THE MINES HANDBOOK

PENTARCO

PINE

FLOTATION

OILS

Take Note of These Facts:

You want to feel assured that any flotation oil you adopt will always run uniform, always be available promptly and be dependable in all other respects. To be sure that the oil you select has these qualifications you must not only buy from the manufacturer direct but also select a manufacturer who has demonstrated his ability to make good on all these points.

The steadily increasing use of PENTARCO oils is founded upon our ability to make good.

The FLOTATION PROCESS

All patent and other rights in North America
acquired by

MINERALS SEPARATION NORTH AMERICAN CORPORATION

a company entirely owned, controlled and
managed by British and American citizens.

This corporation owns over fifty patents in
the United States and corresponding Can-
adian and Mexican patents covering

The Now World - Famed Flotation Process

for the concentration of ores of copper, zinc,
lead, gold, silver, molybdenum, graphite,
mercury, etc.

We are prepared to grant licenses to all who
wish to use this process and to give licensees
all possible advice and competent technical
assistance. While the licensed use of the
process will be encouraged in every respect,
no infringement will be tolerated, and all
infringers will be prosecuted.

To those who have infringed our patents,
notice is given that a settlement for such in-
fringement must precede the granting of
licenses for the further use of same.

No one is authorized to license, install or
use our processes in the United States,
Canada, Mexico or Cuba.

All applications to be made direct to

MINERALS SEPARATION NORTH AMERICAN CORPORATION

PREFACE

The present volume is the second issue of the MINES HANDBOOK and the thirteenth of the COPPER HANDBOOK, of which it is an enlargement.

The volume has many notable changes and has been rewritten and entirely reset. It is no longer merely a Copper Handbook, but is a METAL MINES HANDBOOK, covering all metallic mines.

The greatest change in the volume is the new arrangement of companies. Heretofore all mines and mining companies have been listed alphabetically, an arrangement that saved indexing and concealed imperfections. The new geographical arrangement reveals the completeness or incompleteness with which the book covers the active properties of any particular mining district, or town, and enables the reader to judge whether or not a property is in a successful district or not. This arrangement of companies has very many advantages, but necessitates the use of an index, which, following the custom of other manuals, is put in the front of the book and printed on tinted paper for convenience in reference.

The geographic arrangement is primarily one by countries, states, counties, districts and towns, but this has not been consistently followed at the cost of the readers' convenience, and where practicable the properties of a mining center have been grouped, as, for example, those of Butte, Montana; Jerome, Arizona, etc.

Volume 13 has other new features. It contains maps of the more important mining districts in compact form, and refers to noteworthy articles and books describing mines, mills and processes in use at various properties.

The glossary, chapters on mineralogy and those on metal prices, production, etc., are full and authentic.

The list of producers and buyers of the rarer metals proved very useful and was widely copied, usually without giving credit to the MINES HANDBOOK, from Volume 12; it has been revised and reprinted for this edition.

The more important foreign mines are included in the present volume, and the Japanese information is especially noteworthy.

In the preparation of material on the iron mining companies, Crowell & Murray's Manual has been freely consulted and used. It is cordially recommended to those especially interested in iron mining.

Skinner's Mining Manual, published in London, covers the financial and organization details of all British-owned companies, and has been freely consulted for information concerning the foreign companies.

The war has taken Mr. George H. Morgan, my former assistant editor, who now holds a commission in the Engineers' Corps of the army. Mr. M. von Bernewitz, formerly of the Mining & Scientific Press, is the new assistant editor, and together with M. Stencil, have been valued assistants in writing up material from the field.

The editor has personally visited all the larger and many of the smaller camps during the year in the course of his professional work and feels therefore that the information herein, while not guaranteed, is correct, to the best of his knowledge and belief. Suggestions for betterment and corrections are earnestly invited.

WALTER HARVEY WEED.

*The ACTUALITY is now a PHANTOM
The PHANTOM is now the ACTUALITY*

At the DOME MINES
South Porcupine, Ont., Canada

At this plant Hardinge Mills were installed in competition with 80-1250 lb. Stamps, which were crushing 800 tons per day thru $\frac{1}{4}$ " screens.

The capacity of each Conical Mill being over 500 tons per day

ADDITIONAL STAMPS WERE SCRAPPED
AND
ANOTHER HARDINGE MILL INSTALLED
IN PLACE OF THE PHANTOM

Each Conical Mill has Greater Capacity than 50 Stamps

MINE HOISTS AND MACHINERY

Years of experience in building machinery have gradually developed methods in both our engineering and producing departments which enable us to accomplish our aim—to build machines that are mechanically reliable and humanely safe.

These years of diversified engineering experience, and the skilled workmanship which our extensive plants afford become yours in a very tangible and satisfying form when

you purchase a Wellman-Seaver-Morgan Hoist.

Send for our Bulletin No. 5, "**Electric Mine Hoists**," and get in closer touch with W-S-M equipment for your future needs.

Haulages, operated by steam or electric power, **Gravity Incline Machines**, **Cages**, **Skips**, **Sheaves**, **Headframes**, etc., have a proportionate share in our engineering and building activities.

ORE AND COAL HANDLING MACHINERY

Hulett Unloaders: All of the large modern ore docks constructed in the last six years have been equipped with Hulett Unloaders.

These machines have become a standard for unloading iron ore and are *equally well adapted to unloading coal*.

Besides Hulett Unloaders, The W-S-M Company constructs *complete* Ore and Coal Handling Plants—Rehandling Bridges, Car Dumpers, steam and electric driven, Revolving Derries, etc.

HUGHES MECHANICAL GAS PRODUCER

Hughes Producers have been in use for twenty years and more than one thousand of them are now in operation in various parts of the world.

The New Jersey Zinc Company and other mining corporations are finding them a valuable asset.

3,000 tons of bituminous coal per hour may be gasified by each machine; both the volume and quality of gas are highly satisfactory.

WATER POWER EQUIPMENT

Hydraulic Turbines, vertical and horizontal settings for all heads up to 800 feet. Especially designed for high efficiency. **Johnson Hydraulic Valves** for power plants and water works.

Inquiries are invited and further information will be furnished gladly, by catalogue, by bulletin or by letter.

BALL GRANULATORS

For Every Condition

The Ball Granulator as built by the Allis-Chalmers Manufacturing Company, represents the highest type of design, workmanship, and material in its construction. Every feature has been developed with a view to Economical Operation and Efficiency. Every detail is worthy of your consideration. We will be pleased to furnish full descriptive matter of the special features which have proved so successful.

Successful Mills and Smelters

We design and build them complete. We have made this a specialty for many years and have a large number of successful installations to our credit. Quick to recognize genuine improvements, yet duly conservative in adopting them, our erected plants have, without exception, reflected the most advanced practice at the time of their completion.

**A Concentration Plant, Designed and Erected Complete by Us
in Ninety Days**

Only a very unusual equipment can make this possible—metallurgists experienced in each particular field, able designers and draftsmen, ample shop facilities and thoroughly competent and reliable field crews. Any shortcoming upon the part of any link of this chain is sure to cause annoying and expensive delays, perhaps even failure.

Realizing that the necessary co-ordination cannot be secured where there is divided responsibility, we have always been careful to maintain all these facilities, although but few others even attempt it. Our record of past success is our guarantee for future performance, and those about to erect ore treatment plants can place the entire matter in our hands, thereby securing the responsibility of an organization of proved efficiency, with the assurance of obtaining a completed, up-to-date, highly efficient and economical plant at minimum cost and in the shortest possible time.

ELECTROSTATIC ORE SEPARATION

THE ELECTROSTATIC PROCESS, as developed by the Huff Electrostatic Separator Company, is no longer new and untried. It is accomplishing, in constant field practice, vastly better commercial results, separations, and concentrations of ores, and is applicable to more diversified usage and fields, than was expected by its most sanguine advocates. It is now recognized as a standard method of dry concentration. An advanced step beyond any other known process, as, from ores applicable to the process, it saves more values and makes valuable and available material never before commercially separable or commercially recoverable by mechanical means.

It has very marked advantages over other methods, and has many unique and exclusive fields wherein it has no active competition.

Adapted to the concentration and separation of Zinc Ores, Copper Ores, Gold and Silver, Iron, Manganese, Molybdenite, Monazite Sands, Graphite, Abrasive Materials, and many others.

NOW USED IN

land

ILLUSTRATION OF PRINCIPLE

“CONCENTRATIONS and separations of ores effected by utilizing the differences in electrical conductivity of the particles of which ores are comprised, without water or roasting, regardless of specific gravity or magnetic quality, making separations and recoveries never before commercially attainable.”

PRESCOTT MINE PUMPS

The wet mine presents a greater variety of pumping problems than any other industry. On surface and underground, low and high service, light and heavy pressures, condensing, circulating, forking, shambling, sinking and station work. The water is cold, hot, sometimes acidulated, dirty, gritty and aerated.

Where such conditions of service must be met and overcome, it is essential to select a pump built by a maker intimately acquainted with underground practice and the difficulties attending that kind of work.

Prescott Mine Pump designs result from years of experience in solving the knottiest mine pumping problems. It therefore stands to reason that the Prescott Pump is essentially, a mine pump—the pump for **your** mine.

Duplex double acting—steam or electric drive: accessible, efficient, economical.

We will send a copy of Mine Pump Bulletin
P-105 on receipt of your name and address

Worthington Pump and Machinery Corporation

Tonopah, Nevada.

LAKENAN, C. B.,

Mining Engineer,

Ely, Nevada.

LEWIS, J. Volney,

Mining Geologist

Professor at Rutgers College, University of New Jersey.

New Brunswick, N. J.

LIDDELL, Donald M.,

Metallurgical Engineer,

Care of Merrill, Lynch & Co.,

7 Wall Street, New York City.

LINCOLN, Francis Church,
Consulting Mining Engineer and Geologist,
Director Mackay School of Mines,
Reno, Nevada.

MEIN, William Wallace,
Mining Engineer,
43 Exchange Place, New York.
Cable: Mein, New York.

MERRILL METALLURGICAL CO.,
Specialists in Hydrometallurgical Precipitation and Precipitants,
121 Second Street, San Francisco, California.
Cable: Lureco. Code: Bedford-McNeill.

NEVIUS, J. Nelson,
Mining Engineer and Geologist,
809 South Los Robles Ave., Pasadena, Cal.

PACKARD, George A.,
Mining Engineer and Metallurgist,
Mine Examinations and Reports. Supervision of Mining Operations.
50 Congress Street, Boston, Mass.

PAYNE, Henry Mace,
Consulting Mining Engineer,
Chamber of Commerce Bldg., Pittsburgh, Pa.
Cable: Care of "Macepayne, Pittsburgh." Usual Codes.

PETROLOGICAL LABORATORY
of W. Harold Tomlinson
All Petrographic Work.
Swarthmore, Penna.

PURINGTON, Chester W.,
Examination of Russian Properties,
6 Copthall Avenue, London, E. C.
Cable: Olenek. Usual Codes.

ROHN, Oscar,
Mining Engineer and Geologist,
Care of East Butte Copper Mining Co.,
Butte, Montana.

SEARS, Stanley C.,

Consulting Mining Engineer,

Reports and Management.

702 Walker Bank Building, Salt Lake City. Usual Codes.

SIZER, Frank L.,

Consulting Mining Engineer,

1006 Hobart Building, San Francisco, Cal.

Cable: Sizer.

Usual Codes.

SMITH & ZIESEMER,

Franklin W. Smith.

Mining Engineers,

Bisbee, Arizona.

Ralph A. Ziesemer.

STAUNTON, W. F.,

Mining Engineer,

636 I. W. Hellman Bldg., Los Angeles, Cal.

SYMMES, Whitman,

Mining Engineer,

Manager Union Con, Mexican, Ophir, etc.
Virginia City, Nevada.

TOUT & McCARTHY,

Assayers and Chemists,

Assays, Analysis and Tests, Independent Control Work.
Butte, Montana.

TYRRELL, J. B.,

Mining Engineer and Geologist,

534 Confederation Life Bldg., Toronto, Canada.

Cable: Tyrrell. Usual Codes.

von BERNEWITZ, M. W.,

Metallurgical Engineer,

Room 815, 29 Broadway, New York.

WEED, Walter Harvey,

Mining Geologist and Engineer,

Examinations.

29 Broadway, New York. Cable: "Minexam."

WEEKES, Frederic R.,

Mining Engineer,

42 Broadway, New York.

WESTERVELT, William Young,

Consulting Mining Engineer,

17 Madison Ave. (Madison Square, East), New York.

Cable: Casewest. Code: McNeill.

YEATMAN, Pope,

Mining Engineer,

Room 1109, No. 111 Broadway, New York.

Cable: Ikona. Code: Bedford-McNeill.

THE MINES HANDBOOK

CHAPTER I.

GLOSSARY OF MINING TERMS

The following glossary of mining, milling, and trade terms will be found useful by many readers.

Acicular. Needle-shaped.

Acid. An acid or silicious rock is one in which bases are combined with silica. The antithesis of basic.

Adit. A level mine opening driven into a hill or mountain.

Adobe. Sun-dried brick used in all Latin-American countries.

Air-blast. A violent explosion caused by the escape of air compressed by the settling down of rocks in the upper workings of a mine.

Air Compressor. A machine for condensing air to a pressure sufficient to actuate machinery. The compressed air is forced through pipes to various parts of the mine, or surface plant, and used in the same way as steam for driving drills, pumps, hoists, etc.

Air-doors. Doors built in mine passageways to stop air currents.

Air-drill. A drill driven by the elastic pressure of compressed air.

Air-shaft. A shaft used to provide ventilation for deep workings. Two shafts, one opening on slightly higher ground than the other, will provide natural ventilation underground, when connected by a drift, the longer shaft becoming a chimney, and the shorter an inverted syphon, down which the air is sucked with great force.

Alkali. Potash and soda are the common alkalis. An alkali is the opposite of an acid; it turns red litmus blue, and forms salts with acids.

Alloy. Two or more metals united mechanically, but not chemically by fusion.

Alluvium. Soil or broken rock deposited by the action of water.

Altered. An altered rock is one that has undergone changes in its chemical and mineralogical structure since its original deposition.

Aluminous. Containing aluminum.

Amalgam. An alloy of mercury with another metal such as gold, silver or copper. Mercury will not amalgamate with iron.

Amalgamation. The process of extracting gold and silver from crushed ores by amalgamation with mercury. The quicksilver is expelled later by heat, and recovered for further use.

Amorphous. Without form.

Amygdaloid. A trap rock, containing vesicles or small rounded cavities filled by mineral matter such as calcite, agate, etc. Rock is spotted and in outcrop often pitted as amygdules weather out, leaving cavity. In the Lake Superior district copper-bearing amygdaloids frequently show native copper in the cavities left by the leaching out of the soft minerals originally therein.

Analysis. A determination of the constituents of a chemical substance.

Anhydrous. Devoid of water.

Anode Copper. Copper from a converter, cast in molds into plates with ears, and used in cells of electrolytic refineries.

Anticline. An arch or fold of rock-strata bulging upwards, in U shape; is the reverse of syncline.

Antigua. In Mexico, is a mine worked by Spaniards or Mexicans at a time so remote—from 50 to 300 years—that particulars have been forgotten; sometimes valuable, but “every antigua is not a bonanza.”

Antimonide. An ore of any metal chemically united with antimony.

Apartado. Apartado de correos is Spanish for postoffice box; usually abbreviated to Ap.

Apex. The top or uppermost part of a vein. In the United States the ownership of the outcrop or apex carries the right to follow the vein downward beneath another's ground, if within one's end lines extended.

Arastra. A circular rock-lined pit in which broken ore is pulverized by stones attached to horizontal poles fastened in a central pillar and dragged around by mules.

Arenaceous. Sandy; carrying silica as sand.

Argentiferous. Silver-bearing.

Argillaceous. Clayey.

Aroba. A Spanish weight of 25.36 lbs. avoirdupois; Portugese, 32.38 lbs.

Arroya. A gulch.

Arsenide. A mineral composed of arsenic combined with another metal.

Arsenopyrite. A mineral composed of arsenic sulphur and iron; often carries gold or silver also.

Assay. A test of ore or metal to determine the exact amount of any metal or metals contained in it. Usually fire assay; smelting on a small scale.

Assessment Work. The work required annually by the U. S. government, on an unpatented mining claim to keep title.

Attle. Cornish term for waste rock.

Auriferous. Containing gold.

Back. The rock above mine opening like the ceiling of a room. The part or section of a vein between two levels or between a level and the surface.

Bad air. Air vitiated by powder fumes, noxious gases or insufficient ventilation.

Ball Head or Stamp. A steam stamp, named after its inventor.

Barilla (De Cobre). Spanish term for particles of native copper, cleaned (concentrates). Equivalent to the “mineral” of Lake Superior mines. Used mainly in Bolivia among tin producers.

Barranca. A deep gulch or canyon, with precipitous sides.

Barrel Work. Masses of crude native copper, picked out by hand before ore passes beneath stamp. Was formerly shipped in barrels to the smelter.

Barrow. A wheelbarrow.

Basalt. A dark colored heavy igneous rock, carrying much iron; a trap rock.

Base. Impure; an alkaline element.

Base Bullion. Copper or lead carrying much gold or silver.

Base Metal. Any of the non-precious metals.

Basic. Low in silica; containing more than enough iron and lime to form a good slag.

Basin. A syncline; a trough in the earth's surface.

Battery. A set of stamps, usually five in a stamp mill.

Bearing. The course of direction, as that of a mineral outcrop in degrees, east or west of, north (meridian).

Bed. A seam or layer of stratified rock. Used in some mineral districts for flat veins or lodes.

Bed Rock. The solid rock underlying stream gravel or rock.

Bedded Vein. One parallel with the bedding of the country rock.

Bells. Signals for lowering and hoisting the bucket, skip or cage in a shaft usually are given by bells, the number of strokes indicating the nature of the load, the place for stopping, etc.

Bit. The cutting end of a boring tool. A steel drill; a short hollow

cylinder of soft steel, used in diamond-drilling. The diamonds are set around the inner and outer edges of the bottom of the bit, and cut into the most refractory rocks when the bit is rotated.

Black Copper. Impure copper, smelted, but containing impurities requiring refining.

Black Jack. Sphalerite, zinc blende of dark color.

Blanched Copper. Copper containing a large amount of arsenic, practically forming an alloy.

Blast. (N.) Air forced through tuyeres into a blast furnace or Bessemer converter. (V.) to explode gunpowder or dynamite.

Blast Furnace. A cupola furnace in which ore is smelted, with the aid of air pumped in under pressure.

Blasted. A blasted miner is one who has been injured by the explosion of dynamite or gunpowder.

Blasting. The breaking of rock by means of high explosives, inserted in holes bored in the rock for the purpose.

Blende. Zinc-blende or sphalerite; sulphide of zinc.

Blind Drift. A drift connected with other workings of the mine at one end only; a cul de sac.

Blind Lode. A lode not outcropping at surface.

Blister Copper. Copper of 96 to 99% purity; applied to product of Bessemer converter.

Blocking Out. Exposing the ore in a mine so that it can be extracted by stoping. Properly speaking, ore is not block out for stoping until opened on three sides.

Blossom. The oxidized, softened outcrop of an orebody altered by weathering.

Blout. A mass of quartz, often mineralized, that is often isolated and not connected with a vein; an abbreviation of blow-out.

Blower. A fan used to force air into a mine; a blowing engine.

Blowing Engine. An engine for forcing air into blast furnaces under pressure, often about one pound avoirdupois per square inch.

Blowing In. A smelting furnace is blown in, when charge is ignited, fusion begins and the process of reduction by fire is begun.

Blowing Out. A smelting furnace is blown out when the metal and slag are tapped out, and the fires are allowed to die out.

Blowout. An outcrop larger than the orebody beneath; see blout.

Bluestone. Copper sulphate.

Bonanza. Spanish for pay-ore. Usually applied in United States to a body of exceptionally rich ore, especially in silver mines.

Bonnet. The cover or roof of a cage; also a steel casting connecting the piston-rod with the upper end of a stamp-shaft.

Bostonite. A light colored igneous rock composed mainly of potash feldspar.

Bore Hole. A drill hole bored for test purposes.

Bort (Bortz). A form of crystallized carbon between the diamond and the black diamond.

Botryoidal. Resembling a bunch of grapes.

Bottom. A mass of impure copper formed below the matte, in matting copper ores.

Boulders. Loose, rounded masses of rock, larger than cobbles.

Box Canyon. A canyon closed at one end.

Branch. A vein branching off from the main orebody.

Brattice. A screen for the regulation of air currents in a mine.

Breast. The face or innermost end of a mine working.

Breccia. A rock formed of angular fragments cemented together.

Brecciated. Broken into angular fragments partly or wholly cemented together.

Broken. A vein is broken when dislocated by faults.

Broken Ground. Rock strata where the walls are poorly defined and the general formation shattered.

Bucket. An iron or steel bucket used for hoisting men or ore in a

mine. In a vertical shaft a bucket swings free, but in an incline shaft the bucket runs on a skidway of plank timbers.

Buddle. A conical table on which ore is dressed; formerly used in Cornwall, etc., and recently applied to a new concentrator.

Bulkhead. A wooden or masonry partition walling off part of a mine or protecting it against soft or creeping ground; also damming back water.

Bullion. Includes any of the base metals containing gold and silver; also mixture of gold and silver.

Bullion Bars. Unrefined gold and silver melted and cast into bars.

Bunch. A small mass or pocket of exceptionally rich ore.

Bunchy. An orebody containing small scattered masses or bunches of ore.

Cable. The steel wire rope used in shafts for hoisting buckets, skips or cages.

Age. The elevator used in vertical shafts for hoisting ore and rock, and for lowering men, timber, etc.

Calcareous. Limey.

Calcine. To drive off sulphur, carbonic acid gas, or other volatile constituents of an ore by heating.

Calcining Furnace. A furnace for roasting ore to drive off sulphur, previous to smelting; also for heating cement materials.

Calcite. Crystallized calcium carbonate.

Cam. A double-curved tooth, fixed on a shaft, for lifting gravity stamps.

Camp. A mining town.

Canyon. A deep gorge with precipitous walls.

Cap. The top piece of a framed set of mine timbers; copper caps containing fulminate of mercury, used to explode dynamite in blasting rock.

Capping, or Cap-Rock. The rock or other ground above a mineral deposit.

Captain. In most mining fields where Cornishmen are employed the foreman in charge of mining work is termed a captain.

Carbonaceous. Any mineral in which carbon and oxygen are chemically united.

Carbonates. A term commonly applied in the western part of the United States to oxidized lead ores, usually argentiferous.

Carboniferous. Rocks of the coal age of geological eras.

Carga. A Mexican weight of 300 lbs. avoirdupois.

Cartridge. Dynamite put up in cylindrical cases of oiled paper to fit the holes bored by drills.

Casing. The wooden lining of a shaft; an iron pipe put down outside of a diamond drill hole when passing through soft or broken ground, to prevent the hole becoming clogged by matter intruding from outside.

Casting Copper. Impure copper better suited for casting into various forms than for drawing into wires or rolling into sheets.

Cave. A natural opening or vug in a rock formation; the part or complete falling in of a mine.

Caving System. A plan of mining, by which the worked out upper levels and surface are allowed to subside gradually, as the mine workings are deepened.

Cement Copper. Regulus; the loose and usually impure copper deposited on iron by copper-bearing waters.

Cerro. Spanish for a mountain or hill showing rock outcrops.

Chalybeate. Iron-bearing waters.

Chamber. A large stope.

Change House. Building where miners change their clothing before entering a mine.

Change Day. The day when miners are transferred from day shift to night shift, or the reverse.

Chapeau de Fer. French term for an oxidized iron outcrop; gossan or iron hat.

Charge. The amount of ore, flux and fuel fed to a smelting furnace.

Chert. A coarse impure chalcedony or flint.

Chile Bars. Bars of Chilean blister copper, weighing about 200 lb. each.

Chilean Mill. A grinding apparatus with three heavy wheels running around in a circular pan.

Chimney. An orebody or pipe shape in an approximately vertical position.

Chloride. A mineral (or ore) of any metal united chemically with chlorine; usually applied to hornsilver ore.

Chloride. (V.) To work the oxidized part of an ore deposit on a lease or tribute; a term used in the western part of the United States.

Churn Drill. A drill having a churning motion, used for boring oil wells, test-holes, etc.

Chute. A hole, usually lined with planks, used for dropping ore or waste to a lower level of a mine.

Claim. The area of 600' x 1,500', or 20 acres of U. S. public land staked off and claimed by a prospector or miner. Size of claims varies in different countries.

Classifier. A machine which separates mineral particles according to their weight.

Chloride. (V.) To work the oxidized part of an ore deposit on a lease or tribute. A term used in the western part of the United States.

Clay Gouge. A thin seam of clay separating ore, or ore and rock.

Clay Slate. An argillaceous slate.

Clean-Up. The collection or gathering together of accumulated ore or metal in a mill or smelter.

Cleavage Planes. The more or less regular lines along which slates and other metamorphic rocks break into slabs or leaves.

Coarse Jigs. The jigs used to handle the larger sizes and heavier grades of ore or metal.

Coarse Metal. Matte resulting from the first smelting in old-style smelting of oxidized copper ores.

Cobbing. Breaking masses of ore into lumps by hand hammers and sorting ore out.

Collar. The top of a shaft; surface timbering of a shaft.

Colloids. Non-crystalline materials.

Compartment. Mining shafts usually are divided into two or more compartments or sections, separated by framed timbers and planking.

Concentrate. The ore or metal, after part or complete elimination of gangue rock.

Concentration. The process of separating the metallic part of an ore from the waste rock or mineral in which it has been enclosed. It involves crushing to free the metallic particles. The separation may be by gravity, either dry or in water; by oil or froth flotation, or magnetic separation.

Concentrating Table. A table on which a stream of finely crushed ore and water flows downward and the heavier metallic minerals lag behind and flow off in a separate compartment.

Concentrator. A plant where ores are concentrated; a jig or machine for separating ore or metal from gangue-rock, the process usually employing a rocking or oscillating motion, aided by jets of water, whereby the worthless gangue is carried off and the heavier mineral remains.

Conchoidal. Breaking with a curved or shell-like face, or fracture.

Concretion. A rounded mass or nodule formed of mineral matter gathered about a center.

Conductivity. Electrical conductivity is measured by the resistance offered to the passage of an electrical current.

Conglomerate. A rock formed of pebbles and rounded boulders cemented together. Sedimentary conglomerates are ancient shore deposits whose pebbles and sands are hardened into rock. Volcanic conglomerates are formed of rounded masses ejected from volcanic vents cemented together by volcanic sand or ash (tuff) rock.

Construction Account. Many mining companies summarize their finances so that the cost of operation is divided into two classes, one being for general working expenses and the other for construction, sometimes

classed as capital account. It includes new buildings and machinery on surface and frequently new mine openings.

Contact. The junction of two dissimilar bodies of rock, as limestone and porphyry.

Contact Deposit. A mineral deposit found between two unlike rocks, usually applied to an orebody at the contact between a sedimentary rock, limestone shale or sandstone and an igneous rock.

Contract. In mining applies to an agreement between operator and workman to pay latter so much per foot for excavating drift or stope. These men are known as contract miners and are usually skilled workmen. They work harder than men on wages, due to the incentive of higher earnings.

Copper Ore. Rock carrying copper mineral or minerals. See detailed descriptions of copper-bearing minerals in Chapter III.

Core. A drill core.

Cornish Pump. A form of mine pump actuated by long rods reaching from surface down mine shafts.

Costeaning. Proving an ore deposit or vein by trenching across its outcrop at approximately right angles.

Counterbalance. Hoisting plants usually are worked in counterbalance for deep shafts. The weight of the descending cage or skip is used to partly offset the weight of the ascending cage or skip.

Counter Vein. A cross vein running at approximately right angles to the main orebody.

Country Rock. The predominant rock about an ore deposit.

Course. The direction or strike of a vein; a stretch of mineralized matter in a vein.

Crab. A hand winch.

Creeping. The slow movement of the rock in mine workings caused by the pressure of super-incumbent and adjacent rock masses.

Cretaceous. A geological age characterized by chalky beds in England. The limestones of Arizona and Mexico are large of Cretaceous age, and so are the coal-bearing beds of the Rocky Mountain region.

Cribbing. Close-set round timbers supporting an underground roof, or lining a shaft.

Croppings. Outcrops.

Cross-Course. An intersecting vein.

Crosscut. A mine opening, similar to a tunnel, that is driven across the rocks at approximately right angles to the orebody; a drift follows the lode or vein.

Cross Vein. An intersecting vein.

Crucible. A vessel of refractory material in which ores and fluxes are melted.

Crystals. Geometrical forms, with plane faces, of infinite variety, assumed by the majority of minerals.

Cupola. An upright furnace used in smelting.

Cupriferous. Copper-bearing.

Cut. To intersect an orebody; the portion of a working face of mineral removed at one operation.

Cwt. A hundredweight, or 112 lb. avoirdupois.

Cyanide. (V.) To treat crushed rock with a weak solution of cyanide of potash or of soda, dissolving the gold and silver, which is recovered by precipitating it with zinc (or aluminum for certain silver ore).

Datum Level. The level (usually sea-level or mean level of nearest considerable body of water) from which altitudes are measured in surveys.

Dead Roasting. Sulphide ores are dead roasted when all the sulphur possible to drive off by roasting has been eliminated.

Dead Work. Underground work which is not in ore; the opening of new shafts, drifts, and winzes preliminary to the stoping of the mineral bodies.

Debris. Broken down rock material; the fragmental material broken off by frost, etc., from rock exposures; talus.

Decomposed. Rock or ore altered and leached by air and water.

Decrepitate. To break into fragments with violence, under the blow-pipe or great heat.

Dendrite. A moss or fern-like mineral stain or film usually of manganese or iron oxides.

Denouncement. In Mexico, the formal filing of a claim to mineral land.

Denudation. The uncovering of rock or an ore deposit by the weathering of wind and water, or glaciation.

Dessication. Drying out; loss of water from any given substance.

Detritus. Debris; broken down rock, usually applied to gravel, etc., moved and deposited by streams or glaciers.

Development Work. Mining work performed to develop or expose an ore deposit and to open up new and further amounts of ore.

Diabase. A dark trap rock composed largely of a felt of lathe shaped crystals of plagioclase feldspar, plus ferro-magnesian minerals, etc.

Diamond Drill. A machine used for boring holes in rocks, with a hollow cylinder for a bit, whose end is set with black diamonds or bort.

Die. The iron block in a mortar, onto which ore is fed for crushing by a stamp.

Dike. A vein of igneous rock; locally a reef or wall of rock projecting above the ground; also applied to the hardened waste material filling fissures.

Diorite. A crystalline granitic rock with predominant plagioclase feldspar.

Dip. The inclination or angle at which a lode or vein pitches downward into the earth.

Dip Compass. A compass having the needle fixed to swing in a vertical plane, so it can be readily deflected by magnetic rocks.

Dirt. Frequently used to designate ore broken underground; for instance, in Joplin district, Missouri.

Disintegration. The breaking down of rock through weathering.

Disseminated Ore. Ore carrying fine particles of metallic minerals, usually sulphides; scattered through rock or gangue matter.

Disturbed. An orebody is disturbed when lacking defined walls and settled character.

Dolomite. Magnesian limestone; carbonate of calcium and magnesium.

Donkey. A small auxiliary hoisting engine, usually operated underground and actuated by compressed air, or used for preliminary work at new shafts or exploring pits.

Downcast. A shaft having a downward air current.

Draftage. An arbitrary allowance claimed by some British smelters to cover loss of weight in transport.

Dress. To separate ore from gangue rock by hand or machinery.

Dressing Floor. A floor where ore is sorted by cobbing and picking.

Drift. A horizontal passage in a mine following the lode or vein.

Drift Copper. Native copper found in gravel and clay, far from original orebody, from which it has been carried by glaciers.

Drifting. Opening drifts; driving.

Drill. A steel bar with chisel shaped end used for boring in rock; is struck on the other end by a hammer, or is forcibly driven against rock by air piston.

Drill-Core. Solid, cylindrical cores of rock cut out by a diamond drill. These form a record of the strata through which the drill has passed.

Driving. Extending a drift horizontally.

Drum. The cylinder of a hoisting engine, around which the rope is wound.

Druse. The crystallized crust lining a cavity in rock or ore.

Dry Ore. Argentiferous ores containing insufficient lead for fluxing in a smelter.

Ductile. That which is capable of being extended in length by tension, as into wire.

Ductility. The capacity of a metal to elongate, when under pull from the ends, without cracking or breaking.

Dump. A place for depositing rock taken from a mine; a pile of ore or rock.

Dyke. See dike.

Dynamite. Nitro-glycerine held in wood pulp, infusorial earth, or some similar article, to render it safer in use. Strength varies according to percentage of nitro-glycerine contained.

Eisener Hut. German for iron hat, or gossan, occurring above an ore-body.

Electrolyte. The solution in which electrolytic separation of metals is carried on.

Electrolysis. The separation and redeposition of metals by electrolytic action.

Electrolytic. Applied to copper means copper made from impure metal by electrical decomposition and redeposition. The bar of impure copper is gradually dissolved and the pure metal redeposited at the opposite pole of the battery, while other metals fall as black slime to the bottom of the tank in which the solution (electrolyte) is held.

Elvan. Cornish name for dikes of greenstone, porphyrite and granite.

Erosion. The wearing away of surface masses of rock and soil by the elements, or by glacial action.

Eruptive. Igneous rocks, brought to the earth's surface or outer crust by volcanic activity.

Escarpment. A rock wall, nearly or quite vertical.

Exfoliation. The separation of thin leaf-like layers from a rock mass.

Exploders. A fulminating cap for setting off high explosives.

Exploitation. The productive working of a mine or ore deposit.

Exploration. Prospecting work; looking for ore.

Face. The inner or working end of any mine opening. A face of ore is the ore shown at the extreme end of a drift, stope, or tunnel.

Fahlband. A zone or band of crystalline rock, carrying finely disseminated metallic sulphides.

Fall of Ground. Rock falling from the roof into a mine opening.

False Set. A temporary set of timber.

Fan. A machine for forcing or sucking air into or out of a mine.

Fathom. Six feet. In stoping, a fathom is a cube of six feet.

Fault. Dislocation of a vein or of a rock stratum.

Feeder. A branch or small vein joining a larger one.

Ferruginous. Containing iron.

Filling. The waste material used to fill up old stopes or chambers; allowing a mine to fill with water.

Filter. A machine for removing the solution or moisture from crushed ore, either by forcing it under pressure or sucking it through canvas or cloth, leaving the muddy ore behind.

Fines. The finer particles of ore or metals saved in concentrating processes.

Finisher Jigs. The jigs used to save the smaller particles of ore in a concentrator or stamp mill.

Fire. The miner's warning cry when a blast is to be set off is "fire."

Fissile. Splitting easily into plates

Fissure Vein. A fissure in the earth's crust filled with mineral matter.

Flake Copper. Very thin scales of native copper.

Float. Loose ore or rock, away from its parent mass, on the surface.

Float Copper. Drift Copper.

Float Ore. Loose ore, often water worn ore, found at a distance from its outcrop.

Flocculent. Resembling tufts; cloudy masses of slightly coherent material floating in a liquid.

Floor. The floor of a drift or other horizontal mine opening; the rock bed beneath an orebody.

Flour Copper. Very fine scaly native copper that floats on water and is difficult to save in milling.

Flotation. A process of concentrating or separating out the valuable metallic sulphide minerals of an ore, by mixing the pulverized ore with

acid and oil and agitating it by air or paddles to make a scum or froth that takes up the metallic minerals and floats them off, leaving the waste behind.

Flume. A launder or conduit for carrying water.

Flux. Substances used in furnaces to form a fusible compound with the waste matter and make slag. In assaying, borax, soda, salt, etc., are used; in smelting, limestone, ironstone, etc.

Fluxing Ore. An ore containing appreciable metallic minerals, but smelted mainly because containing fluxing agents required in the reduction of richer ores.

Foliated. Having a laminated structure.

Foot. The foot-wall.

Foot-Wall. The rock wall under a vein or underlying inclined mineral deposit.

Fork. The branching of a vein.

Formation. A term used by miners for any particular body of rock, as a granite formation, a sandstone formation. Geologists limit term to groups or rock beds of similar age.

Founders Shares. The few shares issued to the individuals organizing a stock company. In companies owned outright by other companies, founders shares are issued to as many individuals as are required to incorporate and hold the offices required for corporate management, as the laws do not permit a corporation, which is an artificial person, to form another corporation, or to serve as a director of another corporation.

Free. A metal is free when virgin or native, and not combined chemically with any other element.

Free Milling. An ore that readily yields metallic contents by simple means, such as amalgamation or cyanidation.

Freeze. A furnace freezes when the molten charge solidifies.

Friable. That which may be pulverized or broken up easily.

Froth. Foam; a mass of bubbles.

Furnace. A structure for the smelting or roasting of ore.

Fuse. A cotton cord with a gunpowder core, so made as to carry fire to an explosive.

Fusible. That which may be melted.

Fusion. Melting; alloying metals while liquid, through heat.

Gabbro. A rock composed mainly of plagioclase feldspar and iron magnesia minerals.

Gad. A small steel wedge or chisel.

Galena. Lead sulphide; see Mineralogy.

Gallery. A drift or level.

Gallows Frame. The timber or steel framework over the mouth of a shaft, carrying a sheave-wheel, over which the hoisting rope passes to the engine; now commonly called head frame.

Gangue. The waste rock or mineral in which ore or metallic particles are held.

Gash Vein. A gash-shaped fissure vein, rapidly pinching downward.

Geode. A hollow crystal-lined cavity, or the rounded mass containing such a cavity.

Geological Horizon. Rocks of one geological age.

Geology. The science of the formation of the earth and the rocks of which it is made.

Giant Powder. Dynamite.

Girt (or Girth). A horizontal brace in direction of a drift in mine timbering.

Glaciation. The erosive effect produced by glaciers.

Glance. A metallic sulphide showing a bright, shining surface. Copper glance is chalcocite; silver glance is argentite.

Glory Hole. A large open pit from which ore is or has been extracted.

G. M. B. Good Merchantable Brands, an English grade of refined copper. Term replaced by "Standard."

Gneiss (pronounced nice). A banded coarse-grained rock often formed

of the same minerals as granite, often in patchy and irregular arrangement. May be a diorite gneiss, granite gneiss, etc.

Gob. Waste used to fill worked-out openings.

Gophering. Prospecting work confined to digging shallow pits or starting adits. Term used from similarity of this work to the crooked little holes dug in the soil by gophers.

Gossan. Iron hat; is the leached capping, usually quartzite, showing yellow to reddish brown iron stains found overlying veins.

Grade. The percentage, or value, of ore and partly refined metals; the percentage of rise in roads or mine openings driven on an approximately horizontal plane.

Gram. A metric weight of 15.4 grains or 1-500 of a pound avoirdupois.

Granite. A dense, granular rock of igneous origin, composed of varying proportions of quartz, feldspar and mica.

Granulated. In the form of grains.

Gravity Stamp. A stamp, usually set in batteries of five, in which the piston is raised by a cam, the stamp crushing the charge in the mortar by its weight, when allowed to fall.

Greenstone. An altered basic porphyry; usually andesite or diorite.

Grizzly. A screen or grating of heavy iron rails or steel bars, through which the smaller pieces of rock or ore fall through.

Groundsill. The bed-piece of a set of mine timbers.

Guides. Perpendicular square wooden strips or stringers for guiding cages in vertical shafts. Cables or steel rails are used instead in some mines.

Gut. To rob, or extract, only the rich ore of a mine.

Hade (American). Inclination or dip of a vein, measured from the vertical, while dip is measured from the horizontal. Becoming obsolete, and should not be confounded with rake of an ore-shot.

Hanging. The hanging wall; the rock on the upper side of a mineral vein or deposit.

Hardinge Mill. A cone-shaped cylinder, resting horizontally and half filled with pebbles, which fall and crush ore when mill is revolved.

Haulage Plant. A mechanical installation for the underground tramming of rock, operated by ropes, compressed air, or electricity.

Head or Heading. An underground level or airway in a mine; also water pressure.

Head Frame or Gallows Frame. A framework of 2 or 4 legs, made of wood or steel, fitted with sheaves, over the mouth of a shaft.

Heap-Roasting. Burning the sulphur out of ores piled in heaps, with a small amount of wood or other fuel.

Heave. A horizontal dislocation of a vein or bed caused by a fault. Also applied to the rolling out of line of a lode in making depth.

Hectare. An area 100 meters on each side; called *pertenencias* in Mexico; equals 2.471 acres.

Hoist. An engine for raising ore from a mine and for lowering men and material.

Holing Through. A drift or other mine opening is holed through when a connection is made between two separate sections working toward each other.

Horizon. The sky-line, commonly used in the sense of absolutely flat, as shown by a spirit level. Geologically, all rock strata of the same geological period.

Horse. A mass of country rock enclosed in a mineral vein or deposit.

Horsepower. A measure of power of an engine. One horsepower is rated as equivalent to raising 33,000 lbs. avoirdupois to a height of one foot in one minute.

Horse-Whim. A windlass operated by horses.

Hot Blast. Heated air supplied to a blast furnace.

Hungry. Nearly or quite barren.

Hunt & Douglas Process. A leaching process, using chloride of iron and salt, to dissolve oxide ores of copper.

Huntington Mill. Somewhat similar to a Chilean mill.

Hutch. See Jig.

Hydrated, Hydrous. Containing water combined chemically.

Hydro-Metallurgy. The reduction of ores by wet processes.

Igneous. Rocks consolidated from a molten state; includes not only volcanic rocks but those deep-seated rocks, hardened under cover, which have been exposed to view by erosion, or artificial openings.

Impregnated. Containing metallic minerals, scattered or diffused through the mass; properly used in referring to country rock-carrying mineral similar to that in the vein.

Incrustation. A solidified coating, usually crystallized.

Infiltration. The deposition of mineral matter from percolating waters.

Ingot. A mass of metal cast in a peculiarly formed mold; applied only to gold, silver, or copper. Iron and lead are cast in pigs.

In Place, In Situ. Rock or ore that is in the position where deposited by nature.

Intrusive. Igneous rock masses pushed up through other and older rock formations.

Iridescent. Showing the colors of the rainbow.

Iron Hat. Gossan; outcrop of iron-stained material over an ore deposit or vein.

Jack. A miner's term for sphalerite; is called black jack, ruby jack, or rosin jack, according to color.

Jig. A machine for concentrating ore; i. e., separating the metallic mineral from the waste, by means of oscillatory or vibratory motion, aided by jets of water. The heavier minerals sink, and the lighter rock or gangue is carried off by the current.

Jump. To locate and take possession of mineral lands held or claimed by another party.

Kaolin. China clay.

Keweenaw. Pertaining to or of the Keweenaw formation or rocks in which the Lake Superior copper veins occur.

Kibble. A bucket used for hoisting material in a shaft.

Kilo or Kilogram. A metric weight of 2.2046 lbs.

Kilometer. 0.621376 miles. For rough computations may be figured as 3/5 of a mile.

Kin. A Japanese weight of 1.31 lbs. avoirdupois.

Kindly. The appearance of rock carrying or promising to carry good mineral value.

Ladderway. The series of ladders giving ingress and egress to a mine; the compartment in which the ladders are located.

Lagging. Timber, usually of small diameter, placed over the cap-timbers of incline shafts and drifts, to prevent damage from falling rock.

Lamina. A thin plate; plural is laminae.

Lamellar. In thin sheets of laminae.

Lander. The top man at the mouth of the shaft who receives signals from below, and attends to the unloading of rock sent up in buckets, skips or cages.

Launder. A wooden flume or sluice, used to convey water, or tailings held in suspension in water.

Lava. Rock from volcanoes.

Leach. To dissolve metals out of ore by water or acid, or both.

Leaching. The process of extracting a metal from its ores or salts by treatment with a solvent, such as weak acid.

Lead (pronounced leed). A mineral body.

Leader. A small vein running into a larger one.

Ledge. The solid vein or lode.

Leg. An upright timber supporting the cap of a set of timber.

Lense. An orebody of lenticular form.

Lenticular. Having the shape of a double convex lense.

Level. A horizontal opening in a mine, usually connected with a shaft. Levels are commonly opened at stated intervals as depth is gained—usually at 100 feet in modern mining practice. The word "level" frequently is used interchangeably with the word drift, but is more comprehensive. Both

drifts and crosscuts may be opened on a level, though a crosscut is not a level.

Limestone. A rock composed of lime carbonate.

Lixiviation. The process of leaching out the metallic contents of ores.

Locate. To locate a mining claim is to file a notice claiming ownership, at the point where mineral is discovered, and to put up stakes or monuments at the corners of the rectangular area claimed.

Location Work. Labor required by law to be done on mining claims within 60 days of location, in order to establish ownership.

Lode. A metalliferous vein. In Lake Superior region refers to the mineralized beds; is used generally as synonymous with vein; used by geologists as meaning an aggregation or congerie of mineralized veins.

Long Ton. An English ton of 2,240 lbs. avoirdupois.

Low Grade. Ore whose recoverable value yields but slight profit per ton. Carrying mineral value but sparingly.

Magma. An originally molten mass of rock coming to the earth's crust from depth.

Magmatic Segregation. The process by which the different constituents of molten rock masses crystallize at varying temperatures with a tendency to separate themselves, so far as circumstances allow, from the other compounds.

Malacate. A horse whinn with vertical drum used for hoisting in Mexico. Sometimes is called a Zacatecas malacate.

Mass. Copper; a solid chunk of native metal.

Massive. Rock without defined lines, of cleavage; ore occurring without appreciable gangue, as contradistinguished from ore disseminated throughout a gangue.

Matrix. The rock between imbedded objects, such as a particle or mass of ore or native metal. More rarely a metallic mineral is the matrix cementing together rock particles.

Matte. A furnace product composed of copper and iron sulphides, produced by shaft or reverberatory fusion. Usually contains 30-40% copper, but varies from 20-60%. Is blown to blister copper 98-99% fine in bessemer converters.

Matting. The process of smelting sulphide ores into matte.

Mesa. Spanish for tableland or plateau.

Mesh. The size of openings in a screen.

Metalliferous. Carrying metal.

Metallurgy. The science and practice of reducing metals from ores and minerals.

Metamorphic. Rock that has been changed from its original condition by pressure, chemical action, heat, or other causes.

Metamorphosis. The process by which changes in structure are effected in a rock form by heat or percolating waters.

Metasomatic. Replacement, particle by particle, so that original structure is often preserved.

Meter or Metre. 39.37 inches.

Metric Ton. A weight of 2,204.6 lbs. avoirdupois.

Mica. A scaly transparent mineral. Biotite is brown or black mica; muscovite or isinglass is the clear mica used in stoves, lanterns, electric apparatus, etc.

Mill. Works for treating ores without smelting.

Milling. Dressing ore in a mill; also dumping ore in a winze to be drawn off into cars or wheelbarrows on a lower level.

Mill Run. The treatment of a definite quantity of ore in a mill; also the result or yield thereof.

Mill Test. The determination of the metallic contents and recoverable values in any given ore by the milling of a sufficient quantity to afford average milling conditions.

Miner. In strict construction, the man that does the drilling and blasting in a mine. In a broader sense, all men working underground.

Mineral. Ore or rock containing metal. In the Lake Superior district the term mineral has a special use, being employed to designate the concen-

trate of native copper, with its small amount of admixed amygdaloid or conglomerate, as it comes from the mill, before going to the smelter.

Mineral Belt. The strip or zone of mineralized territory in a given formation or district.

Mineral Right. The ownership of mining rights under the surface of land owned by another holder. Mineral rights sometimes are reserved in selling land in some districts.

Mineralized. Carrying metalliferous minerals.

Miner's Inch. The amount of water that will flow through an opening one inch square under a six-inch head, which is 2,274 cubic feet in 24 hours, or 94¾ cubic feet per hour, equal to 655 wine gallons or 593 imperial gallons hourly.

Mining Engineer. Graduates of technical mining schools are given the degree of engineer of mines and sign the letters M. E. after their names. The letters M. E. stand for mechanical engineer, when given by a school, but are often used by men engaged in mining, who lack scholastic degrees, as an abbreviation for mining engineer, or mining expert.

Missed Hole. A drill hole, charged with explosives, which fails to be set off by the fulminating cap.

Moil. A steel bar, like a drill, except that it is sharpened to a point instead of having a cutting face.

Molybdenite. A graphite-like, flaky, lead-colored mineral found in some ores; composed of molybdenum and sulphur.

Momme. A Japanese weight equal to 3.75 grams or 2.4113 pennyweights.

Monocline. Upturned beds of rock that have a practically uniform dip.

Monzonite. Agranitic rock intermediate between diorite and granite.

Morgen. A South African land measure—2.1165 acres, or 1.44 claims.

Mortar. An assayer's mortar in which rock or ore is crushed with a pestle. A mortar is the box, about the stamp of a mill, in which the ore is stamped and crushed.

Mother Lode. The main lode of the district. In America applies to the mineralized belt of the principal Californian gold region.

Mouth. The surface entrance or opening of an adit, tunnel or shaft.

Mucker. Ore shoveller, who loads the mine cars and in most mines is also a trammer, pushing the cars to the shaft or tunnel mouth.

Mullock. Australian for waste-rock broken underground.

Mundic. Pyrrhotite, magnetic pyrite; iron sulphide.

Mynpacht (South Africa). A part (10%) of a farm, which the owner has the first right to locate or peg out, when the farm is proclaimed a public goldfield.

Nickeliferous. Carrying nickel.

Nodule. A small concretionary, rounded mass of mineral matter.

Non-Conformable. Rock strata not associated originally in the position now occupied.

Nugget. A lump of native metal; usually applied to gold.

Open Cast, Open Cut. A mine worked as a quarry, or pit open to the sky.

Ore. Metallic minerals; mineralized material or rock, holding metallic minerals. Called pay ore when it can be profitably worked; low-grade ore when it yields but slight profit.

Ore Car. A mine car for carrying ore or waste rock.

Ore Chute. An opening in ore or rock through which ore is dropped downward. Also used for ore bins and pockets.

Ore Dump. A heap or pile of ore at the tunnel mouth or top of shaft.

Ore-Shoot. An orebody or portion of a vein carrying high-grade, or payable ore. Usually has a vertical or diagonal dip on the plane of the dip of the vein.

Orthoclase. A white, or pale-colored feldspar composed of silicate of potassium and aluminum. Occurs as white crystals or spots in porphyry.

Outcrop. The apex, or part of a vein or mineral deposit that is exposed at the surface of the earth.

Outlier. An isolated mass of rock or group of rocks lying at a dis-

tance from the main body, and separated therefrom, on the surface by a different rock formation.

Output. Production.

Overburden. Waste material, usually drift or alluvium above the solid rock, or orebody.

Overhand Stopping. Removing ore in ascending steps.

Oxide. An ore of any metal or metals chemically united with oxygen.

Oxidize. To unite with oxygen. Many minerals and most metals oxidize with greater or less rapidity when exposed to air or water.

Panning. To wash gravel, etc., in a pan, so that the sand and gravel is loosened and thrown out and the gold or heavy metallic minerals left in the pan.

Patent. A deed given by the Government, to mineral lands.

Patio. A walled yard with paved floor in houses and mine plants, in Mexico and other Spanish countries.

Paystreak. The rich band, part, or zone in a vein or ore deposit which carries the profitable, or pay ore.

Pegmatite. Very coarsely grained granite; a giant granite.

Penthouse or Pentice. A shed-roof erected in the bottom of a shaft, when sinking, to protect miners from accidental fall of rock, timber or tools from above.

Peroxide. The oxide of any metal containing the greatest proportion of oxygen.

Pertenencia. The unit of a mineral claim in Mexico; 100 meters square, or one hectare, 2.471 acres.

Peter Out. To pinch out, or feather out and end.

Petrology. The study of rocks by thin sections and microscope.

Phosphate. An ore of any metal or metals with which phosphorous and oxygen are chemically united.

Picul. A Chinese weight of 133½ lbs.; commonly used in the Orient.

Pillar. A section, or block or ore left in place to support shafts or roofs.

Pinching. The narrowing of a vein.

Pinching Out. The narrowing of a vein to extinction.

Pipe Vein. An orebody of chimney form.

Pitch. The angle and direction of dip or take of an ore-shoot in a vein. If a vein dips east, an ore-shoot may pitch at a flatter angle than the vein, to the N. E. or S. E.

Plain. A flat or nearly level country.

Placer. A deposit of metal-bearing gravel or alluvium.

Plant. The machinery equipment of a mine or reduction works. In general use the term includes buildings, housing, machinery.

Plat. To draw to scale. In Lake Superior and Australian usage it is the station or enlargement of a level, to give extra space for loading and unloading the cage, skip, or bucket.

Plumbiferous. Carrying lead.

Plutonic. Rocks of deep-seated, igneous origin.

Pocket. An orebody of small extent; a natural underground reservoir of water; a cavity cut in the rock underground to hold ore; a bin at shaft house or mill, in which ore, flux, or fuel is stored.

Pockety. Carrying only occasional bunches of good ore.

Poling. The process of deoxidizing molten copper and tin in a reverberatory furnace by stirring with long poles of green timber.

Poll-Pick. A tool having a pick on one end, and a poll, or hammer head, on the other.

Pood. A Russian weight of 36.112 lbs. avoirdupois.

Poppet-Head. Framework or gallows frame over a shaft, for sheave-wheel and hoist rope.

Porphyritic. Carrying isolated crystals in a ground mass, like plums in a pudding.

Porphyry. Properly, is any igneous rock showing phenocrysts, i. e., distinctly isolated crystals in a dense or crystalline matrix. Porphyry may be granite, quartz, or one of several other rocks.

Pound. The troy pound alone is used for gold, silver, and platinum only. It is 0.82286 of an avoirdupois pound. A pound of gold weighs 12 troy ozs. or 5,760 grains and the avoirdupois pound 7,000 grains.

Primary. The first; primary ores are those first or originally formed in an ore deposit, before alteration began. Also applies to the oldest rock formations.

Prop. A heavy timber placed with its foot against the floor of a mine opening, and its top against the roof, to support the rock above.

Prospect. To seek for mineral; a new mining property that has not yet been developed enough to be called a mine.

Prospector. A searcher for mineral deposits.

Protoxide. The oxide of any metal containing the least proportion of oxygen.

Puddingstone. A coarse conglomerate showing rounded pebbles.

Pulp. Pulverized ore or concentrate.

Pulverize. To crush to powder.

Pulverulent. That which may easily be reduced to powder.

Pyrrhotite. Iron sulphide, often called mundic or magnetic pyrite.

Pyrite. Iron disulphide; fool's gold.

Pyrites. A local term for pyrite and for sulphide ores; more properly, iron disulphide.

Pyrolusite. A black, manganese ore containing 63% manganese.

Quarry. An open pit, of varying size, sometimes several acres, from which stone or ore is mined.

Quarter-Section. In the United States a quarter of a square mile; 160 acres, laid out in a parallelogram, each side of which is one-half mile in length.

Quartz. Crystalline silica; any hard silicious ore, in miners' usage.

Quartz Claim. In the United States mining claims are of two classes: placer claims, carrying mineral, usually gold, in alluvium; and quartz lode claims, any prospect carrying metalliferous bodies in place.

Quartzite. An altered (metamorphosed) crystalline sandstone.

Quartzose. Rock having much quartz in its composition.

Quicksand. Fine sand, which flows easily when wet.

Ragging. Cornish for rough cobbing; broken lumps of ore of medium size.

Raise or Rise. A shaft or winze that is being opened from below. Sometimes called upraise or uprise.

Rake. The pitch of an ore-shoot on the plane of the vein. Also applied to cross veins, which are sometimes called rake, or counter-veins.

Range. A mineral belt; also in many American states a surveyor's term for describing and locating lands. The state is surveyed in sections, towns, and ranges. A township comprises 36 sections and is a square of six miles. Each township receives a double number, one for the town and one for the range. The towns are numbered consecutively from south to north, and the ranges are similarly numbered from east to west. Thus T. 2 N., R. 5 W. means Township 2 north or 12 miles north and Range 5, or 30 miles west of the State meridian.

Reamer. A tool like a bit, used to enlarge a hole previously drilled.

Reduction. The separation of metals from their ores.

Reef. A quartz vein or lode; a projecting ledge or inclined wall like an outcrop. The gold deposits on the Rand are termed reefs.

Refining. The elimination of impurities from crude metals, or separation of metallic alloys obtained in the reduction of ores.

Refractory. A refractory ore is one that cannot be smelted or otherwise treated by ordinary metallurgical processes. A refractory stamp-rock is one that is pulverized with unusual difficulty.

Regulus. The metallic material that separates and settles in the bottom of a pot of molten matte, or slag.

Reniform. Kidney-shaped.

Reserves. The amount of payable ore, developed and ready for extraction, or blocked out ahead of immediate requirements.

Reverberatory Furnace. A smelting furnace in which the flame from the grate below is reflected back by the roof on the charge of ore.

Rise. A raise or opening driven upward.

Roasting. Driving off sulphur and other volatile elements from ore, by heat. When done in a furnace, under great heat, the process is called calcining.

Rob. To remove pillars and other supports from a mine for their mineral content, regardless of the future of the property.

Rock. Lake Superior; applied to ore mined and ready for the stamp mill. In English practice ore is called "Stone." More properly applied to the stony matter surrounding ore, or constituting the earth's crust; is a synonym for stone.

Rock Crusher. A machine for reducing rock or ore to smaller sizes. Crushers are of two types, the jaw and the gyratory. The jaw-crusher works by means of swinging jaws; the gyratory operates on the plan of a coffee-grinder, only that the motion is somewhat eccentric.

Rock Drill. A power drill.

Rock Filling. Waste rock, used to fill up worked-out stopes to support the roof.

Rock House. Lake Superior; the building (usually the one over the shaft) where copper-bearing rock from the mine is dumped from the ore skip (or bucket), is screened, crushed and stored in a bin, ready for shipment to the mill.

Rolls. Heavy steel rolls, worked in pairs, like a clothes wringer, for crushing rock and ore.

Roof. The rock overhead in a mine opening.

Room. Similar to a stope; term usually applied to mines working mineral bodies lying nearly horizontally.

Royalty. A percentage of the ore or value thereof paid to the land owner by the lessee of the mine; often a fixed sum for each ton of ore extracted.

Run. See mill run. A bar or course of ground better or worse than the average value of the mine.

Running Ground. Superincumbent material that breaks off readily and falls into the mine openings.

Saddle. Depression or U-shaped fold; the reverse of an arch or anticline.

Safety Cage. A cage furnished with automatic appliances to stop its descent in case the cable breaks.

Salting. Placing rich foreign ore, minerals or substances in a mine to deceive intending purchasers or other interested parties.

Sample. A specimen of ore from a mineral deposit. A selected sample is misleading because containing far above average value, and splendid samples frequently come from the poorest mines. An average sample is what its name purports—if it be an average sample.

Sampling. Cutting a representative part of an ore deposit, which should truly represent its average value. Most usually a trench-like cut 4 inches wide and 2 inches deep, cut into the clean face of ore and across its course. Honest sampling requires good judgment and practical experience.

Sand Pump. A pump, usually centrifugal, designed to lift water carrying large quantities of coarse tailings or sand in suspension.

Sand. Tailings from the stamp mills of Lake Superior copper mines; in fact, from any mills.

Sand (or Tailings) Wheel. A large wheel, having buckets on its inner perimeter, for elevating water carrying stamp-sand.

Scale Copper. Copper in very thin flakes.

Schist. A crystalline, usually micaceous rock of foliated structure, made up of superimposed flattened particles.

Scoria. Slags from copper smelters; volcanic ash.

Scoriaceous. Of the nature of scoria.

Scram. To search for ore in a mine that is apparently worked out and to extract it.

Screen. A grating of perforated metal or woven wire.

Seam. A thin layer of rock or ore.

Secondary Enrichment. An enrichment of a vein or an orebody by material of later origin, often derived from the oxidation of decomposed overlying ore masses. Nature's process of making high-grade out of low-grade ores. First discovered by Weed and announced by publication in Geol. Soc. of America program, Dec. 8, 1899. Confirmed by Emmons and by Van Hise, Feb., 1900.

Sectile. Easily cut.

Section. A field or district; also, in the U. S. a square mile of land.

Sedimentary. Rocks formed by deposition from water, as contradistinguished from rocks formed by igneous action.

Selvage. A clay seam along which parting occurs; also called fluccan.

Set. A framed form of timber, used for supporting ground in a mine.

Shaft. A pit or deep mine opening.

Shaft-House. A building at the mouth of a shaft, where ore or rock is received from the mine.

Shale. A hardened clay with fissile structure.

Shear Zone. A belt in which the rocks are crushed by many parallel fissures.

Sheave. A grooved wheel, notched to carry rope; an open pulley.

Shift. A miner's work period of 8 to 10 hours' time; a force of men employed on one turn.

Shift Boss. A mine boss, or under-captain, in charge of a gang or shift of miners.

Shoot. See ore-shoot. To fire or explode dynamite in holes drilled for that purpose. An erroneous spelling for chute.

Short Ton. A weight of 2,000 lbs. avoirdupois.

Shot. A blast of some explosive.

Shot Copper. Small rounded particles of native copper, somewhat resembling small shot in size and shape.

Shrinkage Stopping. Taking out ore by blasting it down on a heap of broken ore. Working space for drilling is kept open by drawing out part of the ore from an opening beneath. Is a method of overhead stopping.

Silica. Quartz, a compound of oxygen and silicon. Ordinarily sand is composed largely, if not wholly, of silica.

Silicate. A mineral composed of any metal or element chemically united with silica.

Silicious. Containing much silica or quartz.

Sill. The floor-piece of a set of mine timbers.

Sinking. The process of deepening a shaft or winze.

Sinking-Pump. A movable pump, usually vertical, hung in a shaft, and lowered, as the shaft is deepened.

Skip. An iron box, open at the top, running on guides, on four wheels, and hauled by a cable; used for hoisting ore and rock, and for lowering timber.

Skip-Road (or Way). A track of T-rails, spiked to wooden sleepers, on which a skip runs.

Slag. The melted rock or waste separated from the metal in a smelting furnace.

Slice. To remove ore in mine in pillars, or by successive slices.

Slickenside. A polished rock surface, showing striations produced by the opposing walls of a fracture rubbing and grinding against each other in the movement produced by earth stresses.

Slide. A bedding fault or slipping caused by the subsidence of the overlying rock formation; also applied to masses of loose rock, or ore on a mountain slope.

Slime. Exceedingly small particles of rock and mineral held in suspension in water. This mud is called slum.

Slime Table. A circular revolving table, on which slim flows and minute particles of mineral are saved.

Slip. A fault.

Sludge. The mixture of rock and water, or slime, formed by a diamond drill.

Sluice. A wooden trough, box, flume, or launder.

Smelter. Works where ores or crude metals are reduced by fusion.

Soapstone. Steatite; a soft unctuous rock.

Soft Ground. Heavy ground; rock about underground openings that does not stand well and requires heavy timbering.

Sollar. A platform or ladder landing in a shaft.

Spathic. Containing carbon dioxide; a carbonate.

Specimen. A sample of mineral selected because typical, unusual or exceptionally rich.

Speiss. Impure metallic arsenides produced in copper smelting; ore particles finely disseminated through a rock, usually occurring as impregnations.

Spelter. The common term for metallic zinc.

Sphalerite. Zinc blende; zinc sulphide; the most common zinc ore mineral; is often found associated with galena and chalcopyrite.

Spile. Lagging driven ahead of the regular timbering in treacherous ground.

Spitzkasten. Pyramidal boxes wherein ores are concentrated and sized by a jet of water fed from below.

Spoon. A long-handled spoon, used to scrape out drill holes.

Sprag. A prop or cross-timber set to secure the hanging wall in a stope. A short piece of wood used to block the wheels of a mine car.

Spur. A short, small branch from a vein.

Square Sets. A frame of mine timbers with mortised and tenoned sill, top piece and uprights of equal length, joined at right angles.

Squib. A fuse.

Squeeze. The slow settling down of the roof in mine workings without fracture.

Stack. The chimney of a furnace; usually employed to designate a number of furnaces, when used in the plural.

Stamp-Mill. A mill for crushing and concentrating minerals by stamps and jigs, etc.

Stamp-Rock. Rock containing fine copper that must be crushed and jigged to recover the metal.

Stamps. Machines to crush rock or ore by heavy blows.

Stamp-Shoe. The heavy chilled iron casting attached to the lower end of a stamp piston, and does the actual crushing of rock in a stamp-mill. It hits against a round steel block called a die.

Stanniferous. Tin-bearing.

Station. A chamber in a shaft, cut out for pumps, landing place, etc.

Station-Pump. A mine pump permanently placed, as distinguished from a movable sinking-pump.

Steatite. Soapstone; a greasy mineral, having a talc base.

Step Fault. A series of faults, rising like steps.

Stockwerk. A mass of rock penetrated by numerous small stringers of ore, the entire mass averaging sufficiently rich in metallic material to warrant its mining and treatment.

Stone. See Rock.

Stope. (V.) To mine or extract ore. (N.) The workings between levels or drifts, in which ore is broken down in a series of chambers and taken away for treatment.

Stoping. Breaking down the mass of pay-rock or ore above a drift. When stoping in an orebody of average width, miners can break rock much more quickly and cheaply than when driving the drifts.

Stoping Ground. Part of an orebody opened by drifts and raises and ready for breaking down.

Strata. The successive beds or layers of sedimentary rocks.

Stratified. Having regular layers of varying rock varieties.

Stratum. A layer or bed of rock.

Streak. The color given by a mineral when scratched or when rubbed on porcelain.

Strike. The horizontal direction of a vein, measured by the points of the compass; a discovery of ore.

- Stringer.** A thin seam of ore.
- Strip.** To remove the overburden of waste, drift, or alluvial soil overlying an orebody.
- Stripping.** The waste or overburden above an orebody.
- Structure.** The form of a mineral, whether granular, crystalline or amorphous.
- Stull.** The top-piece of a set of mine timber. A timber prop supporting the roof of a mine opening.
- Sulphate.** A chemical compound (or a mineral) of a metal combined with sulphuric acid; an ore of any metal or metals with which sulphur and oxygen are united chemically.
- Sulphide.** A mineral or ore of any metal or metals with which sulphur is combined chemically.
- Sulpho-antimonite.** A mineral in which sulphur and antimony are united chemically with a metal.
- Sulpho-arsenite.** An ore mineral of any metal or metals with which sulphur and arsenic are united chemically.
- Sulphuret.** A sulphide; term becoming obsolete, but used in California.
- Sump.** The pit at the bottom of a shaft, where water collects; also in cyanide plants.
- Surface Rights.** The ownership of the surface of land only, where mineral rights are reserved.
- Swabstick.** A stick used to clean out drill-holes.
- Syncline.** Canoe or U-shaped fold of rock layers; the reverse of an anticline.
- Table.** A concentrating machine for separating finely crushed particles of ore from gangue.
- Table Land.** A plateau.
- Tailings.** The sandy and gravelly residue or refuse matter from a concentrating mill.
- Tamp.** To closely pack clay or other sticky earth into a drill-hole above the cartridges, to give greater force to the blast.
- Tap.** To draw off molten metal or slag from the vent of a furnace.
- Taper Off.** Cornish for stopping work temporarily.
- Tenor.** The percentage or average metallic content of an ore, matte, or impure metal.
- Terrero.** Spanish for heaps of partly leached ore.
- Tertiary.** The third great geological period preceding the present Quarternary period.
- Test-Pit.** A shallow pit sunk to look for mineral.
- Texture.** A rock structure; is fine or coarse grained, porphyritic, etc.
- Throw.** The displacement of a vein caused by faulting.
- Timber.** The wooden logs and sticks used for underground supports.
- Timberman.** One who works at timbering a mine.
- Ton.** Long, 2,240 lbs.; metric, 2,206 lbs.; short, 2,000 lbs.
- Tonelada.** Spanish for long ton.
- Township.** Abbreviated T. or Twp.; see Range.
- Trachyte.** A light-colored volcanic rock made of alkaline feldspar with black mica and hornblende.
- Tram.** To load rock or ore in cars and push same to the shaft; a tramway.
- Trammers.** Men who load and tram the broken rock underground.
- Trap.** A dense gray, blue or greenish rock of volcanic origin; usually an old and altered basaltic rock.
- Trend.** The general direction of a mineral body.
- Trestle.** A frame-work of timbers, carrying tram-tracks.
- Tribute.** The money per ton or percentage of ore extracted which is paid by lessees to owners for the privilege of working a mine.
- Tripod.** The three-legged iron frame on which the working parts of a power-drill rest; a three-legged wooden frame over the mouth of a pit or shaft.
- Trommel.** A revolving cylindrical sieve for sizing ore.

Troubled. A vein is sometimes called troubled when disturbed or faulted.

True Fissure Vein. All mineralized fissures are true fissure veins. Term commonly used as meaning a fissure vein with promise of holding to great depth, in contradistinction to a gash vein.

Tsubo. A Japanese measure of 6 feet square, equalling 36 square feet.

Tube Mill. A steel cylinder half filled with flint pebbles, which crush ore when the tube is revolved.

Tufa. A limestone formed by spring waters. Name frequently used in place of tuff.

Tuff. Volcanic ash, cinder, and lapilli, ejected from volcanic vents and deposited in layers from air in water and solidified by time and superincumbent pressure. Name also used for coarser volcanic debris, including breccia and conglomerate.

Tunnel. A practically horizontal opening entirely through a hill or mountain. Term is commonly used instead of adit, which is a horizontal gallery having only one opening to surface.

Turbine. The most efficient form of water-wheel; also a new form of steam-engine in which the entire movement of the power-producing parts is rotary instead of reciprocating.

Tuyeres. The pipes in a furnace wall by which air is supplied under pressure, to either blast furnaces or bessemer converters.

Unconformable. With a break between. rock beds lying at different angles or with erosion surface between.

Underhand Stopping. Cutting out ore from the floor of an opening. Removing ore in descending steps.

Underlay, Underlie. The downward extension of a vein or bed beneath the ground. Is technically the horizontal departure of a vein from the vertical measured in feet, per fathom (or 100'). Mineral bodies lying under a given tract, though not outcropping on surface.

Unpatented. Mining claims to which a deed from the U. S. Govt. has not been received. They are subject to annual assessment work, in order to maintain ownership.

Unstratified. Rock that is not bedded in layers.

Unwater. To free from water; to pump out or drain a mine.

Upcast. A shaft having an upward air current.

Upraise. A raise, an upward opening in a mine.

Van. To wash ore on a shovel, like panning.

Vanner. A concentrating table or machine for dressing ore by means of vibratory motion, aided by jets of water to carry away waste rock.

Vara. A Spanish-American measure of length, of 33 inches.

Vein. A rock fissure filled with mineral matter; a mineral body having defined walls. See contract vein and fissure vein.

Veinstuff. Vein filling; also used for gangue.

Vertical Shaft. One sunk at an angle of 90° with the horizon, or directly downwards toward the center of the earth.

Virgin. Native metal occurring elementally, as distinguished from ore minerals, which are chemical compounds.

Vitreous. Of a glassy nature.

Volatile. That which can be driven off as vapor, by heat.

Vug. A cavity in the rock; usually lined with a crystalline encrustation.

W. The chemical symbol for tungsten.

Wall. The side of a mine opening or drift. The waste or country rock on each side of a vein.

Wall Plates. Are the two side pieces of a set or frame of shaft timbers, as distinguished from the end pieces.

Water-Jacket. An outer casing for a blast-furnace, in which water circulates, to keep the metallic furnace-walls from melting because of the intense heat of the charge.

Water Level. The level above which water does not rise, when a mine is allowed to fill. The water level is often the point below which altered and enriched ores are succeeded by base, unaltered sulphides.

Weathered. Changed by long exposure to air and water.

Wet Process. Leaching or lixiviation.

Wheal. Cornish for mine.

Whim. A windlass with a vertical drum revolved by horse-power and used for hoisting.

Whip. A fixed pulley with hoisting rope passed through it and pulled by a horse or mule.

Wilfley. A Wilfley concentrating table; about 20,000 in use throughout the world.

Winch. A windlass.

Winding. Hoisting with rope and drum.

Windlass. A device for hoisting from a pit or shaft, by means of coiling a rope or cable around a drum, with crank handles.

Winze. A shaft, usually short, extending downward from the floor of a mine opening.

Wire Bars. Refined copper cast into bars for wire drawing.

Workings. The underground openings of a mine.

Wulfenite. See molybdenum in minerals.

Zinc Blende. Sphalerite; sulphide of zinc.

Zinckiferous. Carrying zinc.

Zinc Sulphide. A compound of zinc and sulphur. See minerals.

Zn. The chemical symbol for zinc.

CHAPTER II

MINERALOGY

(See Chapter III for Copper Ores)

ORE MINERALS:

Ores as mined are very seldom composed entirely of ore minerals, usually consisting of a mixture of quartz, or other non-metallic mineral, or of altered rock and metal-bearing minerals. The mixture constitutes ore when it contains enough value, in one or more metals, to pay for the cost of mining, concentrating, transportation, smelting, and marketing. As this cost varies with each mine and locality, and the price of every metal, save gold, also fluctuates, there is a wide range of value to ore. The Alaska gold quartz mines operating on a gigantic scale can mine, mill, and extract their product for less than \$1 per ton, whereas many smaller mines cannot make a profit on \$3 ore of similar character. Copper ores show a much greater margin, between the costs at the Utah Copper Co. and those of small vein mines.

In the following pages I have given a list of the more important ore minerals of each metal. It is intended only for general reference; the minerals being arranged under the name of the metal. The list of copper minerals is complete, giving every mineral containing copper. For sight tests and recognition of ore minerals, see "Practical Field Mineralogy," Farrell-Moses, 1912.

ALUMINUM.

Bauxite. 74% alumina. Hydrated alumina. Regarded as a hot spring deposit. Occurs in pockets in clay in Arkansas.

Corundum. 53% aluminum. A bluish-gray, brown or white mineral which is harder than and will scratch any other mineral except diamond; will scratch steel. The clear red is the gem ruby and the blue, sapphire, found in many basic igneous dikes in Montana, especially in the sapphire mines at Yogo.

Cryolite. 12.8% aluminum, sodium alumina fluoride. A Greenland ore, essential to aluminum reduction.

Gibbsite. 65.4% alumina. Hydrated alumina, derived in Arkansas deposits from decomposition of a granitic rock (Elaeolite syenite).

ANTIMONY.

Stibnite. Antimony glance 71.4% antimony. Is the common ore; a sulphide of the metal. Is in process of deposition at Steamboat Springs, Nevada. Antimony occurs in many silver ores. Is common in tetrahedrite or silver-bearing copper minerals. Antimony ores are mined at Pine Creek, near Wardner, Idaho. Specific gravity, 4.5.

ARSENIC.

This metal is largely derived from arsenopyrite deposits, from nickel or cobalt arsenides, common at Cobalt, from enargite, copper arsenide, at Butte.

Arsenopyrite, or **Mispickel**, a sulpharsenide of iron, with 46% arsenic, which looks like iron pyrite, but emits a garlic odor when struck. Occurs in fissure veins, with gold ores. Ruby silver and other minerals rich in silver also contain arsenic. Gravity, 6.

Bismuthinite. Bi_2S_3 , 81.2% bismuth, a sulphide of bismuth. Gravity, 6.4. The metal is a subordinate constituent of many gold, tin, and silver ores, especially those of Leadville, Colo. It is obtained mainly as a by-product from gold-silver and lead ores and not from ores mined for this metal itself.

CADMIUM.

Greenockite. Is the only important ore mineral, the yellow sulphide, which occurs with zinc (sphalerite) ores in the Mississippi states.

CHROMIUM.

Chromite, FeO , Cr_2O_3 , or chrome iron ore, with 68% chromium, is the sole ore of commerce. Gravity, 4.5. It resembles magnetite, the black iron oxide ore.

COBALT.

Cobaltite, or cobalt sulpho-arsenide, with 35.4% cobalt.

Erythrite. A cobalt bloom, 37.4% cobalt, a creamy raspberry red mineral, formed by oxidation; a hydrated arsenious oxide.

Smaltite. Cobalt arsenide with 28.2% arsenious oxide. A silver-white mineral, harder than cobaltite; garlic odor when struck. Gravity, 6.5.

COPPER.

See special list of all copper minerals given in Chapter III.

GOLD.

Calaverite. A pale bronze yellow telluride of gold with 40% gold, 1-2% silver and balance tellurium. Breaks with uneven fracture and scratches easily. If burned in a forge gives beads of gold. Common at Cripple Creek and Kalgoorlie, Western Australia.

Native. As clean metallic, gold; as rusty and mustard colored gold and as pale colored electrum, an alloy with silver.

Petzite. Tellurides of gold and silver, a steel or iron gray metallic lustered mineral easily scratched with knife, slightly scaly, 20% to 25% gold; 18% to 25% silver.

Pyrite is the commonest gold bearing mineral.

Sylvanite. A silvery telluride of gold and silver, with brilliant metallic lustre, very soft, and carries 26% gold, 12.5% silver. Common in Cripple Creek, Colorado, ores.

IRON.

Hematite. 70% iron; black to brick red color; 5.5 to 6.5 hardness; 4.9 to 5.3 gravity. Mined in enormous quantities in Lake Superior region.

Magnetite. 72.4% iron; a black, sandy material or as coarse and fine-grained masses; is magnetic; 5.5 to 6.5 hardness; 4.9 to 5.2 gravity.

Pyrite. 46.7% iron; 53.4% sulphur; brass color; occurs frequently in crystalline masses; 6 to 6.5 hardness; 4.9 to 5.2 gravity. Rarely used as a direct source of iron.

LEAD.

Galena. The common ore of lead; lead sulphide, 8.6% lead, a steely, silvery mineral that crystallizes in cubes, occurs massive, resembling pig iron, or with sheeted structure. Breaks with perfect cleavage. Is often silver-bearing. Gravity, 7.5 to 7.7.

Cerussite. White lead ore, lead carbonate, 77.5% lead, a white or gray brittle mineral with waxy lustre. Is the most common oxidized ore of lead and effervesces with acid. Gravity, 5.5.

Anglesite. Lead sulphate, 73.6% lead; a brittle, colorless, or white mineral, often coating a kernel of galena and mixed with cerussite; very common. Gravity, 6.3.

Pyromorphite. Lead phosphate, 76.30% lead, a green, gray or brown mineral fusing easily to crystalline globules. Occurs in six-sided crystals and mossy fibres.

Jamesonite. Feather ore, lead sulpho-antimonide, 50.8% lead, 29.5% antimony, 19.7% sulphur, steel gray, metallic hairs and needles, also compact.

Bournonite. Lead copper sulphide. See Copper.

Vanadinite. A lead chloro-vandaninite, containing 18.7% lead oxide, 19.4% vanadium oxide, 2.5% chlorine, a bright yellow, orange or brown mineral, occurring in small, sharp hexagonal crystals; fuses easily.

Wulfenite. See molbdenum.

MANGANESE.

Ores to be valuable must contain at least 40% of the metal. Only the oxide ores are valuable.

Braunite. 69.6% manganese. Occurs as brown and black bands in clay in Arkansas.

Franklinite. See under zinc.

Psilomelane. 77% manganese; earthy manganese.

Pyrolusite. 63.2% manganese; black manganese ore resembling limonite. Is the common form of the Virginia deposit.

Wad. A soft earthy brown or black ore of variable composition, generally 20 to 45% manganese, also 10 to 25% water, and oxides of iron and copper.

MERCURY.

Cinnabar. 86.2% mercury. Sulphide of mercury, a red mineral, which is easily decomposed by heat.

MOLYBDENUM.

Molybdenite. The sulphide carries 60% molybdenum. Is a soft, lead colored, scaly metallic mineral resembling graphite, but malleable and giving a greenish streak on unglazed porcelain. Easily scratched by fingernail. Gives sulphurous odor when heated, thus distinguishing it from graphite.

Molybdate. Oxide with 66.7% molybdenum. Is an earthy yellow powder, formed by oxidation, but has never been found in commercial quantity.

Wulfenite. Lead molybdate, contains 39.3% molybdic oxide. It usually occurs in flat, resinous, lustered, yellow, orange or red crystals, in the oxidized parts of lead deposits. Arizona has several deposits.

NICKEL.

Nickelite. Arsenical nickel, copper nickel, 43.6% nickel, 56.4% arsenic; somewhat resembles native copper. Has brownish, black scratch; metallic lustre and melts on heating.

Millerite. Sulphide of nickel, 64.4% nickel, a brass yellow, easily tarnished mineral, easily scratched by a knife.

Pyrrhotite (magnetic iron pyrite). Contains 2-6% nickel at Sudbury, Ont. Sulphur content is about 30%.

PLATINUM.

Metallic. In America is found in the black sand of gold placers, also at the Boss mine in Nevada, and as minute crystals of sperrylite in Sudbury, Canada, nickel ores.

RADIUM.

Carnotite. See Uranium.

Pitchblende. See Uranite (uranium).

SILVER.

Argentite. Silver glance; 85% silver; a silver sulphide of leaden-gray, metallic appearance; scratches with thumb nail.

Embolite. Silver bromide, 67% silver; resembles horn-silver.

Frieslebenite. Gray silver; 22% silver, 30% lead, 28% antimony, 18% sulphur. Resembles gray copper ore (tetrahedrite), but contains silver.

Galena. Lead sulphide. Is usually silver-bearing in our Western ore deposits.

Hornsilver. Cerargyrite; 75.3% silver, 24.7% chlorine. When pure resembles wax and cuts like it. A fragment put on zinc and wetted turns black and is reduced to silver.

Polybasite. 50.6% silver. A brittle, metallic mineral formed of silver and copper, combined with arsenic and antimony; often shows triangles on.

Proustite. Light red or ruby silver, with 65% silver; also called arsenical silver; a brilliant red or ruby colored mineral that is sub-translucent, and is bright red, when powdered.

Pyrargyrite. Dark ruby; 60% silver; antimonial silver; a dark red to black metallic lustered mineral with brilliant red streak, or purplish powder.

Stephanite. Brittle silver, 68.5% silver; an antimonial sulphide of silver, with iron black color and streak.

Tetrahedrite. Gray copper ore, often rich in silver, with up to 17% silver. Usual composition, copper 30-40%; antimony 15-25%; sulphur 20-25%. Brittle iron gray to black metallic mineral; an important silver ore. See under Copper Minerals, next chapter of this book.

TIN.

Cassiterite. Oxide of tin, 78.67% tin. Is the common ore of tin; when weathered, looks like wood, but is very heavy.

Stannite. Tin sulphide, rare.

TUNGSTEN.

Wolframite. Iron manganese tungstate, 76.4% tungstic acid (WO_3). Has a hardness of 5; gravity 5, and a dark brown streak. The name covers all transitions and variations of iron-manganese tungstate from iron tungstate ferberite to manganese tungstate hübnerite.

Occurs in long, dark brown crystals, or short, stoutish columnar masses, varying to black, brilliant, lamellar masses in quartz and pegmatite. The brown varieties are softer and more brittle than the blacker form, whose thin flakes are deep red in transmitted light. Is the most common ore of tungsten.

Ferberite. Iron tungstate, 76.3% tungstic acid. A dull, coal black mineral, sometimes in an aggregate of cubic crystals, more often massive in black, sooty looking material in veins in pegmatite. Is thus far only found commercially in Nederland district, Boulder Co., Colo., and is a desirable ore.

Hübnerite. Manganese tungstate, 76.6% tungstic acid. A light brown mineral often in needle-like crystals of hair brown color, in quartz.

Scheelite. Tungstate of lime, 80.6% tungstic acid. Hardness $4\frac{1}{2}$, gravity 6. Streak white, gray or pale brown, very heavy mineral with peculiar glitter to fractured surfaces. Occurs massive, and as crystals imbedded in quartz, and also in garnet (Hawthorne, Nev., and Bishop, Calif.). Also in gold ores, as at Grass Valley, Calif.; Seoul, Korea; Murray, Idaho; and in New Zealand.

The field test for tungsten is to crush the specimen and "pan" it, to get the heavy residue; powder a part of the residue and put it in a glass or porcelain dish; add a half ounce (tablespoonful) of muriatic acid and heat to near boiling for fifteen minutes. Then add a few drops of nitric acid and boil one minute. Set aside a moment to settle and pour off liquid into a large tumbler of cold water. Also add cold water to residue and stir. Set aside both dishes a few minutes to settle, then pour off liquid. Canary yellow sediment in dish shows tungstic acid.

The more common test is to wrap tin foil about the specimen and boil hard in hydrochloric (muriatic) acid for 15 minutes, remove foil; a blue color indicates tungsten, but the test does not always show the color.

URANIUM.

Carnotite. 52%-57% oxide of uranium. A vanadate of uranium and potassium; a canary yellow powdery mineral occurring in large bedded deposits of impregnated sandstone in southern Utah and southwestern Colorado. Is the chief ore of uranium.

Uraninite. Pitchblende. 65%-80% uranium. A black to dark brown, olive green, very heavy mineral, found in Connecticut, Texas, Colorado, South Dakota, and in Austria. (See Bull. 70, U. S. Bureau of Mines, for description of mines.)

VANADIUM.

Carnotite. (See above.) 18% vanadium.

Roscoelite. 21%-29% vanadium; a scaly green to brown micaceous mineral mined at Vanadium, Colo., by the Primos Co., and also found in California quartz mines.

Vanadinite. 19.4% vanadium oxide. See under lead minerals.

ZINC.

Calamine. Hydrated zinc silicate, 67.5% zinc oxide, balance water and silicon; gravity, 3.9.

Is also the trade name for oxidized zinc ores. Often occurs in clay. Is yellow to brown, rarely pale blue or green.

Franklinite. An iron manganese zinc mineral with 5.54% zinc, 51.8% iron and 7.5% manganese; found at Franklin, N. J.

Smithsonite. Zinc carbonate, 64.8% zinc oxide. Dry bone, the white carbonate of zinc, differs from calamine by effervescing in acid; hardness, 5.

Sphalerite. Blende, Black jack, zinc blende, 67% zinc. Is the chief

source of the metal; varies from brown to black, rarely clear resinous. Gravity, 4. Hardness, 3.5-4. Knife scratch, brown to yellow.

Willemite. Zinc silicate, with 72.9% zinc oxide. Is a greenish yellow to applegreen mineral with resinous lustre. Is only important as an ore mineral at Franklin, N. J.

Zincite. Red zinc ores, 80.3% zinc. Occurs at Franklin, N. J.

CHAPTER III

A DESCRIPTION OF ALL COPPER-BEARING MINERALS

Important ore minerals in capitals

This chapter has been carefully revised and amplified and is the only complete list of copper-bearing minerals published.

Aciculite. Aikinite.

Adamite. A hydrous basic zinc arsenate, in which copper sometimes replaces zinc to the extent of about 18%.

Aguilarite. An unnamed alteration product of aguilarite, has the formula $5(\text{Ag,Cu})_2\text{S}(\text{Sb,As})_2\text{S}_3$. The mineral, which is an arseno-sulpho-antimonite, is isometric.

Aikinite. $3(\text{Pb,Cu}_2)\text{S.Bi}_2\text{S}_3$. A lead and copper sulphobismuthite, carrying 11% copper. Common names, needle ore, acicular bismuth. Crystallization, orthorhombic. Fracture, uneven. Hardness, 2 to 2.5. Gravity, 6.1 to 6.8. Lustre, metallic. Color, blackish lead-gray, tarnishing to pale copper-red. Fuses on charcoal and is soluble in nitric acid. Occurrence, in acicular crystals in quartz, Ural Mountains of Russia and Gold Hill, North Carolina.

Alaskite. An argentiferous and cupriferous variety of galenobismuthite, which is a lead sulphobismuthite, carrying 3.5 to 5.1% copper.

Algodonite. Cu_3As . A copper arsenide carrying 85.5% copper. Structure, massive and granular. Fracture, subconchoidal. Hardness, 4. Gravity, 7.62. Lustre, metallic on fresh fractures, dulling on exposures. Color, steel-gray to silver-white on freshly polished surface, tarnishing to bronze. Is less fusible than domeykite. Occurs in Chile and Lake Superior, in the latter district being found in cross-courses traversing the cupriferous beds of the South Range mines, causing the copper product to be highly arsenical.

Alisonite. $3\text{Cu}_2\text{S.PbS}$. A copper and lead sulphide, carrying 53.5% copper, and 28.5% lead. Is related to cuproplumbite. Structure, massive. Color, deep indigo-blue, quickly tarnishing. Occurs at Coquimbo, Chile.

Ammiolite. Formula undetermined. A mercury and copper antimonite, carrying about 12.5% copper. Occurs, as an earthy powder, in Chile.

Andrewsite. Formula undetermined. A hydrous iron and copper phosphate related to chalcosiderite, containing about 8.6% copper.

Annivite. A variety of tennantite with antimony and bismuth, from Switzerland.

Antimonial Copper. Common name for chalcostibite.

Antlerite. Formula probably $10\text{CuO}.3\text{SO}_3.7\text{H}_2\text{O}$. A basis copper sulphate, containing about 54.7% copper. Structure, massive. Gravity, 3.93. Color, light green. From Yucca, Mohave county, Arizona.

Aphanesite. See clinoclasite.

Aphtonite. An argentiferous and zinciferous variety of tetrahedrite.

Arnimite. $5\text{CuO}.2\text{SO}_3.6\text{H}_2\text{O}$. A hydrous basic copper sulphate, containing 47.6% copper. Color, bright green. Occurs in acicular crystals.

Arzunitite. $(\text{Pb}_2\text{O})\text{SO}_3.3(\text{CuClH}_2\text{O})\text{CuOH}_2$. Crystallization orthorhombic, in small bluish green prisms.

Arsenical Copper. Domeykite.

Asperolite. $\text{CuSiO}_3.3\text{H}_2\text{O}$. A hydrous copper silicate. Apparently a hydrated chrysocolla, from Tagilsk, Perm, Russia.

Atacamite. $\text{CuCl}_2.3\text{Cu}(\text{OH})_2$. A hydrous copper oxychloride, containing 60.5% copper. Crystallization, orthorhombic. Fracture, conchoidal. Tenacity, brittle. Hardness, 3 to 3.5. Gravity, 3.75. Lustre, adamantine

to vitreous. Color, emerald green to blackish green. Streak, apple-green. Is transparent to translucent. Occurs, as sandy granules, in numerous mines in the province of Atacama, Chile, and elsewhere. Usually occurs disseminated, and low in copper tenor, but is extensively mined in Chile.

Atelite. $2\text{CuO} \cdot \text{CuCl}_2 \cdot 3\text{H}_2\text{O}$. A hydrated copper oxychloride. An altered tenorite. Color, green. An alteration product from Mt. Vesuvius, closely related to atacamite chemically and mineralogically, but occurring as a pseudomorph after tenorite.

Atlasite. A copper carbonate containing chlorine, from Chañarcillo, Chile. Apparently is merely an intimate mixture of azurite and atacamite.

Aurichalcite. $2(\text{Zn}, \text{Cu})\text{CO}_3 \cdot 3(\text{Zn}, \text{Cu})(\text{OH})_2$. A basic zinc and copper carbonate, containing 16.6% copper. Crystallization, probably monoclinic. Occurs in acicular crystals, forming drusy incrustations, also columnar, laminated and granular. Hardness, 2. Gravity, 3.5 to 3.6. Lustre, pearly. Color, pale turquoise green to sky-blue. Streak, light green to light blue. Is translucent. Is soluble in acids. Occurs in small quantities in many zinc and copper fields.

AZURITE. $2\text{CuCO}_3 \cdot \text{Cu}(\text{OH})_2$. A basic copper carbonate, containing 53.3% copper. Common names, blue carbonate of copper, blue malachite, azure copper ore. Crystallization, monoclinic. Fracture, conchoidal. Tenacity, brittle. Hardness, 3.5 to 4. Gravity, 3.77 to 3.83. Lustre, vitreous. Color, azure blue. Streak, lighter blue. Is subtranslucent to transparent. Occurs frequently in the oxidized zone of copper ore bodies, almost invariably with malachite, but is much less common than malachite. Is a valuable commercial ore of copper.

Barnhardtite. Formula uncertain. A copper and iron sulphide, probably an alteration product from chalcopyrite that has lost part of its iron and copper, containing 46.7 to 50.4% copper. Apparently is nearer to bornite than to chalcopyrite. Structure, massive, compact. Fracture, conchoidal. Hardness, 3.5. Gravity, 4.5. Lustre, metallic. Color, bronze-yellow, tarnishing to pinchbeck-brown. Streak, grayish black, slightly shining. Occurrences: North Carolina and Arizona.

Barracanite. Cupropyrite.

Bayldonite. $4(\text{Pb}, \text{Cu})\text{O} \cdot \text{As}_2\text{O}_5 \cdot 2\text{H}_2\text{O}$. A hydrous basic lead and copper arsenate containing 26.1% copper. Occurs in minute mamillary concretions with drusy surface. Fracture, subconchoidal. Hardness, 4.5. Gravity, 5.35. Lustre, resinous. Color, grass-green to blackish green. Streak, apple-green. Is subtranslucent. Soluble, with difficulty, in nitric acid. Occurs in Cornwall, England.

Beaumontite. A very doubtful hydrous copper silicate, from Chessy, France.

Bell-Metal Ore. Common name for stannite.

Berzelianite. Cu_2Se . A copper selenide containing 61.6% copper. Occurs disseminated in incrustations. Is very soft. Gravity, 6.71. Lustre, metallic. Color, silver-white, soon tarnishing. Streak, shining. Usually is argentiferous. Occurs in Småland, Sweden.

Beudantite. Apparently this name is applied to two minerals, one an arsenate and the other a sulphate of iron, lead and copper, carrying from a trace to 9.8% copper.

Binnite. Formula probably $3\text{Cu}_2\text{S} \cdot \text{As}_2\text{S}_5$. A copper sulphoarsenite, containing 37.7% copper. A variety of tennantite. Crystallization, isometric. Fracture, conchoidal. Tenacity, brittle. Hardness, 2.5 to 3. Gravity, 4.47. Lustre, metallic. Color, dark steel-gray to iron black. Streak, reddish brown. Occurrence: Binnenthal, Switzerland.

Black Copper. Common name for melaconite or disseminated chalcocite. In all likelihood much of what has been taken for melaconite in the past was disseminated chalcocite.

Blue Copper. Common name for azurite.

Blue Malachite. Common name for azurite.

Bluestone. Common name for chalcantinite; also for blue vitriol, the manufactured product corresponding in chemical formula with chalcantinite; CuSO_4 .

Blue Vitriol. Common name for chalcantinite or bluestone.

Bogoslovskite. Chrysocolla carrying carbon dioxide as an impurity, from the Bogoslovsk mine, Perm, Russia.

Boléite. $\text{Pb}(\text{OH})\text{Cl} \cdot \text{Cu}(\text{OH})\text{Cl} + \frac{1}{2}\text{AgCl}$. A hydrated lead, copper and silver oxychloride, containing about 12% copper. Crystallization, isometric. Texture loose. Hardness, 3 to 3.25. Gravity, 5.08. Color, indigo-blue. Occurrence: at the Boleo mines, Baja California, Mexico.

Boothite. $\text{CuO} \cdot \text{SO}_3 \cdot 7\text{H}_2\text{O}$. A hydrous sulphate of copper. Crystallization, monoclinic. Color, blue. A variety, Morenoside.

BORNITE. Cu_5FeS_4 . A copper and iron sulphide, containing 55.5% copper, 16.4% iron, 28.1% sulphur. Common name, peacock copper ore. Crystallization, rare isometric, with many hexagonal penetration twins. Structure, granular or compact. Fracture, small conchoidal to uneven. Tenacity, brittle. Hardness, 3. Gravity, 4.9 to 5.4. Lustre, metallic. Color, copper red to bluish brown, quickly tarnishing to iridescence, often most brilliant. Streak, pale grayish-black. Is soluble in nitric acid, with separation of sulphur. Is a primary mineral, at Butte and in contact metamorphic ores, but also occurs as the first alteration product from chalcopyrite among the secondary copper sulphides, and often carries nodules and occasionally larger masses of chalcocite. Is one of the most important ores of copper.

Botallackite. Atacamite.

Bournonite. $3(\text{Pb}, \text{Cu}_2)\text{S} \cdot \text{Sb}_2\text{S}_3$. A lead and copper sulphantimonite, containing 13% copper and 42.5% lead. Crystallization, orthorhombic. Structure, massive, granular and compact. Cleavage, imperfect. Fracture, subconchoidal to uneven. Tenacity, rather brittle. Hardness, 2.5 to 3. Gravity, 5.7 to 5.9. Lustre, brilliant metallic. Color and streak, steel-gray, inclining to blackish gray or iron-black. Fuses easily on charcoal and is soluble in acids. Occurrence: in many copper fields.

Brass Ore. Common name for aurichalcite.

Brochantite. $4\text{CuO} \cdot \text{SO}_3 \cdot 3\text{H}_2\text{O}$. A basic copper sulphate containing 56.2% copper. Crystallization, orthorhombic. Fracture, uneven. Hardness, 3.5 to 4. Gravity, 3.9. Lustre, vitreous. Color, emerald-green to blackish green. Streak, paler green. Is translucent to transparent. Is found in many copper fields, and is an important commercial ore in the Clifton district, Graham county, Arizona, and Chuquicamata, Chile.

Buratite. An aurichalcite containing calcium monoxide, probably as a mechanical admixture.

Cacheutaite. A lead, copper and silver selenide carrying 7 to 36% copper. Is closely related to zorgite.

Calciovolborthite. $4(\text{Cu}, \text{Ca})\text{O} \cdot \text{V}_2\text{O}_5 \cdot \text{H}_2\text{O}$. A hydrous basic copper and calcium vanadate, containing 31.7% copper. Hardness, 3.5. Gravity, 3.5 to 3.86. Color, gray to green. Streak, brownish yellow to greenish yellow. Occurrence: Thuringia, Germany.

Caledonite. $2(\text{Pb}, \text{Cu})\text{O} \cdot \text{SO}_3 \cdot \text{H}_2\text{O}$. A basic lead and copper sulphate, containing 9.4% copper. Crystallization, orthorhombic. Fracture, uneven. Tenacity, rather brittle. Hardness, 2.5 to 3. Gravity, 6.4. Lustre, resinous. Color, verdigris-green to bluish green. Streak, greenish white. Is translucent. Occurrence: Scotland, Hungary, California, etc.

Cantonite. A dimorphous variety of covellite, apparently a pseudomorph after galena, crystallized in cubes with cubical cleavage.

Capillary Red Oxide of Copper. Common name for chalcotrichite, a form of cuprite.

Carmentite. A variety of digenite.

Carrollite. $\text{CuS} \cdot \text{Co}_2\text{S}_3$. A cobalt and copper sulphide containing 20.5% copper and 38% cobalt. Crystallization, isometric. Fracture, subconchoidal to uneven. Hardness, 5.5. Gravity, 4.85. Lustre, metallic. Color, light steel-gray, with faint reddish hue. Occurrence: Carroll county, Maryland.

Castillite. $(\text{Cu}, \text{Ag})_2\text{S} \cdot 2(\text{Cu}, \text{Pb}, \text{Zn}, \text{Fe})\text{S}$. A copper, silver, lead, zinc and iron sulphide carrying about 41% copper. Apparently an impure bornite. Structure, massive. Hardness, 3. Gravity, 5.19 to 5.24. Resembles bornite in color, streak and tarnish. Occurrence: Guanacevi, Mexico.

Ceraleite. (Coeruleite) $\text{CuO} \cdot 2\text{Al}_2\text{O}_3 \cdot \text{As}_2\text{O}_3$. A massive clay-like, turquoise blue, arsenate of copper and aluminum.

CHALCANTHITE. $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$. A hydrous copper sulphate containing 25.4% copper. Common names, blue vitriol, bluestone, copper sulphate. Crystallization, triclinic. Structure, massive, stalactitic and reform, sometimes fibrous. Fracture, conchoidal. Tenacity, brittle. Hardness, 2.5. Gravity, 2.12 to 2.30. Lustre, vitreous. Color, sky-blue. Streak, uncolored. Is translucent to subtransparent. Is soluble in water. Occurs as deposits from mine water in most sulphide copper mines, and is found in impure state, in beds, in Chile.

CHALCOCITE. Cu_2S . A copper sulphide carrying 79.8% copper. Common names, copper glance, cuprous sulphide. Crystallization, orthorhombic; also occurs massive, with structure granular to compact and impalpable. Cleavage, indistinct. Fracture, conchoidal. Tenacity, brittle. Hardness, 2.5 to 3. Gravity, 5.5 to 5.8. Lustre, metallic. Color and streak, blackish lead-gray, tarnishing to dull green or blue. Is soluble in nitric acid. Occurs in all copper districts, frequently in large quantities. Is the richest commercial ore of copper and yields more than one-half of world's copper supply.

Chalcolite. Torbernite.

Chalcomenite. $\text{CuO} \cdot \text{SeO}_2 \cdot 2\text{H}_2\text{O}$. A hydrous copper selenite containing 28% copper. Crystallization, monoclinic. Gravity, 3.76. Lustre, vitreous. Color, bright blue. Is transparent. Is soluble in acids. Found at Cacheuta, Mendoza, Argentina.

Chalcomichlite. Bornite.

Chalcophacite. Liroconite.

Chalcopyllite. $7\text{CuO} \cdot \text{As}_2\text{O}_3 \cdot 14\text{H}_2\text{O}$. A hydrous basic copper arsenate containing 42.3% copper. Crystallization, rhombohedral. Hardness, 2. Gravity, 2.43 to 2.66. Lustre, vitreous. Color, grass-green to verdigris-green. Streak, grass-green. Occurs in Hungary, Siberia, and Utah.

CHALCOPYRITE. $\text{Cu}_2\text{S} \cdot \text{Fe}_2\text{S}_3$. A copper and iron sulphide containing 34.5% copper and 30.5% iron. Is the primary ore of copper. Crystallization, tetragonal, sphenoidal, often twinning, also frequently massive and compact. Fracture, uneven. Hardness, 3.5 to 4. Gravity, 4.1 to 4.3. Lustre, metallic. Color, brass-yellow, often tarnishing to iridescence. Streak, greenish black. Is soluble, except sulphur, in nitric acid, and, on being heated, yields a portion of its sulphur. On exposure to moisture and heat becomes hydrated, and copper and iron change readily to sulphates. Alters to azurite, malachite, melaconite, chalcocite, covellite, bornite, brochantite, chrysocolla, tetrahedrite, and tennantite. Is found in practically every copper field in the world, and is second only to chalcocite in importance among the commercial ores of copper.

Chalcopyrrhotite. $\text{CuS} \cdot \text{Fe}_4\text{S}_5$. An iron and copper sulphide containing 13% copper and 48.2% iron. Structure, massive. Hardness, 3.5 to 4. Gravity, 4.28. Color, brassy, with brownish tinge. Occurrence: Nya Kopparberg, Sweden.

Chalcosiderite. $\text{CuO} \cdot 3\text{Fe}_2\text{O}_3 \cdot 2\text{P}_2\text{O}_5 \cdot 8\text{H}_2\text{O}$. A hydrous iron and copper phosphate containing 6.4% copper. Hardness, 4.5. Gravity, 3.1. Crystallization, triclinic in minute distinct crystals in sheaf-like group. Lustre, vitreous. Color, dark green. Streak, pale green. Occurs in Cornwall, England, and Westphalia, Germany.

Chalcosine. Chalcocite.

Chalcostibite. $\text{Cu}_2\text{S} \cdot \text{Sb}_2\text{S}_3$. A copper sulphantimonite containing 25.6% copper and 48.5% antimony. Crystallization, orthorhombic, in thin prisms. Fracture, subconchoidal. Tenacity, brittle. Hardness, 3 to 4. Gravity, 4.75 to 5. Lustre, metallic. Color, between lead-gray and iron-gray. Occurrences: in the Harz Mountains of Germany, and in Guadix, Spain.

Chalcotrichite. A form of cuprite with capillary or acicular crystallization. Common name, plush copper ore.

Chalmersite. $\text{Cu}_2\text{S} \cdot \text{Fe}_4\text{S}_5$. Occurs in orthorhombic prisms. Color, bronze yellow. Found in Moiro Velho gold mine, Brazil, and Alaska.

Chelutite. A ferruginous, nickeliferous and slightly cupriferous smaltite.

Chenevixite. $2\text{CuO} \cdot \text{Fe}_2\text{O}_3 \cdot \text{As}_2\text{O}_5 \cdot 3\text{H}_2\text{O}$. A hydrous copper and iron arsenate containing 21% copper. Structure, massive. Fracture, subconchoidal. Hardness, 3.5 to 4.5. Gravity, 3.93. Lustre, vitreous. Color, dark olive-green to greenish yellow. Streak, yellowish green. Is soluble in acids. Occurrence: Cornwall, England, and Eureka, Juab county, Utah.

Chessylite. Azurite.

Chileite. Formula uncertain. A hydrous lead and copper vanadate containing 11.7 to 13.6% copper. Is related to psittacinite. Structure, earthy. Occurrence: Chile.

Chilenite. $(\text{Ag}, \text{Cu})_8\text{Bi}$. A silver and copper bismuthide, containing 8.5% copper and 75% silver. Structure, amorphous, granular. Is soft. Color, silver-white. Occurrence: Copiapó, Chile.

Chiviatite. A lead sulphobismuthite carrying about 2.5% copper.

Chloanthite. Empirically nickel diarsenide, but analyses invariably show cobalt and iron, and commonly small quantities also of copper, lead, silver, bismuth, and antimony.

Chlorothionite. $\text{CuCl}_2 \cdot \text{K}_2\text{SO}_4$. A copper and potassium chlorosulphate. Occurs in bright blue crystalline crusts on lava. Is an alteration product from Mt. Vesuvius.

Chlorotile. Formula probably $3\text{CuO} \cdot \text{As}_2\text{O}_5 \cdot 6\text{H}_2\text{O}$. A hydrous copper arsenate containing about 33% copper. Is related to trichalcite. Crystallization, orthorhombic; also occurs fibrous and massive. Is soft. Color, pale emerald-green. Is transparent.

CHRYSOCOLLA. $\text{CuSiO}_3 \cdot 2\text{H}_2\text{O}$. A hydrous copper silicate carrying 36% copper. Common names, mountain green and mountain blue. Structure, cryptocrystalline, enamel-like, sometimes botryoidal. Fracture, conchoidal. Is brittle and somewhat sectile. Hardness, 2 to 4. Gravity, 2 to 2.24. Lustre, vitreous to earthy. Color, mountain green, bluish green and sky blue to turquoise-blue, with impure varieties brown to dull black. Streak, white, from pure green and blue varieties. Is opaque to translucent. Is decomposed by acids, without gelatinization. Commonly occurs with carbonate ores in the oxidized zones of copper ore bodies, and is a commercial ore of value in many districts.

Clarite. $3\text{Cu}_2\text{S} \cdot \text{As}_2\text{S}_5$. Crystallization monoclinic. Color, dark lead-gray. Belongs to enargite family. A dimorphous form of enargite, from Schapbach, Baden, Germany.

Clayite. A lead sulphantimonite, carrying copper as a replacement of lead to extent of circa 8%.

Clinoclasite. $6\text{CuO} \cdot \text{As}_2\text{O}_5 \cdot 3\text{H}_2\text{O}$. A hydrous basic copper arsenate carrying 48% copper. Crystallization, monoclinic. Is brittle. Hardness, 2.5 to 3. Gravity, 4.19 to 4.36. Lustre, vitreous to resinous. Color, blackish blue-green externally, dark verdigris-green internally. Streak, bluish green. Is subtransparent to translucent. Is soluble in nitric acid. Occurrence: Cornwall and Utah.

Condurrite. Apparently a copper arsenide, related to domeykite. Is supposed to be an alteration product of tennantite. Is soft and black. Occurs in the Condurrow mine, and at Carn Brea, Cornwall, England.

Conichalcite. $4(\text{Cu}, \text{Ca})\text{O} \cdot \text{As}_2\text{O}_5 \cdot 1\frac{1}{2}\text{H}_2\text{O}$. A hydrous basic copper and calcium arsenate, carrying 24% copper. Structure, reniform and massive. Fracture, splintery. Tenacity, brittle. Hardness, 4.5. Gravity, 4.12. Color and streak, pistachio to emerald green. Is translucent. Occurs in Andalusia, Spain, and at Eureka, Juab county, Utah.

Connellite. Formula probably $\text{Cu}_{15}(\text{Cl}, \text{O}_2\text{H})_4\text{SO}_{18} \cdot 15\text{HO}$. A hydrous basic copper chlorosulphate, containing about 57.6% copper. Crystallization, hexagonal. Hardness, 3. Gravity, 3.36. Lustre, vitreous. Color, fine blue. Is translucent. Is soluble in nitric acid. Occurrence: Cornwall, England.

COPPER. Cu. Native copper. The chemical symbol Cu is an abbreviation of cuprum, the Latin word for copper. The metal, native or refined, has the following names in modern languages: kupfer in German; koppar in Swedish; kobber in Norwegian; cobre in Spanish and Portuguese; cuivre in French, rame in Italian.

Atomic weight, 63.2. Belongs in the first group and is the leader of the

fifth series of Mendeleéf's Periodic System. The group is as follows: 1, hydrogen; 2, lithium; 3, sodium; 4, potassium; 5, copper; 6, rubidium; 7, silver; 8, caesium; 9, unknown (possibly terbium, atomic weight 160); 10, gold; 11, unknown. The fifth series, of which copper is the basic leader, is as follows: 1, copper; 2, zinc; 3, gallium; 4, germanium; 5, arsenic; 6, selenium; 7, bromine. The three metallic elements falling between series four and five in Mendeleéf's table are iron, cobalt, and nickel. The frequency with which these three elements are found associated with copper, and the ease with which all four metals replace one another, is notable. The general resemblance between copper, silver and gold, which form ascending steps in the same group, is readily apparent.

System of crystallization, isometric. Tetrahexahedronal forms are the most common, with much twinning. Crystals often show cavernous faces and occasionally elevations, are often distorted and pass gradually through distortions into filiform and arborescent forms. Native copper also occurs massive, in granular form, and in laminae. In the Lake Superior mines the metal occurs in all observed forms and sizes, including lamellae from microscopic flakes up to sheets of immense size and weight, crystals of greatly varying form and size, grains from microscopic size to considerable nodules, and druses, often of considerable size, show various filiform and arborescent shapes. The finest particles are grains and exceedingly minute flakes, occurring in an upper sandstone of the Keweenawan series, while the largest masses, weighing upwards of 500 tons, have been found in contact and fissure veins.

Cleavage, none; fracture, hackly; tenacity, second only to that of iron. Is perfectly sectile and highly ductile and malleable, ranking in these particulars with the precious metals. Electrical conductivity, 931, as compared with 1,000 for silver, which possesses the most perfect electrical conductivity of any known metal or alloy. Conductivity for heat, 898, as compared with 1,000 for gold, the most perfect conductor of heat.

Hardness, 2.5 to 3. Specific gravity, in vacuo, at 0 degrees Centigrade (equal to 32°, or freezing point, Fahrenheit); when chemically pure and devoid of porosity, is 8.945. Specific gravity of the ordinary copper of commerce, none of which is free from impurities, varies from about 8.75 when cast, to about 8.95 when rolled, hammered or drawn, the exact gravity depending upon how handled, as well as upon the extent and nature of the impurities contained.

Lustre, metallic. Color, copper-red. Streak, copper-red, metallic, shining. Tarnishes upon exposure to air to brownish red, and is liable to form a coating of verdigris or oxide upon long exposure to air. Atmosphere laden with moisture and carbonic acid is especially favorable to the formation of verdigris.

Fusibility: Copper is fusible at approximately 2,000° Fahrenheit, or a trifle less than 1,100° Centigrade. Color, when fused, sea-green. Copper becomes volatile under the high temperature of the electric arc.

Solubility: Copper is soluble in nitric acid, aqua regia, and strong boiling sulphuric acid, also, slowly, in dilute hydrochloric and sulphuric acids, with admission of air. When in solution in nitric or sulphuric acids will deposit metallic copper on iron immersed therein.

Affinities: Copper has a greater affinity for sulphur than for any other element, possessing also marked affinities for oxygen, carbon dioxide, arsenic, antimony and bismuth, and unites with many other elements.

Alterations: Native copper alters on exposure, especially in damp air, to the simpler oxide and carbonate ores, such as cuprite, malachite and azurite, and occasionally, in time, to the more complex ore forms.

Occurrence: Native copper occurs, usually in small quantities, in most of the principal copper districts of the world. The native metal is mined upon a considerable scale only in Lake Superior, U. S. A., and Bolivia. The Lake Superior native copper carries considerable silver, mechanically admixed, though not alloyed, but carries no gold. In districts outside of Lake Superior and Bolivia the metal occurs most frequently in connection with the oxide and carbonate ores, and occasionally with the secondary sulphide ores.

Impurities: Native copper frequently contains silver, arsenic, bismuth, antimony, zinc and occasionally mercury. Commercial copper, refined from ores, may contain any of the elements already named, and also gold, tin, lead, selenium and tellurium, the latter two elements in very minute quantities.

Copper Glance. Common name for chalcocite.

Copper Mica. A miner's name for chalcopyrite.

Copper Nickel. A term sometimes used for niccolite.

Copper Phosphate. Libethenite.

Copper Pyrite. Common name for chalcopyrite.

Copper Vitriol. Trade name for copper sulphate which is called chalcantite in nature; bluestone when manufactured.

Copper Uranite. Trade name for torbernite.

Coppite. A ferruginous variety of tennantite.

Cornwallite. $5\text{CuO} \cdot \text{As}_2\text{O}_5 \cdot 3\text{H}_2\text{O}$. A hydrous basic copper arsenate containing 46.5% copper. Structure, massive. Fracture, conchoidal. Hardness, 4.5. Gravity, 4.16. Color, verdigris-green to emerald green. Occurrence: Cornwall, England.

Cosalite. Empirically lead sulphobismuthite, but usually cupriferous to the extent of from a trace to 8.75% copper.

COVELLITE. Covellite. CuS . A beautiful bright blue copper sulphide containing 66.4% copper. Chemical name, cupric sulphide. Crystallization, hexagonal; also occurs massive. Is flexible in thin layers, with basal cleavage. Hardness, 1.5 to 2. Gravity, 4.6. Lustre, submetallic on crystals, dull when massive. Color, indigo-blue. Streak, lead-gray to black, shining. Occurs in most sulphide copper districts, as a secondary ore and is a valuable commercial ore of copper, when found in sufficient quantities, as in Butte, Mont., Utah, Wyoming and elsewhere.

Crednerite. $3\text{CuO} \cdot 2\text{Mn}_2\text{O}_3$. A copper manganate containing 34.4% copper. Crystallization, monoclinic. Cleavage, basal, perfect, less distinct in other directions. Hardness, 4.5. Gravity, 4.9 to 5.1. Lustre, metallic. Color, iron-black to steel-gray. Streak, brownish black. Is soluble in hydrochloric acid.

Crookesite. $(\text{Cu}, \text{Tl}, \text{Ag})_2\text{Se}$. A copper, thallium, and silver selenide, containing 44 to 46% copper, 17 to 18.5% thallium and 1.5 to 5% silver. Structure is massive, without crystallization, is brittle. Hardness, 2.5 to 3. Gravity, 6.9. Lustre, metallic. Color, lead-gray, finely disseminated. Occurrence: Samaland, Sweden.

Cubanite. $\text{CuS} \cdot \text{Fe}_2\text{S}_3$. An iron and copper sulphide containing 23.3% copper and 41.3% iron. Crystallization, isometric; also occur massive. Cleavage, cubic. Hardness, 4. Gravity, 4.026 to 4.169. Color, bronze to brass-yellow. Streak, dark reddish bronze to black. Occurrence: Cuba, California, and Sweden.

Cumengite. $\text{Pb}(\text{OH})\text{Cl} \cdot \text{Cu}(\text{OH})\text{Cl}$. A hydrous lead and copper oxychloride, related to boléite. Crystallization, tetragonal. Color, indigo blue. Loose texture.

Cupric Oxide. Tenorite, when found in nature; copper monoxide in chemistry.

CUPRITE. Cu_2O . A copper oxide, containing 88.8% copper, being the richest copper ore. Chemical names, cuprous oxide, copper protoxide. Common names, ruby copper, red glassy copper ore, octrahedral copper ore. Crystallization, isometric, commonly in octohedrons; also occurs massive, granular and sometimes earthy. Fracture, conchoidal. Is brittle. Hardness, 3.5 to 4. Gravity, 5.85 to 6.15. Lustre, adamantine to earthy. Color, light to dark red; when fresh, usually ruby-red, but fades to duller red. Streak, brownish red, shining. Is subtransparent to subtranslucent. Occurs in most copper districts in the upper oxidized zone, frequently shading into crystals of native copper.

Cuprobismutite. $3\text{Cu}_2\text{S} \cdot 4\text{Bi}_2\text{S}_3$. A copper sulphobismuthite containing 15% copper and 65.1% bismuth. Occurs in slender prismatic crystals. Gravity, 6.31 to 6.68. Lustre, metallic. Color, dark bluish black. Streak, black. The copper frequently is replaced partially by silver.

Cuprocalcite. Formula perhaps $(\text{Cu}_2\text{O})_2 \cdot \text{CO}_2 + 2\text{CaO} \cdot \text{CO}_2 + \text{H}_2\text{O}$. Ap-

parently merely an intimate mixture of cuprite and calcium carbonate. Hardness, 3. Gravity, 3.9. Color, vermillion-red. Is soluble in hydrochloric acid.

Cuprocassiterite. Formula possibly $4\text{SnO}_2 + \text{Cu}_2\text{Sn}(\text{OH})_2$. Occurrence: Black Hills of South Dakota.

Cuprodescloizite. A cupriferous variety of descloizite, which is a basic lead and zinc vanadate.

Cuproferrite. Pisanite.

Cuprogoslarite. A copper-bearing variety of goslarite, or zinc sulphate.

Cupriodargyrite. CuI.RgI . A copper and silver iodide. Apparently a decomposition product of stromeyerite. Occurs, as incrustations, at Huantajaya, Chile.

Cupromagnesite. $(\text{Cu,Mg}) \text{SO}_4 + 7\text{H}_2\text{O}$. A copper and magnesium sulphate; crystallization monoclinic. Occurs in crust on lava. Color, bluish green. Is alteration product, occurring as incrustations, from Mt. Vesuvius.

Cuproplumbite. $\text{Cu}_2\text{S} \cdot 2\text{PbS}$. A copper and lead sulphide, carrying 61.3% copper and 19% lead. Structure, massive. Lustre, feeble or lacking. Color, lead-gray to indigo-blue. Occurrence: Catemou, Aconcagua, Chile; Butte, Montana; and Semipalatinsk, Siberia.

Cupropyrithite. CuFe_2S_4 . An iron and copper sulphide, carrying 24% copper. Is closely related to cubanite.

Cuproscheelite. $(\text{Ca,Co}) \text{WO}_4$. A calcium and copper tungstate carrying 3 to 5% copper. Is a variety of cuprotungstite in which copper is mainly replaced by calcium.

Cuprotungstite. CuWO_4 . A copper tungstate carrying 24% copper. Structure, granular and incrustive. Hardness, 4.5 to 5. Color, pistachio-green to leek-green. Streak, greenish gray to greenish yellow. Is soluble in hydrochloric acid. Occurrence: Llamuco, Santiago de Chile; and Seoul, Korea.

Cuprouranite. Torbernite.

Cuprous Oxide. Cuprite in nature. Chemical term for two atoms of copper united with one atom of oxygen.

Cuprovanadate. Chileite.

Cyanochalcite. A phosphoriferous variety of chrysocolla, from Nijni Tagilsk, Perm, Russia.

Cyanochoirite. $\text{CuSO}_4 \cdot \text{K}_2\text{SO}_4 + 6\text{H}_2\text{O}$. A hydrous copper and potassium sulphate, carrying 14.3% copper. Crystallization, monoclinic. Color, clear blue. Is an alteration product from Mt. Vesuvius.

Cyanotrichite. $4\text{CuO} \cdot \text{Al}_2\text{O}_3 \cdot \text{SO}_3 \cdot 8\text{H}_2\text{O}$. A hydrous basic copper and aluminum sulphate, carrying 39.4% copper. Crystallization, orthorhombic. Lustre, pearly. Color, smalt-blue to sky-blue. Occurrence: Hungary, France, Arizona, and Utah.

Darwinite. Whitneyite.

Delafossite. An iron, copper and aluminum oxide containing 37.9% copper 47.99% iron sesquioxide and 3.52% aluminum sesquioxide. Occurrence: Ekaterinburg, Perm, Russia.

Demidovite. A phosphoriferous variety of chrysocolla from Tagilsk, Perm, Russia.

Digenite. Apparently a partly altered chalcocite containing a considerable percentage of covellite.

Dihydrite. $5\text{CuO} \cdot \text{P}_2\text{O}_5 \cdot 2\text{H}_2\text{O}$. A hydrous basic copper phosphate containing 55.2% copper. Crystallization, monoclinic; also occurs massive and fibrous. Fracture, conchoidal to uneven. Tenacity, brittle. Hardness, 4.5 to 5. Gravity, 4 to 4.4. Lustre, adamantine. Color, dark emerald-green. Streak, pale emerald-green. Is translucent. Is soluble in nitric acid. Occurrence: Germany and the Ural Mountains of Russia.

Dillenburgite. An impure chrysocolla containing copper carbonate.

Diopside. $\text{CuO} \cdot \text{SiO}_2 \cdot \text{H}_2\text{O}$. A hydrous copper silicate carrying 40.3% copper. Common names, emerald copper, emerald malachite. Crystallization, rhombohedral; also occurs massive. Fracture, conchoidal to uneven. Tenacity, brittle. Hardness, 5. Gravity, 3.28 to 3.35. Lustre, vitreous. Color, brilliant emerald-green. Streak, green. Is subtranslucent to transparent. Gelatinizes with hydrochloric acid. Is fusible with charcoal and

soda. Occurrence: Chile, Hungary, Siberia, French Congo, and at Superior, Arizona, etc.

Dognacskaité. Formula perhaps $3\text{Cu}_2 \cdot 5\text{Bi}_2\text{S}_3$. A variety of cuprobismutite carrying slightly less copper and sulphur and slightly more bismuth than the normal mineral. Color, gray.

Dolerophanite. $2\text{CuO} \cdot \text{SO}_3$. A basic copper sulphate carrying 53.1% copper. Crystallization, monoclinic. Color, brown. Is soluble in nitric acid. Is a sublimation product from Mt. Vesuvius.

Domeykite. Cu_3As . A copper arsenide carrying 71.7% copper. Common name, arsenical copper. Structure, reniform and botryoidal, also massive and disseminated. Fracture, uneven. Hardness, 3 to 3.5. Gravity, 7.2 to 7.75. Lustre, metallic, dulling on exposure. Color, tin-white to steel gray, tarnishing to iridescent bronze, sometimes argentiferous and granular. Is fusible in open tube, yielding a white sublimate of arsenic trioxide. Is soluble in nitric acid. Occurrence: Chile, Bolivia, Saxony, Mexico, and Lake Superior.

Ducktownite. Apparently merely a mechanical mixture of chalcocite and pyrite.

Dürfeldtite. $3(\text{Pb}, \text{Ag}, \text{Cu}, \text{Mn}, \text{Fe})\text{S} \cdot \text{Sb}_2\text{S}_3$. A lead, silver, copper, manganese and iron sulphobismuthite. Occurs in acicular crystals. Hardness, 2.5. Gravity, 5.4. Lustre, metallic. Color, light gray. Is related to stylotypite. Found in Perú.

Ehlite. $5\text{CuO} \cdot \text{P}_2\text{O}_5 \cdot 3\text{H}_2\text{O}$. A hydrous basic copper phosphate containing 52 to 55% copper. Is closely related to dihydrite and pseudomalachite. Gravity, 4.2 to 4.4. Occurrence: Cornwall, England, and Nijni Tagilsk, Perm, Russia.

Emerald Copper. Common name for diopside.

Emerald Malachite. Common name for diopside.

Emplectite. $\text{Cu}_2\text{S} \cdot \text{Bi}_2\text{S}_3$. A copper sulphobismuthite containing 18.9% copper and 62% bismuth. Crystallization, orthorhombic, in thin prisms. Tenacity, brittle. Hardness, 2. Gravity, 6.3 to 6.5. Lustre, metallic. Color, grayish to tin-white. Occurrence: Chile, Saxony and Norway.

ENARGITE. $3\text{Cu}_2 \cdot \text{As}_2\text{S}_5$. Enargite grades into famatinite. A copper sulpharsenite containing 48.3% copper. Crystallization, orthorhombic; also occurs massive and granular. Fracture, uneven. Tenacity, brittle. Hardness, 3. Gravity, 4.45. Lustre, metallic. Color and streak, grayish black to iron-black. Is soluble in aqua regia and fusible on charcoal. Occurs in many copper fields, notably at Butte, Montana, where it is a common and valuable ore.

Epigenite. Formula probably $4\text{Cu}_2\text{S} \cdot 3\text{FeS} \cdot \text{As}_2\text{S}_5$. A copper and iron sulpharsenite, carrying about 41% copper. Crystallization, orthorhombic, in short prisms. Fracture, uneven. Hardness, 3.5. Lustre, metallic. Color, steel-gray. Streak, black. Is soluble in nitric acid. Occurrence: Wittichen, Baden, Germany.

Erinite. $5\text{CuO} \cdot \text{As}_2\text{O}_5 \cdot 2\text{H}_2\text{O}$. A hydrous basic copper arsenate, containing 47.8% copper. Occurs in mamillated concentric crystalline groups, also fibrous and rough. Tenacity, brittle. Hardness, 4.5 to 5. Gravity, 4.04. Lustre, slightly resinous. Color, emerald green. Streak, grass-green. Is opaque to subtranslucent. Is soluble in nitric acid. Occurrence: Cornwall and Utah.

Erythrocalcite. $\text{CuCl}_2 + n\text{H}_2\text{O}$. A hydrated copper chloride. Is an alteration product from Mt. Vesuvius.

Eucairite. $\text{Cu}_2\text{Se} \cdot \text{Ag}_2\text{Se}$. A silver and copper selenide carrying 25.3% copper and 43.1% silver. Crystallization, isometric; also occurs massive and granular. Hardness, 2.5. Gravity, 7.5. Lustre, metallic. Color, silver-white to lead-gray. Streak, shining. Occurrence: Smaland, Sweden; and Copiapó, Chile.

Euchlorine. A compound of copper potash and soda sulphates and cuprous chloride, from Mt. Vesuvius.

Euchroite. $4\text{CuO} \cdot \text{As}_2\text{O}_5 \cdot 7\text{H}_2\text{O}$. A hydrous basic copper arsenate containing 39.7% copper. Crystallization, orthorhombic. Fracture, subconchoidal. Tenacity, brittle. Hardness, 3.5 to 4. Gravity, 3.39. Lustre,

vitreous. Color, emerald-green to leek-green. Is translucent to transparent. Occurrence: Libethen, Hungary.

Fahlore. Common name for tetrahedrite or tennantite.

Falkenhaynite. $3\text{Cu}_2\text{S} \cdot \text{Sb}_2\text{S}_3$. A copper sulphantimonite carrying 39.5% copper. Apparently is related to stylumite. Structure, massive. Gravity, 4.83. Color, gray-black. Occurrence: Joachimsthal, Bohemia, Austria.

Famatinite. $3\text{Cu}_2\text{S} \cdot \text{Sb}_2\text{S}_3$. A copper sulphantimonite carrying 43.3% copper. Crystallization, orthorhombic; is isomorphous with enargite; also occurs massive. Fracture, uneven. Tenacity, brittle. Hardness, 3.5. Gravity, 4.57. Color, gray with copper-red tinge. Streak, black. Is fusible on charcoal. Decrepitates in closed tube. Occurrence: Sierra de Famatina, Rioja, Argentina; and Cerro de Pasco, Junín, Perú.

Fieldite. A zinciferous variety of tetrahedrite.

Footite. $8\text{Cu}(\text{OH})_2 \cdot \text{CuCl}_2 + 4\text{H}_2\text{O}$. A hydrous basic copper oxychloride containing 55.3% copper. Is closely related to tillingite. Crystallization, monoclinic. Color, deep blue. Occurrence: Bisbee, Arizona.

Fournetite. Apparently merely a mechanical mixture of tetrahedrite and galena.

Fredricite. An argentiferous, plumbiferous, and stanniferous variety of tennantite; from Sweden.

Freibergite. An argentiferous tetrahedrite carrying variable percentages of silver as a replacement of the copper found in the normal tetrahedrite.

Frigidite. A ferruginous and nickeliferous variety of tennantite.

Gerhardite. $4\text{CuO} \cdot \text{N}_2\text{O}_5 \cdot 3\text{H}_2\text{O}$. A basic copper nitrate containing 52.9% copper. Crystallization, orthorhombic. Cleavage, yields flexible laminae. Tenacity, fragile and sectile. Hardness, 2. Gravity, 3.426. Lustre, vitreous, brilliant. Color, deep emerald-green. Streak, light green. Is transparent. Is soluble in dilute acids. Occurrence: Jerome, Arizona.

Gersdorffite. Empirically nickel sulphoarsenite, but occasionally slightly cupriferous.

GLANCE. Common name for sulphide ores with dark metallic lustre. Copper glance is chalcocite.

Glasbachite. Zorgite.

Glaucopyrite. An iron and cobalt diarsenide, occasionally slightly cupriferous.

Gray Copper. Common name for tetrahedrite; name also is applied to tennantite, which shades into tetrahedrite.

Green Copper. Common name for malachite.

Grunauite. An impure nickel sulphide (polydimite) carrying copper, lead, cobalt, iron and bismuth, copper ranging 1.69 to 11.56% in tenor in published assays.

Guejarite. $\text{Cu}_2\text{S} \cdot 2\text{Sb}_2\text{S}_3$. A copper sulphoantimonite containing 15.2% copper. Crystallization, orthorhombic. Tenacity, brittle. Hardness, 3.5. Gravity, 5.03. Lustre, metallic. Color, steel-gray, with bluish tinge. Streak, black. Occurrence: Andalusia, Spain.

Harrisite. A pseudomorph of chalcocite after galena.

Henwoodite. Chemical formula uncertain. A hydrous aluminum and copper phosphate carrying about 5.6% copper. Occurs in botryoidal globular masses. Fracture, conchoidal. Hardness, 4.4 to 4.5. Gravity, 2.67. Color, turquoise-blue. Streak, bluish to greenish white. Occurs in Cornwall, England.

Hermesite. An imperfectly established variety of schwartzite.

Herrngrundite. $\text{CaO} \cdot 4\text{CuO} \cdot 2\text{SO}_3 \cdot 6\text{H}_2\text{O}$. A hydrous basic copper and calcium sulphate carrying 39.5% copper. It is related to brochantite. Crystallization, monoclinic. Tenacity, rather brittle. Hardness, 2.5. Gravity, 3.13. Lustre, vitreous. Color, emerald-green to bluish-green. Streak, light green. Is transparent. Occurrence: Herrngrund, Hungary.

Histrixite. $7\text{Bi}_2\text{S}_3 \cdot 2\text{Sb}_2\text{S}_3 \cdot 5\text{CuFeS}_2$ (a variety of Emplectite). Orthorhombic prismatic steel gray.

Homichlinite. Chemical formula uncertain. A copper and iron sulphide carrying about 43.8% copper. Apparently is chalcopyrite partly altered to bornite, and close to barnhardtite. Crystallization, tetragonal; also occurs

massive. Hardness, 4 to 5. Gravity, 4.48. Color, brassy bronze. Streak, black. Occurrence: Chile, Germany, Japan, etc.

Horseflesh Ore. Common name for bornite.

Horsfordite. Cu_3Sb . A copper antimonide carrying 76% copper. Structure, massive. Is brittle. Hardness, 4 to 5. Gravity, 8.8. Lustre, metallic. Color, silver-white, tarnishing easily. Is said to occur in large deposits on the Island of Mitylene, Asia Minor.

Hutchinsonite. $(\text{Ti}, \text{Ag}, \text{Cu})_2\text{S} \cdot \text{As}_2\text{S}_3 + \text{PbS} \cdot \text{As}_2\text{S}_3 (?)$. Crystallization, orthorhombic in flattened prisms; lustre, adamantine; red colored.

Hydrocyanite. $\text{CuO} \cdot \text{SO}_3$. A copper sulphate carrying 39.6% copper. Crystallization, orthorhombic. Color, green. Is soluble in water. Is an alteration product, from Mt. Vesuvius.

Hydrocuprite. Apparently a hydrated cuprite. Is amorphous, occurring in very thin coatings on magnetite. Color, orange-red to orange-yellow. Found at Schapbach, Baden, Germany, and at Cornwall, Pennsylvania.

Indigo Copper. Common name for covellite.

Isopyre. Apparently an impure opal, carrying about 1.6% copper, found at St. Just, Cornwall, England.

Jalpaite. $3\text{Ag}_2\text{S} \cdot \text{Cu}_2\text{S}$. A silver and copper sulphide, carrying 13.1% copper and 71.5% silver. Apparently is a cupriferous argentite. Crystallization, isometric. Tenacity, malleable. Gravity, 6.89. Color, blackish lead-gray. Occurrence: Jalpa, Mexico.

Jamesonite. A lead sulphantimonite, sometimes cupriferous to the extent of about 3.5%.

Johannite. Chemical formula uncertain. A hydrous uranium and copper sulphate, containing about 4.8% copper. Crystallization, monoclinic. Hardness, 2 to 2.5. Gravity, 3.19. Lustre, vitreous. Color, emerald-green to apple-green. Streak, paler green. Is translucent to transparent. Taste, bitter. From Joachimsthal, Bohemia.

Julianite. A slightly argentiferous and ferruginous variety of tennantite, from Silesia, Germany.

Kamarezite. $(\text{CuOH})_2\text{SO}_4 \cdot \text{Cu}(\text{OH})_2 + 6\text{H}_2\text{O}$. A hydrated copper sulphate. Crystallization, probably orthorhombic. Color, grass green. Occurrence: Laurium, Greece.

Karamsinite. Chemical formula uncertain. As determined is a weird silicate of aluminum, iron, manganese, copper, calcium, magnesium and potassium, containing about 1.85% copper. Occurrence: Finland.

Keweenawite. $(\text{Cu}, \text{Ni}, \text{Co})_2\text{As}$. A copper and nickel arsenide, related to mohawkite, carrying 39 to 54% copper and 9.7% to 20% nickel, with cobalt replacing nickel to extent of about 0.9%. Structure, massive. Cleavage, subconchoidal. Fracture, uneven. Tenacity, slight. Hardness, 4. Gravity, 7.7. Lustre, metallic. Color, pale pinkish brown red, tarnishing to darker red. Is soluble in nitric acid. Occurrence: Mohawk mine, Keweenaw county, Michigan.

Klarpotholite. $3\text{Cu}_2\text{S} \cdot 2\text{Bi}_2\text{S}_3$. A copper sulphobismuthite containing 25.3% copper and 55.4% bismuth. Crystallization, orthorhombic, in furrowed prisms. Fracture, uneven. Tenacity, brittle. Hardness, 2.5. Gravity, 4.6. Lustre, metallic. Color, steel-gray, tarnishing to iridescent brass-yellow. Occurrence: Baden, Germany.

Kobellite. A lead sulphoantimonite, usually cupriferous to the extent of about 1%.

Krohnkite. $\text{CuSO}_4 \cdot \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$. A hydrous copper and sodium sulphate carrying 18.8% copper. Crystallization, monoclinic. Fracture, conchoidal. Hardness, 2.5. Gravity, 1.98. Lustre, vitreous. Color, azure-blue to bluish green. Occurrence: Chile Copper Co. mine at Chuquicamata, Chile; Atacama, Chile.

Lampadite. A cupriferous wad, an earthy form of manganese oxide with 3 to 15% copper.

Langite. $4\text{CuO} \cdot \text{SO}_3 \cdot 4\text{H}_2\text{O}$. A hydrous basic copper sulphate containing 53% copper. Is closely related to brochantite. Crystallization, orthorhombic. Hardness, 2.5 to 3. Gravity, 3.5. Lustre, vitreous on crystals,

silky on crusts. Color, greenish blue. Is translucent. Occurrence: Cornwall, England.

Lautite. CuAsS . An imperfectly determined copper sulphoarsenite, of the enargite family, from Marienberg, Saxony.

Lavendulan. Chemical formula probably $3(\text{Cu}, \text{Co}, \text{Ni})\text{O} \cdot \text{As}_2\text{O}_5 + 3\text{H}_2\text{O}$. A hydrous copper, cobalt and nickel arsenate, containing about 32% copper, 2.5% cobalt monoxide and 1.35% nickel monoxide. Is related to trichalcite. Structure, amorphous. Fracture, conchoidal. Hardness, 2.5 to 3. Gravity, 3.01. Lustre, greasy to vitreous. Color, lavender blue. Streak, pale lavender blue. Diaphaneity, translucent. Is soluble in warm hydrochloric acid. Occurrence: Chile and Saxony.

Laxmannite. Vauquelinite.

Ledouxite. Cu_4As . Massive, silver white.

Lengenbachite. $6\text{PbS}(\text{Ag}, \text{Cu})_2\text{S} \cdot \text{As}_2\text{S}_3$. Crystallization, triclinic, bladed, steel gray.

Lepidophaeite. A varietal form of cupriferous wad or lampadite.

Lettsomite. Cyanotrichite.

Leucochalcite. $4\text{CuO} \cdot \text{As}_2\text{O}_5 \cdot 3\text{H}_2\text{O}$. A hydrous basic copper arsenate, carrying about 39.8% copper. Structure, acicular. Lustre, silky. Color, light greenish white.

Libethenite. $4\text{CuOP}_2\text{O}_6 \cdot \text{H}_2\text{O}$. A hydrous copper phosphate carrying 51.1% copper. Common name, copper phosphate. Crystallization, orthorhombic. Fracture, subconchoidal to uneven. Tenacity, brittle. Hardness, 4. Gravity, 3.6 to 3.8. Lustre, resinous. Color and streak, olive-green. Diaphaneity, subtranslucent. Is soluble in nitric acid. Occurrence: Chile, Bolivia, England, Germany, and Hungary.

Lilianite. A lead sulphobismuthite, sometimes cupriferous to the extent of about 1.5%.

Lime-Malachite. Apparently merely a malachite carrying gypsum or calcite, or both, as impurities.

Linarite. $\text{PbO} \cdot \text{CuO} \cdot \text{SO}_3 \cdot \text{H}_2\text{O}$. A basic lead and copper sulphate carrying 15.8% copper and 55.7% lead oxide. Crystallization, monoclinic. Fracture, conchoidal. Tenacity, brittle. Hardness, 2.5. Gravity, 5.3 to 5.45. Lustre, vitreous to adamantine. Color, deep azure-blue. Streak, pale blue. Diaphaneity, translucent. Occurs in many lead and copper districts.

Lindackerite. Chemical formula probably $3\text{NiO} \cdot 6\text{CuO} \cdot \text{SO}_3 \cdot 2\text{As}_2\text{O}_5 \cdot 7\text{H}_2\text{O}$. A hydrous copper and nickel sulphoarsenate containing 27.8% copper. Crystallization, orthorhombic. Hardness, 2 to 2.5. Gravity, 2 to 2.5. Lustre, vitreous. Color, verdigris-green to apple-green. Streak, pale green to white.

Linnaeite. A cobalt sulphide in which cobalt frequently is replaced partly by nickel, iron or copper, latter to the extent of 1 to 8%.

Liroconite. $18\text{CuO} \cdot 4\text{Al}_2\text{O}_3 \cdot 5\text{As}_2\text{O}_5 \cdot 55\text{H}_2\text{O}$. A hydrous basic copper and aluminum arsenate carrying 28.7% copper. Crystallization, monoclinic; also occurs rarely, granular. Cleavage, subconchoidal. Is imperfectly sectile. Hardness, 2 to 2.5. Gravity, 2.88 to 2.98. Lustre, vitreous. Color and streak, sky-blue to verdigris-green. Is soluble in nitric acid. Occurrence: Hungary, and Cornwall, England.

Lithidionite. A copper, iron, potassium and sodium silicate carrying circa 5.2% copper. Is an alteration product from Mt. Vesuvius.

Lunnite. A name proposed for dihydrite, pseudomalachite, and their varietal forms.

Luzonite. A dimorphous form of enargite, found in the Mancayan-Suyoc district, Lepanto, Luzon, Philippines.

Lyellite. Langite.

MALACHITE. $2\text{CuO} \cdot \text{CO}_2 \cdot \text{H}_2\text{O}$. A basic copper carbonate carrying 57.5% copper. Common names, green copper carbonate, basic cupric carbonate. Crystallization, monoclinic. Commonly massive, but frequently incrustive and sometimes granular or earthy, and disseminated as stains. Fracture, subconchoidal to uneven. Tenacity, brittle. Hardness, 3.5 to 4. Gravity, 3.9 to 4.03. Lustre, of crystals, adamantine, frequently with concretionary bands of varying shades from pistachio-green to bluish green. Streak, green. Is opaque to translucent. Is soluble in nitric acid. Occurs

in most copper districts, in the upper portions of the oxidized zones of ore bodies, and frequently is an important commercial ore. When massive and beautifully marked is a semi-precious stone, used for table tops, etc.

Malinowskite. A plumbiferous and usually argentiferous variety of tennantite.

Marcyite. An imperfectly determined alteration product from copper sulphides, consisting of hydrated copper oxides and sulphides. Occurrence: Perú and Arkansas, U. S. A.

Marshite. Cu_2I_2 . A copper iodide containing 33.4% copper. Crystallization, tetragonal. Fracture, subconchoidal. Tenacity, brittle. Lustre, adamantine. Color, oil-brown. Streak, orange-yellow. Is translucent. Occurrence: Broken Hill mines, New South Wales, Australia.

MELACONITE. Massive, compact, shining or earthy dull, black copper oxide of same composition as tenorite. Tenorite.

Melanochalcite. Chiefly Cu O with some $\text{SiO}_2, \text{CO}_2, \text{H}_2\text{O}$. A massive black mineral. $\text{Cu}_2(\text{Si,C})\text{O}_4 \cdot \text{Cu}(\text{OH})_2$. A copper silicate containing 61.4% copper. Structure, amorphous or cryptocrystalline, habit of crystals being undetermined. Hardness, 4. Gravity, 4.14. Lustre, vitreous. Color, jet black, powder is coffee-brown.

Melanothallite. Chemical formula probably $\text{CuCl}_2 \cdot \text{CuO} \cdot 2\text{H}_2\text{O}$. A copper oxychloride. Is an alteration product at Mt. Vesuvius.

Miargyrite. A silver sulphoantimonite, frequently cupriferous to the extent of one-half to one per cent.

Mixite. Chemical formula probably $20\text{CuO} \cdot \text{Bi}_2\text{O}_3 \cdot 5\text{As}_2\text{O}_5 \cdot 22\text{H}_2\text{O}$. A hydrated basic copper arsenobismuthite, carrying 35.2% copper. Occurs in tufts of minute acicular crystals. Hardness, 3 to 4. Gravity, 3.79. Color, whitish green to emerald-green or bluish-green. Streak, lighter green. Is translucent, and, in fine particles, transparent. Occurrence: Baden, Germany, and Utah.

Mohawkite. $(\text{Cu, Ni, Co})_3\text{As}$. A copper, nickel and cobalt arsenide, carrying 63 to 69% copper, 3 to 7% nickel and 0.5 to 2% cobalt, usually somewhat argentiferous. Crystallization, hexagonal, by synthesis, no crystals being found in nature. Cleavage, indistinct. Fracture, uneven. Tenacity, slight. Hardness, 4. Gravity, 8.05. Color, light gray on fresh fractures, tarnishing to purple or brassy yellow. Streak, gray. Is soluble in nitric acid. Occurrence: Mohawk mine, Keweenaw county, Michigan.

Mohawk-Whitneyite. Cu_3As . A copper arsenide, carrying 83 to 87% copper. Is a mere name of convenience for an intimate blending of mohawkite and whitneyite, or keweenawite and whitneyite, indistinguishable to the eye, but determined chemically. Cleavage, none. Fracture, hackly. Tenacity, is malleable to only a slightly less extent than copper. Hardness, about 5. Gravity, 8.6. Color, gray, with a yellowish tinge, tarnishing to coffee-brown. Streak, gray. Is soluble in nitric acid, with a small residue of gray powder. Occurrence: at Mohawk mine, Keweenaw county, Michigan.

Motttramite. Chemical formula undetermined. A hydrous basic lead and copper vanadate containing about 16.3% copper. Form resinous, velvety black crystalline incrustation. Is very closely related to psittacinite.

Mountain Blue. Common name for azurite.

Mountain Green. Common name for malachite. Name sometimes is applied to chrysocolla also.

Mysorin. An impure malachite from Mysore, India.

Namaqualite. Chemical formula probably $2\text{Cu}(\text{OH})_2 \cdot \text{Al}(\text{OH})_3 \cdot 2\text{H}_2\text{O}$. A hydrated copper and aluminum oxide, carrying 35.8% copper. Occurrence: Little Namaqualand, Cape Colony.

Nantokite. Cu_2Cl_2 . A copper chloride, carrying 84.1% copper. Crystallization, isometric; also occurs massive and granular. Cleavage, cubic. Fracture, conchoidal. Hardness, 2 to 2.5. Gravity, 3.9. Lustre, adamantine. Color, grayish white to colorless. Is translucent to transparent. Is soluble in nitric or hydrochloric acids, and in ammonia. Yields chlorine when sharply struck. Oxidizes readily on exposure to atmosphere. Occurrence: Carmen Bajo mine, Chile, and Broken Hill mines, New South Wales.

Natrochalcite. $\text{Na}_2\text{SO}_4 \cdot \text{Cu}_4(\text{OH})_2(\text{SO}_4)_2 + 2\text{H}_2\text{O}$. A sodium copper

sulphate of the copperas group. Crystallization, monoclinic. Lustre, brilliant. Translucent. Color, emerald-green.

Neocianite. Anhydrous copper silicate. Crystallization, monoclinic, in microscopic tables as a blue sublimate on lava.

Octahedral Copper Ore. Common name for cuprite.

Olive Green Copper Ore. Common name for olivenite.

Olivenite. $4\text{CuO} \cdot \text{As}_2\text{O}_5 \cdot \text{H}_2\text{O}$. A hydrous basic copper arsenate, carrying 44.8% copper. Common name, olive green copper ore. Crystallization, orthorhombic, with prismatic and acicular crystals; also occurs globular and granular. Fracture, conchoidal to uneven. Tenacity, brittle. Hardness, 3. Gravity, 4.1 to 4.4. Lustre, adamantine to vitreous. Color, olive-green to blackish green, also earthy, felt-like whitish mass. Is opaque to subtransparent. Is soluble in nitric acid. Occurrence: Nijni Tagilsk, Perm, Russia, Cornwall and Devon, England, Chile, Utah, etc.

Orileyite. $(\text{Cu}_2\text{Fe})_3(\text{As}, \text{Sb})_2$. A copper and iron arsenoantimonite, carrying 12.13% copper. Is related to stibiodomeykite. Structure, massive. Hardness, 5.5. Gravity, 7.4. Lustre, metallic. Color, steel-gray, with purplish tinge on fresh fracture. Streak, dark gray. Occurrence: Burmah.

Paramelaconite. $\text{CuO} + \text{Fe}_2\text{O}_3$. A copper oxide carrying 79.3% copper. Is a dimorphous form of melaconite. Crystallization, tetragonal. Hardness, 5. Gravity, 5.83. Lustre, brilliant. Color, purplish black on faces, pitch-black on fractures. Occurrence, with footeite, at Bisbee, Arizona.

Paratacamite. $\text{CuCl}_2 \cdot 3\text{Cu}(\text{OH})_2$. Crystallization, rhombohedral. Color bright green.

Partzite. $\text{Cu}, \text{Sb}, \text{H}_2\text{O}$. Chemical formula uncertain. A hydrous copper antimonite, carrying about 28.7% copper. Fracture, conchoidal. Hardness, 3 to 4. Gravity, 3.8. Color, yellowish green to blackish green. Occurrence: Mono county, California.

Peacock Ore. Common name for bornite. Sometimes is applied also to chalcopyrite when showing an iridescent tarnish.

Pearceite. Chemical formula probably $9(\text{Ag}, \text{Cu})_2\text{S} \cdot \text{As}_2\text{S}_3$. A silver and copper sulphoantimonite. Crystallization, rhombohedral; also occurs massive. Cleavage, none. Fracture, conchoidal. Tenacity, brittle. Hardness, 3. Gravity, 6.125. Lustre, metallic. Color and streak, black. Occurrence: Aspen, Colorado.

Peloconite. A varietal form of lampadite, a copper-bearing earthy form of manganese oxide.

Pentlandite. An iron and nickel sulphide carrying up to 1.75% copper.

Percylite. Chemical formula probably $\text{PbCuO} \cdot \text{Cl}_2 \cdot \text{H}_2\text{O}$. A hydrous lead and copper oxychloride carrying about 17% copper. Crystallization, isometric. Hardness, 2.5. Color and streak, sky-blue. Occurrence: Chile, Bolivia, South Africa, and Mexico.

Phillipite. $\text{CuSO}_4 \cdot \text{Fe}_2(\text{SO}_4)_3 + n\text{H}_2\text{O}$. A hydrous copper and iron sulphate, carrying 11.5% copper. Structure, granular and fibrous. Lustre, vitreous. Color, azure-blue. Diaphaneity, translucent. Taste, astringent. Is soluble in water. A variety of Kröhnkite. Occurrence: Los Condes, Santiago de Chile.

Phosphorochalcite. $6\text{CuO} \cdot \text{P}_2\text{O}_5 \cdot 3\text{H}_2\text{O}$. A hydrous basic copper phosphate, closely related to dihydrite and pseudomalachite.

Phosphochromite. Vaquelinite.

Pilarite. An aluminous variety of chrysocolla, from Chile.

Pisanite. $(\text{Fe}, \text{Cu})\text{SO}_4 + 7\text{H}_2\text{O}$. A hydrous iron and copper sulphate, carrying variable percentages of copper. Practically is a cupriferous melanterite, or copperas. Crystallization, monoclinic. Lustre, vitreous. Color, bright blue. Occurrence: Old Jordan mine, Bingham, Utah.

Plancheite. $15\text{CuO} \cdot 12\text{SiO}_2 \cdot 5\text{H}_2\text{O}$. A fibrous blue hydrated silicate of silver.

Planerite. A hydrous aluminum, copper and iron phosphate, carrying about 2.8%. Occurrence: Gumishevsk, Perm, Russia.

Plumbocuprite. Cuproplumbite.

Plush Copper Ore. Common name for capillary cuprite.

Polybasite. $9(\text{Ag}, \text{Cu})\text{S} \cdot \text{Sb}_2\text{S}_3$. A silver and copper sulphoantimonite carrying 3 to 10% copper and 62 to 72% silver. Crystallization, orthorhombic.

bic. Fracture, uneven. Hardness, 2 to 3. Gravity, 6 to 6.2. Lustre, metallic. Color, iron-black, in thin splinters, cherry-red. Streak, black. Is nearly opaque. Occurrence: Neihart, Mont., Mollie Gibson mine, Aspen, Colorado.

Prasine. A varietal form of dihydrite, containing alumina, silica and arsenic in small amounts, apparently merely as impurities.

Pseudobolëite. Cumengite.

Pseudolibethenite. Libethenite.

Pseudomalachite. $6\text{CuO} \cdot \text{P}_2\text{O}_5 \cdot 3\text{H}_2\text{O}$. A hydrous basic copper phosphate containing 53.5% copper. Is closely related to dihydrite, but has one extra unit each of cupric oxide and water. Structure, massive, reniform and botryoidal. Hardness, 4.5 to 5. Gravity, 3.4 to 4.4. Lustre, vitreous. Color, emerald-green to blackish green. Streak, paler green.

Psittacinite. Chemical formula probably $4(\text{Pb}, \text{Cu}) \cdot \text{V}_2\text{O}_5 \cdot 2\text{H}_2\text{O}$. A hydrous basic lead and copper vanadate, containing about 15.4% copper. Cryptocrystalline coating. Structure, pulverulent. Color, olive-green. Occurrence: Argentina and Montana.

Purple Copper Ore. Common name for bornite.

Pyrites of Copper. Common name for chalcocyprite.

Rabdionite. Chemical formula uncertain. A hydrated iron, manganese and copper oxide, containing 11.2% copper. Is very soft. Gravity, 2.8. Lustre, dull. Color, black. Streak, dark brown. Occurrence: Nijni Tagilsk, Perm, Russia.

Rahtite. An impure cupriferous sphalerite.

Ramirite. Cuprodesclowitzite.

Red Copper Ore. Common name for cuprite.

Red Glassy Copper Ore. Common name for cuprite.

Redruthite. Chalcocite; prismatic in pseudo-hexagonal twin crystals.

Regnolite. $5\text{CuS} \cdot \text{FeS} \cdot \text{ZnS} \cdot \text{As}_2\text{S}_5$. A copper, iron and zinc sulphoarsenite containing 32.6% copper. Is closely related to epigenite, sandbergerite. Crystallization, tetragonal. Occurrence: Cajamarca, Perú.

Resanite. Chemical formula uncertain. A hydrous copper and iron silicate, containing about 18.5% copper. Structure, massive. Color, olive-green. Is soluble in hydrochloric acid. Occurrence: Liquillo, Porto Rico, associated with chrysocolla and malachite.

Rezbanyite. A lead sulphobismuthite, usually cupriferous to the extent of 1.75 to 3.75%.

Richmondite. A cupriferous variety of beegerite, which is, normally, a lead sulphobismuthite.

Rickardite. Cu_4Te_3 . A copper telluride containing 40.5% copper. Structure, massive. Fracture, irregular. Hardness, 3.5. Gravity, 7.54. Color, brilliant, purple, rivaling bornite tarnish, even on a fresh fracture, and showing deep color when pulverized. Is fusible on charcoal and soluble in nitric acid. Occurrence: Good Hope mine, Vulcan, Colorado.

Rionite. A bismuthiferous variety of tennantite. 13% bismuth.

Rivotite. Chemical formula uncertain. A copper and antimony carbonate and oxide carrying about 31.6% copper. Structure, amorphous, compact. Fracture, uneven. Tenacity, fragile. Hardness, 3.5 to 4. Gravity, 3.55 to 3.62. Color, yellowish green to grayish green. Streak, grayish green. Occurrence: Lerida, Spain.

Rosasite. (Variety of Aurichalcite.) $2\text{CuO} \cdot 3\text{CuCO}_3 \cdot 5\text{ZnCO}_3$. A fibrous greenish blue mineral.

Ruby Copper. Common name for cuprite.

Safflorite. A cobalt diarsenide, usually cupriferous to the extent of 0.25 to 4.25%.

Salvadorite. $\text{FeSO}_4 \cdot 7\text{H}_2\text{O} \cdot 2(\text{CuSO}_4) \cdot 7\text{H}_2\text{O}$. A hydrous copper and iron sulphate carrying about 14.5% copper. Is near pisanite. Crystallization, monoclinic. Lustre, vitreous. Color, bluish green. Occurrence: Calama, Antofagasta, Chile.

Sandbergerite. A zinciferous variety of tennantite, from Peru. Contains about 8% zinc.

Schulzenite. Chemical formula probably $\text{CuO} \cdot 2\text{CoO} \cdot \text{Co}_2\text{O}_3 + 4\text{H}_2\text{O}$. A hydrous copper and cobalt oxide. Structure, amorphous. Fracture, con-

choidal. Hardness, 3.5. Gravity, 3.39. Color and streak, black. Occurrence, Chile.

Schwartzite. A mercurial tetrahedrite, in which mercury replaces copper variably, usually to the extent of about 15% of the total. Gravity, 5.10. Lustre, dull. Color, dark gray to iron-black.

Seligmannite. $\text{Cu}_2\text{S}_2 \cdot \text{PbS} \cdot \text{As}_2\text{S}_3$. Orthorhombic, in small crystals. Color, lead gray. Is a variety of bournonite.

Serpierite. $3(\text{Cu}, \text{Zn}, \text{Ca})\text{SO}_4 \cdot 3\text{H}_2\text{O}$. A hydrous basic copper, zinc and calcium sulphate, containing 28.8% copper. Crystallization, orthorhombic. Hardness, 2.5. Color, bluish green. Is transparent. Occurrence: Laurium, Greece.

Siegenite. A nickeliferous variety of linnæite, frequently carrying small percentages of copper.

Smaltite. Empirically cobalt disulphide, but frequently carrying copper in quantities from a mere trace to 3.25%.

Somervillite. $\text{CuSiO}_3 \cdot 4\text{H}_2\text{O}$. A hydrous copper silicate, corresponding in formula with chrysocolla and asperolite, except as to excess of water. From Somerville, Somerset County, New Jersey.

Spangolite. Chemical formula probably $(\text{AlCl})\text{SO}_4 \cdot 6\text{Cu}(\text{OH})_2 \cdot 3\text{H}_2\text{O}$. A basic copper and aluminum chlorosulphate, carrying about 47.7% copper. Crystallization, rhombohedral. Fracture, conchoidal. Hardness, 2 to 3. Gravity, 3.14. Lustre, vitreous. Color, dark green. Occurrence: Cochise county, Arizona.

Spaniolite. An imperfectly established variety of schwartzite.

Stannite. Chemical formula probably $\text{Cu}_2\text{S} \cdot \text{FeS} \cdot \text{SnS}_2$. A copper, iron and tin sulphide, containing 29.5% copper, 13.1% iron and 27.5% tin. Structure, massive, granular and disseminated. Crystallization, scalenohedral, tetragonal symmetry. Cleavage, cubic, indistinct. Fracture, uneven. Tenacity, brittle. Hardness, 4. Gravity, 4.3 to 4.5. Lustre, brilliant, metallic. Color, olive steel-gray when pure, ranging to iron-black when impure, latter with bluish to yellowish tarnish. Streak, blackish. Occurrence: County Wicklow, Ireland, and Cornwall, England.

Stelznerite. $\text{CuSO}_4 \cdot 2\text{Cu}(\text{OH})_2$. Chemical formula uncertain. A basic copper sulphate, closely related to brochantite. Crystallization, orthorhombic. Hardness, 3.5 to 4. Gravity, 3.9. Lustre, vitreous. Color, dark emerald-green to blackish green. Streak, lighter green. Is translucent to transparent. Occurrence: Chile, associated with brochantite and atacamite, and frequently mistaken for both.

Stetefeldite. Chiefly $\text{Sb}_2\text{O}_3 \cdot \text{AgCu} \cdot \text{H}_2\text{O}$. A hydrous copper antimonite, carrying about 12.8% copper. Structure, massive. Hardness, 3.5 to 4.5. Gravity, 4.12 to 4.24. Color, brown to blackish. Streak, shining. Occurrence: Nevada.

Stibiodomeykite. $\text{Cu}_3(\text{As}, \text{Sb})$. A copper arsenoantimonite containing about 65% copper. Apparently is an antimonial domeykite. Crystallization, hexagonal in synthetic crystals, none being found in nature. Cleavage, none. Fracture, uneven. Tenacity, very slight. Hardness, 4. Gravity, 8.1. Lustre, metallic. Color, gray, with yellowish tinge, like domeykite. Streak, gray. Is soluble in nitric acid, with small residue of gray powder. Occurrence: Mohawk mine, Keweenaw county, Michigan.

Stromeyerite. $(\text{Cu}, \text{Ag})_2\text{S}$. A silver and copper sulphide, carrying 31.1% copper and 53.1% silver. Crystallization, orthorhombic. Fracture, subconchoidal. Generally compact, massive. Hardness, 2.5 to 3. Gravity, 6.15 to 6.3. Lustre, metallic. Color and streak, dark steel-gray. Occurrence: Chile, Perú, Siberia, Colorado, California, and Silver King mines, Arizona.

Stubelite. Chemical formula undetermined. A hydrous manganese, copper, iron and aluminum silicate, carrying about 12% copper. Structure, massive, reniform and botryoidal. Fracture, conchoidal. Tenacity, brittle. Hardness, 4 to 5. Gravity, 2.22 to 2.26. Lustre, vitreous, brilliant. Color, velvet-black to pitch-black. Streak, dark brown.

Studerite. A varietal form of tennantite, containing, as partial replacement of normal copper content, silver, lead, zinc and iron.

Stylopyrite. $3(\text{Cu}_2\text{Ag}_2\text{Fe})\text{S} \cdot \text{Sb}_2\text{S}_3$. A copper, silver and iron sulpho-

bismuthite carrying 28.3% copper and 8.1% silver. Apparently is an argeniferous and ferruginous bournonite. Crystallization, orthorhombic, columnar prisms. Fracture, imperfectly conchoidal. Tenacity, brittle. Hardness, 3. Gravity, 4.8. Lustre, metallic. Color, iron-black. Streak, black. Occurrence, Copiapó, Chile.

Sub-Oxide of Copper. Cuprite in mineralogy; cuprous oxide in chemistry.

Sulvanite. $3\text{Cu}_2\text{SV}_2\text{S}_5$. Massive, bronze yellow, tarnishing on exposure. Is a variety of famatinite.

Sychnodymite. $(\text{Co,Cu})_4\text{S}_6$. A cobalt and copper sulphide, containing about 14.5% copper. Crystallization, isometric. Gravity, 4.75. Lustre, metallic. Color, steel-gray. Is soluble in nitric acid. Occurrence: Eiserfeld, Siegen, Germany.

Tagilite. $4\text{CuO} \cdot \text{P}_2\text{O}_5 \cdot 3\text{H}_2\text{O}$. A hydrous basic copper phosphate containing 49.4% copper. Crystallization, monoclinic; also occurs in spheroidal concretions with structure fibrous to earthy. Fracture, uneven. Tenacity, brittle. Hardness, 3 to 4. Gravity, 4.08. Lustre, vitreous. Color, verdigris-green to emerald-green. Diaphaneity, subtranslucent. Is soluble in nitric acid. Occurrence: Coquimbo, Chile, and Nijni Tagilsk, Perm, Russia.

Tallingite. Chemical formula probably $\text{Cu}_2(\text{OH})_2\text{Cl}_2 + 4\text{H}_2\text{O}$. A hydrated copper oxychloride containing about 64% copper. Structure, subcrystalline. Hardness, 3. Gravity, about 3.5. Color, greenish blue. Streak, white. Is subtranslucent. Thin crusts of minute greenish blue globules. Occurrence: Botallack mine, Cornwall, England.

Targionite. Apparently merely an impure galena carrying circa 1% each of copper, silver and zinc, from Tuscany, Italy.

Tennantite. $4\text{Cu}_2\text{S} \cdot \text{As}_2\text{S}_3$. A copper sulpharsenite containing 57.5% copper when pure, but shading into a great number of varietal forms. Common name, gray copper ore, in common with tetrahedrite, to which tennantite is closely related and joined by a chain of rather obscure minerals shading gradually from tennantite into tetrahedrite. The many varietal forms of this mineral are brought about by part replacement of copper by silver, lead, zinc, iron, mercury, cobalt, nickel, tin, and platinum, with a marked tendency toward mutual substitution of the antimony of tetrahedrite for the arsenic of tennantite, and vice versa, rendering the tetrahedrite-tennantite group unusually prolific. Crystallization, isometric; also occurs massive and granular, compact. Cleavage, none. Fracture, subconchoidal. Tenacity, brittle. Hardness, 3.5 to 4.5. Gravity, 4.4 to 5.1. Lustre, metallic. Color and streak, flint-gray to iron-black. Diaphaneity, opaque to subtranslucent in small splinters. Is soluble in nitric acid and fusible on charcoal. Occurrence: at numerous points, being found in greater or less profusion in most copper districts. Is not regarded usually as a commercial ore, except where argentiferous, which is commonly the case.

TENORITE. Earthy form is known as melaconite. CuO . A copper oxide, containing 79.8% copper. Common names, **Black Copper**, **Black Oxide of Copper**. Chemical names, copper monoxide, copper peroxide, cupric oxide. Crystallization, monoclinic; also occurs massive, pulverulent and earthy. Fracture, conchoidal to uneven. Hardness, 3 to 4. Gravity, 5.8 to 6.25. Lustre, metallic. Color, dull grayish-black when massive, steel-gray in flakes. Is soluble in nitric and hydrochloric acids. Is found in most copper districts, and is a valuable ore of copper when occurring in quantities, but much of what has been considered tenorite in the past really was chalcocite, for which it is easily mistaken when disseminated. Found in very thin, long, flexible, minute scales of glistening gray color in Vesuvian lavas.

TETRAHEDRITE. $4\text{Cu}_2\text{S} \cdot \text{Sb}_2\text{S}_3$. A copper sulphoantimonite containing 52.1% copper. Shades into tennantite, which see, for reference to protean forms of these two closely related and frequently indistinguishable minerals. Common name, gray copper ore. Crystallization, isometric; also occurs massive and granular, coarse to fine, compact. Cleavage, none. Fracture, subconchoidal to uneven. Tenacity, brittle. Hardness, 3.5 to 4.5. Gravity, 4.4 to 5.1. Lustre, metallic, brilliant. Color, flint-gray to iron-black. Streak, grayish-brown to cherry red. Opaque in quantity, but occa-

sionally subtranslucent in very thin splinters, giving cherry red transmitted light. Is soluble in nitric acid and fusible on charcoal. Occurrence: in most copper districts, but commonly is not regarded as a commercial ore, except when argentiferous, which frequently is the case.

Thrombolite. An imperfectly determined hydrous copper antimonate, carrying about 31.5% copper. Structure, amorphous. Color, emerald-green. Occurrence: Rezbánya, Hungary.

Tiemannite. An imperfectly determined silver, mercury and copper selenide, carrying about 8.8% copper. Occurrence: with eucairite and umangite, in the Sierra de Umango, Rioja, Argentina.

Torbernite. $\text{CuO} \cdot 2\text{UO}_3 \cdot \text{P}_2\text{O}_5 \cdot 8\text{H}_2\text{O}$. A hydrous uranium and copper phosphate, carrying 6.9% copper. Common name, uranium mica. Crystallization, tetragonal. Cleavage, micaceous, with brittle laminae. Hardness, 2 to 2.5. Gravity, 3.4 to 3.6. Lustre, pearly on cleavage planes and subadamantine on other faces. Color, emerald-green to grass-green. Streak, apple-green. Diaphaneity, translucent to transparent. Is soluble in nitric acid. Occurrence: Cornwall, Saxony, etc.

Trichalcite. $3\text{CuO} \cdot \text{As}_2\text{O}_5 \cdot 5\text{H}_2\text{O}$. A hydrous copper arsenate containing 34% copper. Structure, in radiated groups, columnar, also dendritic. Hardness, 2.5. Lustre, silky. Color, verdigris-green. Is soluble in hydrochloric acid. Occurrence: Russia.

Trippkeite. ($n\text{CuO} \cdot \text{As}_2\text{O}_5$.) A copper arsenite. Crystallization, tetragonal. Color, bluish-green. Is soluble in acids. Occurrence: Copiapó, Chile, in druses.

Tritochorite. Cuprodesclowitzite.

Turquoise. $[\text{Al}(\text{OH})_3 \cdot \text{Fe}(\text{OH})_2 \cdot \text{Cu}(\text{OH}) \cdot \text{H}] \text{P}_3\text{O}_{10}$. A gemstone, essentially a hydrous aluminum phosphate, colored by 2 to 6% of copper, which probably is included as a hydrous basic copper phosphate.

Tyrolite. $5\text{CuO} \cdot \text{As}_2\text{O}_5 \cdot 9\text{H}_2\text{O}$. A hydrous basic copper arsenate carrying 40.1% copper. Crystallization, orthorhombic. Cleavage, micaceous. Tenacity, highly sectile and flexible in thin laminae. Hardness, 1 to 1.5. Gravity, 3.02 to 3.1. Lustre, pearly to vitreous. Color, verdigris-green to apple-green. Diaphaneity, subtranslucent to translucent. Occurrence: Libethen, Hungary, Utah, etc.

Umangite. Cu_3Se_2 . A copper selenide containing 54.6% copper. Structure, massive. Cleavage, none. Fracture, subconchoidal to uneven. Hardness, 3. Gravity, 5.62. Lustre, metallic. Color, dark cherry-red, with violet tinges on fresh fracture, soon tarnishing to violet-blue. Streak, black. Occurrence: with tiemannite and eucairite, in the Sierra de Umango, Rioja, Argentina.

Uranium Mica. Common name for torbernite.

Uranochalcite. Chemical formula undetermined. A hydrous basic uranium and copper sulphate carrying about 5% copper. Occurs in acicular crystals. Hardness, 2 to 2.5. Color, grass-green. Occurrence: Joachimstal, Bohemia.

Valleriite. A sulphate of copper, iron, aluminum and magnesium. Apparently is a mixture of covellite, pyrrhotite and several aluminous and magnesian minerals. Occurrence: Nya Kopparberg, Sweden.

Variegated Copper Ore. Common name for bornite.

Vauquelinite. Chemical formula probably $2(\text{Pb,Cu})\text{CrO}_4 \cdot (\text{Pb,Cu})_3\text{P}_2\text{O}_8$. A lead and copper phosphochromate carrying 3.9 to 10% copper. Crystallization, monoclinic; also occurs amorphous. Fracture, uneven. Tenacity, brittle. Hardness, 2.5 to 3. Gravity, 5.8 to 6.1. Lustre, adamantine to resinous. Color, apple-green to liver-brown. Streak, greenish to brownish. Diaphaneity, opaque to faintly translucent. Occurrence: Berezov, Russia.

Velvet Copper Ore. Common name for chalcotrichite.

Venerite. A hydrous copper, aluminum, iron and magnesium silicate containing about 14% copper. Occurrence: Springfield, Berkshire county, Pennsylvania.

Verdigris. Copper carbonate. Is formed from metallic copper by the action of carbon dioxide and moisture in the atmosphere. The verdigris of the pharmacist is a copper acetate, and care should be taken not to confuse these widely varying compounds bearing the same name.

Veszelyite. Chemical formula probably $(\text{CuZn})_7(\text{OH})_8(\text{AsP})_2\text{O}_8 + 5\text{H}_2\text{O}$. A hydrous copper arsenophosphate carrying about 30% copper. Crystallization, monoclinic. Hardness, 3.5 to 4. Gravity, 3.53. Color and streak, greenish blue. Occurrence: Moravitz, Hungary.

Voglite. Chemical formula uncertain. A hydrous uranium, lime and copper carbonate carrying about 6.9% copper. Occurs in aggregations of crystalline scales. Lustre, pearly. Color, emerald-green to bright grass-green.

Volforthite. Chemical formula probably $(\text{Cu,Ca,Ba})_3(\text{OH})_3\text{VO}_4 + 6\text{H}_2\text{O}$. A hydrous basic copper, calcium and barium vanadate carrying about 30.9% copper. Hardness, 3 to 3.5. Gravity, 3.55. Lustre, pearly to vitreous. Color, olive-green to citron-yellow. Streak, greenish yellow. Is translucent in thin splinters. Occurrence: Perm, Russia, and at Henrietta mine, Yavapai Co., Ariz.

Warringtonite. A varietal form of brochantite.

Whitneyite. Cu_3As . A copper arsenide containing 88.4% copper. Structure, massive, crystalline, very finely granular. Tenacity, malleable. Hardness, 3.5. Gravity, 8.4 to 8.6. Lustre, dull and submetallic on fresh fracture, strongly metallic when scratched, soon tarnishing. Color, pale reddish to grayish white, pale reddish white on a rubbed surface, tarnishing to yellowish bronze, brown and brownish black, sometimes with iridescence. Is soluble in nitric acid. Occurrence: Osceola mine, Calumet, Michigan; Sonora, Mexico; and Chile.

Winklerite. Chemical formula uncertain. A hydrous cobalt, nickel and copper arsenate carrying about 11 to 12% copper. Structure, amorphous, massive. Fracture, conchoidal. Hardness, 3. Gravity, 3.43. Lustre, dull. Color, bluish black to violet black. Streak, dark brown. Occurrence: Almería, Spain.

Wittichenite. $3\text{Cu}_2\text{S} \cdot \text{Bi}_2\text{S}_3$. A copper sulphobismuthite, carrying 38.4% copper. Crystallization, orthorhombic. Fracture, conchoidal. Hardness, 3.5. Gravity, 4.3 to 5. Color, steel-gray to tin-white, tarnishing to pale lead-gray. Streak, black. Is soluble in nitric or hydrochloric acids. Decomposes easily on charcoal. Occurrence: Wittichen, Baden, Germany.

Wolchite. A varietal form of bournonite.

Wolfsbergite. Chalcostibite.

Wood Copper. Common name for olivenite.

Woodwardite. Chemical formula uncertain. An aluminum and copper sulphate containing about 38.4% copper. Is closely related to langite.

Yellow Copper Ore. Common name for chalcopyrite.

Ypoléime. Chemical formula perhaps $5\text{CuO} \cdot 2\text{P}_2\text{O}_5 \cdot 5\text{H}_2\text{O}$. A doubtful hydrous basic copper phosphate of the dihydrite-pseudomalachite group.

Zeunerite. $\text{CuO} \cdot 2\text{UO}_3 \cdot \text{As}_2\text{O}_5 \cdot 8\text{H}_2\text{O}$. A hydrous uranium and copper arsenate containing 6.1% copper. Crystallization, tetragonal. Fracture, uneven. Tenacity, brittle. Hardness, 2 to 2.5. Color, grass-green to emerald-green. Occurrence: Saxony and Cornwall, England.

Zinkazurite. Apparently merely a hydrous mixture of copper carbonate and zinc sulphate in small blue crystals, from the Sierra Almagrera, Spain.

Zinkenite. A lead sulphoantimonite, usually slightly cupriferous.

Zippeite. Chemical formula undetermined. A hydrous basic uranium, copper and calcium sulphate. Occurs in acicular crystals and crusts. Hardness, 3. Color, lemon-yellow to orange-yellow. Occurrence: Joachimstal, Bohemia.

Zorgite. Chemical formula uncertain. A lead and copper selenide, carrying 4 to 15.5% copper and 41 to 64% lead, with traces of silver, mercury and iron. Structure, massive and granular. Tenacity, brittle. Hardness, 2.5. Gravity, 7 to 7.5. Lustre, metallic. Color, lead-gray, tarnishing. Streak, darker lead-gray. Occurrence: Cacheuta, Mendoza, Argentina.

CHAPTER IV

OBSOLETE SECURITIES AND CORPORATIONS

A LIST OF DORMANT OR DEAD MINING COMPANIES

This is a list of mining companies that are merged, dead, liquidated, dissolved, bankrupt or otherwise out of business. It possibly also includes a few companies that have been inactive for years and have been reported by local authorities as dead. As complete sets of the Copper Handbook are not accessible to many readers, excerpts from former volumes, describing any company in this list, when the volume is in stock, will be furnished for 50 cents each by the Mines Handbook office, 29 Broadway, New York.

Any errors will be gladly corrected on receipt of authentic information.

- Abbey Mng. Co. N. M. Apparently dead. See Vol. XI.
Aberdeen C. Co. Lordsburg, N. M. See Vol. V.
Accidental M. & M. Co. Granite, Colo. See Vol. VI.
Acme M. & M. Co. Cotopaxi, Colo. See Vol. X.
Ada Copper Mining Co. Basin, Mont.
Adams C. Co. Saratoga, Wyo.
Adams C. M. & Ref. Co. Steamboat Springs, Colo. See Vol. X.
Admiral Togo-Ely C. Co. Formerly at Ely, Nev. See Vol. VIII.
Aduddell Mines Co. Merged, 1910, in Frontenac Cons. Mines, Central City, Colo.
Advance Dev. & M. Co. Bisbee, Ariz. See Vol. VIII.
Aeolian Copper Cons. Mng. Co., Ltd. Succeeded by Columbia Copper Co.
Aetna G. & C. M. Co. Bingham Canyon, Utah. See Vol. X.
Aetna M. Co. Bonanza, Colo. See Vol. X.
African Noble Duke G. & C. M. Co. Bisbee, Ariz.
Afro-American M. & M. Co. Butte, Mont. See Vol. VIII.
Afterthought M. Co. Lands sold to Great Western G. Co., succeeded, 1909, by Afterthought C. Co., Redding, Cal.
Afton M. & S. Co. Helena, Mont. See Vol. V.
Agassiz M. Co. Ray, Ariz. See Vol. VI.
Aguila Amalgamated Mng. Co. Mexico. Succeeded by Aguila Cons. Mng. Co., which see.
Ajax M. Co. Merged, 1909, in Gold Chain M. Co. See Vol. VIII.
Ajo C. Co. Ajo, Ariz. See Vol. X.
Ajo C. Mountain Mines Co. Property sold, 1907, to Rendall Ore Red. Co. See Vol. VIII.
Ak-Sar-Ben C. Co. Merged, 1907, in Shawnee-Wyo. C. Mng. Co. Carbon, Wyo.
Alabama G. & C. Co. Orogrande, N. M. See Vol. VIII.
Aladdin Mng. Co. Clinton, Mont. See Vol. XI.
Aladdin Mng. Co. Northport, Wash. See Vol. XII.
Alamo C. Co. Tucson, Ariz.

- Alamos Silver & C. Co. Succeeded by Alamos M. Co. Alamos, Mex.
 Alaska Amalgamated C. Co. Succeeded, 1907, by Alaska United C. Ex. Co.
 Alaska C. Ass'n. Valdez, Alaska. See Vol. VIII.
 Alaska C. Co. Ely, Nev. See Vol. VIII.
 Alaska Copper & Coal Co. Dissolved 1915. Formerly owned Kennecott mines.
 Alaska Dev. Co. McCarthy's Creek, Alaska. See Vol. VIII.
 Alaska-Galena M. Co. Ketchikan, Alaska. See Vol. X.
 Alaska G. & C. Co. Succeeded, 1907, by Chisna Cons. Mines Co. McCarthy's Creek, Alas.
 Alaska Gold & Copper Mng. Co. Alaska. Apparently dead. See Vol. XI.
 Alaska Gold Expl'n & Dev. Co. Seward, Alaska. See Vol. XII.
 Alaska Imperial M. Co. Ketchikan, Alaska. See Vol. VI.
 Alaska Mines Securities Co. Hadley, Alaska. See Vol. VIII.
 Alaska M. Co. Silver City, Utah. See Vol. VIII.
 Alaska Northwest C. Co. Sidney Inlet, Victoria, B. C. See Vol. V.
 Alaska S. & R. Co. Hadley, Alaska. See Vol. VIII.
 Albany Copper Co. Morningstar, Nev. Supposedly dead; mail returned.
 Albayalde; Cia Min. De. Gomez del Palacio, Mex. See Vol. X.
 Alberni G. & C. Co., Ltd. Alberni, B. C. See Vol. V.
 Alessandro C. M. Co. Lands sold, 1908, to Copper Gulf M. Co. See Vol. VI.
 Alexandria G. & C. M. Co. Randsburg, Cal. See Vol. VIII.
 Algoma Commercial Co., Ltd. Property sold, 1912, to Dominion Nickel C. Co. Sault Ste. Marie.
 Alice Dev. Co. Succeeded by Alice G. Mills Corp. See Vol. IX.
 Alice G. M. Co. Chewelah, Wash. See Vol. VI.
 Allegheny M. Co. Belvidere, N. J. See Vol. VIII.
 Allen M. Co. Old Glory, Ariz. See Vol. X.
 Alliance C.-G. Co. Greenwood, B. C. See Vol. VIII.
 Alliance C. M. Co. Absorbed, 1902, by Iconoclast Cons. Mines Co., Keller, Wash.
 Alma May C. Co. Lost lands, 1908. Holmes, Wyo. See Vol. VIII.
 Alma M. & M. Co. Cañitas, Mex. See Vol. VIII.
 Almado & Terito Cons. M. Co. Succeeded by Neg. Min. de Clemente Ybarra. Alamos, Mex. See Vol. V.
 Almeda M. Co. Succeeded, 1905, by Almeda Cons. Mines Co., Galice, Ore.
 Almoloya Y Anexas; Cia De. Ameca. Jalisco, Mex. See Vol. XII.
 Almonte C. Co. Hanover, N. M. See Vol. VIII.
 Alpena Copper Mng. Co. Saltese, Mont. Dead, 1914.
 Alpha C. Co. Property sold at sheriff's sale, June, 1912, to Geo. H. Gardner, for \$5,000, subject to \$315,000 mortgage of Manhattan Trust Co., N. Y., and \$2,500 mtge. of Camden Safe Deposit, N. Y. City. Somerville, N. J. See Vol. X.
 Alphabet C. Co. Courtland, Ariz. See Vol. VIII.
 Alpha Mining Co. Dolomi, Alaska. See Vol. XI.
 Alsacia Dev. Co. Reorganized, 1905, as Alsacia M. Co., Fronteras, Sa. Mex.
 Alsacia M. Co. Fronteras, Mex. See Vol. VIII.
 Alta C. Co. Succeeded, 1908, by Alta Montana C. Co. Corbin, Mont.
 Alta C. Mines. Succeeded, 1909, by Boston & Alta C. Co. Corbin, Mont.
 Alta C. M. Co. Ketchum, Idaho. See Vol. VIII.
 Alta C. Mng. Co. Mackay, Idaho. Presumably dead. See Vol. XII.
 Alta Crown C. Co. Ivanpah, Cal. See Vol. VIII.
 Alta & Hecla M. & M. Co. Merged, 1910, in South Hecla M. Co. See Vol. VIII.
 Alta M. & M. Co. Merged, 1907, in Ibex M. Co., Eureka, Utah.

- Alta M. & M. Co. Lusk, Wyo. See Vol. VIII.
- Alta Mizpah C. & G. M. Co. Alta, Utah. See Vol. VIII.
- Alta-Montana Co. Succeeded by Helena M. & Red. Co. Shares worthless.
- Alta-Montana C. Co. Succeeded, 1909, by Boston & Alta C. Co. Corbin, Mont.
- Alta-Quincy M. Co. Merged, 1906, in South Columbus M. Co. Alta, Utah.
- Alta-St. Louis M. Co. Alta, Utah. See Vol. X.
- Alta-Superior M. Co. Alta, Utah. See Vol. VIII.
- Alta-Zoani Mining Co. Hamilton, Nev.
- Altata M. Co. Chloride, Ariz. See Vol. X.
- Alto C. Co. Reorganized, 1909, as Cons. Mines, Smelter & Trans. Co. Patagonia, Ariz.
- Alto M. Co. Lands sold, 1908, to Leontine Cons. M. Co. Poland, Ariz.
- Alton M. Co. Needles, Cal. See Vol. X.
- Altona M. Co. Grand Forks, Idaho. See Vol. X.
- Amador Copper & Gold Mng. & Mlg. Co. Iron Mountain, Mont. Property held by Intermountain Copper Mining Co.
- Amalgamated Arizona C. Co. at Swansea, Ariz. See Vol. X.
- Amalgamated C. M. & Extr'n. Co. Merged, 1909, in Hecla Cons. Mines Co., Hecla, Wyo.
- Amalgamated G. & C. Co. Huron, Ariz. See Vol. VI.
- Amalgamated Greenwater C. Co. Greenwater, Cal. See Vol. VIII.
- Amalgamated Metal & Expl'n Co. Reorganized, 1910, as Amalgamated Metals Co., Jerome, Ariz.
- Amalgamated Metals Co. Liquidated, 1913. Jerome, Ariz.
- Amarillo M. Co. Property sold to Jarilla Cons. C. Co., 1912. Jarilla, N. M.
- Amazon-Butte C. Co. Property relinquished. Butte, Mont. See Vol. X.
- Amazon C. M. Co. Victorville, Cal. See Vol. VIII.
- Amazon-Montana Dev. Co. Property reverted to former owners. Amazon, Mont. See Vol. X.
- America-Britannia M. Co. Baring, Wash.
- America M. Co., S. A. Transferred property to San Pedro C. Co., S. A. Cananea, Mex.
- American Banner C. Co. Property sold, 1910, to Inspiration C. Co., Globe, Ariz.
- American Cons. C. Co. Butte, Mont. See Vol. VIII.
- American Cons. C. Co. Santa Fé, N. M. See Vol. V.
- American C. Co. Succeeded, 1905, by American C. & G. Co., also dead. See Vol. X.
- American C. M. Co. Succeeded, 1909, by Alpha C. Co. Somerville, N. J. See Vol. VIII.
- American C. M. & Extr'n. Co. Denver, Colo. See Vol. V.
- American C. M. & S. Co. Was a swindle, promoted by J. R. Keer & Co.
- American Dev. Co. Merged, 1906, in American-Saginaw Dev. Co. See Vol. VI.
- American Dev., M. & Red. Co. Silver City, N. M. See Vol. X.
- American Eagle C. M. Co. Encampment, Wyo. See Vol. X.
- American G. & C. Co. Globe, Ariz. See Vol. X.
- American G. & C. Co. Merged, 1904, in Poland-American G. M. & M. Co. Morristown, Ariz. See Vol. XI.
- American G. & C. M. Co. Jelm, Wyo. See Vol. VI.
- American G. M. Co. of New Mexico. Nogal, N. M. See Vol. VIII.
- American Gulch M. Co. Bingham Canyon, Utah. See Vol. VIII.
- American Metals Co. Organ, N. M. See Vol. VIII.
- American Mines Dev. Ass'n. Needles, Cal. See Vol. X.
- American Mines Dev. Co., Ltd. Globe, Ariz. See Vol. VIII.

- American Mines & Expl'n Co. Hillside, Ariz. See Vol. X.
 American M. Co. Central Mine, Mich. See Vol. VIII.
 American M. Co. Callao, Utah. See Vol. VI.
 American M. Co. Monte Cristo, Wash. See Vol. X.
 American M. & Dev. Co. French Corral and Sweetland, Cal. See Vol. X.
 American M. & Dev. Co. Naco, Mex. See Vol. VIII.
 American M., M. & S. Co. Was a brazen swindle. See Vols. VI and VII.
 American M. & S. Co. Twisp, Wash. See Vol. X.
 American Prospecting & Dev. Co. Jerome, Ariz. See Vol. X.
 American Queen M. Co. Lands passed to Colorado-Arizona Mines Co. Gold Hill, Colo.
 American-Saginaw Dev. Co. Liquidated, property sold to Calumet & Ariz. M. Co., Warren, Ariz.
 American Smelters Expl'n. Co. Changed name, 1905, to American Sm. Sec. Co.
 American Venture Co. Ayutla, Mex. See Vol. VIII.
 American Zinc Extraction Co. Tucson, Ariz. See Vol. VI.
 Amygdaloid M. Co. Lands sold, 1905, to Calumet & Hecla M. Co. Central Mine, Mich.
 Anaconda Cons. C. Co. of Greenwater. Greenwater, Cal. See Vol. VIII.
 Anaconda-Corral Cons. Mines Co. Bouse, Ariz. See Vol. VIII.
 Anaconda M. Co. Dissolved, 1907. Parent of Anaconda C. M. Co. Butte, Mont.
 Anaconda Mizpah C. Co. Merged, 1907, in Ely-National C. Co. Ely, Nev.
 Anaconda-Sonora C. Co. Sahuaripa, Mex. See Vol. VIII.
 Anderson M. Co. Alberni, B. C. See Vol. X.
 Angang C. Co. Chirangangueo, Mex. See Vol. X.
 Angangueo; Cia. Met. de. Angangueo, Mex. See Vol. VIII.
 Angel M. Co. Wickenburg, Ariz. See Vol. X.
 Anglo-American C. Co., Ltd. Succeeded, 1907, by Ray Cons. C. Co. Kelvin, Ariz.
 Anglo-American C. M. Co. of Parry Sound, Ltd. Parry Sound, Ont. See Vol. VIII.
 Anglo-American Dev. Co. Barranca de Cobre, Mex. See Vol. X.
 Anglo-American G. & C. Co. Cananea, Mex. See Vol. IV.
 Anglo-Butte C., Ltd. Liquidated, 1909. Butte, Mont.
 Anglo-Mexican M. & Ex. Co. Guachinango, Mex. See Vol. X.
 Animas M. & S. Co. Llano, Mex. See Vol. VIII.
 Anita Cons. C. Co. Reorganized, 1903, as Anita C. Co. Williams, Ariz.
 Anita C. Co. Properly sold, under foreclosure. Succeeded by Titanic C. Co. Williams, Ariz.
 Anita M. Co. Ocotlán, Jalisco, Mex. See Vol. VI.
 Annabel M. Co. Merged, 1909, in Hillside Cons. M. Co. Cherry, Ariz.
 Antelope Mining Co. Eureka, Utah.
 Apache Chief M. Co. Lands sold, 1907, to Ariz. Success. M. Co. Salome, Ariz.
 Apache C. Co. Bouse, Ariz. See Vol. VIII.
 Apache Cons. C. Co. Globe, Ariz. Fully described, Vol. XII.
 Apache Dev. Co. Lands sold, 1907, to Anderson-Apache C. Co. Hachita, N. M.
 Apex C. Co. Lost River, Idaho. See Vol. VIII.
 Apex Cons. Mng. Co. Silver City, Utah. See Vol. XII.
 Apex C. Co. Hayman, Colo. See Vol. XII.
 Apollo C. M. & M. Co. Frisco, Utah. See Vol. V.
 Arapahoe Copper Mng. Co. Oro Blanco, N. M. See Vol. XI.
 Arcade-Ariz. M. Co. Silver Bell, Ariz. See Vol. X.

- Arcadian C. Co. Succeeded by New Arcadian C. Co. Houghton, Mich.
- Arc Group M. Co. Kettle Falls, Wash. See Vol. X.
- Arctic C. M. Co. Lake Mine, Mich. See Vol. I.
- Arctic M. Co. Absorbed by Victoria C. M. Co., Mich.
- Argenta Mines Co. Ainsworth, B. C. See Vol. VIII.
- Argo C. M. Co. Merger, 1904, in Eclipse-Argo M. Co. Canyon Ferry, Mont.
- Argo Tunnel & M. Co., Ltd. Reorganized, 1905, as Argo Trans. & Tunnel Co., Ltd., also dead; succeeded, 1909, by Argo M. & Tunnel Co. Idaho Springs, Colo.
- Arichise Copper Co. Property in Arizona transferred to San Chez Copper Corporation, 1916. Company wound up. See Vols. X and XI.
- Arizona Alpha Mng. Co. Kingman, Ariz. See Vol. XI.
- Arizona Amalgamated C. Co. Property sold, 1907, to Coppermines Co. of Ariz., Ltd.
- Arizona-Apache M. Co. Tucson, Ariz. See Vol. VIII.
- Arizona & Arkansas Lead, Zinc & C. M. Co. Gila Bend, Ariz. See Vol. V.
- Arizona Banner C. Co. Globe, Ariz. See Vol. VI.
- Arizona Belle M. Co. Vail, Ariz. See Vol. VI.
- Arizona-Boston C. Co. Globe, Ariz. See Vol. VIII.
- Arizona-Bouse C. Co. Reorganized, 1909, as Little Butte Cons. Mines Co. Bouse, Ariz.
- Arizona Cananea Mines Corp. Cananea, Son., Mex. See Vol. XI.
- Arizona Central Copper Co. Prescott, Ariz. See Vol. XI.
- Ariz.-Colo. C. Belt & G. M. & M. Co. Succeeded, 1911, by German C. Co. Globe, Ariz.
- Ariz. Commercial Co. Succeeded, 1904, by Ariz. Comm. C. Co., also dead; succeeded, 1912, by Ariz. Comm. M. Co., Globe, Ariz.
- Ariz. Cons. M. Co. Succeeded, 1909, by Ariz. United M. Co., Johnson, Ariz.
- Ariz. C. Chief Sm. Co. No trace of operations secured.
- Ariz. C. Hill M. Co. Property sold under foreclosure. Oracle, Ariz. See Vol. VI.
- Ariz. C., Ltd. Clifton, Ariz. See Vol. X.
- Ariz. C. Mountain M. Co. Peach Springs, Ariz. See Vol. VIII.
- Ariz. C. Mountain M. Co. Title changed, 1904, to C. Butte Mines, Ray, Ariz.
- Ariz. C. Placer M. & M. Co. Quartzite, Ariz. See Vol. X.
- Ariz. C. Sm. Co. Kelvin, Ariz. See Vol. VIII.
- Ariz. C. Syn. Clifton, Ariz. See Vol. V.
- Ariz. C. Syn., Ltd. Was an English twin of Ariz. C. Syn.
- Ariz. C. Syn. of Providence. Succeeded, 1910, by Copperox M. Co. Pearce, Ariz.
- Ariz. Dev. Co. Safford, Ariz. See Vol. X.
- Ariz. & Eastern Cons. M. Co. Property owned by Ray Cons. C. Co. Globe, Ariz.
- Ariz. Eastern & Mont. Sm. & Ore Purch. Co. A swindle, promoted by Dr. R. C. Flower, Montana.
- Ariz.-Echo C. M. Co. Planet, Ariz. See Vol. X.
- Ariz. & Ely C. Co. Wickenburg, Ariz. See Vol. VIII.
- Ariz. Empire Copper Mines Co. Parker, Ariz. See Vol. XI.
- Ariz. Expl'n. & Dev. Co. Globe, Ariz. See Vol. VIII.
- Ariz. G. & C. Co. Lands sold, 1907, to Trenton M. Co. Patagonia, Ariz.
- Ariz. G. & C. Mines Co. Wickenburg, Ariz. See Vol. IV.
- Ariz. G. & C. M. Co. Prescott, Ariz.
- Ariz. G. & C. Red Co. A swindle, perpetrated by Theodore Stegner, Ariz.
- Ariz. G. Lode M. Co. Reorganized, 1906, as Ariz. C.-G. Mines Co.

- Ariz. G. M. Co. Clifton, Ariz.
 Ariz. Gold Mines Co. Wickenburg, Ariz. See Vol. XI.
 Ariz. G. M. Co. Wickenburg, Ariz. See Vol. VI.
 Ariz. G. M. & Dev. Co. Bisbee, Ariz. See Vol. VIII.
 Ariz. G. M. & M. Co. Briggs, Ariz. See Vol. IV.
 Ariz. & Hancock M. Co. Succeeded, 1903, by Ariz.-Hancock Cons. M. Co., also dead. Florence, Ariz.
 Ariz. Independent Vacuum Sm. Co. Process and claims of company fully described under Cornelia C. Co., Vol. VI.
 Ariz. Intern'l M. Co. Yucca, Ariz. See Vol. VIII.
 Ariz. Mercantile Trans. & Dev. Co. Mayer, Ariz. See Vol. XI.
 Ariz. Metals Co. Teviston, Ariz. See Vol. X.
 Ariz.-Mexican C. Co. Caborca, Mex. Described Vol. X.
 Ariz.-Mexican M. & S. Co. Property sold, 1909, to Needles M. & S. Co. Needles, Cal. See Vol. VIII.
 Ariz. & Mich. M. Co. Globe, Ariz. See Vol. X.
 Ariz. Mines Co. Casa Grande, Ariz.
 Ariz. Mines Co. Wickenburg, Ariz. See Vol. XI and Tomboy Grp.
 Ariz. M. Co. Pinos Altos, N. M.
 Ariz. M. & M. Co. Bankrupt, June, 1911. Judge J. J. Hawkins, Poland, Ariz., trustee. See Vol. X.
 Ariz. M. & Trading Co. Nacozari, Mex. See Vol. XII.
 Ariz. & Mo. C. M. Co. Humboldt, Ariz. See Vol. X.
 Ariz. National Copper Co. Globe, Ariz.
 Ariz.-Nevada Copper Co. Hillside, Ariz. Dissolved, 1915. See Vol. XI.
 Ariz.-Nev. Cons. Goldfield M. Co. Bisbee, Ariz. See Vol. X.
 Ariz. & New South M. Co. Oracle, Ariz. See Vol. IX.
 Ariz. Prospecting & Dev. Co. Wickenburg, Ariz.
 Ariz. Syndicate. Kelvin, Ariz. See Vol. VI.
 Ariz. Union Cons. G. & C. Mines Co. Supposedly in Arizona. See Vol. IV.
 Ariz. United C. Co. Clifton, Ariz. See Vol. X.
 Ariz.-Utah C. Co. Jerome, Ariz. See Vol. VIII.
 Ariz. Venture Corp'n. Kingman, Ariz.
 Ariz.-Vermont Copper Co. Morristown, Ariz.
 Ariz. & West Lake C. Co. Bisbee, Ariz. See Vol. V.
 Arizpe; Cia. de Cobre de. Arizpe, Sonora, Mex. See Vol. VIII.
 Arizpe M. Co. Succeeded, 1910, by Arizpe Mines Co. (Mexican Metals Co.) See Vol. VIII.
 Arkansas M. Co. Helena, Mont. See Vol. VIII.
 Arlington-Burns C.-G. Co., Ltd. Greenwood, B. C. See Vol. VI.
 Arlington C. Co. Lands sold, 1903, for debt. Arlington, N. J. See Vol. II.
 Arlington M. Corp. Conconnully, Wash. See Vol. VIII.
 Arm Exploration Co. Raymond, Cal.
 Armando; Cia. Minera. Zautla, Puebla, Mex. See Vol. VIII.
 Armendaiz-Sucesores; Francisco. Cerralvo, Nuevo Leon, Mex. See Vol. XII.
 Arzard M. Co. Chewelah, Wash. See Vol. X.

 Zonia C. M. Co. Kirkland, Ariz. See Vol. X.

CHAPTER V

STATISTICS OF THE METAL MINING INDUSTRY

Mineral production of the United States during 1916 was valued by the U. S. Geological Survey at \$3,470,000,000, an increase of 45% over that for 1915, which was a large gain over the 1914 yield. Metal production in 1916 was worth \$1,622,000,000, 63% higher than in 1915. Copper and pig iron contributed 78% of the increase. Non-metals were valued at \$1,833,000,000, a gain of 32%. Coal and oil supplied 76% of the increase.

Metal production in 1917—due to labor troubles, lower prices, and other causes—will most likely be considerably below that of 1916.

The remarkable prosperity of the metal mining industry for 1915, 1916, and 1917, is a direct result of the great European War: When this War began in 1914, the sudden lack of demand and cessation of exports of the metals, coupled with slack if not stagnant business conditions in the United States, led to lowered prices, and a painfully depressed state of the entire industry, but in 1915-'16-'17 the truly remarkable demand for copper, zinc, lead, and mercury, and tungsten, also many non-metallic minerals with runaway prices, quickly led to the reopening of many properties long idle and the crowding of output from producing mines.

The following table, showing production for the years 1913-1916, does not disclose this activity, since in the figures for the calendar year the small output for the first half year, combined with the great output of the second half, makes the total nearly normal. The total from July to July would be quite different. The table is from the *Engineering & Mining Journal*, Mineral Industry, and U. S. Geological Survey.

PRODUCTION OF METALS IN THE UNITED STATES

Metal	1913	1914	1915	1916
Aluminum, pounds.....	64,900,000	90,000,000	99,000,000 (g)	139,000,000
Copper (a), pounds.....	1,225,735,834	1,158,581,876	1,423,698,160	1,941,900,586
Ferromanganese, long tons...	229,834	185,118	239,824	415,534
Gold (b), dollars.....	88,884,400	94,531,800	101,035,700	92,316,400
Iron, long tons.....	30,966,301	23,332,244	29,916,213	39,434,797
Lead (c), short tons.....	433,476	538,735	535,922	583,498
Nickel (e), pounds.....	47,194,101	35,006,770	56,352,582	72,611,492
Quicksilver, flasks.....	19,681	16,568	21,033	(f) 29,932
Silver (b), Troy ounces.....	66,801,500	72,455,100	74,961,075	72,883,800
Zinc (d), short tons.....	346,676	353,049	489,519	667,456

(a) Production from ore originating in the United States. (b) The statistics are final, reported jointly by the directors of the Mint and the U. S. Geological Survey. (c) Production of refined lead from ore and scrap originating in the United States; antimonial lead is included. (d) Total production of smelters, except those treating dross and junk exclusively; includes spelter derived from imported ore. (e) Imports: this nickel is refined in the United States for the production of metal, oxide and salts. (f) As reported by U. S. Geological Survey. (g) Estimated.

The most important individual producer is the American Smelting & Refining Co., often called the Smelter Trust. This company handles most of the custom ore sold in this country and Mexico, and also has many mines of its own. The metals recovered by its smelters in 1915 were sold for \$232,281,182, and \$330,297,952 in 1916. In 1915 and 1916 this single company

COURSE OF METAL PRICES SINCE 1879—ANNUAL AVERAGES

Prices in 1917 are for six months. Pig iron rose to \$55, but at end of Nov., 1917, was \$37.25 per ton; copper declined and was fixed by Government at 23½¢ per lb., spelter rose to 10.3¢ in March, but was 7.7¢ in Nov.; and lead rose to 11.17¢ in June, but was 6.25¢ per lb. in Dec.

received nearly \$55,000,000 each for gold produced from the ores handled, equal to more than half the United States production; its smelter extracted over \$38,000,000 of silver in 1915 and \$41,000,000 in 1916 from the ores treated, including some from Mexico and Canada. The copper ore put through its smelters realized \$92,356,662 and \$185,919,397, or over 35% and 39% of the country's total production for the last two years. The lead production, equivalent to over one-half the value of the entire United States production, was sold for over \$27,000,000 and \$37,000,000. These figures explain why the company is so often called the Smelter Trust.

METAL PRICES

The price per unit of metal production (gold excepted, which is fixed by law at \$20.67+ per fine ounce) is based upon averages of daily market prices current at New York for silver, copper and lead, and at St. Louis for metallic zinc or spelter. The prices used by the U. S. Geological Survey for calculation of values for years 1850-1915, inclusives, are as follows:

PRICES OF SILVER, COPPER, LEAD AND ZINC

Year	Silver Fine oz.	Copper Pound	Lead Pound	Zinc Pound	Year	Silver Fine oz.	Copper Pound	Lead Pound	Zinc Pound
1850.....	\$1.32	\$0.22	\$0.05	\$.....	1884.....	\$1.11	\$0.13	\$0.037	\$0.044

* 11 months.

These prices do not accord with the yearly averages reported by the American Metal Exchange, the differences being possibly those between an arithmetical and a geometrical average.

The 25 years (1889-1913) geometric averages for the three metals are as follows: Silver, 66 cts. per oz.; copper, 14 cts. per lb.; zinc, 5.3 cts. per lb.

These variations are shown graphically on the diagram on the opposite page where the generally close relation of the prices of pig iron and of copper is brought out. The price of pig iron is the recognized index of industrial activity, high prices prevailing during "good times" and the reverse in periods of depression. Spelter prices rise and fall with copper, while lead prices have been less responsive to general conditions.

In the following pages, the essential facts concerning the price, production, consumption, exports and imports of each metal are given in tables.

ALUMINUM

Aluminum Production and Prices of the United States, in Pounds

			Per Lb.
1883.....	83	1901.....	7,150,000
1884.....	150	1902.....	7,300,000
1885.....	283	1903.....	7,500,000

1897.....	4,000,000	1915.....	99,000,000 31.90
1898.....	5,200,000	1916.....	139,000,000 34.00
1899.....	6,500,000		
1900.....	7,150,000	Total.....	694,866,779

(a) Consumption. (b) American Metal Market figures. In July, 1916, virgin ingots, 98%-99% pure, sold at 61 to 62 cents per pound, remelted at 58 cents, and alloy at 47-49 cents. In October, 1917, the respective prices were 37 to 39 cents, 35 to 37 cents, and 27 to 29 cents. Aluminum dust, used in recovery of silver, etc., was 75 to 85 cents per pound. This is also used in the explosive 'ammonal.'

EXPORTS OF ALUMINUM OF UNITED STATES PRODUCTION

1908.....	\$ 330,092	1913.....	\$966,094
1909.....	567,375	1914.....	1,546,510
1910.....	949,215	1915.....	3,682,117
1911.....	1,158,603	1916.....	15,419,134
1912.....	1,347,621	1917 (July-August).....	3,775,325

Imports during 1916 were 8,200,528 lbs., against 13,765,172 in 1915, 15,964,042 in 1914, and 26,958,354 in 1913. In 8 months of 1917, 55,238 lb.

WORLD'S PRODUCTION OF ALUMINUM

In metric tons of 2,204.6 lb.

	1906	1907	1908	1909	1910	1911	1912	1913	1914	1915	1916

Production in 1913 was approximately 22,000 tons (long tons) of regulus, crude and refined, made up as follows: China, 12,820 tons; France 6,000; Mexico, 2,315, and Hungary, 860 tons.

During 1916 the *Metal Bulletin* of London stated that Algeria produced 28,473 tons of ore, and smelters were erected near Marseilles, France. The Bolivian output increased considerably. China exported 24,727 tons of metal and 12,968 tons of ore, valued at \$9,340,567 and \$1,092,762, respectively. In China, the Wah Chang Mining & Smelting Co., is the important factor, also in the world's output.

The antimony deposits of the U. S. may be classed as those containing antimony only, and those whose antimonial content is a valuable by-product. Though many deposits of stibnite are known, they cannot be worked with normal prices, because in ordinary years the Chinese and Japanese smelters can supply it cheaper than we can produce it, and because the market is limited and easily glutted, resulting in still lower prices. The domestic production has therefore come almost entirely from the electrolytic refining of antimonial lead and copper metal.

The entire world's consumption up to 1914 was less than $\frac{1}{2}$ that of tin or 3% of that of zinc or copper. Antimonial ores to be valuable must be free from arsenic, zinc, and lead.

The average price for the 30 years preceding 1914 is 7.5 cts. per pound.

The Market for Antimony. The principal uses of antimony, the demand for which continues to increase, are in making type metal, babbitt and other anti-friction bearing metals, battery plates, siphon tops, cable sheathing, white metals for the foundation of silver-plated ware, and other plated ware, such as clock-cases, table-ware, coffin trimmings, and toys. In 1915-16 a great demand was created by the use of antimony in making shrapnel bullets, but this fell off somewhat due to the use of high explosive shells.

Its compounds are used in enamels, rubber vulcanizing, pigments, glass making, and safety matches.

The following persons are buyers of antimony ores:

Atkins, Kroll & Co., San Francisco, Cal.; Elsasser Merchants Finance Co., 625 Security Bldg., Los Angeles, Cal.; Frazer & Co., 50 Church St., New York City; C. W. Hill Chemical Co., 320 S. San Pedro St., Los Angeles, Cal.; Edw. Hill's Son & Co., Inc., 65 Wall St., New York City; Hoyt Metal Co., St. Louis, Mo.; M. D. Mackay, 130 Pearl St., New York City; Magnolia Metal Co., 113-15 Bank St., New York City; Pennsylvania Smelting Co., Pittsburgh, Pa.; Philipp Brothers, 42 Broadway, New York City; Herbert Solinger, Beer-Sondheimer Co., 61 Broadway, New York; C. Solomon, Jr. (Chapman Smelting Co.), 409 Battery St., San Francisco, Cal.; David Taylor, Consolidated Ores Co., Boston Bldg., Salt Lake City, Utah; Wm. Wraith, mgr., International Smelting Co., Salt Lake City, Utah; Wah Chang Mining & Smelting Co., New York.

In 1915 antimony mines in all parts of the U. S. were reopened, notably those of Pine creek, in the Coeur d'Alene, Idaho. Several small furnaces were built, due to the increased price of the metal. The largest production was made from deposits near Wild Rose spring, on the northwest slope of Telescope peak, in the Panamint range, Death Valley, Cal. Alaska furnished 800 tons of stibnite ore from the Fairbanks district and from Seward peninsula. Reported that shippers received from \$1.25 to \$1.75 per unit of stibnite.

The slump in prices early in 1916 resulted in many domestic producers closing most of them being in districts where transportation is expensive, while there was lack of buyers. This condition grew worse until stagnation set in, with a temporary increase, and remained so at Dec., 1917.

Antimony is sold as star metal, and the market not only demands a product assaying 99%, but also that each slab should have the fern-like crystallized surface known as the star, although this does not indicate that it is chemically pure.

The occurrence of arsenic in metal-bearing ores is so common as to be practically universal. This is shown at the smelters treating lead, copper, and zinc ores, which emit over 20,000 tons of arsenious trioxide yearly into the atmosphere in the form of smelter smoke or fume. A small amount is saved at the Anaconda, Mont., smelter, and at the Ontario smelters treating Cobalt ores, and also in Mexico by the Mapimi smelter of the American Metal Co. Allison Butts, in *The Mineral Industry* for 1916, states that the amount lost yearly from the Anaconda smelter is greater than the American production.

With such an enormous wastage, it is foolish to attempt to work arsenical ores for the arsenic alone. The chief use of the metal is in glass-making and for insecticides in agriculture; the glass industry uses about half of the amount produced in this country.

BISMUTH

Occurrence. Bismuth ores are comparatively rare, though the metal occurs in many of the lead ores of the Rocky Mountain regions. The U. S.

production comes entirely from electrolytic lead refineries at Grasselli, Ind., Omaha, Neb., and a few other plants. The Wilson Cons. Mining Co. produced oxidized bismuth ore in the Clifton district, Tooele Co., Utah, in 1914. The world's supply comes mainly from Bolivian mines owned by Aramayo Francke Mines, Ltd., at Chorolque and Tasna. This firm produced 511 tons crude metal in the year ended May 31, 1915, compared with 437 tons the previous year. Another producer is the Seoul Mining Co., Korea, whose concentrates in 1915 contained bismuth worth \$30,000, say 5 tons of metal.

Occasionally lots of gold-silver or lead ore containing from 10 to 20% bismuth have been marketed in the West, but buyers gave nothing for the bismuth contained.

Prices. The price for bismuth in the U. S., ordinarily about 65 cents a pound, was \$2.75 per lb. at the beginning of 1915; toward the end of the year it sold to \$4 per lb. This declined to \$3.25 later on. In London the price was from 10s to 11s. (\$2.40 to \$2.64) per lb. in 1916.

The price and market for bismuth ores and metal were both artificial, prior to the war being fixed by a combination of English and German firms, who absolutely controlled the market and shut out competition by most drastic and inquisitorial methods. Were American production constant, domestic producers could have secured the American market. At present the A. S. & R. Co., and U. S. S. R. & M. Co., are the main producers and dealers.

The Anaconda smelter dust carries over 1% bismuth, equal to a daily production of 1,580 lbs., and this plant will probably be a factor in the market.

Uses. Metallic bismuth is employed in making low-fusing alloys or cliché metals which are used in automatic fire sprinklers, fuses for electric wiring, and solders. Some of the salts have a smooth, unctuous feel, and are used in face and toilet powders, and in medicinal preparations. It is also employed to a small extent in making optical glasses.

* U. S. Geol. Survey.

Chromic-iron ore is sold on the basis of 40% chromic oxide and 8% silica, bringing in 1916 from 30 to 50c per unit, or \$12 to \$20 per ton, f. o. b. California, plus \$11 freight to Eastern points. In 1917, prices steadily advanced, and in October stood at 60 to 75 cts. for 40% ore and over, equal to \$24 and \$30 per ton. Production is almost entirely from California. The output during 1916 was 13 times greater than in 1915.

Occurrence. The chief producing areas are the belts of serpentine in the Sierra Nevada and Coast ranges, the foothill regions being the important producers. Most of the orebodies are small and lenticular in shape, containing only from 1 to 200 tons ore. Others are very irregular. An interesting occurrence is the disseminated ore such as near Red Bluff. This has to be concentrated. Oregon shipped 3,000 tons in 1916. Some of its ores require concentrating.

Preliminary Report No. 3, Sept., 1917, entitled 'Manganese and Chromium,' issued by the California State Mining Bureau, San Francisco, gives the names of all the chrome mines in that State, which produce most of the ore in this country.

Use. Chromic iron ore is used in the manufacture of ferrochrome and steel for high-speed tools, armor plate and projectiles, bichromates of soda and potash, chromic acid, chrome alum and chrome tannage, and refractory brick.

WORLD'S PRODUCTION OF CHROMIC IRON ORE, IN LONG TONS.

Russia.....	14,157	1,238	20,934

New Caledonia, Rhodesia and the United States are the principal producers, but Canada is gaining fast, especially in Quebec.

* 8 months.

No record is kept of the imports of metallic cobalt. The price of the metal seems to have varied little during the last three years, ranging from \$1.50 to \$2 a pound. In 1916 the range was from \$1.25 to \$1.50 per lb.; while in October, 1917, the metal was quoted at \$2.70 per lb.

No cobalt was produced from domestic ores in the last 4 years. The cobalt used in making high-priced steels and stellite is generally reduced from the imported oxide. (Stellite is an alloy, 75% cobalt and 25 % chromium, said to be especially valuable for making high-speed steels and non-tarnishable cutlery.) Experimental work in 1916 has shown that cobalt may be substituted for nickel in plating. Canadian production, mainly from Cobalt, Ont., is as follows:

	Metallic Cobalt	Cobalt Oxide	Total Metal
1914, pounds.....	242,572	899,027	871,891
1915, ".....	211,610	379,219	477,063

Gold imports during 8 months ended Aug. 31, 1917, totaled \$524,160,907, against \$290,325,528 in that period of 1916. Exports amounted to \$317,636,118,

compared with \$87,581,321. Canada (for England) supplied \$494,980,735 of the imports, while Japan took \$141,968,201 of the exports.

Figures from U. S. Geological Survey report, 1914; and *Eng. & Min. Jour.*, Sept. 8, 1917.

DERIVATION OF GOLD PRODUCTION OF THE UNITED STATES

Production by:	Percentage of total output			
	1912	1913	1914	1915
Placers.....	24.8	24.9	25.3	22.7
Gold and silver mills:				
By amalgamation.....	22.3	21.5	20.9	22.8
By cyanidation.....	30.9	31.2	31.4	30.4
By chlorination.....	.4	.3	.4	.5
Total Milling.....	53.6	53.0	52.5	53.7
Smelting.....	21.6	22.1	22.2	23.6
Total.....	100.0	100.0	100.0	100.0

Gold output of the world for 1917 was considerably under that for 1916, as the Rand shows a decrease of over \$2,000,000 in 9 months, Australia, several millions, the true Russian figures are rarely obtainable and are generally considered inaccurate, and several states in America will show declines; on the other hand, Canada should show a fair increase and probably Mexico and Korea.

IRIDIUM—See Platinum.

IRIDOSMINE (osmiridium)—See Platinum.

IRON

This metal is included in The Mines Handbook for the first time. The United States produced as much pig iron as the remainder of the world combined in 1916; while in a normal year, say 1913, the domestic output is 40% of the total. From 1820 to 1865, production increased irregularly from 20,000 to 1,000,000 tons per annum; from 1866 to 1898 it gained from 1,205,663 to 11,773,934 tons per annum, after which were the following yields:

Year	Tons	Year	Tons
1899.....	13,620,703	1909.....	25,795,471
1900.....	13,789,242	1910.....	27,303,567
1901.....	15,878,354	1911.....	33,649,547
1902.....	17,821,307	1912.....	29,726,937
1903.....	18,009,252	1913.....	30,966,301
1904.....	16,497,033	1914.....	23,332,244

1906.....	25,307,191	1916.....	39,434,797
1907.....	25,781,361	1917*.....	35,412,440
1908.....	15,936,018		

* 11 months.

Pig iron production is generally considered a good barometer of a country's prosperity, as the above table will show.

Prices of Bessemer pig iron at Pittsburg ranged from \$18.96 to \$9.98 per ton from 1886 to 1897, then:

Year	Per ton	Year	Per ton
1898.....	\$10.31	1908.....	\$16.14
1899.....	18.89	1909.....	16.53
1900.....	18.84	1910.....	16.20
1901.....	15.73	1911.....	14.81
1902.....	20.07	1912.....	15.09
1903.....	18.64	1913.....	16.19
1904.....	13.66	1914.....	13.98
1905.....	15.48	1915.....	14.87
1906.....	18.48	1916.....	22.93
1907.....	21.74	1917*.....	44.85

* Nine months.

In 1917 prices from January to September were: \$35, \$35, \$36.70, \$41.36, \$44.12, \$53.50, \$55.56, \$54.26, and \$48.13 per ton.

On September 24, the Government fixed the price at \$33 per ton for all buyers, effective until January 1, 1918.

Steel production of the United States, including all grades, is as follows for 13 years.

Year	Tons	Year	Tons
1904.....	13,859,887	1911.....	23,676,106
1905.....	20,023,947	1912.....	31,251,303

1909.....	23,955,021	1916.....	42,773,680
1910.....	26,094,919		

The U. S. Steel Corporation produced 44% of the pig iron and 50% of the steel made in 1916.

Imports of pig iron vary considerably, and in the past 9 years averaged about 135,000 tons yearly; and exports in 8 years averaged 227,000 tons, the quantity for 1916 being nearly 3 times greater than in 1915, bringing up the average. In 8 months of 1917 imports totaled 55,109 tons, and exports 471,545 tons, including ferro-manganese, etc.

Iron production of the world was 4,401,415 tons in 1850; 26,994,904 tons in 1890; 40,181,865 tons in 1910; then:

Year	Tons	Year	Tons
1911.....	63,210,720	1914.....	62,844,609
1912.....	73,529,929	1915.....	64,515,928
1913.....	79,395,472	1916*.....	72,000,000

* Estimated.

The principal producing countries are as under:

* Present rate.

Iron-ore production of the United States from 1810 to the end of the 1917 season approximates 1,200,000,000 long tons. By 1886 the year's output was 10,000,000 tons, then a gradual increase to 19,433,716 in 1898, followed by considerable gains to 28,887,479 in 1901. From then the figures were as follows:

Year	Tons	Year	Tons
1902.....	35,554,135	1910.....	57,014,906
1903.....	35,019,308	1911.....	43,786,552
1904.....	27,644,330	1912.....	55,150,147
1905.....	42,526,133	1913.....	61,980,437
1906.....	47,749,728	1914.....	41,439,761
1907.....	51,720,619	1915.....	55,526,490
1908.....	35,983,336	1916*.....	75,500,000
1909.....	51,294,271	1917*.....	70,000,000

* Estimated.

The Lake Superior region (Michigan, Minnesota, and Wisconsin) contribute 80% of the American total output of iron ore, followed by Alabama with 10%. The U. S. Steel Corporation mines about 60% of the country's iron ore, through its subsidiary, the Oliver Iron Mining Co., whose operations, with other iron companies, are described elsewhere in this volume.

Prices of Mesabi ore were \$2.50 per ton for Bessemer and \$1.75 for non-Bessemer at Lake Erie docks, in 1894. Up to 1903 prices rose irregularly to \$4 and \$3.50 per ton, after which were the following:

Year	Bessemer	Non-Bessemer	Year	Bessemer	Non-Bessemer
1904.....	\$2.75	\$2.35	1911.....	\$4.25	\$3.50
1905.....	3.50	3.00	1912.....	3.50	2.85
1906.....	4.00	3.50	1913.....	4.15	3.40
1907.....	4.75	4.00	1914.....	3.50	2.85
1908.....	4.25	3.50	1915.....	3.45	2.80
1909.....	4.25	3.50	1916.....	4.20	3.55
1910.....	4.75	4.00	1917.....	5.70	5.05

In September, 1917, prices for the next season (1918) were fixed by the Government at \$5.05 per ton.

Imports of iron ore from 1912 to 1916 were as follows: 2,104,576; 2,594,770; 1,351,368; 1,341,281; and 1,325,736 tons, respectively. Normally, Cuba supplies 60%, and Sweden 15%.

Exports of iron ore from 1912 to 1916 were as follows: 1,195,742; 1,042,151; 551,618; 707,641; and 1,183,952 tons, respectively.

The above figures are from the U. S. Geological Survey.

LEAD STATISTICS

The lead production of the United States comes largely from three states, Missouri, Idaho and Utah, whose 1916 output was 218,253, 170,049, and 111,789 tons, respectively. Colorado produced only 33,046 tons.

The great bulk of Missouri's output comes from the south-eastern part of the State, where a half-dozen companies work on 3 to 4% disseminated ore. The characteristic of this district is that lead alone, without zinc, is produced. Idaho's production comes from the lead-silver-zinc ores of the Coeur d'Alene district, which in some years leads all others. Utah's production comes mainly from the silver-lead ores of Park City, Alta Cottonwood, and Bingham, and the mixed ores of the Tintic district.

Only 18,906 tons of lead from foreign ore, mainly Mexico, was refined in the United States last year, compared with 94,984 tons in 1911, and 43,029 tons in 1915. The production of lead from domestic ores in 1916 reached the total of 596,221 tons, a healthy increase from 389,211 tons in 1910. Next to the United States, the important lead-producing countries of the world are Spain and Australia.

The vital figures of the industry are given in the following tables:-

U. S. LEAD PRODUCTION (SHORT TONS), PRICE AND VALUE

Year	Desilver- ized Lead	Soft Lead	Total Produc- tion	From domestic ores and base bullion	From foreign ores	From foreign bullion	Price at New York	Value

Percentage U. S. production..	34.0	28.0	30.3	31.0	32.0	30.6	32.4
-------------------------------	------	------	------	------	------	------	------

United States consumption in 1914, 1915 and 1916 was 449,013; 426,751; and 477,384 tons, respectively.

Lead Smelters and Refineries in North America in 1917

UNITED STATES

Arizona:

Mowry—Consolidated Mines, Smelter & Transportation Co. (Idle.)

California:

Keeler—Four Metals Mining & Smelting Co. (Idle.)

Needles—Needles Mining & Smelting Co. (Subsidiary of U. S. Sm. Ref. & Mng. Co.) (Idle.)

Selby—Selby Smelting & Lead Co. Refinery also. American Smelters Securities Co., controlled by A. S. & R. Co.

Colorado:

Denver—Globe plant, American Smelting & Refining Co.

Durango—Durango plant, American Smelting & Refining Co.

Georgetown—Western Metals Co. Malm dry chlorination process.

Leadville—Arkansas Valley plant, American Smelting & Refining Co.

Pueblo—Pueblo plant, American Smelting & Refining Co.

Salida—The Ohio & Colorado Smelting & Refining Co.

Idaho:

Kellogg—Bunker Hill & Sullivan Mining & Concentrating Co.

Clayton—Red Bird Smelting Co.

Enaville—North Fork Smelting & Mining Co. (Idle.)

Ponderay—Idaho Smelting & Refining Co. (Idle.)

Sea Foam—Greyhound Mining & Milling Co. (Idle.)

Illinois:

Aurora—Aurora Metal Co. Secondary metals, but some ore also.

Chicago—Goldsmith Bros.' Smelting & Refining Co. Secondary lead, but some ore.

Chicago—Great Western Smelting & Refining Co. Secondary lead, but some ore.

Chicago—National plant, American Smelting & Refining Co. Refinery only; smelter dismantled at end of 1914.

Collinsville—St. Louis Smelting & Refining Co. Refinery also. Nat'l Lead Co.

Federal—Federal Lead Co. Am. Smelters Sec. Co.

Granite City—Hoyt Metal Co. Smelts secondary lead, but also some ore.

Indiana:

East Chicago—International Lead Refining Co. Refinery only. Intern'l Sm. & Ref. Co.

East Chicago—U. S. Reduction Co. Smelts secondary lead and some ore.
Grasselli—United States Metals Refining Co. Refinery only. Betts electrolytic process.

Iowa:

Dubuque—J. W. Watters. Not operated for some years.

Kansas:

Galena—Galena Smelting & Manufacturing Co. Controlled by Eagle-Picher Lead Co.

Missouri:

Desloge—Desloge Consolidated Lead Co.

Granby—Granby Mining & Smelting Co.

Herculaneum—St. Joseph Lead Co.

Joplin—Eagle-Picher Lead Co.

Valle Mines—Valle Mining Co. Not operated for some years.

Webb City—Webb City Smelting & Manufacturing Co. Controlled by Eagle-Picher Lead Co.

Montana:

Cooke—Western Smelting & Power Co. (Idle.)

East Helena—East Helena plant, American Smelting & Refining Co.

Helena—Northwestern Metals Co. Dry chlorination process. (Idle 1915.)

Nebraska:

Omaha—Omaha & Grant Smelting Co. Refinery only. Betts electrolytic process. Am. Sm. & Ref. Co.

Nevada:

Nelson—Santa Barbara Searchlight Mining Co. (Idle.)

Spruce—Black Forest Mines & Smelting Co. (Idle.)

New Jersey:

Newark—Balbach Smelting & Refining Co. Refinery also.

Perth Amboy—Perth Amboy plant, American Smelting & Refining Co. Refinery also.

New Mexico:

Deming—National Mining & Smelting Co. (Idle.)

Pennsylvania:

Carnegie—Pennsylvania Smelting Co. Refinery also.

Texas:

El Paso—Kansas City Consolidated Smelting & Refining Co. (Am. Sm. Ref. Co.)

Utah:

Midvale—United States Smelting Co. (Subsid. U. S. Sm., Ref. & Mng. Co.)

Murray—Murray plant, American Smelting & Refining Co.

Silver City—Tintic Smelting Co. (Idle several years.)

Tooele—International Smelting Co.

Washington:

Keller—Keller & Indiana Consolidated Smelting Co. (Idle several years.)

Northport—Northport Smelting & Refining Co.

Wisconsin:

Dodgeville—Blue Mounds Mining & Smelting Co. (Idle.)

Waukesha—Northern Smelting Co. (Idle.)

CANADA

British Columbia:

Trail—Consolidated Mining & Smelting Co. of Canada, Ltd. Refinery also. Betts electrolytic process.

Ontario:

Kingston—North American Smelting Co., Ltd.

MEXICO

Aguascalientes:

Aguascalientes—American Smelting & Refining Co.

Chihuahua:

Chihuahua—American Smelting & Refining Co.

Uruachic—Uruachic Mining & Smelting Co., Ltd.

Coahuila:

Saltillo—Mazapil Copper Co., Ltd.

Torreon—Compañía Metalurgica de Torreon.

Durango:

Asarco (Velardena)—American Smelters Securities Co.

Mapimi—Compañía Minera de Penoles. (Am. Metal Co.)

Guerrero:

Campo Morado—Reforma Mining & Milling Co. (Idle.)

Nuevo Leon:

Monterey—American Smelting & Refining Co.

Monterey—Compañía Minera, Fundidora y Afinidora, S. A. Refinery also.

San Luis Potosi: Plant wrecked by revolutionists, 1914.

Matheuala—American Smelters Securities Co. (National Metallurgical Co.)

San Luis Potosi—Compañía Metalurgica Mexicana.

Sonora:

Guaymas—Pacific Smelting & Refining Co. (Mexican-American Smelting & Refining Co., Ltd.) (Idle and never operated.)

Ures—Yaqui Smelting & Refining Co., S. A. Refinery also. (Idle.)

Zacatecas:

Chalchihuites—National Smelting Co. (Idle.)

MANGANESE

Manganese ore, to be saleable, must contain 35% or more manganese, and for ferro-manganese or ferro, 40% or better, with less than 8% silica, and not over 0.2% phosphorus. As 90% of the manganese ore used in the United States goes into ferro, the demand is chiefly for high-grade ore. For dry batteries, the ore must contain a minimum of 50% manganese, present as the dioxide, and less than 1% iron or ½% copper, nickel or cobalt.

MANGANESE ORE SOLD IN THE UNITED STATES IN LONG TONS*

* Min. Res. U. S. Geol. Survey, 1915, p. 32.

† 1914: California and South Carolina; 1915: Alabama, Arizona, Colorado, Tennessee, Texas, and Utah.

Figures for 1916 are not available, but the total was about 27,000 tons, the price being upwards of \$20 per long ton at eastern points. In August, 1917, prices had advanced to over \$40 per ton for domestic ore.

Ore Buyers:

The principal purchasers of manganese ores are as follows: N. A. Adler, Batesville, Ark.; Alleghany Ore & Iron Co., Iron Gate, Va.; American Carbon & Battery Co., E. St. Louis, Ill.; American Manganese Mfg. Co., Dunbar, Pa.; American Smelting & Refining Co., Murray, Utah; American Steel Foundries, Pittsburgh, Pa.; Burney & Smith, New York, N. Y.; Carnegie Steel Co., Pittsburgh, Pa.; Delaware River Steel Co., Chester, Pa.; Eureka Manganese Co., Birmingham, Ala.; Robert Gilchrist, Elizabethtown, N. J.; Harshaw, Fuller & Goodwin Co., Cleveland, Ohio; Hickman Williams & Co., St. Louis, Mo.; Illinois Glass Co., Alton, Ill.; Illinois Pacific Glass Co., San Francisco, Cal.; J. S. Lawson & Bro., Inc., 80 Maiden Lane, N. Y.; Manhattan Electrical Supply Co., New York, N. Y.; Napier Iron Works, Napier, Tenn.; National Alloys Co., Philadelphia, Pa.; National Paint & Manganese Co., Lynchburg, Va.; Noble Electric Steel Co., Heroult, Cal.; Pulaski Iron Co., Pulaski, Va.; Sloss Sheffield Steel & Iron Co., Birmingham, Ala.; U. S. Steel Corporation, Pittsburgh, Pa.; U. S. Steel Corporation, South Chicago, Ill.; U. S. Steel Corporation, Birmingham, Ala.

Preliminary Report No. 3, Sept., 1917, entitled 'Manganese and Chromium,' issued by the California State Mining Bureau at San Francisco, gives the names of all the manganese mines in that State.

MOLYBDENUM

The amount of molybdenum produced in the U. S. has never exceeded a few tons a year and the annual consumption is unknown. Imports comprise but small quantities of molybdenite, the sulphide ore, and some wulfenite, molybdenum metal, and ferro-molybdenum.

The world's supply, mostly molybdenum, comes from New South Wales, Queensland, and Norway; but the demand created by the war resulted in deposits being opened in Bolivia, Peru, Ontario, Quebec, and the Western United States. What is probably the largest molybdenum producer is that of the Canadian Wood Molybdenite Co., in Quebec, which yielded 5,000 tons of 2.5% ore in 1916. In the past 3 years, the Primos Chemical Co., operated a molybdenite mine at Camp Boericke near Empire, Colo., and several other properties in the same State were worked on a small scale. A little was mined in Washington. In British Columbia a molybdenum mine, 13 miles from Anyox, was reported to have a 50-ton flotation plant, which was expected to start operating by Aug., 1916.

In U. S. Bureau of Mines, Bulletin 111, by F. W. Horton, the American deposits are fully described. Six Western States contain large low grade deposits that can be concentrated.

Uses: Molybdenum has rather limited uses and while it can be used instead of tungsten in high speed steels and in the manufacture of ordnance, such use is practically prohibited in the U. S. by the Halcomb patent. The metal is also used in electric resistance furnaces as supports for filaments in electric light bulbs, and Roentgen ray tubes and in alloys such as stellite. The salts have a limited use in chemical technology.

As noted above the use of molybdenum by American steel manufacturers has been greatly retarded if not prohibited by the Halcomb patent, issued in 1903, and held by the Crucible Steel Co. This controls the manufacture of the best grades of molybdenum-steel, using quantities of 6 to 15% molybdenum, less than 1.2% carbon and 2% silicon; the patent also controls the use of chromium in practicable amounts in conjunction with steels of the composition specified. France and Germany make large quantities of molybdenum steel. The results in those countries make it certain that when the Halcomb patent expires the use of molybdenum in America will be quickly extended and its production receive a sudden stimulus. The metal is more abundant than tungsten, and the exhaustion of the richer bodies of tungsten ore is likely to result in a maintenance of a price so that molybdenum will become a strong competitor.

An average price for molybdenite cannot be given. Production and demand have been small and irregular; most of the molybdenite being bought by individual bargaining. The price has ranged in general, from 15 to 30c per lb. for molybdenite, containing 92% MoS_2 until the past couple of years; during 1915-16 it sold as high as \$2 per lb. for 92% molybdenite; such prices are of course ephemeral. During 1917, prices have been steady at from \$1.50 to \$2. per lb.

In 1915 Canada produced 28,600 lbs., of molybdenite, valued at \$28,460, and in 1916, 79.5 tons worth \$159,000. In 1916 New South Wales yielded 54 tons; Queensland, 97 tons; and Japan, 37 tons.

Ore Buyers:

The following firms are users and buyers of molybdenite: J. T. Baker Chemical Co., Phillipsburg, N. J.; Baker & Adamson Chemical Co., Easton, Pa.; Foote Mineral Co., 107 N. 19th St., Philadelphia, Pa.; Goldschmidt Thermit Co., 90 West St., New York; Primos Chemical Co.; Primos, Pa.; S. Schaaf-Regelman, 21 State St., New York; Henry E. Wood & Co., 1734 Arapahoe St., Denver, Colo.; York Metal & Alloys Co., York, Pa.; Electro Metallurgical Co., Niagara Falls, N. Y.; General Electric Co., Schenectady, N. Y.; Imperial Munitions Board, Ottawa, Ont.; International Molybdenum Co., Orillia and Renfrew, Ont.; and the Tivani Steel Co., Belleville, Ontario.

The following companies and individuals are producers, 1916:

American Molybdenum Co., Yucca, Ariz.

Duquesne Mining & Reduction Co., Box 45, Pittsburgh, Pa. Claims 20 miles from Patagonia, in Patagonia district, Santa Cruz County, Arizona. Post office of claims, Duquesne, Ariz.

Thompson & Porter, 322 Story Building, Los Angeles, Cal.

Primos Chemical Co., Primos, Pa. Claims at Camp Boericke, in Clear Creek County, Colorado.

Pingrey Mines & Ore Reduction Co., Leadville, Colo. Claims are on Bartlett Mountains, $1\frac{1}{4}$ miles from Climax, 10 or 15 miles from Leadville, Colo., in Summit County.

Montana Molybdenum Mining Co., Chico, Mont. Claims are in Emigrant district, 9 miles from Chico, in charge of L. A. Van Horn.

Margarito Romero, Las Vegas, N. Mex.

C. H. Gibbs, Geologist, Utah Fuel Co., Salt Lake City, Utah. Interested with Fred Redmond in claims about 2 miles west of Alta, in Little Cottonwood canyon.

Empire Molybdenite Mining & Milling Co., Spokane, Wash. Claims in T. 37 N., R. 44 E., in Metaline district, Pend Oreille County, Washington.

Aurelia Crown Point Mines, Box 187, Seattle, Wash. Property at Lucerne, Lake Chelan district, Chelan County, Washington.

Canadian Molybdenite Co., Quyon, Quebec.

International Molybdenum Co., Renfrew and Orillia, Ontario.

Renfrew Molybdenum Co., Mt. St. Patrick, Ontario.

NICKEL

Nickel ores, as such are not mined in the U. S., though nickel is saved as a by-product in electrolytic refining of copper, and marketed both in the form of sulphate and as the metal. In 1914 an equivalent of 845,334 lbs. metallic nickel, valued at \$313,000 was produced in this way, it collects in the electrolyte slime and is obtained from there.

Nickel occurs in small amounts in many copper ores, being found in blister copper (in pounds per hundred tons), from the following smelteries: Anaconda, Mont., 22; Great Falls, Mont., 68; Garfield, Utah, 40; Steptoe, Nev., 64; Omaha, Neb., 644; Mountain, Cal., 172; Tacoma, Wash., 770; Aguascalientes, Mex., 132; Cerro de Pasco, Peru, 32; Mount Lyell, Tasmania, 166.

The world's supply comes mainly from Ontario and is imported into the U. S., in the form of copper nickel matte, or as Monel metal from the International Nickel Co.'s smelter at Copper Cliff, Ont., from ores mined at Sudbury, Ont. The refineries are at Constable Hook, Bayonne, N. J., and Port Colborne, Ont. A much smaller quantity of rich matte has also been imported from Belgium and refined at New Brunswick, N. J., by the United States Nickel Co. The British American Nickel Corporation had its reduction works and refinery near Sudbury, Ont., nearly completed in October, 1917.

Canada also produces nickel from the silver ores of the Cobalt district and those of the Alexo mine at Temiskaming. The smelters and refineries treating the Cobalt output make nickel oxide and in 1915 also made refined metallic nickel, the metal content being 361,701 lbs. The Sudbury, Ontario, smelters produced a Bessemer matte, the 1916 output being 80,010 tons holding 44,859,321 lbs. copper and 82,956,862 lbs. nickel. These are considerable increases when compared to the 1915 figures. Exports amounted to 80,441,700 lbs. nickel, valued at 10.77 cts. per lb., against 11.13 cts. in 1915. The refined metal exported from the U. S. was valued at 38.77 cts. in 1916, 37.95 cts. in 1915, and 34 cts. in 1914. Of the Canadian output, 83% went to the United States; but with the new refineries in the Dominion exports to America will show a big drop in 1918.

The market price for 1915 varied from 45 to 50 cts. per lb. for ordinary forms. In 1916 it was much the same; while by Oct., 1917, the price was 55 cts. per lb.

Use: large amounts of nickel are used in the manufacture of armor plate which requires 3 to 4% nickel; it is used in bridge and structural steel; in automobile manufacture, in axles, steering gear, etc.; in the manufacture of German silver, and is a constituent of Monel metal, the converter product of the Sudbury ores which carries 67% nickel, 28% copper, and 5% other metals.

PALLADIUM—See Platinum.

PLATINUM

The U. S. production of platinum is very small, Russia and Colombia are the largest producers. The 1916 domestic production of 24,518 oz., compared with 6,495 oz. in 1915, is obtained mainly from the refining of gold and copper bullion of both domestic and foreign origin, but placer mines supplied 488 ounces.

Use: One of the most important uses of platinum is as a catalyzer in the manufacture of fuming sulphuric trioxide; in this use it is technically known as "contact mass," some of which contains as much as 7 to 8% of platinum. The loss in good practice is small. Platinum dishes and utensils are a necessity in chemical laboratories. Its use in the electric industry and in dentistry is becoming less each year, nichrome replacing it in electrical appliances. The increased use of silica-ware is also reducing the consumption of platinum in concentration of sulphuric acid and for other purposes.

1916.....	53,484	3,138,396	18,923	5,202,120
1917* (Unmanufactured).....	17,799	1,436,638	3,310	243,949

* 8 months.

Exports during 8 months of 1917 were 3,182 oz., valued at \$252,593.

The embargo placed upon the export of platinum from Russia at the beginning of the war is the cause of the greatly reduced imports in 1914.

U. S. PRODUCTION OF PLATINUM FROM DOMESTIC SOURCES, IN TROY OUNCES

Year	Quantity	Value	Year	Quantity	Value
1903.....	110	\$2,080	1910.....	773	\$25,277

December....	38.75	46.00	45.50	43.45	42.19	85.50	86.87
Year....	\$32.70	\$43.12	\$45.55	\$44.88	\$45.14	\$49.63	\$83.40

During 1917 the price has been from \$100 to \$115 per ounce, in October being \$105

THE PLATINUM METALS

Iridium: The price of iridium remains much higher than that of platinum, because of its relative scarcity and its usefulness in hardening platinum. It is a frequent mistake of the platinum miner to speak of iridosmine as "iridium." Iridosmine is an alloy of osmium and iridium, with osmium varying from 17 to 49%. There is practically no market for osmium, except the use as pen points; iridosmine is valuable for the iridium content only. The extraction of osmium is both very costly and dangerous, on account of the poisonous character of the osmium vapor.

Palladium: The marketable supply for 1915 increased on account of the greater care taken by the copper refineries in extracting it from the electrolytic slimes in which it occurs with gold, silver, etc., particularly in the slime of Canadian matte, and the base bullion from Australia and else-

where. The use of palladium as a catalyzer is well known, and is largely used as an alloy for platinum, as it renders the platinum lighter and of a more brilliant white.

Osmium: The supply of this metal of the platinum group exceeds the demand, tungsten having replaced it in electric light bulbs, and its use in medicine and in silk dyeing being slight.

PLATINUM-GROUP METALS IMPORTED IN THE UNITED STATES

	Domestic							
	1914	1913	Value	1914	Value	1915	Value	
	Troy oz.	Troy oz.		Troy oz.		Troy oz.		
Iridium.....	64	4,094	\$295,864	1,785	\$112,430	4,158	\$243,266	
Osmiridium.	195	151	11,872	1,348	84,363	130	5,737	
Osmium....	560	42,924	32	787	
Palladium...	2,635	8,891	364,738	1,613	69,547	3,020	103,623	
Rhodium...	64	3,668	32	1,905	

Imports of iridium and osmium during 8 months ended Aug. 31, 1917, were 2,668 oz., valued at \$255,671; compared with 6,967 oz. and \$320,354 in same period of 1916.

Some of the more important buyers of crude platinum and sweeps are listed below:

American Platinum Works, Newark, N. J.
 Baker & Co. (Inc.), Newark, N. J.
 J. Bishop & Co., Malvern, Pa.
 Commercial Research Co., Long Island City, N. Y.
 Thomas J. Dee & Co., Chicago, Ill.
 Elizabethtown Smelting Co., Newark, N. J.
 Goldsmith Bros. Smelting & Refining Co., Chicago, Ill.
 Pacific Platinum Works, Los Angeles, Cal.
 Roessler & Hasslacher Chemical Co., Perth Amboy, N. J.
 S. S. White Dental Manufacturing Co., Philadelphia, Pa.
 Tiffany & Co., New York.

PALLADIUM PRODUCERS

American Smelting & Refining Co. Oro Amigo Platino Mining Co.... Nevada
 Boss Gold Mining Co..... Nevada

PLATINUM PRODUCERS

American Smelting & Refining Co. Irvington Smelting & Refining Co.
 Azurite Mining Co..... Nevada (Refining)..... New Jersey
 Boss Gold Mining Co..... Nevada Oro Amigo Platino Mining Co.... Nevada
 Hecla Consolidated Mines Co. (Idle) Platinum Mining & Milling Co.
 Wyoming Wyoming

Little is heard of the Nevada and Wyoming platinum-palladium producers, whose output must be negligible, but in November, 1917, the new plant of the Boss company was reported to be extracting platinum.

PYRITE

Pyrite mining is an important industry at several localities in the U. S., but its sole use being for sulphuric acid manufacture. The market is limited by transportation costs and by the competition of the copper and zinc smelting plants, at which such acid is made, the principal ones being

at Anaconda, Montana; Garfield, Utah; Douglas, Arizona; Trail, B. C.; Ducktown, Tenn., and Hillsboro, Danville, Peru, La Salle, Springfield and East St. Louis, all in Illinois; Langeloth and Donora, Penna., Argentine, Kansas, and Clarksburg, and Moundville, W. Va. The bulk of the pyrite consumed in the U. S. still comes from Spain, the value and the amount of the imported article being over 3 times that of the domestic production, but on account of shipping conditions the outlook in 1917 is far from reassuring for continuance of shipments from Spain. This has led to exploitation of domestic pyrite and pyrrhotite deposits, also utilization of "coal brasses."

PRODUCTION OF PYRITE IN THE UNITED STATES, 1882-1916, IN LONG TONS

1882... 12,000	\$72,000	1894... 105,940	\$363,134	1906... 261,422	\$931,305

1893... 75,777	256,552	1905... 253,000	938,492		

* Includes production of natural sulphur.

The 1916 output of United States was probably over 400,000 tons.

IMPORTS OF PYRITE, CARRYING LESS THAN 3½% COPPER

1910.....	803,551 long tons	1913.....	850,592 long tons
1911.....	1,006,310 " "	1914.....	1,026,617 " "
1912.....	970,785 " "	1915.....	964,634 " "

Imports during 1916 and 1917 will show a direct falling off. Spanish pyrite was quoted in November, 1917, at 15c per unit of sulphur.

Imports of pyrite during 8 months of 1917 totaled 610,716 tons, valued at \$3,962,219; compared with 916,369 tons and \$4,885,098 in same period of 1916. Spanish supplies decreased 60%, while Canada increased over 100%.

Canada and Norway are large producers, the former reporting 310,000 tons in 1916, and the latter about 500,000 tons in 1915.

QUICKSILVER

Most of the domestic supply of quicksilver comes from California and Nevada, Texas producing the remainder, as Arizona has as yet only a small output. In 1914 there were 30 producers, including small prospects, 7 more

than in 1913. In 1915, 1916, and 1917 there were certainly more than in 1914, owing to high prices. In recent years much of the California output has been from old mines, whose richest ore was extracted long ago, and which are now difficult to operate profitably, except when the price is high.

Beside the new supply each year there is also recovered an annual output of old quicksilver in the clean-up of old amalgamation mills, and from other sources; this supply has but little effect on the market. Austria, Italy, and Spain furnish 5/6 of the world's supply.

Quicksilver is used mainly in the manufacture of fulminate of mercury for explosive caps, of scientific and electric apparatus, of drugs and in the recovery of precious metals; the latter use is gradually diminishing. It is also used in manufacturing paints for protective coatings.

The primary domestic market for quicksilver is San Francisco; the price is averaged from the market quotations published in the *Mining and Scientific Press*. Prices are given in dollars per flask of 75 lbs. Since the war started it can hardly be said that San Francisco is the principal market, as witness the break in prices late in 1915 from \$300 to \$80 per flask, caused by the Allies dumping a large quantity on the American market. Until the war is over munition requirements will dominate the market.

RADIUM—(See Uranium, Vanadium.)

Radium, uranium, and vanadium are closely connected, in occurrence and always found together in an ore. Colorado and Utah contain the largest known radium-bearing deposits of the world, but Europe has been the chief market for the ore, which accounts for the greatly reduced output for 1915. In 1913, over 100 teams were hauling the waste dumps and tailing from the carnotite mines of Paradox Valley to the railway to be shipped to Germany for fertilizer.

PRODUCTION FROM CARNOTITE ORES

	Uranium Oxide tons	Radium grams	Vanadium tons
1916.....	8 to 10
1915.....	23.4	6	635
1914.....	87.2	22.3	435
1913.....	41	10.5
1912.....	26	6.7

At Joachimsthal, Bohemia, Austria, the government works in 1915 yielded radium compounds valued at \$209,365.

Carnotite is a complex ore consisting essentially of vanadium oxide or with potassium as double silicate, and associated with or loosely combined with uranium oxide. A ton of ordinary carnotite ore assaying about 2½% uranium oxide contains only 12.5 milligrams radium, or one part out of a hundred million, recoverable radium. For companies producing carnotite or other uranium ores, see Uranium, in this chapter. The following firms are producers of radium:

Standard Chemical Co., Pittsburgh, Pa.
W. L. Cummings Chemical Co., Lansdowne, Pa.
Radium Company of America, Sellersville, Pa.
Schlesinger Radium Co., Box 1316, Denver, Colo.
Carnotite Reduction Co., 2600 Iglehart Court, Chicago, Ill.
Pittsburgh Radium Co., Denver, Colo.
Chemical Products Co., Denver, Colo.

Eilers, A., Notes on the occurrence of some of the rarer metals in blister copper: Am. Inst. Min. Eng. Trans., vol. 47, pp. 217-218, 1914.

Eilers comments as follows:

Garfield, Utah, copper comes from the Bingham porphyry copper mines. Steptoe, Nev., blister copper is from the Nevada Consolidated porphyry deposits.

Omaha, Nebr., blister copper comes from concentrated copper-lead mattes from the lead-silver plants of the Rocky Mountain region.

Iron Mountain, Cal., ores occur in connection with diorite(?).

Tacoma, Wash., the blister is produced from Pacific coast and Alaska copper ores.

Aguascalientes, Mexico, blister is produced from the smelting of silver and gold ores with mostly low-grade copper ores, coming from all parts of Mexico and from many different geological occurrences and connections.

Cerro de Pasco, Peru, blister from copper and lead-copper mattes produced at the Cerro de Pasco works. Ore originates in veins occurring in limestone near andesite masses.

Mount Lyell, Tasmania, blister is from the well-known low-grade copper deposit of Tasmania, in schists.

Selenium is ordinarily sold in small pigs, in sticks $\frac{1}{2}$ " thick by 4" in length, and also in a fairly coarse powder form. It is an amorphous brilliant black substance which looks much like pitch or one of the asphalts.

Use: Selenium is chiefly used in coloring glass to which it gives a red color. The unique property possessed by this metal of an increasing electrical resistance with decrease of light has led to the invention of many electrical wonders including Hammond's dirigible torpedo as well as in measuring Roentgen rays; in controlling electric signs, moving pictures, street lights and the flame on gas buoys; in transmitting pictures over a wire. It is also used medicinally to a small extent.

SILVER

Average monthly prices of silver per ounce, as published by The American Metal Market:

The average price for 25 years past is not a true index, as it includes the artificial price of \$1.29 per oz., due to free coinage, giving a fictitious average of 60 cts. per oz. The average for 14 years, 1903-1916, is 57.52 cts. per oz.

After remaining around 70 to 80cts. per oz., from January to July, 1917, silver commenced advancing in price rapidly until September 25, when it stood at \$1.076. Further gains were expected, but the reverse took place; and due probably to profit-taking, and reluctance of India and China to buy at high prices, quick drops took place until October 26, when quotations were steady at 82½cts. Judging by past performances, the price is about bedrock on this movement and an advance may be expected again. By November 13 the price had gained to 96.12c., one jump being 5c. in a day. At the end of

November quotations were steady at around 84c., probably due to the British and United States Governments about to fix the price around 85c. per oz. Early in December, 1917, it was reported from Washington, D. C., that it was proposed to fix the rice at \$1 per oz., in other words, bimetallism. An international monetary system was suggested to provide for the expanding credit of the world due to war exigencies.

Temiskaming Mining Co.....	278,961 ⁶	1,263,848
Consolidated Mining and Smelting Co.....	2,230,500 ⁶	2,285,631

¹ Year ended Feb. 28, 1915. ² Year ended Oct. 31, 1915. ³ Year ended Aug. 31, 1915. ⁴ Year ended Aug. 31, 1915. ⁵ Calendar year 1914. ⁶ Year ended Sept. 30, 1915. ⁷ Year ended April 28, 1915.

The real silver producers are those at Tonopah and Cobalt. The first four in the table are metallurgical companies whose production is largely derived from ore purchased; the bulk of the Anaconda and U. S. Smelting productions comes from their own mines, also the Consolidated M. & S. Co of Canada.

The Butte & Superior being a zinc-mining company, the silver actually recovered is considerably less than is the content of the ore.

TIN

Very little tin is produced in this country, and the most of it comes from Alaska, which yielded 232 tons of 66% concentrate in 1916. In 1914 South Dakota furnished a few hundred pounds of stream tin, and there are promises of a revival in lode mining in that State. Workable deposits exist near Deeth, Nevada, and El Paso, Texas. Practically all the tin used in the United States is brought from Europe and the Straits Settlements. Bolivia ranks second to the Straits as a tin producer; its ores were formerly sent to Europe for reduction, but the reverberatory tin-smelting plant of the American Sm. & Ref. Co. at Perth Amboy, N. J., built to handle Bolivian "barilla" or concentrates, will materially change conditions. This plant was blown in March 1, 1915, and the first crude tin drawn off March 7. This metal is refined electrolytically at the plant.

UNITED STATES TIN PRODUCTION (U. S. GEOL. SURVEY)

	Tons Concts.	Percent Tin	Value
1916.....	232	66
1915.....	200	66
1914.....	157.5	66	\$66,560
1913.....	84	60	36,970
1912.....	147	60	124,800

Secondary tin recovered in the United States:

	Tons	Value
1916.....	17,400	\$15,131,040
1915.....	13,650	10,544,180
1914.....	12,447	8,887,158

The United States is the largest user (48% of the world's output) of tin among the countries of the world, and hence a large importer of the metal. The U. S. Steel Corporation is the greatest single user of the metal.

TITANIUM

Titanium is obtained from the two minerals: rutile, titanic oxide, 60% titanium; and ilmenite or titanic iron ore, FeOTiO_2 , with 31.6% titanium. The supply of rutile comes from Virginia, being mined by the American Rutile Co. at Roseland, Nelson county. Its output in 1914 was 94 tons of rutile, containing 95% oxide, and 89 tons of ilmenite, with 55% oxide.

Rutile is used for making ferro-titanium, used in cast iron and steel, in electrodes for arc lamps, in dyeing leather and wool and in chemicals. A little ilmenite has been used in making ferro-titanium and arc lamp electrodes.

TITANIUM MINE

American Rutile Co.....Virginia

TUNGSTEN

The 1915 production of tungsten ores in the United States broke all previous records. This increased output was due to the demand for high-speed tungsten tool steel required for completing war orders in the United States and abroad. Prices soared with demand; starting from \$5.80 to \$9 per unit for 60% ore early in 1915 they reached \$66 per unit early in 1916; by the end of March some ore sold for \$93.50 per unit at the mills. Consumption could not keep pace with production; prices dropped and by July 60% ore was selling around \$25 per unit; by the middle of August sales were made as low as \$20 per unit. Previous to 1915 the highest price reported was \$15 per unit, paid in 1907; normal price has been \$6 to \$7.

During 1916 prices fell to \$17 per unit in September, remaining there until December, then slowly gaining until \$26 was reached by August, 1917. In October, the quotation is from \$23 to \$26 per unit. The demand is steady, and some sort of price agreement may possibly be keeping it so; not among producers, but consumers.

All tungsten ores in Great Britain are under the control of the Government, and they are sold at the uniform price of 55 shillings per unit of a long ton, that is 55 shillings for 22.4 pounds of tungsten trioxide, WO_3 .

The unit in the United States is 1 per cent of a short ton in tungsten trioxide, that is 20 pounds, containing a minimum of 60% WO_3 .

Besides its use for high-speed tool steel, a considerable quantity of tungsten is used for incandescent electric lamp filaments, there being over

200,000,000 tungsten lamps made in 1916, an increase of 33%. The metal is also used for contact points in automobile spark plugs, spark coils, and telegraph relays.

There were 7 tungsten mills in 1916 in the Nederland district, Boulder Co., and one at Rollinsville, Gilpin Co., Colo.; 4 at Dragoon, 3 at Arivaca, and one at Yucca, Ariz.; and one each at Atolia, Goffs, Johannesburg and Nipton, and two at Bishop, Cal. There were two at Sodaville, Nev., and one at Toy, also several near Ely. After the drop in prices some of the plants ceased work. In South Dakota the Homestake and Wasp No. 2 companies operate small concentrators. Connecticut, Alaska, Missouri, Idaho, and Washington are small producers.

U. S. Production of Tungsten

		Yucca Tungsten Co.....	Arizona

Figures deduced by the Boulder County (Colorado) Metal Mining Association prove that the cost of producing tungsten ore averages about \$16.50 per unit. This applies, of course, to conditions prevailing in this one district, but it is here that the bulk of American tungsten emanates.

Tungsten ores from Bolivia are laid down in New York at \$7 per unit. In that country, the ore occurs in more persistent shoots than in our American districts. The mining of tungsten is therefore conducted with less deadwork and more regularity of production from each mine than is possible with us. Another point is that labor is much cheaper abroad than at home.

Our nation will always need all the tungsten that can be mined in our own country and the Government has been urged to declare an import duty that will largely eliminate foreign competition in supplying this necessity. A tax of \$10 per unit has been suggested.

Imports of tungsten ore in 8 months of 1917 totaled 2,737 tons, valued at \$2,791,451, equal to about \$1,000 per ton, or nearly \$17 per unit of 60% material. Of the total, 1,870 tons came from Chile and Peru, presumably of Bolivian origin, as exports from this country pass through the others.

URANIUM

As uranium is the source of radium, the production of uranium ore has already been given under radium. Uranium ores occur in many places in the United States, but are found in greatest abundance in the Paradox Valley region of Colorado and Utah. The following list of producing properties, practically covers the field.

Colorado-Utah Carnotite Mines Co., Grand Junction, Colo. Claims in Grand County, Utah.

Consolidated Uranium & Vanadium Co., Uranium, Colo.

German-Belcher Mines, Central City, Colo.

Curran & Hudson, Naturita, Colo.

A. C. Titcomb, Uranium, Colo.

Ike W. Stevens, Cedar, Colo.

Cliff Mines, Nucla, Colo.

American Rare Metals Co., Cedar, Colo.

A. M. Wilson, Naturita, Colo.

E. T. Herrmann, 1738 Broadway, Denver, Colo.

Ward & Reams, Nucla, Colo.

•Ewing Williams, Redvale, Colo.

J. M. Belisle, Norwood, Colo.

J. S. McArthur & Co., Glasgow, Scotland. Claims at Greenriver, Utah.

VANADIUM

Vanadium occurs with uranium in carnotite, the mineral of greatest commercial importance. When vanadium is 14% and uranium but 3% the mineral is a dark olive green; when the uranium content is 20%, the mineral is a beautiful yellow. The ore is usually low-grade, 2% to 4%, but of wide-spread occurrence, the sandstone looking as if dusted with sulphur.

The American Vanadium Co. is said to control 92% of the world's vanadium supply. Its mines in Peru yielded 2526 tons of ore in 1915. The demand is for vanadium steel, used in aeroplane construction, in automobiles, for military helmets and wherever extreme strength and lightness are required. In 1916 the price of ferro-vanadium was from \$2.25 to \$3 per pound. In 1917 there was a small advance on this quotation.

The three principal producers in the United States are:

Primos Chemical Co., Primos, Pa. Mines at Vanadium, San Miguel County, Colo.

Standard Chemical Co., Pittsburgh, Pa. Mines in Colorado.

American Vanadium Co., Pittsburgh, Pa. Minas-ragra mines, Peru.

VANADIUM MINES

American Vanadium Co. Peru Shattuck-Arizona Copper Co. . . Arizona
Primos Chemical Co. Colorado (etc.) Standard Chemical Co. . . . Colorado-Utah

ZINC (SPELTER)

Zinc mining has been a war industry in 1915-'16-'17, prices exceeding those ever known. American smelters in 1916 treated 1,777,891 tons of ore,

compared with 1,257,528 tons in 1915, and 872,767 tons in 1914. These tonnages yielded 683,004; 507,142, and 370,312 tons of spelter, respectively. Production in 1917 continues at a fair price, but many blocks of retorts are cold on account of uncertain conditions.

The following regulation was made in 1916 by the New York Metal Exchange.

Prime Western Spelter shall be virgin spelter resulting from the distillation of zinciferous material, and shall not contain on the average, in excess of 2% lead and .08% iron.

In case of dispute one slab out of every ten shall constitute a proper sample.

Remelted spelter shall not be a good delivery.

This ruling goes into effect at once, and replaces Rule 1 of the Spelter Trade Rules.

C. MAYER,
Secretary.

New York, August 31, 1916.

An illustration of the effect of the abnormal price upon the earnings of zinc companies is shown in the Butte & Superior returns: In 1914, with zinc averaging 4.94c per pound, the net profit was \$372,984, or \$3.90 per ton, treating 18.28% ore. In the first quarter of 1916, with zinc at 16.1c, the profit was \$3,554,939, or \$21.55 per ton, treating 15.69% ore.

The ore supply heretofore from many small mines is now in large part from a few large properties, the Butte & Superior mine and its neighbor the Elm Orlu at Butte, Mont., and the Consolidated Interstate-Callahan at Wallace, Idaho, these mines furnishing a third of the entire American production; although the new fields in Arkansas and Oklahoma must not be forgotten as being a factor in the supply. The use of concentration by flotation has entirely altered the ore situation at many mines. Oxidized or calamine ores furnish about 29% of the production.

Spelter Prices in New York

(a) Smelters' receipts: reports missing from three small smelters. (b) Including Illinois and Iowa. (c) In addition to the ore reported from Canada and Mexico, zinc smelters received a few thousand tons from Europe and Eastern Siberia in 1913. (d) Included in others.

Zinc ore imported in the 8 months of 1917 amounted to 156,589 tons, containing 60,082 tons of spelter, valued at \$3,583,391. There was also imported 171 tons of pig metal and 322 tons of dust. Of the ore imported, Australia sent 11,713 tons, Mexico 36,038 tons and Spain 6,083 tons.

Exports in this period were 7,332 tons of dross, worthy of \$1,239,941, and 137,420 tons of metal, valued at \$33,154,824. Of this, 50% went to England and 33% to France.

* First half (U. S. G. S.).

Summarizing the spelter situation for 1916, W. R. Ingalls stated in the *Engineering and Mining Journal* of July 7, 1917, that: (1) the United States production was 683,000 tons; (2) exports were 192,000 tons; (3) domestic consumption was about 450,000 tons; (4) use for galvanizing was more and for brass-making was less than was estimated in 1916; and (5) although stock in smelters' hands increased only 2,000 tons, there was really a large increase in stock, which was unavailable owing to delays in transit, and did not become released until 1917.

A feature of 1916 and 1917 was the starting of electrolytic zinc treatment plants, not only in United States, but in Australia and Canada. At present the following are in operation:

Company	Situation	Daily spelter capacity, tons
American Smelting & Refining.....	Murray, Utah.....	Experimental
Anaconda Copper Mining.....	Great Falls, Montana.....	200
Bully Hill Copper Co.....	Bully Hill, California.....	Experimental
Consolidated Mining & Smelting.....	Trail, B. C.....	20
Electrolytic Zinc Co. of Australia.....	Tasmania.....	20
Electrolytic Zinc.....	Baltimore, Md.....	10

Company	Situation	Daily spelter capacity, tons
Judge Mining & Smelting.....	Park City, Utah.....	15
Mammoth Copper.....	Kennett, California.....	25
River Smelting & Refining.....	Keokuk, Iowa.....	10
Western Metals.....	Georgetown, Colorado.....	100

During 1916, 10,229 tons of spelter was made from ore by the new process; and in 1917 the capacity of all domestic plants was rated at 85,000 tons per annum.

CHAPTER VI

RESUMÉ OF THE COPPER INDUSTRY

In this chapter, the essential, vital facts concerning the copper industry, both of the United States and of all countries of the world are presented in a series of tables, giving price and production with trade statistics, covering imports, exports, and consumption. A list of copper smelting plants and refineries and their capacities and outputs, and of copper stocks, is supplemented by the figures for the Michigan field, and the porphyry coppers.

The figures presented are mainly those of the Mineral Statistics Division of the U. S. Geological Survey, but the prices given are those reported by the Eng. & Mng. Journal, for the excellent reason that all ore sales are settled upon these figures, and no other journal or organization has access to reports of sales, made by the four or five greatest selling agencies, handling 95% of the North American output.

Figures for 1916 are summarized in the accompanying tables. The first gives the reported sales of electrolytic copper, the second of Lake copper, while the third gives comparative figures over the period of the last 12 years. Referring to the table of electrolytic sales, it appears that upward of 1,200,000,000 lb. of copper realized an average of 25.71c per lb. This accounts for a very large proportion of the copper produced and sold in 1916. Indeed, we may say that it accounts for all of it, for it may be assumed reasonably that the Anaconda production of upward of 300,000,000 lb., together with the other unreported copper that is sold through its agency, probably realized about the same price as was got for the Inspiration copper, namely, 25.39c.; while unreported copper sold through the American Smelting & Refining Co. undoubtedly realized about the same as was got for the copper of the Hayden-Stone-Jackling companies; taking account, moreover, of the large amount of copper that is sold to consumers on the quotational average, we may assume that the entire production—about 2,300,000,000 lb.—of American refiners in 1916 was sold at an average of about 25.71c. That figure is, if anything, too high, for without any doubt it includes in many cases prices that were gross; that is, including amounts that producers had to pay out for freight in delivering to their customers or allowances that they had to make for bills discounted.

Reports of the Michigan companies show the sale of 257,000,000 lb. of copper at an average of 25.02c per lb. Their reports represent practically all the Michigan production.

The average realized for all the copper sold in 1916 was far below the quotational average. This is explained by the fact that in 1916 the conditions were, in general, those of a rising market. Copper was sold by the producers in large blocks, after which the market, continuing to rise, was made on relatively small transactions. The difference between the sales average and the quotational average in 1916 is, therefore, the difference between a quantitative and an arithmetical average.

The same condition is reflected in the wide range of price received by the several companies. These averages ranged from 23.18c in the case of Shattuck Arizona to 27.35c in the case of United Verde. The low prices were due to the early sale of large quantities of copper at times when the market was

relatively low. The highest prices were realized by those companies that did not adopt the policy of selling all their output ahead, but reserved all or a considerable proportion of it and followed the market upward. The concerns that did that realized approximately the quotational average.

COPPER SALES IN 1916 BY ELECTROLYTIC PRODUCERS

Company	Pounds	Proceeds	Av. Price

Total.....	257,389,714	\$64,409,479	25.024c

The following table (from the Eng. & Mng. Journal) gives the essential figures of the Copper Industry for the past twelve years. The column headed "Pounds reported" represents the sales of the eight largest producers aggre-

gating 40% of the United States production, so that the prices given may be considered as representative of the entire industry.

Production, Sale and Price for Copper for 12 Years

Year	Total Production	Pounds Reported	Average Realized, Cents	Quotational Average, Cents
1905.....	219,000,000	82,372,955	15.597	15.699
1906.....	224,071,000	113,411,645	19.146	19.616
1907.....	220,317,041	66,316,025	18.043	20.661
1908.....	222,267,444	125,949,248	13.348	13.424

1910.....	221,400,864	126,710,763	12.960	13.039
1911.....	216,412,867	135,329,098	12.657	12.634
1912.....	1,228,333,298	552,155,308	15.841	16.341
1913.....	1,406,448,665	658,533,402	15.222	15.269
1914.....	1,342,634,206	566,687,750	13.458	13.602
1915.....	1,411,652,418	619,832,987	17.299	17.275
1916.....	2,300,000,000	1,217,014,743*	25.710	27.202

* 15 producers.

The 1914 price is an average for nine months. No quotations in August, September and October. The bulk of the copper sold in 1914 was disposed of before and after those months. So the nine month's basis is approximately correct.

For the first half of 1917, copper production of chief North and South American mines totaled about 1,085,815,000 lb. Up to 1912 the figures represent Michigan copper production and sales, and later figures represent electrolytic copper only. The figures for "pounds reported" and "average realized" do not include the United Metals Selling Co. (Anaconda), but John D. Ryan has stated that in the 10 years ending with 1913 his companies sold 5,560,000,000 lbs. of copper at an average of 14.82c, delivered to the buyers in Europe and America. This would be equivalent to 14.62 to 14.67c, net cash, New York. During the same 10-year period, Phelps, Dodge & Co. reported an average of 14.56c per lb., net cash, New York, actually realized. The arithmetical mean of the quotational averages for electrolytic copper in this period is 15.06c.

The figures for each company for 1915, a year of violent fluctuation with war demands and unusual conditions of delivery, are given below.

Copper Sales in 1915

Company	Pounds	Proceeds	Av. Price
Chino.....	64,887,788	\$11,303,957	17.42c (a)
Miami.....	41,907,754	7,262,884	17.331c (b)
Nevada Consolidated.....	62,726,651	11,069,671	17.647c (a)
North Butte.....	19,725,510	3,294,752	16.703c (c)
Phelps, Dodge & Co.....	194,925,668	31,342,098	16.079c (d)
Ray Consolidated.....	60,338,936	10,470,274	17.352c (a)
U. S. Smelting, Refining and Mining.....	26,923,674	4,895,532	18.183c (e)
Utah Copper Co.....	148,397,006	26,235,331	17.679c (a)
Total.....	619,832,987	17.299
E. & M. J. average.....	17.275

(a) Probably figured on copper produced and sold in 1915 but partly delivered and paid for in 1916. Whether gross price or net price not stated. (b) Gross price. (c) Produced and delivered in 1915. Whether gross price or net price not stated. (d) Produced and delivered in 1915. Net price. (e) Average of sales. Whether gross price or net price not stated.

Commenting editorially on these figures, the E. & M. Journal says that it is uncertain whether the price given is gross, including freight to delivery point of the refined copper or is net, and it is probable that the figures given do not represent the same thing. The Phelps-Dodge report 16.079c, realized from copper produced, sold and delivered, while others include copper sold, but not delivered and paid until 1916. A further discrepancy between the prices shown in the above table is due to differences in reported sales. Steadily rising prices were accompanied by increased production, partly sold in 1915, but not delivered and paid for until 1916, is by some companies all included in 1915 figures; thus the North Butte Co. delivered 19,725,510 lbs. @ 16.703c per pound but sold 27,805,869 lbs. @ 18.114c.

The Utah, Nevada, Chino and Ray report an "aggregate 336,350,381 lbs. @ 17.524c. All this copper was sold by the American Smelting and Refining Co., which reported a production of 551,798,000 lbs. valued at 16.13c. The returns of other companies selling through that agency were more in line with the latter figure than the former. In 1914 there was no such discrepancy, for the matter of carry-over does not make so great a difference when the prices over the turn of the year is not very different, as often is the case. The Hayden-Jackling companies in 1914 reported 275,938,710 lbs. of copper sold at an average of 13.313c, while the American Smelting and Refining Co. reported a production of 529,686,000 lbs., valued at 13.46c."

Two noteworthy features of these figures are the realization of a lower average for Lake copper than for electrolytic and the relatively slight variation among the prices received by the Lake producers.

(Engineering and Mining Journal)

GRADES OF COPPER

LAKE.—Copper from the native copper mines of the Lake Superior district. The standard range of conductivity is 99.5%.

ELECTROLYTIC.—Copper refined by the electrolytic process and running 99.93% upwards for cathodes. Conductivity to 103%.

CASTING.—Copper analyzing 99 to 99.75% made from ore and scrap. Used for casting purposes.

BEST SELECTED.—British copper averaging 99.75% fine. Largely used in the British brass trades.

TOUGH.—British copper largely used for casting, rolling and drawing. Runs about 99.25%.

CHILE BARS.—Copper smelted in CHILE running 95 to 99% pure and in some cases carrying bullion.

STANDARD.—Practically anything running from 96% upwards, dealt in on London Metal Exchange.

MATTE.—A semi metallic compound made from ores and usually running from 25 to 55% copper. An intermediate product between the ore and the finished copper.

DESCRIPTION OF COPPER

WIRE BARS.—About 3" to 4" square and 3' to 7' long. Average weight 135 to 175 lbs. Used for wire drawing.

INGOTS.—Average weight about 18 to 20 lbs. Notched. Used for casting.

INGOT BARS.—Notched bars for casting. Weight about 55 to 60 lbs.

CAKES.—Weight 100 lbs. and upward. Used for rolling.

ANODES.—About 2' by 3', 1½" thick, weighing 250 lbs. Crude copper used by electrolytic refiners.

CATHODES.—About 2' by 3' but thicker at the top than the bottom. Refined copper from the electrolytic tanks which is run down to wire bars, etc.—From American Metal Market.

New York, cents per pound. London, pounds sterling per long ton of standard copper. * No quotations.

†On Sept. 21, 1917, the Federal Government fixed copper prices at 23.50c per lb. for itself and the public during the duration of the War.

In explanation of the prices given in the *Engineering and Mining Journal*, the following quotation from that magazine is of interest:

"On any given day copper is apt to be sold at a range of price even when the market is stationary, such range exhibiting the competition among sellers and the shopping among buyers; also there are differences in price according to conditions of sale. In periods of activity there are, moreover, changes in price between the beginning and end of a day. In quoting figures in this annual review we have reference to what we have in our weekly market reports during the year computed as the daily average price. Quotations are reduced in terms of net cash, New York. Copper for domestic delivery is commonly sold on "regular terms." "Regular terms" in the sale of copper means that the seller delivers the copper to the buyer, paying the freight on it, and allows him 30 days after his receipt of the copper in which to make payment, or if he chooses to pay cash, the bill is discounted at the rate of $\frac{1}{2}\%$. To arrive at the difference between a sale upon these terms and a cash sale f.o.b. refinery, which is regarded as being f.o.b. New York, the interest on the value of the copper while in transit is commonly reckoned. This is a matter of 10 days. When copper sells at $18\frac{1}{4}c$, regular terms, the equivalent net price is therefore about 18.03c, there being 0.09125c discount, 0.1c freight and 0.0304c loss of interest, a total of 0.22c. The freight rate is naturally a variable, being less to some nearby factories and more to some of the more remote ones. About 10c per 100 lbs. is regarded as being an average transportation cost."

In discussing the copper producing mines of America it is worth while remembering that a very large part of the silver production of the United States and a respectable part of the gold output come from our copper mines. In the last year, several copper companies have also become zinc producers. The new metallurgy has made the recovery of the latter metal profitable in ores formerly worthless because of the presence of zinc. Thus the copper mines around Kennett, Calif. yielded 315,549 tons copper ore in 1915 with a value of \$17.97 per ton, made up as follows: gold, \$1.51 per ton; silver, \$1.26 per ton; copper, \$11.96 per ton; zinc, \$3.24 per ton. A perusal of statements of several companies at Butte, in another part of this volume will show the advance made along this line.

AVERAGE AMERICAN AND ENGLISH PRICES

The following table of average annual prices of copper in England and the United States is based upon the New York price for Lake copper and the London price for Standard copper. The two last columns give the American prices in cents and fractions and the English equivalent in sterling. English prices are for long tons of 2,240 pounds, and American prices for pounds avoirdupois, the last column, giving English equivalent of the American prices, being figured in long tons.

Year	English Prices										American Prices

* For six months ending June.

AMERICAN COPPER SUPPLY

The following table gives the figures of American copper supply, deliveries and stocks, in pounds, according to the statistics gathered by the American Copper Producers' Association:

1909	Stocks	Production	Deliveries	Changes
January.....	122,357,266	112,135,200	90,362,421	+ 21,772,779
February.....	144,130,045	103,700,817	74,546,614	+ 29,154,203
March.....	173,284,248	117,058,661	108,063,007	+ 8,995,654
April.....	182,279,902	113,574,292	112,656,121	+ 918,171
May.....	183,198,073	118,356,146	131,706,078	- 13,349,932
June.....	169,848,141	116,567,493	131,557,573	- 14,990,080
July.....	154,858,061	118,277,603	150,539,057	- 32,261,454
August.....	122,596,607	120,597,234	107,996,911	+ 12,600,323
September.....	135,196,930	118,023,139	102,182,932	+ 15,840,207
Adjustment.....		3,007,738	2,572,103	+ 435,635
October.....	151,472,772	124,657,709	122,620,855	+ 2,036,854
November.....	153,509,626	121,618,369	122,124,468	- 506,094
December.....	153,003,527	117,828,655	129,066,071	- 11,237,416
1910				
January.....	141,766,111	116,547,287	159,850,059	- 43,302,772
February.....	98,463,339	112,712,493	103,987,840	+ 8,724,653
March.....	107,187,992	120,067,467	103,430,585	+ 16,636,882
April.....	123,824,874	117,477,639	99,318,354	+ 18,159,285
May.....	141,984,159	123,242,476	104,800,662	+ 18,441,814
June.....	160,425,973	127,219,188	119,259,144	+ 7,960,044
July.....	168,386,017	118,370,003	116,115,342	+ 2,254,661
August.....	170,640,678	127,803,618	129,563,051	- 1,759,433
September.....	168,881,245	119,519,983	139,607,514	- 20,087,531
October.....	148,793,714	126,469,284	136,001,084	- 9,531,800
November.....	139,261,914	119,353,463	128,226,308	- 8,872,845
December.....	130,389,069	123,339,219	131,698,093	- 8,358,874

AMERICAN COPPER SUPPLY—Continued

1911	Stocks	Production	Deliveries	Changes
January.....	122,030,195	115,696,591	95,287,296	+ 20,409,295

	(a)			(b)	

(a) Production by the regular refining plants in 1915; (b) refined copper exported; both figures are from the advance statement, U. S. G. S., of production of copper in 1915.

The following table, listing the largest copper consumers in the United States, compiled by the Boston News Bureau, is of value.

	Monthly lb.	Per annum lb.
American Brass Co.....	25,000,000	300,000,000
Buffalo Brass Co.....	12,000,000	144,000,000
Chase Rolling Mills.....	12,000,000	144,000,000
National Conduit & Cable Co.....	10,000,000	120,000,000
Detroit Copper & Brass Co.....	8,000,000	96,000,000
Scoville Manufacturing Co.....	8,000,000	96,000,000
Roebbing Sons Co.....	6,000,000	72,000,000
Standard Underground Cable Co.....	6,000,000	72,000,000
Bridgeport Brass Co.....	6,000,000	72,000,000
Rome Brass & Copper Co.....	6,000,000	72,000,000
American Electrical Works & Phillips Insulating.....	6,000,000	72,000,000
Waclark Manufacturing Co.....	4,000,000	48,000,000
Baltimore Copper Smelting & Rolling Co.....	4,000,000	48,000,000
Seymour Mfg. Co.....	3,500,000	42,000,000
American Steel & Wire Co.....	2,500,000	30,000,000
Michigan Brass Co.....	2,000,000	24,000,000

	Monthly lb.	Per annum lb.
Plume & Atwood.....	1,500,000	18,000,000
Bristol Brass Co.....	1,250,000	15,000,000
Baltimore Tube Works.....	1,000,000	12,000,000
Taunton-New Bedford Copper Co.....	1,000,000	12,000,000
Randolph Clowse.....	1,000,000	12,000,000
C. G. Hussey Co.....	1,000,000	12,000,000
Stamford Rolling Mills.....	1,000,000	12,000,000
Hendricks Brothers.....	750,000	9,000,000
Miscellaneous.....	6,500,000	78,000,000
Total.....	136,000,000	1,632,000,000

From an obscure position, the Buffalo Brass Co. has forged rapidly ahead to a position second only to the American Brass Co. in the amount of copper used.

AMERICAN COPPER IMPORTS (In Pounds)

The following table, showing imports of copper, in various forms, into the United States, is summarized from the official figures of the United States Government. The Government statisticians have seen fit to vary the methods employed in presenting these figures, from time to time, but the present plan of giving contents in fine copper of imported ore and matte is preferable to the old plan of giving actual weight of imported ore and matte:

Year	Copper Contents Ore and Matte	Raw Copper	Old Copper	Total Fine Copper
1890.....	3,448,237	5,189	284,789	3,960,053
1891.....	8,391,554	2,556	134,407	11,472,436
1892.....	7,669,978	22,097	71,485	8,066,647
1893.....	7,256,015	554,348	59,375	11,045,297

See above table for 1917.

OUR COPPER AND SPELTER EXPORTS

Copper has for years been an important factor in our foreign trade, but neither spelter nor brass was prominent in this respect until after the outbreak of the war.

From Government statistics the *Boston News Bureau* has compiled figures giving a three years' comparison of 11 months' exports of copper, spelter and brass:

	1916*	1915-16	1914-15	1913-14
Copper, lbs.....	784,103,644	631,457,750	627,211,836	893,776,295
Value.....	\$213,276,190	\$138,007,251	\$87,293,720	\$133,423,679
Spelter, lbs.....	412,734,000	246,196,999	237,749,016	3,457,619
Value.....	\$56,750,925	\$40,563,710	\$18,281,791	\$369,667
Brass, lbs.....	251,488,064	119,512,499	50,506,918	28,074,291
Value.....	\$370,760,676	\$132,909,153	\$16,284,267	\$6,842,434
Total Value.....	640,787,791	311,480,114	121,859,778	140,635,780
Value, total exports.....	\$5,481,423,589	\$3,814,454,114	\$2,452,033,414	\$2,175,578,565

*Full year.

Imports of copper from other countries have also been increasing, 1915-16, particularly from Peru and Chile, where the rapidly growing operations of Cerro de Pasco, Braden and Chile companies have swelled the shipments to this country. More than 507,550,000 pounds of zinc have been brought into the United States since 1914, up to July, 1917; against 24,264,000 pounds in 1914. Over half of these imports came from Australia.

MICHIGAN MINES COPPER PRODUCTION IN 1915 AND 1916, IN POUNDS

					25.642

a As this table includes mines reporting their output both for the calendar and for the fiscal years, and as some of the companies report the refined copper equivalent of mineral produced and others report refined copper, the totals do not necessarily agree with the total of either mine or smelter output.

b Figures for fiscal year ending June 30, 1916.

c Included in Champion (Copper Range Co.).

d Year ended June 30, 1917.

(a) Copper Range Co. owns practically all the stock of the Baltic Mining Co. and Trimountain Mining Co., and 50,000 shares of Champion Copper

Co.; St. Mary's Mineral Land Co. owns the remaining 50,000 shares of Champion stock. Dividends of the operating companies have not been deducted from the totals; this duplicates a portion of the "Total dividends paid."

The average price received for all Lake Superior copper, from 1845 to 1916, inclusive, was 14.375 cents per pound, with average dividends of 3.702 cents per pound, leaving an estimated cost of 10.673 cents for all years. While this may be accepted as an arbitrary figure, the cost might very properly be figured materially higher. By adding \$60,000,000 to the cost of production, for money lost in unproductive ventures, the cost of copper produced would be made almost 11.5 cents per pound. By adding another \$15,000,000 for assessments, on mines that have since repaid in dividends the original assessments, cost of copper would be increased to about 11.85 cents per pound, leaving a net margin of profit, for the entire production, of almost exactly 2 cents per pound, plus the present aggregate values of the mines, which would be about equal to total dividend disbursements to date, or about 3.5 cents per pound.

Omitting the production of mines that have not proven profitable, the average cost of copper produced by dividend-paying Lake Superior mines probably has been about 9.5 cents per pound, for all years.

In the first nine months of this year there was paid out to copper shareholders in the United States approximately \$139,000,000, against \$108,000,000 in the same period of last year, according to the *Boston News Bureau*.

The heaviest distribution was made by the Utah Copper Co., which in the first three quarters of 1917 returned its stockholders \$17,869,390. Anaconda divided among its shareholders \$15,153,125; Kennecott disbursed \$13,054,616.

The principal copper share dividend payers and the amounts distributed throughout the first ten months of the past two years appear in the following tabulation:

* Initial.

Some of the companies listed above have already taken action on dividends to be paid in October, November and December; but they have not been included in the compilation as their payment has not actually taken place. In this grouping may be included Anaconda and Calumet & Arizona.

In preparation for meeting the forthcoming heavy taxation on excess profits, it was expected that Chino, Nevada Con., Ray, and Utah Copper would husband their cash resources to a large extent and eliminate what have heretofore been regarded as extra payments; but with the exception of Chino, all paid the same as in the previous period. Their record is as follows. The stock market discounted such a step to a large extent, particularly in Utah and Kennecott.

Company	1917 Per share	1916 Per share
Chino Copper	\$9.90	\$8.25
Nevada Con.	4.15	3.75
Ray Con.	4.20	2.75
Utah Copper	14.50	12.00

On July 25, 1917, each company paid a Red Cross dividend, amounting to 40c., 15c., 20c., and 50c. per share, respectively.

In the following tables it is probable that no data will be available until after the war.

CONSUMPTION OF COPPER IN EUROPE

European consumption of copper according to A. Hirsch & Sohn; in tons of 2,240 pounds.

STATE MINE INSPECTORS, COMMISSIONERS, ETC.

State	Name and Address
Alabama.....	C. H. Nesbit, Chief Mine Inspector, Birmingham.
Alaska.....	Sumner S. Smith, Mine Inspector, Juneau.
Arizona.....	C. H. Bolin, State Mine Inspector, Phoenix. Charles F. Willis, Director, State Bureau of Mines.
Arkansas.....	John H. Page, Commissioner, Bureau of Mines, Manufacturers and Agriculture, Little Rock; John T. Fuller, State Mineralogist; Tom Shaw, State Mine Inspector, Midland.
California.....	F. McN. Hamilton, State Mineralogist, San Francisco.
Colorado.....	Fred Carroll, Commissioner. James Dalrymple, State Inspector of Coal Mines, Denver.
Idaho.....	R. N. Bell, State Mine Inspector, Boise.
Indiana.....	Michael Scollard, Deputy Inspector of Mines, Indianapolis.
Iowa.....	E. M. Gray, President, State Mining Board, Des Moines.
Kansas.....	John Pellegrino, Chief Mine Inspector, Pittsburgh.
Kentucky.....	C. J. Norwood, Chief Inspector of Mines, Lexington.
Maryland.....	John Casey, State Mine Inspector, Frostburg.
Minnesota.....	F. A. Wildes, State Mine Inspector, Hibbing.
Missouri.....	J. P. Hawkins, Secretary, Bureau of Mines and Mines Inspection, Jefferson City. George Hill, Chief Mine Inspector, Bevier.
Montana.....	W. B. Orem, State Mine Inspector, Helena.
Nevada.....	A. J. Stinson, State Mine Inspector, Carson City.
New Jersey.....	Aug. Munson, State Mine Inspector, Trenton.
New Mexico.....	W. W. Risdon, State Mine Inspector, Albuquerque.
New York.....	W. W. Jones, State Mine Inspector, Albany.
North Dakota....	Jay W. Bliss, State Engineer, Bismarck.
Ohio.....	James Pritchard, Chief Deputy, Division of Mines, Columbus.
Oklahoma.....	Ed. Boyle, Chief Inspector, McAlester.
Oregon.....	H. M. Parks, Director, Bureau of Mines, Corvallis.
Pennsylvania....	James Roderick, Chief, Department of Mines, Harrisburg.
South Dakota....	Otto E. Ellerman, State Mine Inspector, Lead.
Tennessee.....	R. A. Shiflett, Chief Mine Inspector, Nashville.
Texas.....	B. S. Gentry, State Mine Inspector, Rockdale.
Utah.....	J. E. Pettit, State Mine Inspector, Salt Lake City.
Virginia.....	A. G. Lucas, Mine Inspector, Richmond.
Washington.....	James Bagley, State Inspector of Coal Mines, Seattle
West Virginia....	Earl Henry, Chief, Department of Mines, Charleston.

STATE GEOLOGISTS

Alabama.....	Eugene A. Smith, University.
Arkansas.....	N. F. Drake, Fayetteville.
Connecticut.....	H. E. Gregory, Superintendent, New Haven.
Colorado.....	R. D. George, Director, Boulder.
Florida.....	E. H. Sellards, Tallahassee.
Georgia.....	S. W. McCallie, Atlanta.
Illinois.....	F. W. DeWolf, Director, Urbana.
Indiana.....	Edward Barrett, Indianapolis.
Iowa.....	George F. Kay, Des Moines.
Kansas.....	R. C. Moore, Lawrence.
Kentucky.....	J. B. Hoeing, Frankfort.
Maryland.....	William Bullock Clark, Baltimore.
Michigan.....	R. C. Allen, Lansing.

STATE GEOLOGISTS—(Continued)

State	Name and Address
Minnesota.....	W. H. Emmons, Minneapolis.
Mississippi.....	E. N. Lowe, Jackson.
Missouri.....	H. A. Buehler, Rolla.
Montana.....	J. P. Rowe, Missoula.
Nebraska.....	E. H. Barbour, Lincoln.
New Jersey.....	H. B. Kummel, Trenton.
New Mexico.....	C. T. Kirk, Albuquerque.
New York.....	John M. Clarke, Albany.
North Carolina...	Joseph Hyde Pratt, Chapel Hill.
North Dakota....	A. G. Leonard, Fargo.
Ohio.....	J. A. Bownocker, Columbus.
Oklahoma.....	C. W. Shannon, Norman.
Oregon.....	H. M. Parks, Corvallis.
Pennsylvania....	R. R. Hice, Beaver.
Rhode Island....	Charles W. Brown, Providence.
South Dakota....	Freeman Ward, Vermillion.
Tennessee.....	A. H. Purdue, Nashville.
Texas.....	J. A. Udden, Director, Bureau of Economic Geology, Austin.
Vermont.....	G. H. Perkins, Burlington.
Virginia.....	Thomas L. Watson, Charlottesville.
Washington.....	Henry Landes, Seattle.
West Virginia....	I. C. White, Morgantown.
Wisconsin.....	W. O. Hotchkiss, Madison.
Wyoming.....	L. W. Trumbull, Cheyenne.

THE MINING COMPANIES AND MINES
OF THE UNITED STATES

MINES OF THE UNITED STATES

MINES OF THE UNITED STATES

CHAPTER VI

THE MINING COMPANIES AND MINES OF THE UNITED STATES

Those of other countries are in separate chapters. See alphabetical index in front of book.

A description of the active and most of the inactive mining corporations, and active mines of the various States arranged by States and grouped by counties and towns. The arrangement permits ready identification of companies whose exact title is not recalled and enables the reader to tell quickly what companies are operating near each mining center.

The descriptions of foreign mining companies are grouped under the name of each country, arranged alphabetically by countries and by companies.

A complete index in the front of the book makes quick reference possible when the name of the company is known.

UNITED STATES

The companies given under the general heading, operate properties in so many districts that the descriptions cannot be properly given under any one state. References are however given in the appropriate places, to the local holdings.

ALUMINUM COMPANY OF AMERICA.

Offices: Oliver Bldg., Pittsburgh, Pa., and 120 Broadway, New York.

Officers: Arthur V. Davis, pres.; G. R. Gibbons, v. p.-sec.-asst. treas.; R. E. Withers, treas.-asst. sec., Pittsburgh, Pa.; with D. L. Gillespie, Roy A. Hunt, Alvah K. Lawrie, A. W. Mellon and R. B. Mellon, directors.

Inc. 1888 in Pa., as the Pittsburgh Reduction Co.; name changed to present title, Jan. 1, 1907. **Cap.**, authorized, \$20,000,000; shares \$100 par; outstanding, \$19,000,000. No bonded debt. Dividends: 8% per annum, paid quarterly, Feb., etc., 1916; 2% extra in Dec.; 2% in Feb., 1917.

Controls the St. Lawrence River Power Co., the Northern Aluminum Co., the St. Lawrence Transmission Co. and the Tallassee Power Co. On Nov. 1, 1915, acquired control of the Southern Aluminum Co., with its unfinished hydro-electric and aluminum manufacturing plants near Whitney, N. C. This company was controlled by French interests until the outbreak of the European war in 1914. The plants were to have cost upward of

\$10,000,000. The Aluminum Co. of America formed the Tallassee Power Co., capital \$1,000,000 to complete the hydro-electric plant; it was expected to have this finished early in 1917. The aluminum reduction plant will also be completed.

Company owns extensive bauxite deposits in Saline Co., Ark., from which it secures most of its aluminum ore. About 6 tons of ore yields one ton of metal. Equipment at the property consists of crushing and drying machinery. The bauxite is shipped to a refining plant at East St. Louis, Ill., where the impurities are removed. There are also reduction works at Niagara Falls and Massena, N. Y., where there is a wire and cable mill, and at Maryville, Tenn. The company has a general fabricating plant at New Kensington, Pa., also a plant for the manufacture of aluminum bronze powder and aluminum foil.

The Northern Aluminum Co. is a Canadian corporation, which has a reduction plant and wire mill at Shawinigan Falls, Que., and a fabricating plant at Toronto, Ont.

Production: about 80% of the total aluminum product of the U. S., which in 1916 was 139,000,000 lbs. Company sold 86,589,774 lbs. in 1916 and supplied a subsidiary, the U. S. Aluminum Co. with 24,821,061 lbs.

AMALGAMATED COPPER CO.

Company dissolved in 1916. See Vols. XI. and XII.

AMERICAN FINANCE & SECURITIES CO. (THE)

Involuntary petition in bankruptcy filed June 22, 1915. Adjudicated bankrupt, May 15, 1916. Henry J. West, Camden, N. J., trustee. See Mines Handbook, Vol. XII.

AMERICAN METAL CO., LTD. (THE)

61 Broadway, New York City. **Officers:** Berthold Hochschild, New York, Chairman of the Board; C. M. Loeb, pres.; Otto Sussman, Henry Bruère, Julius Loeb and Harold K. Hochschild, v. p's.; Julian Beaty, treas.; Julius Goldman, sec., with Henry V. Putzel, S. Roos and M. Schott, directors.

Inc. 1887 in N. Y. as refiners, exporters, importers and dealers in metals and chemicals. **Cap.**, \$25,000,000, \$100, par, \$7,000,000 issued. No bonded debt. Dividends not reported.

Controls the Consolidated Interstate Callahan Mng. Co., Wallace, Idaho; American Zinc & Chemical Co., Langeloth, Pa.; the Compania Minera de Penoles, of Mapimi, Mex.; Compania de Minerales y Metales of Mexico; Ohio & Colorado Smelting & Refining Co., of Salida, Colo.; Bartlesville Zinc Co., of Bartlesville, Okla.; Compania Metallurgica de Torreon of Mexico and Metallurgical Company of America, of New York. Company is agent for Balbach Smelting & Refining Co., of Newark, N. J.

AMERICAN SMELTING & REFINING CO.

Gen. Offices: 120 Broadway, New York; Corporate office: 15 Exchange Place, Jersey City, N. J.; City of Mexico office: Cio Bancaria de Obras Bldg., Mexico, D. F. Valparaiso office: Casilla 12, Valparaiso, Chile.

General officers: Daniel Guggenheim, pres.; E. L. Newhouse, Edw. Brush, S. W. Eccles, Karl Eilers, Jos. Clendenin, J. K. MacGowan, v. p's.; Isaac Guggenheim, treas.; Judd Stewart, gen. aud. and asst. to the pres.; F. W. Hills, compt.; L. A. Chapin, asst. treas.; W. E. Merriss, sec.; F. R. Foraker, asst. sec.; R. P. Reese, aud.; John N. Steele, gen. counsel.

Directors: Simon Guggenheim, chairman; Jos. Clendenin, Silas W. Eccles, Karl Eilers, Chas. Earl, Leopold Fredrick, Daniel Guggenheim, Isaac Guggenheim, Murry Guggenheim, S. R. Guggenheim, F. W. Hills, Wm. Loeb, Jr., John K. MacGowan, W. S. McCornick, W. S. Morse, E. L. Newhouse, Walter T. Page, H. A. Prösser, Grant B. Schley, John

N. Steele, Judd Stewart, C. W. Whitley, F. H. Brownell, C. A. H. de Saulles, Roger W. Straus.

Executive Committee: S. R. Guggenheim, chairman; Edward Brush, Jos. Clendenin, S. W. Eccles, Karl Eilers, Chas. Earl, Daniel Guggenheim, Murry Guggenheim, Simon Guggenheim, F. W. Hills, Wm. Loeb, Jr., J. K. MacGowan, W. S. Morse, E. L. Newhouse, H. A. Prosser, Judd Stewart, F. H. Brownell, H. A. Guess.

Finance Committee: Murry Guggenheim; chairman; Edw. Brush, S. R. Guggenheim, Daniel Guggenheim.

Operating officials: Jos. Clendenin, mgr. copper sales dept.; Wm. Loeb, Jr., managing director labor and welfare dept.; E. R. Reets, purch. agt.; F. R. Raiff, traffic mgr.; G. H. Cole, asst. traffic mgr.; E. L. Carpenter, fuel agt.; C. W. Whitley, gen. mgr. Utah dept.; L. G. Eakins, gen. mgr. Colo. dept.; H. A. Guess, managing director mng. dept.; W. M. Drury, mgr. mng. dept.; C. L. Baker, gen. mgr. Mex. dept.; R. T. White, gen. mgr. Chile; Kuno Doerr, gen. mgr. S. W. dept.; F. D. Aller, Chile agt.; Samuel Metzger, mgr. ins. dept.; E. A. Behr, sales agt. lead dept.; H. M. Brush, asst. mgr. copper sales dept.; Roger W. Straus, asst. to chairman of board.

Foreign representatives: Paul Koning, Zurich, Switzerland; Kleinwort, Sons & Co., London, Eng.; W. A. Price and Geo. T. Ewart, fin. agts., Mexico City, Mex.; H. R. Wagner, res. director, Valparaiso, Chile; R. T. White, gen. mgr., Antofagasta, Chile, S. A.

Transfer agt., Ralph M. Leonard, New York; registrar, Chase National Bank, New York.

Inc. April 4, 1899, in New Jersey. **Cap.**, \$115,000,000, with \$65,000,000 common and \$50,000,000 cumulative 7% preferred stock; shares \$100 par. Original capitalization was \$54,600,000, increased to \$100,000,000 and again increased Jan., 1911, by \$15,000,000 common stock authorized to exchange for 6% debenture bonds of American Smelters Securities Co. at any time before Aug., 1918, that bonds may sell at par. Annual meeting, first Wednesday in April. Has about 11,000 shareholders.

The American Smelting & Refining Co. controls the American Smelters Securities Co. through the ownership of the entire common stock issue of \$30,000,000, 80% of pfd. B and 35% of pfd. A. and has guaranteed principal and 5% dividends on the entire stock issue of Series B cum. pfd. stock of the American Smelters Securities Co.

Company's consolidated balance sheet of Dec. 31, 1916, shows total assets of \$217,325,133, which includes property acct., \$141,165,684; investments in securities of other companies, \$827,277; metal stocks, \$27,477,650; working assets, \$4,601,312; current assets, \$42,430,307; in funds, \$823,003; a total increase of \$15,508,782 in assets over 1915. Current assets include cash \$16,941,492; accounts and notes receivable \$20,593,603; secured loans, \$4,119,412 and advances to affiliated companies, \$775,699. Liabilities are given as pfd. capital stock outstanding, \$96,458,800; common stock outstanding, \$54,299,000; debenture-bonds outstanding, \$6,669,000; current liabilities, \$27,468,288; reserve and suspended creditor acct., \$8,957,749; surplus of \$23,442,295. The profit and loss column showed \$32,578,854, of which \$6,000,000 was reserved for enlargement and extension.

Consolidated Income Account:	1916	1915	1914
†Net earnings	\$22,574,527	\$14,472,612	\$10,667,822

-------------------------------	-----------	-----------	-------

Profit and loss surplus	\$23,442,295	\$19,560,438	\$18,495,943
-------------------------------	--------------	--------------	--------------

† Of smelting and refining plants and industries dependent thereon.

* In 1916 in excess of 30% on common stock outstanding Dec. 31, 1916. Regular quarterly dividends of 6% per annum were declared on Common Stock. In 1915, equal to 14.1 per cent on the company's \$50,000,000 common stock after allowing \$1,646,565 for depreciation; 6.03 per cent was earned on the same amount of stock in 1914, when \$1,540,350 was charged off.

x Special appropriations were \$3,136,559 for property account, and \$6,000,000 for enlargement and extension.

Par value of Securities Co.'s bonds held by Trustees in sinking fund, Dec. 31, 1916 is \$4,110,000; par value held in company's treasury for which Smelting Co.'s common was issued in exchange, \$4,191,000; bonds outstanding, \$6,699,000; or a decrease of \$5,913,500 for the year.

Net increase in cash working capital was \$4,731,611 of which \$3,858,788 was expended for increase in metal stocks. Balance of Dec. 31, 1916, gave \$19,941,492, as cash on hand and subject to check and \$3,000,000 of loans secured by Stock Exchange collateral.

A comparison of the tremendous increase in business being done at end of and at the beginning of the year 1916 is offered by the book value of ore, bullion, and factory products on hand and in transit on Dec. 31, 1916, less treatment charges accrued but not earned, amounting to \$105,254,065, against \$58,582,143 at the end of 1915 for value of same stock; or an increase of \$46,671,922. This is largely in weight of metal carried in normal business as inventory price at which metals are carried has not been increased.

The total receipts from sales of metals and manufactured products of \$346,602,866, compares with the receipts from same sources in 1915, of \$219,603,470, and in 1914, of \$183,146,077.

Operating Statistics

	1915	1916
No. of men employed, excluding Mexico.....	15,556	21,073
Total wages and salaries, excluding Mexico...	\$11,392,503	\$17,047,944

Average wage per 8-hour day	\$2.44	\$2.70
Charge smelted, tons	4,153,092	4,789,474
Bullion refined, tons	579,080	677,460
Coal used, tons	604,204	724,595
Coke used, tons	401,511	454,468
Fuel-oil used, barrels	829,304	1,107,285
Gas used, cubic feet	1,071,593,000	2,130,460,328
Ore mined, tons	1,578,611	1,638,566
Coal mined, tons	235,222	224,807
Coke produced, tons	120,660	140,961

Metal Products

Gold, ounces	2,672,702	2,662,011
Silver, ounces	76,117,453	71,868,451
Platinum and palladium, ounces	693	868
Lead produced, tons	296,986	279,144
Copper produced, pounds	551,798,000	789,438,000
Spelter, pounds	36,154,000	47,807,547
Nickel, pounds	1,120,556	1,224,328
Tin, pounds	3,262,000
Sulphuric acid, pounds	34,124,000	25,842,000
Arsenic, pounds	7,269,000	9,090,000
Copper sulphate, pounds	8,366,000	13,046,000
By-product metals, pounds	2,229,887	5,671,827
Copper and brass manuf. products, pounds....	8,763,480	31,597,489
Test lead and litharge sold, pounds.....	355,229	417,898
Loaded cartridges sold, number	12,898,000	15,338,000
Sheet lead, pipe, etc., sold, pounds	9,638,205	21,713,331
Mixed metals sold, pounds	2,566,255	2,831,617

The business of the company is so varied that it almost defies analysis, save by a certified accountant. It mines gold, silver, copper, lead, zinc ores and coal. It melts its own ores of all these metals, and most of the ore produced by the lesser mines of America. It refines not only these five metals, but manufactures them into copper sheets, rods, tubes, etc., at Baltimore; makes white lead, sheet lead, etc., at Selby; zinc white, etc., at its zinc smelters; sulphuric acid at Perth Amboy, N. J., and Garfield, Utah, and coke at its mines. It refines and sells bismuth, cadmium, arsenic, nickel and platinum, palladium and selenium largely from the slimes of its electrolytic refineries, and makes blue vitriol.

It owns and operates ten mines in Mexico. It owns and operates a number of railways in Mexico under the title of the Mine Lines of Mexico, and the Mexican Union R. R.

Following is the list of metallurgical plants of the company:

Lead Smelting

Plant—	Location	Manager	Supt.	Furnaces	(c) Tons
Globe	Denver, Colo.....	L. G. Eakins, g. m....	F. Roesser	7	1,600

Tacoma	Tacoma, Wash.	72,000
	H. Y. Walker, mgr.; G. A. Kerr, supt.				

The mining properties of the company are under the general charge of Mr. W. M. Drury, general manager; R. F. Manahan, assistant. The operating mines are as follows:

Silver Lake Mine, L. R. Clapp, supt., Silver Lake, Colo.

Anganguero Unit, A. W. Edelen, supt., Anganguero, Mich., Mexico.

Charcas Unit, S. F. Shaw, supt., Charcas, S. L. P., Mexico.

Dolores Unit, E. E. Reyer, supt., Matehuala, S. L. P., Mexico.

Federal Lead Co., H. G. Washburn, mgr., Flat River, Mo.

Sierra Mojada, W. B. Gates, supt., Sierra Mojada, Coa., Mexico.

Santa Eulalia, W. J. Deavitt, supt., Santa Eulalia, Chi., Mexico.

Santa Barbara, W. P. Schumacher, supt., Santa Barbara, Chi., Mexico.

Velardena, R. E. Adams, supt., Velardena, Dgo., Mexico.

American Smelters Securities Co.'s properties are all included in the above; the same applies to the National Metallurgical Co., the Tacoma Smelting Co., the Baltimore Copper S. & R. Co., the Selby Smelting & Lead Co., the Federal Lead Co. and the Garfield Smelting Co.

The Federal Smelter is supplied with ores principally from the Company's mining operations in Southeast Missouri. At present the output of ore is, roughly speaking, 1,500,000 tons per annum, which is concentrated into approximately 75,000 tons of concentrates, containing more or less 60,000 tons of lead.

About \$750,000 has been spent in enlarging the milling and smelting

works, and extending the development of mines of the company in Missouri.

The production of pig lead has been increased from 42,000 tons at the beginning of 1916 to 66,000 tons per annum.

The recent installation of an electrolytic zinc plant at the Murray, Utah, smelter, and construction of a 100-ton sulphuric acid plant, using the chamber process, at Garfield, Utah, show that the company is still in the fore in its metallurgical practice.

During 1916 the sulphuric acid plant, with a capacity of over 50,000 tons per annum, was completed, and plans have been made to duplicate this plant as soon as market can be found for increased product.

The plant at Chihuahua is largely supplied with ores from the Company's Mines in the Santa Eulalia and Sierra Mojada Districts of Mexico.

The Velardena Smelters are supplied largely from the Company's Velardena Mines.

Matchuala Smelter handles principally the ore from the Company's Dolores Mines, which are in the same district.

None of the Mexican smelters were operated during 1916.

In October, 1917, it is reported that the smelters at Aguas Calientes, Matchuala, and Monterey, are in operation and several mining units reopened. Company will operate its own trains between Laredo, Tex., and Monterey for transportation of coke, supplies, and bullion. Mexican Government has promised unusual vigilance for protection of railroad.

Company during 1916 entered the mining and smelting business in Chile and bought the Caldera smelter including many mines, imperfectly developed, and the stock of the Carrizal smelter.

A developed mining property in Mexico adjoining the company's mines at Parral was also secured.

The tin plant production is now about 600 tons monthly, and an addition to the plant, now under construction, will increase the production of pig tin to 18,000 tons per annum, in 1917.

With the completion of construction now covered by appropriation, and which should be in operation soon after the middle of 1917, the company will have a capacity for producing 1,300,000,000 lbs. of electrolytic copper annually.

The semi-annual report for 6 months ended June 30, 1917, states that the combined income of the company and its subsidiaries from smelting, refining and mining properties, together with miscellaneous earnings, amounted to \$18,757,900, after deducting various general expense items. This is an increase of \$5,528,841 over similar earnings for the corresponding six months of the preceding year. Against the gross income, as given, various charges amounting to \$8,555,780 reduce the net income to \$10,202,120, as compared with \$11,145,694 reported for the same period of last year.

The charge for depreciation and depletion of ore reserves is \$2,396,174 as against \$1,019,489 for the first half of last year, the new figure being obtained by a more scientific method of estimation, based on a percentage of appraised valuation of the property of the company. Administrative expenses were \$529,027, a slight increase; research and examination expenses were \$86,052, a small decrease. Interest on outstanding American Smelter Securities Co. debenture bonds amounted to \$25,450, and that on the American Smelting and Refining Co. first-mortgage bonds was \$377,483. Miscellaneous profit and loss charges were \$752,033 and an appropriation of \$500,000 was made for an employees' life-insurance fund, the plan of which insurance will be more fully outlined in the next annual report of the company. There was also a charge for corporate taxes, including accrued income tax and estimated excess profits tax, amounting to \$3,-

889,561. Since the law fixing the amount had not been passed, the board of directors were unable to determine whether the estimate would prove too large or too small.

After the payment of the regular dividends, and a special Red Cross dividend of 1% on the common stock, or a total dividend disbursement of \$5,037,049 during the 6 months as compared with \$4,502,734 for the same period of last year, there was carried to the credit of the surplus account a balance of \$5,165,071. This gives a total profit-and-loss surplus of \$28,607,366 on June 30, 1917, as compared with \$26,203,398 on June 30, 1916, or a net increase of \$2,403,968.

The expenditures for increasing the facilities and capacity of various properties, together with the purchase of new properties, amounted to \$3,794,647, which amount has been charged to a reserve account of \$6,000,000 established for the purpose from the earnings of the year 1916. The property account has been decreased by the amount charged to depreciation and depletion of ore reserves and by certain small miscellaneous credits, making a total decrease of \$2,409,140 since Dec. 31, 1916, which leaves a total property account of \$138,756,545 on June 30, 1917. The investments in securities of other companies amounted to \$1,744,174, or an increase of \$916,897 over the previous six months, representing investments in mining properties in the United States and also in Chile, as well as coal properties and plants for the manufacture of chemicals, details of which will be given in the next annual report of the company.

"For the first time in 3 years or more the company is receiving a net income from its Mexican properties. All the mines and smelters in Mexico are now operating, except those at or near Chihuahua and those at Velardeña. Work is carried on under many difficulties and as yet only to a limited extent. The government of Mexico is anxious for the company to succeed and laborers are more than willing to work. However, on account of the high cost of living, they are suffering to even a greater extent, comparatively, than the inhabitants of the United States. It is estimated that in Mexico the price of necessities is at present six times greater than during the period preceding the revolution. To meet this situation the company is importing and selling such necessities to the laborers at cost, or lower, and has largely increased the wages paid. Transportation is the greatest difficulty, to overcome which the company has purchased the necessary cars and locomotives and, under the permission of the Mexican government, is managing its own railroad transportation. As the business of the company in Mexico promotes the general welfare of the country, by the payment of freight and taxes to the government and the employment of the people, the board of directors has felt that all difficulties should be overcome without regard to temporary profits. It is considered that, as long as the high prices of metals continue, the company will be amply repaid."—(E. & M. Journal).

The American Smelting & Refining Co. is the largest general smelting and metallurgical enterprise in the world. The company continues to expand and prosper, mainly because of its superior metallurgical and business ability, backed by large and modern works and adequate capital.

American Sm. Securities Co. United States & Mexico

Office: 120 Broadway, New York.

Inc. March 25, 1905, in New Jersey, and name changed to present title, May, 1905. Cap., \$77,000,000 shares \$100 par, in \$17,000,000 Series A cumulative 6% preferred stock; outstanding Dec. 31, 1916, \$16,649,800; \$30,000,000 Series B cumulative 5% preferred stock, and \$30,000,000 common stock

Series A has preference as to dividends, and both preference series have equal rights as to assets, both having priority rights to assets and dividends over common stock.

Is controlled by American Smelting & Refining Co., through the ownership of the entire issue of common stock, and the American Smelting & Refining Co. guarantees the Series B. preferred stock.

Financial statement is consolidated with that of A. S. & R. Co., which see.

Owns in fee mines in different districts in Mexico, and copper and lead smelting and refining plants in the United States. It also owns all or a controlling part of the stock of a large number of subsidiary companies.

The A. S. & R. Co. owns all the common stock of the American Smelters Securities Co. The bonds of the latter company have been redeemed. The 5% cumulative-preferred stock, series B, of the Securities Co. is guaranteed by the Smelting Co., both as to interest and principal, and is, therefore, an obligation of the Smelting Co., prior to its preferred stock. After mature deliberation, the directors decided that it would be to the interest of the Smelting Co. to acquire the Series B preferred stock of the Securities Co. by offering its 1st mtge. 5% bonds in exchange for the series B, 5% preferred stock of the Securities Co., par for par. Accordingly, the Smelting Co. made such an offer to holders of preferred stock, series B, of the Securities Co., the plan to be declared operative in case an amount of the series B preferred stock, in the judgment of the Smelting Co., sufficient to justify it in making the exchange, shall be deposited. This offer remained open until March 14, 1917.

AMERICAN, ZINC, LEAD & SMELTING CO.

General offices: 55 Congress St., Boston, Mass. Sales office: 120 Broadway, New York City. Operating office: 1012 Pierce Bldg., St. Louis, Mo. Corporate office: 85 Exchange St., Portland, Maine.

Officers: C. W. Baker, prés.; L. A. Coolidge, C. A. Hight, P. E. Coyle, W. F. Rossman (in charge of smelters), and J. N. Houser (in charge of mines), v. p.'s; F. W. Batchelder, sec.; S. E. Farwell, treas.; M. A. Donovan, asst. sec.-treas.; William A. Ogg, comptroller; H. L. Smith, gen. aud.; H. I. Young, mgr. Missouri mines.

Directors are E. P. Brown, E. A. Clark, Galen L. Stone, Charles Hayden, N. B. MacKelvie, C. W. Baker, W. H. Coolidge, J. N. Lovell, F. Lothrop Ames, L. A. Coolidge, B. P. Bole, C. A. Hight, F. H. Goff, and H. S. Kimball. Transfer agents: F. W. Batchelder, 55 Congress St., Boston, Mass., and Guaranty Trust Co., New York. Registrars: First National Bank, Boston, Mass., and Bankers Trust Co., New York.

Inc. Jan. 26, 1899, in Maine. **Cap.**, \$500,000; shares \$25 par; increased on April 22, 1899, to \$2,500,000; on October 16, 1906, decreased to \$1,250,000; on December 18, 1906, increased to \$3,750,000; on April 10, 1912, increased to \$7,500,000; outstanding December 31, 1915, \$4,828,000. At the annual meeting in April, 1916, the authorized capital stock consisting of \$7,500,000, divided into 300,000 shares of the par value of \$25, was classified as follows: 100,000 of the authorized shares unissued and in the treasury at that date were classified as pfd. stock, and the remaining 200,000 shares were classified as common stock, so that the present authorized capital consists of 100,000 shares of pfd. stock and 200,000 shares of common stock. Stock is listed on Boston and New York Stock Exchanges. Annual meeting, second Wednesday in April.

Balance sheet of American Zinc and subsidiaries for year ended Dec. 31, 1916 shows assets totaling \$20,591,841, including property accounts, \$12,-

310,404, investments \$1,637,616, insurance-fund investments \$41,953, advances to subsidiaries \$300,000, current \$6,230,781, and deferred charges \$71,087. Liabilities include \$7,242,000 pfd. and com. stock, \$2,000,000 first-mortgage 5%, 10-year gold bonds, \$4,561,911 depreciation and reserve funds, \$1,841,661 current, and \$4,904,316 surplus. Excess of current assets over liabilities was \$4,389,120 at end of 1916.

Profits from sales of zinc and lead ores, spelter, sulphuric acid, royalties, etc., totaled \$9,307,968 in 1916. Adding surplus from 1915 there was available \$15,163,609. Of this, \$4,976,490 was paid in dividends, \$2,006,000 transferred to depreciation and reserve funds, and \$3,282,644 applied to purchase of the Granby properties. The surplus carried forward to 1917 was \$4,904,316.

Dividends: have been \$2 in 1899, \$1 in 1900, \$1.25 in 1907, \$1.50 in 1910, \$2 in 1911 and 1912 and \$1 in 1913. In June, 1916, a stock dividend was declared, each share of com. stock issued received one-half share of pfd. stock, equivalent at par to \$12.50. The pfd. stock is entitled to cumulative dividends of \$6 per annum. In the event of any liquidation or dissolution of the company, holders of the pfd. stock are entitled to be paid \$100 per share and accrued dividends. During 1916, \$3 per share was paid upon the pfd. and in 1917 \$1.50 quarterly on the pfd. stock.

The Amer. Zinc, Lead & Sm. Co. is an operating and holding company, owning the following: Amer. Zinc Co. of Tenn., Amer. Zinc Co. of Ill., Amer. Ballast Co., Amer. Pipe Line Co., Amer. Zinc Ore Separating Co., and 649,774 shares of 925,000 shares issued of the Wisconsin Zinc Co. These companies are listed under their own title but are described below.

In 1916 company purchased all the assets of the Granby Mining & Smelting Co., consisting of about 30,000 acres of mineral lands in the Joplin district, Missouri, 10,000 acres of coal lands in Illinois, a zinc smelter at East St. Louis, Ill., a zinc smelter at Neodesha, Kan., and a lead smelter at Granby, Mo. All of the above are described below.

Property: in the Joplin district, Mo., the company owns 32,160 acres of mineral land. The principal operations are at the Davey mines on the 655-acre Davey property, the Vogey mine on a 40-acre tract in the Porto Rico district, the Klondike, Mascot, and Golden Rule mines near Granby, Mo., a 600-ton custom mill near Granby, Mo., and the B. & H. Mine near Joplin. There are 4 mines in the Davey group, 2 worked out and 2 producing.

The ore, sulphides of lead and zinc, occurs in bands between the barren zones of flint that comprise the Grand Falls chert. It is from this formation that the term "sheet-ground mines" is derived, and in it the ore is generally uniform in character and covers large areas. In the Davey mines, 124 acres have been mined out in one continuous chamber. Ore faces are from 14 to 20' in height.

Development is by means of 6 vertical 2-compartment shafts, all in the ore formation. Two shafts are used for mining purposes, and 4 for ventilation. The ore level is at 250' depth. The ore is very low grade, zinc concentrates recovered representing 1.79% and the lead concentrates 0.67% of rock treated. Ore output has been approximately 50,000 tons ore per acre, from 15% to 20% ore being left as pillars. Timbering is not necessary. The blanket formation permits of development, in wide areas, average yearly advance on all faces in the mine is 125'.

There are 2 mills on the property, No. 3 mill of 1,200 tons ore and No. 4 mill of 1,000 tons ore daily capacity.

The Vogey mine is similar to the Davey. Operations have been irregular, depending on price of zinc and lead concentrates. Zinc concentrates

recovered represent 1.76% and lead concentrates 0.20% of rock hoisted. There is a mill on the property, with daily capacity of 1,000 tons.

The Klondike, Mascot, and Golden Rule mines are in sheet ground formation. Recovery in zinc concentrates represents from 2 to 4% of rock hoisted. The Klondike is developed by 3 shafts and equipped with 1,000-ton mill. The Mascot is developed by 3 shafts, and equipped with 350-ton mill. The Golden Rule is developed by 1 shaft and equipped with 300-ton mill. The B. & H. mine, near Joplin, is developed by 1 shaft and equipped with 250-ton mill. All mills are operated by electric power, with the exception of the B. & H., which has a steam plant.

There are also many mines being operated under lease on a royalty basis on the company's lands in the Granby district. An extensive drilling campaign is being carried on to determine values and possibilities on holdings in the district.

The company owns 3 smelting plants in the gas belt at Caney, Dearing, and Neodesha, Kan. At Caney there are 6,080, at Dearing, 4,480, and at Neodesha, 3,760 retorts. Combined yearly capacity is 150,000 tons of concentrates. The company also leases from the Owen Zinc Co. at Caney, Kan., two blocks of furnaces and in 1916 added one furnace block, making a total of 1920 retorts. The life of these smelters depends upon the fuel-supply of natural gas, now obtained from the Oklahoma-Kansas field. The Caney and Dearing smelters were closed down Sept., 1917.

The company also owns a small lead smelter with a yearly capacity of 10,000 tons of ore at Granby, Mo.

Subsidiary Companies

American Zinc Co. of Tennessee

O. C. Burrell, mgr., Mascot, Tenn.

Inc. Feb. 24, 1911, in Maine. Cap., \$10,000; shares \$1 par, all owned and issued by A. Z. L. & S. Co.

Principal mining operations of the Tennessee Co. are at Mascot, Knox Co., where the company owns 2,400 acres land, and in Jefferson Co., adjoining Knox Co. on the east, where company owns 400 acres of land.

Orebodies of the Mascot mines occur in the Knox dolomite, dip 15° to 30° south and strike north of east, in lenses of varying sizes and in well-defined brecciated areas which lie in certain recognized zones or bedding planes. The ore is a light colored sphalerite. The zinc formation may be followed for many miles from Knoxville, in an easterly direction. In 1910 the company obtained an option on the Holston property, started drilling and proved up a large tonnage of pay ore. A 3-compartment shaft, mine No. 1, was sunk in 1911 and the orebody developed in 1912. The main orebody is developed on the 280' level, and, as exposed, is 1,300' long, 700' to 880' wide, and 30' to 40' thick. Limits of the orebody have not been reached by development to date. In 1913 a 4-compartment shaft, mine No. 2, was sunk 2,000' east of No. 1 and a second orebody developed, with length of 1,500', thickness of 40' to 125', width of 300' and limits not yet reached. Average grade of ore as shown by drill records is 5% to 5½% zinc. Greatest depth of workings, 800', is at mine No. 2. A tramway connect No. 2 mine with No. 1 mill. Development has shown the ore to be continuous between No. 1 and No. 2 orebodies. Further drilling 3,000' east of eastern limits of mine No. 2 has indicated a third orebody; this will not be developed until some future time.

Mining methods at the Mascot mines are described by H. A. Coy and H. B. Henegar in the Sept., 1917, *Bulletin* of American Institute of Mining Engineers. Costs total 70c per ton.

From the east to west the ore development as now shown is 7,900' in length. There has been blocked out 4,000,000 to 5,000,000 tons of ore which will average 4% zinc.

In May, 1913, mill No. 1, with 1,000 tons daily capacity, was completed. Additions to this mill were finished in July, 1915, bringing its daily capacity up to 2,200 tons. It is now treating over 2,400 tons daily. On the Roseberry property adjoining the Holston on the west, Mascot No. 3 mill has been completed having a daily capacity of 700 tons. Mill equipment at Mascot consists of crushers, rolls, jigs and tables, followed by flotation treatment of slime and fine sand. Mascot No. 1 mill is being enlarged by addition of 55 tables, jigs, etc.

Power is obtained from the Tennessee Power Co.

Mascot concentrates average about 60% zinc and are very high grade, in fact, the lowest in lead and iron of any produced in quantity in the U. S., the spelter produced therefrom commands a substantial premium per pound over Prime Western quotations.

The company has developed the town of Mascot, owning 350 houses, a company store, and hotel.

Mossy Creek mine at Jefferson City was opened during 1916, and ore is being shipped to Mascot No. 1 mill for treatment.

A modern plant was built near No. 1 mill during 1916 to prepare agricultural limestone, asphalt-filler and fertilizer, from tailings from the Mascot concentrating mills.

American Zinc Co. of Wisconsin

A. M. Plumb, mgr., Platterville, Wis.

Inc. June 27, 1908, in Maine. **Cap.**, \$1,000,000, shares \$1 par, issued 925,000 shares, owned by A. Z. L. & S. Co., 649,774 shares. Property: in S. W. part of the State in the Wisconsin district. The ore deposits exist in the forms of flats and pitches, the flats being horizontal deposits along the bedding planes of the rocks, while the pitches are dipping crevices. The chief deposits lie in the lower part of the Galena limestone at a depth of 100' to 200' and vary in length from 1,000' to 5,000', in width from 30' to 300', and in height from 12' to 60'. The ores consist of the sulphides of zinc, lead and iron, the latter in the form of marcasite.

The principal operations in the Wisconsin field are as follows:

Champion property, 434 acres, on which there has been developed an orebody 1,500' long, 800' wide, and 40' high. A mill of 500 tons daily capacity is in operation.

Winskell mine, operated on leased land, 10% of gross output going to the land owners. A mill of 450 tons daily capacity is in operation. Total production to end of 1914 was 31,089 tons zinc concentrates, averaging 36.51% zinc, and 1,073 tons lead concentrates, averaging 76.28% lead.

The life of the Champion property, with its surrounding leases, as estimated at present, is from 5 to 10 years.

Longhorn property, operated on leased land at 10% royalty, has ore reserves of 175,000 tons high grade ore. The 350-ton mill is in operation.

The Thompson mine, operated on leased land at 10% royalty, has ore reserves of 200,000 tons high grade ore; equipped with 350-ton mill.

Company owns a number of other leases in the district on which valuable ore reserves have been proved by drilling. The Copeland property will be developed by shaft and equipped with mill in the near future.

The life of the Champion property, with its surrounding leases, as estimated at present, is from 5 to 10 years.

The policy of the company is to maintain a drilling campaign for

new orebodies, with the purpose of keeping 5 to 10 years' production in sight.

The low grade of concentrates in the Wisconsin district necessitates treatment by means of partial roast and magnetic separation. The company has a plant for this purpose, equipped with a 7-hearth roaster of the Skinner type near the Champion property. This plant has 200 tons daily capacity, producing a finished concentrate assaying 58 to 60% zinc.

American Zinc Co. of Illinois

Inc. Aug. 15, 1911, in Maine. **Cap.**, \$10,000, shares \$1 par, all issued and owned by the Am. Z. L. & Sm. Co.

Property: at Hillsboro, Ill., consists of 600 acres, on which has been built a modern smelter plant of 4,800 retorts furnace capacity, capable of distilling 48,000 tons of concentrates per year; 3 Hegeler muffle kilns, pottery, machine-shop, warehouse, ore storage bins and sulphuric acid plant producing 45,000 tons of 60° acid annually; also a zinc-oxide plant of 24 furnaces, with auxiliary buildings.

East St. Louis property consists of 143 acres, on which is a modern smelter plant of 5,600 retorts capacity, capable of treating 54,000 tons of concentrates annually; Hegeler and De Spirlet roasting kiln, pottery, sulphuric acid plant, oxide plant of 8 furnaces, with auxiliary buildings. Sulphuric acid plant produces 50,000 tons 60° sulphuric acid annually.

American Ballast Co.

Mascot, Tenn. Inc. Nov. 9, 1911. **Cap.**, \$2,000, shares \$1 par, 5 shares issued and owned by Am. Z. L. & Sm. Co. The company disposes of mill tailings of the Mascot mill of the Amer. Zinc Co. of Tenn. Table and flotation tailings are sold for fertilizing purposes, other tailings are sold for railroad ballast, road construction, etc.

American Pipe Line Co.

Inc. June 16, 1910, in West Va. **Cap.**, \$50,000, shares \$100 par, all issued and owned by A. Z. L. & Sm. Co. Property consists of gas lands, and leases, gas wells and oil wells, located in the southeast corner of Kansas, near the Caney and Dearing smelters, the gas rights on 181,000 acres in Osage Co., Okla., and a system of trunk pipe-lines in Kansas and Oklahoma with the necessary feeders. There are over 60 miles of main pipe-line, 12" diam., now laid and connected up with smelters.

American Zinc Ore Separating Co.

Inc. Oct 13, 1908, in Maine. **Cap.**, \$25,000, shares \$5 par, all issued and owned by A. Z. L. & Sm. Co. This company owns certain patents for the separating of zinc ores by the Huff electrostatic methods. Its business is to lease machines constructed under these patents on a royalty basis. Companies using Huff process are as follows:

Zinc: U. S. Sm., Ref. & Mng. Co., Midvale, Utah; Carnegie Lead & Zinc Co., Cananea, Mex.; Kittimac Mng. Co., Silverton, Colo.; Mary Murphy G. Mng. Co., Romley, Colo.; Sunnyside Mines Co., Eureka, Colo.; Pinos Altos Mng. Co., Pinos Altos, N. M. **Copper:** Tilt Cove Mng. Co., St. Johns, Nfld.; Det Metallurgiske Akt., Bergen, Norway. **Graphite:** Flaketown Graphite Co., Flaketown, Ala.; Jennings G. Co., Alabama G. Co., Ashland, Ala.; National G. Co., Toronto, Can. **Misc.:** Carborundum Co., Niagara Falls, N. Y.; Soc. Française des Metaux, Australia. **Testing Plants:** University of Illinois, Urbana, Ills., and Canadian Dept. of Mines, Ottawa, Can.

Granby Mining & Smelting Co. of Missouri

Granby, Newton Co., Mo. Inc. in 1864. In June, 1916, net quick assets exceeded \$2,750,000, of which nearly \$1,000,000 was in cash; current liabilities, less than \$300,000. Reported in June that company had declared a dividend of \$2,000,000 in the form of 10-year, 5% bonds, secured by mortgage of its real estate, and the company subject to this mortgage, had been taken over by the Granby Co. of Maine, to be then taken over by the American Zinc, Lead & Smelting Co. Purchase price, \$8,000,000. The \$2,000,000 bond issue has been taken as part payment; and it is proposed to furnish \$2,000,000 additional by an issue of 40,000 shares of common stock of the American Z. L. & Sm. Co., to be offered stockholders at \$50, stock to be underwritten without commission; remaining \$4,000,000 to be paid for out of earnings. Value and earning capacities of properties based on a 5-ct. spelter market.

Property: owns in fee simple about 30,000 acres of land in the zinc district of southwestern Missouri. For nearly 50 years its revenue has come from royalties paid by lessees operating on these lands. Within the past 3 years it has itself developed a large tonnage of rich ore near Granby. Company has been a dividend payer almost from its inception, and has, out of earnings, acquired 10,000 acres of coal land in Illinois; built a new coal zinc smelter and sulphuric acid plant in East St. Louis; bought and improved a gas zinc smelter at Neodesha, Kansas, and acquired a small lead smelter at Granby.

All the sulphuric acid output has been sold up to and through 1920
GENERAL DEVELOPMENT CO.

Offices: 61 Broadway, New York.

Officers: Adolph Lewisohn, pres.; J. Parke Channing, v. p.-cons. engr.; Theo. L. Herrmann, sec.; Sam A. Lewisohn, treas.; preceding officers, Samuel Untermeyer, Herman Sielcken, D. M. Hyman, W. T. Rosen, A. S. Rossin, J. H. Susmann, E. H. Westlake, Arthur Lehman, B. Hochschild, F. W. Estabrook and S. S. Rosenstamm, directors.

Inc. 1906, in Delaware. **Cap.,** \$2,000,000, increased to \$2,500,000, increased 1909 to \$2,600,000, and again increased, 1913, to \$3,000,000; shares \$25 par, nonassessable; 120,000 shares issued. Equitable Trust Co. of New York, registrar. Dividends paid 1908, 1½%; 90% in 1909, 15% in 1910; 1½% in 1913; 6% in 1915; 23% in 1916; 25% to Sept., 1917, a total of 170%. Balance sheet of Dec. 31, 1916 shows a surplus of \$2,043,397.

Company is a securities holding corporation, which owns nearly one share of Miami stock for each issued share of its own, and also owns a large block of dividend paying Kerr Lake stock, and of New Cornelia Copper. It also controls, through stock ownership the Colorado Gold Dredging Co., San Cayetano Mines, Ltd., and Naumkeag Copper Co. The increase of capitalization, 1913, was to finance the merger of the Silver Mines Exploration Co., the corporation which developed and promoted the Kerr Lake and Wettlaufer-Lorrain companies of Cobalt, Ont. Company has extensive stock interests in New Planet Copper Co., Bagdad Copper Co., with other mining interests in the United States, Canada and Mexico.

The General Development Co. is a parent corporation, examining, developing and financing mining properties which, when they have reached the self-supporting producing age, are turned over to operating companies. It is a powerful factor in the copper industry, and with the wide experience and astute guidance of Mr. Adolph Lewisohn, combined with the technical skill and great ability of J. Parke Channing, its consulting engineer, promises to become increasingly important.

Company's most recent venture is the Jerome Copper Co., organized to explore and develop the Hooker-Ewing group, south of Jerome and the Mayer-Belford group near Mayer, Ariz. Described under Jerome Copper Co. in Arizona section of this volume.

GOLD FIELDS AMERICAN DEVELOPMENT CO., LTD.

Offices: 233 Broadway, New York, and 8 Old Jewry, London, E. C., England.

Officers: S. Christopherson, chairman; E. S. Birkenruth, Lord Bra-bourne, Lord Harris, J. C. Prinsep, and H. L. Sapte, directors. Advisory committee in America: J. McDougall, Alfred de Ropp, and H. H. Webb.

Inc. March 10, 1911, in England. **Cap.**, £2,500,000; shares 10s. par; 2,000,000 issued, 1,000,000 being fully paid and 1,000,000 with 10s. called.

Company acquired from Consolidated Gold Fields of South Africa, Ltd. (which see) latter's interests in America, including shares in Natomas Consolidated, Oroville Dredging, Sierra Pacific Electric, Mississippi River Power Co., Yuba Consolidated Gold Fields, Granville Mining, Vera Cruz Mexican Oil, Trans-continental Consolidated Oil, International Petroleum Co., Foreign Mines Development, La Grange Mining, American Trona Corp., and others. The mining companies named herein will be found described under their respective titles.

GUGGENHEIM EXPLORATION CO.

Dissolution completed in 1916. See previous volumes for past operations, also American Smelting & Refining Co., Braden Copper Co., Chile Copper Corporation, and Kennecott Copper Corporation.

INTERNATIONAL AGRICULTURAL CORPORATION

Office: 61 Broadway, New York City.

Officers: S. B. Fleming, pres.; Albert French, v. p.; J. J. Watson, Jr., v. p.-treas.; F. F. Ward, v. p.-asst. sec.; J. R. Floyd, sec.-asst. treas.; with G. B. Case, T. W. Lamont, W. Schmidtman, E. R. Stettinius, D. E. Pomeroy, F. M. Weld, and A. H. Wiggin, directors.

Inc. June 14, 1909, in New York. **Cap.**, authorized 7% cumulative preferred \$8,000,000, and \$18,000,000 common. Issued \$13,055,500 pfd., \$7,303,500 com., and \$10,725,000 in bonds.

Assets total \$33,709,437, including \$21,364,935 for real estate and plant. Gross profits in 1916 amounted to \$2,944,237, which was \$745,000 ahead of that for 1915. The net profit was \$1,034,054. In 1913 there was a loss of \$161,493. In 4 years, \$1,480,815 was written off for rock depletion and general depreciation, while \$1,062,576 was spent on new plant.

Company has 18 large acidulating and fertilizer plants, mostly in the South, a large number of distributing plants, and holds 50% interest in some German potash mines.

Property: 42,226 acres of phosphate lands in Florida; also extensive areas in Tennessee. In 17,000 acres explored, reserves are estimated at 41,500,000 tons. In all properties there is supposed to be nearly 100,000,000 tons. To make this rock soluble, sulphuric acid, bought from the Tennessee Copper Co., is mixed with it.

INTERNATIONAL METALS SELLING CO.

Is a subsidiary of the U. S. Smelting, Refining & Mining Co. and managed by Vogelstein & Co., 42 Broadway, New York.

INTERNATIONAL SMELTING CO.

Office: 42 Broadway, New York.

Officers: Cornelius F. Kelly, pres.; Wm. D. Thornton, 1st v. p.; L. D. Ricketts, 2nd v. p.; Albert H. Melin, treas.; with C. E. Mills, Benj. B. Thayer, and John D. Ryan, directors. David B. Hennessy, sec. J. B. Whitehill, ore purchasing agent.

Inc. in Montana. **Cap.**, \$15,000,000. Stock entirely owned by Anaconda Copper Mining Co. Company is a reorganization of the International Sm. & Ref. Co.

Company operates smelters at Tooele, Utah and Miami, Ariz., the Raritan Copper Works at Perth Amboy, N. J., and the smelter of the International Lead Refining Co., at East Chicago, Ind.

Miami Smelter

The Miami smelting plant, Miami, Ariz., C. E. Mills, gen. mgr.; L. R. Wallace, supt., built primarily to smelt the concentrates produced by the mills of the Inspiration Cons. Copper Co. and the Miami Copper Co., is equipped to handle custom ores. The plant is situated about a mile E. of Miami and 6 miles W. of Globe, on the Inspiration Co.'s Industrial Ry., connecting with the Arizona Eastern R. R. at Miami.

The smelter is essentially a reverberatory plant, which on account of the high copper content of the concentrates treated has been built to minimize losses in the handling of material from one department to another, and the prevention of dust losses, as far as possible.

Material from both Miami and Inspiration mills is largely flotation concentrate hauled to the smelting plant in 60-ton steel cars especially designed to handle sticky fine material of this nature.

Bins: Concentrates are first bedded in three 3,000-ton V-bottom bins with the necessary limestone, pyrite, first-class ore and secondaries to give a proper smelting mixture. First-class ore goes to receiving bins with capacity of 1,350 tons.

Crushing and Sampling Plant: 22'x40', 5-stories high, contains: 1 18"x30" Blake crusher; 1 set 54"x16" rolls; 3 sets 42"x16" rolls; 1 16" Snyder sampler; 3 27" Snyder samplers; 2 24"x8" rolls.

Steel storage bins of 1,500 tons capacity are provided for the storage of crushed ore and fluxing material.

Roaster and Dryer Plant: 67'x97' and 93' high, contains 5 Wedge roasting furnaces, 22'6" in diam., each having 5 regular hearths and a dryer hearth. Oil burners operating in combustion chambers supply the heat for drying. No roasting is permitted, as the sulphur content of the concentrates is so low that it is necessary to add pyrite to keep matte down to a proper grade.

Each furnace is fed from a 190-ton storage bin directly over it. The gases pass directly to a header flue, and then into Cottrell treaters located above the charge floor. The Cottrell treaters in this plant practically prevent the loss of any flue dust.

Reverberatory Plant: the reverberatory building, 134'x176', contains 3 reverberatory furnaces with hearth areas of 21'x120'. The furnaces are oil fired and discharge their gases through Stirling boilers, according to the usual practice. There are seven 712-h. p. waste heat Stirling boilers.

Converter Plant: is 58'x380'x49' to the top of crane rail. Two 40-ton magnet switch controlled electric traveling cranes are provided.

The plant contains 5 converter stands of 12' electrically operated Great Falls type converters; 2 straight line casting machines with 5'6"x16'6" tilting furnaces, 1 skullbreaker, etc. Silica bins filled by belt conveyors discharge into weighing hoppers, which measure out a pre-determined charge, delivering it directly into the mouth of the converter through pivoted spout.

The gases from the converters are passed through Cottrell treaters, before being discharged into the chimney, which give a high recovery of the precious metal values contained in the gases.

Power Plant: at the smelting works is operated by the Inspiration Co., the smelting plant selling its steam to, and purchasing its power from the Inspiration company. The power plant buildings are of steel and reinforced concrete construction throughout. The main units consist of three 6,000-k. w. Turbo-Generators and 3 cross-compound, 15,000 cu. ft. blowing engines, switchboard, etc. Modern auxiliary apparatus is provided for condensing, automatically measuring steam and feed water, recording temperatures, pressures, etc. The boiler house contains six 712-h. p. oil fired Stirling boilers equipped with superheater and economizer.

The plant operates at very high efficiency.

Shops, Offices, Etc.: a steel shop building, equipped with traveling crane, is divided into four departments, viz., machine, blacksmith, boiler, electrical and carpenter shops, all well equipped with modern tools.

The warehouse building and general office and laboratory buildings are of reinforced concrete throughout and there are 8 reinforced concrete cottages at the smelting plant for its staff. Water for the plant is obtained from the Inspiration Co.'s water main.

On account of the high copper contents of the concentrates which the plant receives, it has a production capacity of 16,000,000 lbs. of copper per month, with spare reverberatory furnace and converter stand.

During 1916 the plant treated 295,075 tons of concentrates and 37,891 tons of custom ores, a total of 332,966 tons. This yielded 181,518,396 lbs. of copper, 257,543 oz. of silver and 2,882 oz. of gold.

Tooele Smelter

Tooele Smelter: Wm. Wraith, gen. mgr., Kearns Blk., Salt Lake City, Utah. The smelter is $6\frac{1}{2}$ miles from Tooele Junction on the main line of the Los Angeles & Salt Lake Railroad, where connection is made with the Tooele Valley railroad, and plants and yards cover one-half square mile.

Crushing and sampling 5-story building, 2 complete sections using the Brunton system of sampling, contains 8 Blake type crushers, 9 to 12"x15 to 24" in size and 8 rolls, 12 to 15" wide and 26", 42" and 48" diameter. Each sampling section contains 4 Brunton sample cutters. In the copper plant ore is crushed to $\frac{3}{8}$ ", conveyed from sample mill to roaster storage bins (5,000 tons capacity) by belt conveyor, thence to roaster feed hoppers by belt conveyor.

Copper Department: The McDougall roaster building contains 2 sections, each 64x162' and holding 32 furnaces. These furnaces are 16' in diameter, 18' high and have 6 hearths. Roaster gases pass through a 120x140' hopper bottomed brick dust chamber 30' high above hoppers, containing two 4' banks of wires; thence through brick flue 255' long to stack. The brick stack is 350' high and 25' inside diameter at the top. The reverberatory plant receives the calcine by electric tram system. It contains 5 coal-fired furnaces, Anaconda type, 1 with 19'x90' hearth, 4 with 19'x102' hearths. Each furnace is equipped with 750-h. p. waste-heat Stirling boiler. Gases go through a brick flue 1,360' long to stack.

The converter plant has 5 electric-driven stands for 96x150" shells and a 60-ton crane. Converter shells are lined with magnesite brick. Copper is cast in steel moulds by 30-ton crane. Slag is cast in beds and broken up and sent to the lead blast furnaces. Gases from plant go through a steel flue to a 50x126' brick bag house containing 960 31x1'6" woolen bags. From the bag house the gas is discharged through a 150' stack 15' in diameter at the top.

The power house contains 2 Corliss engines direct-connected to 250-k. w. 500-v.d.c. generators; 2 vertical triple-expansion engines direct-connected to 750-kva. 2,200-v. generators; 2 converter blowing engines, 15 lbs. air; 1 steam-driven 90-lb. air compressor; 1 electric-driven 90-lb. air compressor; 2 No. 10 Roots blowers, direct-connected to tandem compound Corliss engines; one 750-k. w. Westinghouse-Parsons turbo-generator; and 2 Leblanc condensers and necessary auxiliaries. Condensing water is cooled in natural draft cooling tower. In addition to the waste-heat boilers, there are 3 hand-fired 350-h. p. Stirling boilers.

Lead Department: The lead plant contains blast furnaces, sinter plant and charge bins. There are 26 double steel bins with a capacity of 10,000 tons of ore and concentrate, receiving material from the crushing plant by belt conveyor. Fine concentrates and ores already sampled can be dumped direct. Charges for blast furnaces and sinter machines are weighed in scale hoppers and dropped into charge cars, going direct to furnaces, but sinter charges go by car to a hopper-feeding belt conveyor delivering to sintering machines.

The sinter plant contains 10 Dwight-Lloyd machines, 42x264", rated capacity 100 tons per day per machine. Sinter from machines goes to blast-furnace charge bins by standard railway cars.

The blast-furnace plant is a steel and concrete building with two 45x180" and two 60x180" furnaces whose daily capacity averages 250 tons of charge. Gases pass to brick bag house containing 1,440 bags, lead to dressing plant and the lead-copper matte to the converter plant. A slag settling furnace is being erected. The dressing plant has four 30-ton kettles and uses a Howard press.

Tooele Valley railway has 7 miles of main line; 1 locomotive, 6-wheel switching type, 57 tons weight; 1 locomotive Mogul type, 60½ tons weight; 2 locomotives, Consolidation type, 96 tons; 30 steel hopper-bottom ore cars; 3 flat cars and 4 passenger coaches.

This plant has a fully-equipped assay office and laboratory, shops, weather observation department, emergency hospital, offices, etc.

Industrial equipment consists of four 18-ton and four 12-ton electric locomotives, with necessary slag trucks, matte trucks, calcine and coal cars. All buildings are of steel and concrete construction.

The plant was enlarged during 1916.

The smelting practice of copper ores largely follows Anaconda methods. The sulphide fines are roasted with a certain amount of silicious ore added upon the fifth hearth of the roasters to heat the ore and keep the temperature at the right point. The ore is roasted down to .7% sulphur corresponding to a matte fall of 15 to 18 tons per day. The reverberatory slag, carrying 40 to 42% silica, is tapped at the back of the furnace and the matte, carrying 20 to 30% copper, conveyed in ladles to the converters. The converters, when operated only on day shift, are kept hot over night by filling them with cinders from the reverberatory furnaces. Silica is applied to the converter in lump ore, 2 boats to each 8-ton charge. The bag-house dust from the smelter fumes is removed by reversing the fan and direction of current, drawing the dust into the chamber beneath.

The completion of the Utah Metal Mining Co.'s 11,000' tunnel in 1913, gives direct connection with the Bingham mines. In 1916 the plant treated 442,756 tons copper ore, 421,197 tons lead ore. **Production:** 20,041,089 lbs. fine copper, 117,976,091 lbs. lead, 5,549,777 oz. silver, and 40,009 oz. gold.

Raritan Copper Works

The Raritan Copper Works: E. C. Clark, supt., Perth Amboy, N. J., is on New York harbor. Completed 1899, and since enlarged repeatedly,

it is one of the largest and most modern electrolytic copper refineries in the world.

The smelting department consists of one 200-ton, one 150-ton and one 100-ton furnaces for casting anodes, and two 225-ton, one 150-ton and two 100-ton furnaces for casting wire bars, ingots and cakes.

The electrolytic refinery includes 2 tank houses with their respective power houses; power consumption being about 7,000 k. w. The department has special shears for trimming cathode sheets and Morrow loop machines for attaching copper lugs to the cathode starting-sheets.

The tank house No. 1 has 1,800 tanks and a capacity of 22,000,000 lbs. per month. The general arrangement and method of operation is very similar to that in No. 2 tank room. This room is 210x582'.

No. 1 power house, which furnishes power for No. 1 tank room, contains four 1,000-k. w. Nordberg triple-expansion Corliss engines and Allis-Chalmers barometric condensers. The engines are direct-connected to 1,000-k. w. electric generators, 2 being furnished by the General Electric Co. and 2 by the Crocker-Wheeler Co.

No. 2 tank house has 3 bays running lengthwise, with two 10-ton 3-motor Whiting cranes in each bay, equipped with special devices for handling an entire tankful of anodes or cathodes at 1 load. There are 3 electric circuits running lengthwise, 1 in each bay, each circuit of 396 tanks being handled from the power house by an electric generator. Current is 7,500 amperes, giving a current density of 20 amperes per sq. ft. The main conductor has a cross-sectional area of 12 $\frac{3}{4}$ ". There are 1,188 depositing tanks arranged in 108 nests of 11 cells each, with electrode arrangement on the Walker system.

In 1916 the plant treated 233,956 tons copper bullion, and 4,531,771 oz. silver bullion. **Production:** 462,666,262 lbs. fine copper; 18,606,866 oz. silver, and 167,024 oz. gold.

International Lead Refining Co.

Wm. Wraith, gen. mgr.; G. P. Hulst, supt.; has an extensive plant located at 151st St. and McCook Ave., East Chicago, Ind., with 64 acres of ground. Construction work started April 20, 1912, and plant was in operation Oct. 3, 1912. Plant comprises main refinery building, all steel and concrete, with 3 standard-gauge tracks entering the building. There are 2 crane runways running the full length of the building, with 3 traveling cranes. A men's change house, of brick, is equipped with toilets, shower baths, steel lockers, and 1 room equipped as a dining room. Bag house is constructed of brick and concrete, divided into 4 compartments of 144 bags, 30'x18".

Equipment: consists of one 12,000-ton battery Parks process, two 300-ton softeners, four 60-ton desilverizing kettles, one 300-ton refining furnace, and one 200-ton molding furnace. The bullion comes in on a high track, is charged into furnace with charging machine and flows by gravity through the plant. Lead is hand-molded and trucked into cars. Sampling is done in two 40-ton kettles and bullion pumped into softeners with centrifugal pump. Residues are worked up in three 30-ton reverberatory furnaces. There are two 40-ton blast furnaces, 1 for antimonial slag, and 1 for by-products and ores; 8 retort furnaces for treating zinc skim and two 5-ton cupels for treating high-grade retort metal.

Common lead is double refined by crystallization in kettles in the corroding lead plant. Refining plant is in complete operation. All furnace gases except softeners and retorts are drawn through a sheet flue 700' long and passed through the bag house.

Power is supplied by the Northern Indiana Gas & Electric Co. Two waste-heat boilers supply steam for compressors and refinery. High-pressure air is supplied by centrifugal air compressor and air for blast furnaces is supplied by a Connersville blower. A 50,000-gal. tank elevated 50', and 100,000-gal. sump tank, waste running back into sump tank and pumped into the 50,000-gal tank, the elevated tank being connected with the East Chicago Water Co.'s mains. Oil storage capacity, two 12,000-gal. oil tanks.

The International is not burdened by old smelteries acquired at exorbitant prices, but has new and up-to-date plants, capable of handling ore as cheap, if not cheaper, than any of its competitors and is a big factor in the mining world. It is in strong and competent hands, both technical and financial, and its profitable operation is assured.

In 1916 the plant treated 58,769 tons of lead bullion from Tooele, and 6,148 tons foreign ore. **Production:** 108,009,116 lbs. of common and corroding lead; 15,682,151 lbs. of antimonial lead; 4,468,775 oz. of silver, and 20,580 oz. of gold.

INTERNATIONAL SMELTING AND REFINING CO.

Properties and assets: purchased 1914 by Anaconda Copper Mng. Co. for \$10,392,709. Company dissolved and properties transferred to International Smelting Co., and described thereunder.

METALLURGICAL COMPANY OF AMERICA.

Office: 61 Broadway, New York.

Officers: C. M. Loeb, pres. and gen. mgr.; B. Hochschild, v. p.; Otto Sussman, treas.; preceded with Julian B. Beaty and Edw. Randolph, directors; Julius Goldman, sec.

Inc. May 19, 1904, in New Jersey. **Cap.**, \$100,000; shares \$100 par; issued for the purpose of exploiting mining and smelting enterprises. Annual meeting second Tuesday in April, at Jersey City, N. J.

MINERALS SEPARATION NORTH AMERICAN CORPORATION

Offices: 61 Broadway, New York, and 220 Battery St., San Francisco, Cal. E. H. Nutter, chief engineer.

Officers: John Ballot, pres.; Dr. S. Gregory, v. p.; Frank Altschul, treas.; Chester B. Allen, sec.

Inc. 1917. **Cap.**, 500,000 shares of no par value, placed in a 5-year voting trust. Certificates for 250,000 shares were distributed to shareholders of Mineral Separation, Ltd., the British parent company, as an initial dividend.

Company owns United States, Canadian and Mexican flotation patents of Minerals Separation, Ltd. Ore treated under license during 1916 totaled 14,000,000 tons, compared with 4,500,000 tons in 1915. Of the 1916 total, 12,000,000 tons were treated in United States, which should yield \$700,000 in royalties. Infringers are estimated to have treated 13,500,000 tons in 1916.

While large profits are in sight for Minerals Separation, they will be accompanied by considerable litigation over patents, and the end of the legal tangle is not yet in sight. Flotation of copper, gold, lead, silver, zinc, or other ores is in use or being tried everywhere. At present there are several hundred users of one or more of the many modifications of flotation. The economic value of the process for base-metal ores is enormous. Though it is not universally applicable it is certain that many flotation plants were failures because of inexperience and a few because the ores were not amenable to the process. In some cases it has been found that flotation works well for a while, then recoveries drop almost to level of other concentration systems. It is quite evident that

while flotation is not a cure for all treatment troubles, it is an invaluable adjunct to almost every concentration plant.

It is the modifications of flotation, which Minerals Separation terms infringements, that have caused the recent litigation. Company claims it has over 200 infringers. If these various new systems were allowed to be used unchallenged, Minerals Separation would lose large sums due as royalty for its patents. At the present time about 27,000,000 tons of ore is treated annually by flotation largely in conjunction with other classification and gravity-concentration processes, though a few mills use flotation solely.

Several large copper companies made contracts with Minerals Separation for royalties on a tonnage sliding-scale basis, about 4 to 12c per ton of ore treated. Among these are Anaconda, Arizona Copper, Braden, Calumet & Arizona, Greene-Cananea and Inspiration.

Minerals Separation v. James Hyde (really the Butte & Superior Mng. Co.), also v. Miami Copper, have been the principal suits over flotation patents. In *M. S. v. B. & S.* the District Court, at Butte, Mont., sustained U. S. patent 835,120 as to 10 of complainant's claims, finding that defendant had infringed them. The Ninth Circuit Court of Appeals reversed this decision. In a writ of certiorari to review this decision, the U. S. Supreme Court adjudged in Dec., 1916, that the patent was valid as to 7 claims. The critical amount of oil used is claimed by M. S. to be a fraction of 1% to the amount of ore. The *M. S. v. B. & S.* suit had not reached finality in Sept., 1917.

In *M. S. v. Miami*, the U. S. District Court at Wilmington, Delaware, Sept., 1916, sustained the plaintiff, declaring infringement of claims 1 and 12 of patent 835,120, and all of patent 962,678, but did not uphold claim 9 of patent 835,120, or any of patent 1,099,699. This suit was next taken to the Third Circuit Court of Appeals, which decided in May, 1917, that Miami had infringed patents 835,120 and 962,678. In Sept., 1917, the Miami Co. decided not to appeal this decision. Miami, like many other companies, uses the Callow pneumatic system for mixing ore pulp and oils for flotation of minerals.

To evade the patents, which specifically cover the use of 1% or less of oil to the tonnage of ore treated, many large metal mining companies are using over 1% of oil, with surprisingly good results; they therefore maintain they need not pay royalty, claiming that over 1% is not an infringement. To stop this practise Minerals Separation brought the matter to Court, and on Aug. 27, Judge Bourquin of the U. S. Circuit Court in Montana, gave judgment in favor of the Minerals Separation against Butte & Superior. The case hinged on the use of more than 1% of oil. B. & S. formerly used less than this quantity, but in recent years added over 1% in their operations, considering that this would relieve the company of infringement liability.

The above review is apropos in The Mines Handbook, inasmuch as hundreds of the companies listed herein are using flotation in some form, and their future profits depend largely on their use of flotation methods.

MINES EXPLORATION SYNDICATE

Office: Makeever Bros., mgrs., 170 Broadway, New York. Operating dept., 1553 Harvard Ave., Salt Lake City, Utah. Walter Neal, engineer.

Organized Aug., 1916, "to investigate and develop worthy mining properties." Over 200 mines were examined but only 3 taken over for development to April, 1917.

Property: Lookout mines in Montana, the Herb Lake (Rex) mines in Northern Manitoba, Can., and the Candelaria mines in Jalisco, Mex.

The Lookout group of 3 claims in Montana (location not stated) is said to show a series of veins carrying gold-silver-copper values. Average values are given as \$14.52 to \$26.41 per ton based on 60c silver and 25c copper. About 500' of work is reported done on 3 tunnels, a road built and necessary buildings put up.

The Rex mine on Herb Lake, Manitoba, Canada, is developed by a 60' shaft and vein is reported by Makeever's engineer to average 48" in width. Average assay is given as \$48.60 gold. Engineer estimates ore extracted in shaft sinking and now on dump will total \$5,054 and also assumes that a stope of such ore 100' long by 100' high will pay for the mine, development, mill, equipment, operation and metallurgical loss. A 30-ton mill to be installed.

The Candelaria mine at Jalisco, Mex., is an old mine credited with past production of rich ore. Workings will be cleaned out but no equipment installed until Mexican conditions are more stable.

NEW JERSEY ZINC CO.

Offices: 810 Broad St., Newark, N. J.; 55 Wall St., New York.

Officers: Edgar Palmer, pres.; A. P. Cobb, v. p.; J. E. Hayes, v. p.; A. B. Schultz, sec.; H. S. Wardner, treas. **Directors:** Edgar Palmer, C. W. Cox, August Heckscher, T. D. Jones, E. S. Marston, J. J. Riker, E. M. Squier, W. P. Hardenbergh and A. B. Schultz. G. F. Wolff, comptroller; H. G. Clopper, gen. sales mgr.; E. V. Peters, asst. gen. sales mgr.; A. H. Peck, sales mgr.; H. Hardenbergh, gen. purch. agt.; W. J. Lee, purch. agt.

Inc. Oct. 30, 1880, in New Jersey as the New Jersey Zinc & Iron Co. Name changed 1897 to present title and capital increased from \$3,000,000 to \$10,000,000. Stock increased to \$35,000,000 by payment of stock dividend of 250% July 7, 1915. **Cap.**, 350,000 shares; \$100 par; all outstanding. Transfer office: 55 Wall St., New York. Registrar: Farmers Loan & Trust Co., N. Y.

Bonded debt: the unretired balance of bonds authorized Oct. 1, 1901, due Oct. 1, 1926, First Gold, 4%. Original authorized issue, \$10,000,000, of which \$4,000,000 were issued, the balance to be issued only for the purchase of new property, stock of new corporations, the erection of new plants, etc. Of the \$6,000,000 of unissued bonds, \$3,000,000 had been retired up to Jan. 1, 1916, leaving a present authorized amount \$7,000,000. The mortgage provides for the cancellation of \$200,000 of unissued bonds yearly on Oct. 1, beginning 1902, the authorized amount of bonds to be reduced accordingly, and after all such unissued bonds have been canceled, the company is required to pay to the trustee, annually, on Oct. 1, \$200,000 as a sinking fund for the purchase or redemption of outstanding bonds at not exceeding par and interest.

Net income in 1916 was \$34,028,239, of which \$26,600,000 was paid in dividends, \$460,000 for interest and reserve, \$900,000 for profit sharing and \$6,068,239 surplus.

Dividends: regular quarterly at rate of 20% per annum have been paid from 1906 to July, 1915, and quarterly at rate of 2½% in Aug. and Nov., 1915. On Feb. 10, 1916, and regularly since, quarterly at rate of 16% per annum.

Extra distributions: 10% in 1907, 5% in 1909, 10% each in 1910 and 1911, 10% each 3 times in 1912, 10% each 3 times in 1913, 10% each twice in 1914, 5% each twice in 1914, 2%, 10% and 30% in 1915, 250% stock dividend in July, 1915, 10% each 4 times and 5% 4 times in 1916, 10% in Jan., and 4% each Mar., April and June, 1917.

Comparison of the first three quarters of 1917 and 1916 is as follows:

	1917			1916		
	First	Second	Third	First	Second	Thrd i
Income.....	\$6,735,444	\$6,497,692	\$5,593,984	\$8,561,385	\$8,850,292	\$8,304,511
Interest.....	115,000	115,000	115,000	115,000	115,000	115,000
Balance.....	\$6,620,444	\$6,382,692	\$5,478,984	\$8,346,385	\$8,735,292	\$8,189,511
Federal taxes..	613,705	581,855	2,126,317
Net income....	\$6,006,739	\$5,800,837	\$3,352,667
Dividends.....	4,200,000	4,200,000	2,800,000	6,650,000	6,650,000	6,650,000
Surplus.....	\$1,806,739	\$1,600,837	\$552,667	\$1,796,385	\$2,085,292	\$1,539,511

Property: the famous zinc mines at Franklin, New Jersey. The different original holdings were consolidated as a result of litigation and to effect better mine operations. It was upon the economies due to a single control of the great orebody and to the discovery by J. P. Wetherill of a process for treating the manganese-zinc ores that the fortunes of the company were built. For geology of mine see Lindgren's "Ore Deposits," p. 709; also U. S. G. S. Geologic Folio, No. 161.

Company owns the New Jersey Zinc Co. (of Pa.), with operating plants at Palmerton and Freemansburgh, Pa.; operating mines near Benton, Wis. (Mineral Point Zinc Co.); many other producing properties and reduction works, including the Empire Zinc Co. of Mo., not operating any property at present, and the Empire Zinc Co. of Colo.

The Franklin mine in New Jersey produces the high-grade ore from which the Horsehead brand of spelter is made. The reserves are unofficially reported to be in blocked out ore, sufficient for a thirty-year supply at the present rate. Custom ores are also bought for treatment. The products include oxide of zinc, spelter, sheet zinc, zinc dust, spiegeleisen, sulphuric acid, and lithopone.

Production: no reports are published, but it is known that the company has a yearly smelting capacity of 160,000,000 to 170,000,000 lbs. of spelter, and the 1917 production is estimated at 250,000,000 lbs. of zinc, besides other products.

During 1917 the following papers were published in the Engineering and Mining Journal: "Hoist Record at Palmer Shaft," by H. H. Hodgkinson. This shaft is 1,510' deep at an angle of 47°, and has 4 compartments. Two 22x48" duplex, direct acting hoists are used, with ore loading pockets at 800 and 1,150'. On July 14, 1916, one engine hoisted 3,079 tons in 10 hours. This shaft has produced 76,018 tons in one month. In the issue of Sept. 8, the company's Franklin laboratory was described by D. Jenkins. A paper prepared for the A. I. M. E. by W. R. Ingalls, in issue of Sept. 15, discusses "Zinc Burning as a Metallurgical Process," covering in part work of New Jersey Zinc. In Sept. Bulletin of the A. I. M. E., G. C. Stone discusses "Oxide of Zinc," as made by the New Jersey company. In the Oct. Bull. of the A. I. M. E. "Zinc Mining at Franklin, N. J.," was the title of a 106-page article by C. M. Haight and B. F. Tillson. Company publishes a monthly organ entitled "Zinc."

PHELPS DODGE CORPORATION

Office: 99 John St., New York.

Officers: Walter Douglas, pres.; Cleveland H. Dodge, Arthur Curtiss James, Jas. McLean, v. p.'s; preceding, with Dr. James Douglas, chm.; Geo. B. Agnew, Francis L. Hine, Wm. Church Osborn and E. Hayward Ferry,

directors; Geo. Notman, sec.-treas.; A. T. Thomson, ast. to pres. and comptroller; S. W. French, gen. mgr.; A. V. Dye, asst. gen. mgr.; J. Millard Jones, British agent.

Phelps Dodge Corporation assumed all the assets and liabilities on April 1, 1917, of Phelps, Dodge & Co., Inc. and continued the business of the former company with the same Board of Directors and official staff. It is proposed to dissolve Phelps, Dodge & Co., Inc., and to distribute stock of the new corporation, share for share, to stockholders of the old corporation.

Phelps, Dodge & Co., Inc. was the holding company for its subsidiary companies. Under the new plan the name of the Copper Queen Cons. Mining Co. was changed to the Phelps Dodge Corporation, its capital stock increased and the properties of the Detroit Copper Mining Co., the Burro Mountain Copper Co. and the Stag Cañon Fuel Co. were transferred to it, also the stocks of the Moctezuma Copper Co., Bunker Hill Mines Co. and the Phelps Dodge Mercantile Co., together with the remaining assets of Phelps, Dodge & Co., Inc. This gives direct ownership and operation by a single company. The former companies are known as branches with the exception of the Moctezuma Copper Co. and the Bunker Hill Mines Co.

Phelps, Dodge & Co., Inc. was organized as the successor of the firm of Phelps, Dodge & Co., which had a history of nearly a century, its founder, Wm. Earle Dodge, having been one of the great pioneer merchants of America and a noted philanthropist.

Inc. Aug., 1885, in New York. **Cap.**, \$2,000,000; shares \$10; increased to \$50,000,000 in March, 1917; \$45,000,000 of which is now outstanding having been exchanged share for share for stock of Phelps, Dodge & Co., incorporated. Dec. 14, 1908, in New York with capital stock: authorized, \$50,000,000; outstanding, \$45,000,000; shares \$100. The capital stock was issued for the purchase of the entire stock of the Copper Queen Consolidated Mining Co., at \$135 for each \$10 share, \$27,000,000; Moctezuma Copper Co., at \$307 9/13 for each \$100 share, \$8,000,000; Detroit Copper Mining Co. of Arizona, at \$150 for each \$25 share, \$6,000,000; Stag Cañon Fuel Co., at 800 for each \$100 share, \$4,000,000; held for future issue \$5,000,000; total, \$50,000,000. Stock listed on New York Stock Exchange. Annual meeting, first Tuesday after first Monday in April, at 99 John St., New York. Books close 10 days before and reopen day after annual meeting. Stock transferred at office of the company. Farmers' Loan & Trust Co., New York, registrar.

Comparative General Balance Sheet:

Assets—	Property & Equip.	Deferred	Cash	Other Current	Total
1916.....	\$39,268,558	\$2,763,213	\$7,746,519	\$15,735,612	\$66,513,903
1915.....	38,550,942 (a)	2,130,583	5,889,305	11,375,526	57,946,356
1914.....	49,392,281	264,076	4,891,697	4,687,999	59,236,053
Liabilities—	Capital Stock	Current	Surplus	Total	
1916.....	\$45,000,000	\$5,826,777	\$15,687,126 (b)	\$66,513,903	
1915.....	45,000,000	4,608,492	8,337,864 (b)	57,946,356	
1914.....	45,000,000	7,224,944	7,011,109	59,236,053	

(a) After deducting \$6,853,466 for depletion of ore and coal and \$4,850,854 for depreciation. (b) Balance Dec. 31, 1915, \$8,337,863; earnings for 1916, \$24,030,904; deduct ore depletion and plant depreciation, \$2,056,642; and dividends, \$14,625,000.

Earnings: \$6,025,740 in 1909; \$9,099,910 in 1910; \$7,283,509 in 1911; \$10,411,535 in 1912; \$9,581,494 in 1913; \$6,891,651 in 1914; \$10,981,512 in 1915; \$24,030,904 in 1916.

Dividends: company pays a regular quarterly dividend of \$2.50 per share and also extra dividends; these were \$2 each per share in 1909, 1910, 1911; \$5 in 1912; \$6.50 in 1913; \$4 in 1914; \$10 in 1915; \$22.50 in 1916; \$20 to Oct., 1917. Total dividends to July, 1917, \$66,596,527.

Company controls through personal holdings of its officers, the Old Dominion Co., Old Dominion Copper Mining & Smelting Co., United Globe Mines and Commercial Mining Co. Members of the old firm also control the El Paso & Southwestern railway, a road that, while built originally as an outlet for the Copper Queen mine, has expanded steadily and bids fair to develop eventually into a transcontinental trunk line. The same interests are very large shareholders in the Rock Island and Great Northern railways.

The company controls, some of the richest and most productive copper mines in existence, all able to make copper at unusually low costs, as is evidenced by the great increase in dividends of subsidiaries in 1910 over 1909, in a year when decreased dividends were the rule with a great majority of the large copper producers of the world.

Production: comparative statement of total production, of company's branches, years ending Dec. 31—

	Tons of Ore			Co. Ore Smelted	Copper Lbs.	Silver Oz.	Gold Oz.	Lead Lbs.
	Extr'd	Milled	Smelted					
1916.....	2,305,072	1,422,468	1,389,192	1,200,090	152,263,729	1,642,055	28,873	10,404,341
1915.....	1,583,364	800,600	1,129,766	1,016,746	140,478,003	1,655,669	31,696	9,525,584
1914.....	1,777,243	1,046,728	917,204	855,594	131,662,324	1,769,626	23,518	8,936,074
1913.....	1,978,892	1,122,372	1,035,367	856,520	155,665,712	1,870,162	31,141	5,701,628
1912.....	1,893,244		1,051,315	953,741	148,678,889	1,689,152	27,687	
1911.....	1,841,210	1,017,352	930,331	822,647	134,149,627	1,794,895	27,154	

Company also took over the metals selling agency of the old firm, and in addition to marketing the product of its own mines, acts as sales agent for the Calumet & Arizona and other producers.

Comparative Statement of Copper Sales:

		Own	Outside	Domestic	Foreign	Aver.
Total		Comp.	Product on Comm.	Trade	Trade	Price Cts.
1916....	247,303,587	173,710,400	(a) 73,593,187	176,468,527	70,835,000	24.48
1915....	194,925,668	139,351,785	55,573,883	97,122,436	97,803,232	16.079
1914....	188,687,378	134,553,404	54,133,974	80,978,884	107,708,494	13.57
1913....	201,489,796	151,080,018	50,409,778	83,552,432	117,937,364	15.37
1912....	192,297,374	139,759,515	52,537,859	98,267,037	94,030,337	15.51
1911....	180,301,965	131,327,002	48,974,963	69,483,782	110,818,183	12.36
1910....	194,138,698	139,297,409	54,841,289	100,819,254	93,319,444	12.826

(a) includes 34,742,080 lbs. from ores purchased.

Phelps, Dodge & Co., Inc., is one of the few new companies in the copper mining industry that is undercapitalized rather than overcapitalized, and this is but a detail in a general business policy that, while thoroughly progressive and abreast with the times, retains the fundamentally sound and conservative policies developed by the old firm in nearly a century of honorable and markedly successful business life.

Branches and Subsidiaries

Copper Queen Branch
Morenci Branch
Burro Mountain Branch
Stag Cañon Branch
Moctezuma Copper Co.
Bunker Hill Mines Co.
Phelps Dodge Mercantile Co.

Besides these principal branches the corporation owns a prospect at Fierro, Grant Co., New Mexico, known as the Hanover mine. It owns another prospect in the Old Hat district in the Catalina Mountains north of Tucson, Pima Co., Ariz., near the Dailey mine. Also has an option on the Burro Mountain holdings of the Azure Mining Co.

The Stag Cañon Branch produced 1,439,904 tons of coal in 1916, of which 618,725 tons were used for coking, 662,605 were sold to railroads and 153,845 tons were commercial sales. T. H. O'Brien is general manager and J. B. Morrow, supt. of Coke dept.

The Phelps Dodge Mercantile Co.'s gross sales and transfer during 1916 amounted to \$8,406,635, an increase of \$2,196,178 over 1915. Combined inventories of merchandise increased \$408,926, or approximately 40%. There were 569 employees at the different establishments. W. H. Brophy is general manager.

COPPER QUEEN BRANCH

Operating and works office: Douglas, Cochise Co., Ariz. **Mine office:** Bisbee, Ariz.

Officers: G. H. Dowell, mgr.; Gerald Sherman, supt. mining dept.; F. Rutherford, smelter supt.; C. C. Barclay, purch. agt.; Joseph P. Hodgson, formerly mine supt., has been transferred to the consulting staff of the corporation in the mining department.

The Copper Queen Consolidated Mining Co., retaining its charter, has changed its name to Phelps Dodge Corporation. Its properties in Bisbee and Douglas, Ariz. are now known as the Copper Queen Branch of that corporation. The company was operated for many years as a close corporation, without making its figures public, but is said to have paid, 1888 to 1907, inclusive, dividends aggregating \$30,000,000 or upwards. Dividends: \$3,000,000 in 1908; \$4,025,000 in 1909; \$6,300,000 in 1910; \$5,200,000 in 1911; \$5,707,351 in 1912; \$5,700,000 in 1913; \$4,500,000 in 1914; \$7,000,000 in 1915.

Property: comprises the Copper Queen and other mines at Bisbee, a large smelting plant at Douglas, on the Mexican border, 30 miles from the mines. Mineral lands in the Warren, or Bisbee district, comprise 176 patented claims, 2,298 acres.

The Copper Queen, one of the best known copper mines of the world, was opened 1880, on an outcrop of oxidized copper ore in massive limestone, opposite the Copper Queen hotel in Bisbee. The original orebody, now represented by a large cave, averaged 23% copper. The ore was smelted in a 30" water-jacket furnace, with English coke, brought via San Francisco. This orebody was exhausted in 3 or 4 years and the mine experienced many vicissitudes, until additional orebodies were developed, by following seams and stringers of ore leading to further large and rich deposits.

Geology: the ore-bearing formation of the Copper Queen and other mines of the Bisbee district, consists of thickly bedded limestone beds, dipping to the southward and cut by intrusive porphyritic dikes. Until 1902, the principal orebodies were found at the base of the carboniferous limestone beds, which are broken by igneous intrusive rocks, that evidently have a strong genetic bearing upon deposition. The ore deposits occur as pockets, lenses, chimneys, bunches, shoots, veins, stringers and seams, the larger bodies being connected, in most cases, by small veins, or mere knife-blade seams. The limestone and its included orebodies have a general gentle dip to the southeast, necessitating deeper shafts as distance is made toward the southeast. Extensive bodies of high-grade ore have been found, since 1902, in the deeper levels driven in the older limestones (Cambrian),

and developments prove these underlying orebodies to be persistent to great depth. The mines show beautiful caves, lined with calcite crystals and stalactites and wonderfully fine crusts of azurite, malachite and cuprite; some of these caves are of considerable size. Many of the shafts are bot-tomed in sulphide ores of high-grade, consequently the depth of the ore-bodies, while already proven great, is conjectural. New orebodies are de-veloped yearly and the ultimate lateral limits of payable ore are unknown.

"In the Copper Queen mine, the majority of the ore has occurred in a zone encircling the west boundary of the porphyry intrusion of Sacra-mento Hill. It has a width varying from 800 to 1,200', and a thickness of about 400'. It reaches the surface in the older part of the mine to the N. W., but dips to the S. E., where it is reached at 1,400' below the Czar collar, in its farthest extension at present developed on Copper Queen ground. There is one major extension from the N. W. end of the zone toward the west along the Czar fault, and others of minor importance.

"Individual orebodies are scattered through the zone in an eccentric manner, only matched by their own irregularities of form and size. Their most general characteristics are the softness of the ore and their great horizontal rather than vertical extent. It has been estimated that the average vertical thickness of ore in the Czar and Lowell divisions is between 30 and 35'. It is calculated by assuming it to be uniformly distributed over its horizontally projected area.

"In this zone, and for some distance above it, the ground has been subjected to intense alteration and intense but irregular oxidation. It has resulted in an enormous quantity of earthy or clayey material, which may be either ore or waste, which, when wet, is both heavy and tenacious. Below alteration, the ground is fairly hard, and the limestones contain pri-mary ores differing from those heretofore considered typical of the camp, and which have not yet been thoroughly exploited."

Development: the Copper Queen mine has 7 shafts, all connected on the even numbered levels. The entire output is concentrated at and hoisted from the 1,700' Sacramento shaft. The mines are opened ahead for several years, development averaging about 1 mile monthly of new workings, or at the rate of 1 linear foot of new work for 10 tons of ore extracted, which figure is proven by past experience to maintain practically constant ore reserves, while avoiding excessive advance openings that require useless maintenance cost. The stopes are filled throughout and the mines are tim-bered with square sets, mainly Washington fir, an average of 30' in timber, board measure, being required for each ton of ore won in the oxidized zone.

The underground haulage plant is very extensive, with 21 miles of tracks, covering every second level from the 4th to the 16th, inclusive, ore from the intermediate levels being dropped through chutes, and all ore hauled to the Sacramento shaft for hoisting. The haulage system includes Goodman electric locomotives and side-dumping ore cars. Chutes have been installed throughout the mine for loading the cars, which discharge into large storage bins at the Sacramento shaft, through which all ore is hoisted. The system is fully described by Mr. Gerald F. G. Sherman, supt., in Trans. A. I. M. E., Sept., 1915, p. 1837. In order to complete the underground traction system, it was necessary to open many lateral drifts and crosscuts, which were located in solid ground, wherever possible, as the electric tram lines are the arteries of the mine.

The Uncle Sam mine has an old shaft, and a new shaft, sunk 1908, of 224' depth. This mine is connected with the Czar, Holbrook and Sacra-mento shafts, and has a large orebody, discovered 1913, that compares fav-orably with the bonanza deposits of the adjoining Shattuck mine.

The White Tail Deer mine lies across the range on the edge of the mesa near Don Luis, being reached by wagon road through a detour of several miles. It has been worked 1916-1917, developing a good grade of ore and may become an important producer.

The 4-compartment Sacramento shaft, 1,700' deep, concreted, handles the entire output of the mines. There are loading bins on the even-numbered levels from 400 to 1,600', reached by the electric haulage lines from all other workings of the mine. The shaft was sunk in rock for practically its entire depth, insuring as great a degree of immunity from drawing as is possible in this district. The Sacramento shows some rich ore, discovered 1913, on the 1,500' level near the Hoatson claim line. Exploratory work, in the porphyry stock of Sacramento Hill, which is the geological keystone of the Bisbee ore deposits, has shown up a large tonnage of concentrating ore.

The hoist at the Sacramento is a powerful Nordberg tandem-compound engine, having 7' drums with 5' face, operated by steam, with 6 auxiliary engines, actuated by oil, under 150 lbs. pressure. Hoisting is done in 3-ton skips, and the hoist can raise a skip each minute, giving the shaft a capacity of fully 4,000 tons daily.

The Sacramento shaft has, perhaps, the most elaborate and ingenious system for mixing and loading ores to be found at any copper mine. This is fully described by Sherman in the paper already noted. The ventilation of the whole property with its 6 downcast and one upcast (Lowell) shafts is well described by Chas. A. Mitke, in *Bull. A. I. M. E.*, Sept., 1915, p. 1911.

The central power plant near the Sacramento shaft, includes a boiler house, having four 400-h. p. Stirling water-tube boilers, furnishing steam direct to the hoists at the nearby Sacramento and Gardner shafts, the hoists at the other shafts being operated by compressed air. Equipment of the engine house includes three 500-k. w. Curtis turbo-generators, 3 Ingersoll-Rand air compressors, of about 100 drills aggregate capacity, a 70-drill Nordberg air compressor, the largest in the Southwest, and a 7,000 cu. ft. Nordberg compressor. Fuel is Texas and California petroleum, with large tanks for oil storage. All of the shafts, and the principal mine buildings, are reached by spurs of the El Paso & Southwestern railway.

During the past few years churn drilling has developed in Sacramento Hill, a large tonnage of concentrating ore known as the East and West orebodies. The West orebody, because of its nearness to the surface will be mined by steam shovel. A 90-ton test mill was built in 1914, the best saving being effected by combined hydraulic and flotation methods. Tests, on a working scale demonstrated that 1.3% of copper will make ore, and it is probable that 1% material can be worked. Based on the results of this experimental work a 3,000-ton concentrator will be built on the flat west of Douglas.

New work in 1916 was 80,853', which does not include 46,925' of churn drilling on the Sacramento Hill. Results show that more ore was found than was extracted, and the estimated reserves stand within a few thousand tons of their maximum. New ore has been found in the old Copper King claim and in the Gardner division.

Douglas Smelter

The Douglas smelter, known as the Douglas Reduction Works, is at Douglas, Ariz., 28 miles from the mine and one-half mile from the Mexican border. This plant treats 3,000 tons daily, handling the output of the Copper Queen mines, that of the Burro Mountain branch and that of the Moctezuma Copper Co., as well as doing a general custom-smelting busi-

ness. The works occupy a site of 320 acres and are served by a very complete standard-gauge railroad system, reaching every building. The plant was blown in March, 1904, since which time there has been almost continuous enlargement, the works costing fully \$4,000,000, smelting about 3,000 tons daily, there being no concentrator to eliminate part of the tonnage from the final furnace charges. The plant is incidentally described by J. Moore Samuel, in Bull. A. I. M. E., June, 1916, p. 1079, in a paper on Dust Losses.

Water for the works is secured from artesian wells, of about 300' average depth, the water rising nearly to the surface, with 1 well, of about 1,000' depth, flowing 200 gals. per minute. A large reservoir and cooling tower have been built in connection with the water supply.

The ore-bedding system consists of 5 pits, each 40x800' in size, and 11' deep, having an aggregate storage capacity of 90,000 tons. Ore, received from the mine in side-dumping steel cars, is discharged into the pits, which are lined with white tufa rock. The pits are filled with the different grades of ore required to constitute a normal furnace mixture, and the ores mixed by a mechanical plow. Ore is removed, as required by the furnaces, with steam shovels, running on permanent tracks laid upon the floor of the pits.

The blast furnace building, 150x900' in size, of steel frame, also covers the converter department. Three 60-ton traveling cranes, 60' span, run the entire length of the building. There are ten 400-ton blast furnaces, each 44x240" with forty 4" tuyeres, and 16' in height from the tuyeres to the charging floor. The 10 furnaces are set 15' apart, in a single row, with a 10x20' settler between each pair, the lower half lined with chrome brick and the upper half with ordinary brick. Ore is charged on either side, alternately, charging being done from trains of twenty 2,500-lb. cars, hauled by 13-ton electric locomotives. Slags flow from the settlers into 18-ton slag cars, hauled by electric locomotives. The slag dump is 1,700' long, and is kept trim by a special leveling machine, operated by electric power. The blast furnaces consume 350 to 400 tons of coke daily.

The dust chamber is of steel frame with brick and tile walls, roofed with reinforced concrete supported by steel trusses and has a bottom of tiled hoppers.

Molten matte is taken from the blast furnace to the converters by 60-ton electric traveling cranes, each having two 15-ton auxiliary hoists. The converter department has 7 stands, operated hydraulically, with 10 shells, of the Great Falls type, basic lined. Copper is poured in a Walker casting machine, and product is blister copper of about 99% tenor, with considerable gold and silver values. The converter plant has a flue, taking the gases from the 7 stands to a dust flue 11' in diameter at the hoods and 13' at the dust chamber.

The 260' steel stack of the blast furnace building is 30' in diameter at the base and 25' at the top.

The calcining and reverberatory plant is 100x850' in size, of steel frame. Ore is brought in over an elevated railway track on steel trestles, 400' in length, and dumped into concrete storage bins, and drawn, from the bins to the roasters by belt conveyors. There are three 100' reverberatory furnaces and sixteen 75-ton McDougal calciners. A slag tunnel, 30' wide, 15' deep and 276' long, has electric cars, connecting with the slag-tracks. The tunnel is lined with 4' concrete walls, with a 2' separating wall in the center. The reverberatory furnaces are next to the old building, succeeded by the slag tunnel, on top of which there is a battery of four 400-h. p. water-tube boilers, followed by a dust chamber; the McDougal roasters occupy the northern end of the building. The reverberatory department has a separate

300' stack, of 22' inside diameter, built of special hollow bricks, with walls 42" thick at the bottom and 12" at the top, requiring 1,250,000 brick and standing on a base of 60' diameter requiring 1,100 cu. yds. of concrete.

The power house, of steel and brick, was enlarged to transmit electric energy 72 miles to El Tigre mine, in northern Mexico. The power plant has about 20 units, of various sizes and types, aggregating more than 6,000 h. p. Equipment includes 4 Nordberg cross-compound blowing engines, each direct-connected to a 400-k. w. 250-volt direct-current generator; Nos. 9 and 10 Connersville blowers, set staggering; a cross-compound 2-stage condensing air compressor, with piston capacity of 2,000 cu. ft. of free air per minute, at 100 lbs. pressure, for running the pneumatic tamping devices, operating charging doors of the blast furnaces and pumping water; 3 triplex motor-driven pumps, delivering water into compression tanks, at 350 lbs. pressure per square inch, with automatic regulation; four 400-k. w. 250-volt direct-current generators, supplying power for cranes, slag locomotives and electric lights; two 750-k. w. turbo-generators and a number of minor engines and dynamos. The power plant is equipped with a complete set of gauges and meters, keeping exact record of the distribution of power to every department and subdepartment.

The steel boiler house has six 500-h. p. and four 1,000'-h. p. Stirling water-tube boilers, with a Green fuel economizer, and a Foster superheater with capacity of 90,000 lbs. of steam per hour. The stack of the boiler house is of brick, 177' high and 13' in diameter at the base. Boilers are arranged to burn either coal or petroleum, but latter is used exclusively, consumption of California and Texas petroleum, at the mine and works, amounting to about 500,000 gals. monthly. Oil for fuel is at present cheaper in first cost, easier and cleaner to handle, and effects a great saving in the wages of 3 daily shifts of stokers, formerly required at every boiler plant.

A limestone quarry, at Lee station, 7 miles east of Douglas, has a large crusher and storage bins, the smelter requiring 400 to 500 tons of limestone daily, for flux. A saw mill is operated, in the forests of the Chiricahua mountains, though the bulk of the timber and lumber requirements of the mine and works are met by the importation of timber from the Pacific coast.

Production:	Tons Mined	Lbs. Copper	Oz. Silver	Oz. Gold	Lbs. Lead
1916.....	951,978	102,685,722	1,096,136	24,030	9,421,562

Smelter production, including custom ores:

	Tons Treated	Oz. Gold	Oz. Silver	Lbs. Copper
1916.....	1,304,523	32,832	1,794,854	171,893,880
1915.....	1,063,329	29,840	1,388,149	125,144,027
1914.....	835,016	26,259	1,405,301	119,957,017

Ore received in 1916 was 1,318,387 tons as compared with 1,064,671 for 1915. Stocks of ore on hand Jan. 1, 1917 was 102,591 tons as compared with 87,531 on Jan. 1, 1916.

There were employed, during the year, 3,671 men in all departments.

MORENCI BRANCH

(formerly known as Detroit Copper Co.)

Mine and works office: Morenci, Ariz.

Staff officers: M. H. McLean, mgr.; W. G. McBride, asst. mgr.; F. W. McLean, mine supt.; G. E. Hunt, mill supt.; V. P. Hastings, smelter supt.; J. A. McDougall, supt. of power; G. M. Robison, chief eng.

Property: is extensive, including the Ryerson, Arizona-Central, Copper Mountain, Yankee, W. Yankee, Montezuma and Santa Rosa mines, at and near Morenci.

Geology: The mines of this company work varied types of copper deposits, all dependent upon and co-extensive with a big intrusive body of quartz porphyry and its dikes. The ores are chalcocite, chalcopyrite and pyrite with various oxidized products occurring either in altered limestones, or as fissure veins in the impregnated rocks adjacent to them, or in large masses of altered, impregnated, shattered porphyry. The geologic relations are fully treated in a monograph by Waldemar Lindgren, Prof. Paper 43, U. S. Geo. Surv.; see also Weed, "Copper Mines of the World," page 287.

Ores are mainly sulphide with slight gold-silver values and high silica and alumina contents. The oxidized and limestone ores are still produced in small quantities, but 98.8% of the ores mined consists of small particles of chalcocite, associated with chalcopyrite and pyrite, in a leached and whitened, decomposed porphyry, averaging 2.39% copper. The high-grade ore from fissure veins carries 6 to 18% copper.

Development: is very extensive, with numerous shafts and long cross-country connections. The workings have thus far been shallow, 400' being for many years the greatest depth. In 1912, development on the 600 and 700' levels of the Yankee mine, north of the Yankee fault, opened up 194,939 tons of 2.36% ore and similar deep exploration in the Arizona Central mine upset previous ideas that ores would not go deeper. Total amount of development work in 1914 was 26,375'; in 1915, 14,709'; in 1916, 20,513'.

About 90% of the output is now mined by the slicing system, costing about 21% of the square set and fill cost, which is necessarily still used in some parts of the mine. Block caving is still cheaper, uses but little timber and costs but 54.8% of the square set and fill method, but like the gopher and fill method, which is slightly cheaper, can only be used where favorable conditions prevail.

The New England mine has 2 shafts, deepest 750', and a 2,000' tunnel. The Clifton mine has 7 shafts, of 70 to 315' depth, with tunnels of 220', 450', 700', 800', 1,000' and 1,700'.

The Copper King mine is as yet but slightly developed, but has been claimed to show about 40,000 tons of ore. An aerial tram from the Copper King mine was completed 1909.

Equipment: includes power house, of steel frame on concrete foundations, with one steam-driven blowing engine, 9,000 cu. ft. per min., one gas-driven blowing engine, 6,000 cu. ft. per min., one motor-driven No. 10 Connersville blower and one No. 9 Connersville blower driven by a 200-h. p. gas engine, two steam-driven air compressors, one of 4,000 cu. ft. capacity, the other of 1,300 cu. ft., one 600-k.w. turbo generator delivering 2,300 v., 2 phase, 60-cycle current, four 250-k. w. and one 100-k. w. belted generators driven by gas engines, delivering 230 v., 2 phase, 60-cycle current, running in parallel with turbo generators through transformers. Two 1,000-h. p. Diesel engines will be installed 1917.

The concentrator, designed by H. Kenyon Burch, has proved remarkably successful, running 95% of the time. It consists of two 650-ton units, is 166x240' in size, and cost about \$1,000,000. Equipment includes Chilean

mills, 6 sets of 16x42" rolls, 28 revolving screens, 80 Frue vanners, 40 Wilfley tables, and Deister tables, the mill putting about 7 tons into 1.

A flotation plant was completed in Sept., 1915. The mill power plant has 3 gas engines of 200-h. p. and 2 of 175-h. p. each, in conjunction with electric motors driven from the smelter power house.

In 1916 the mill handled 451,347 tons of ore, of an average grade of 2.39%, producing 59,035 tons of gravity concentrates, averaging 11.85%; 2950 tons of flotation concentrates, averaging 19.43%; and 1,161 tons of concentrate slimes of 11.06% copper: the saving was 71.25% with a ratio of concentration of 7.098.

The concentrator uses about 500 gallons of new water per ton of ore treated, the balance being obtained by reclamation of water from the tailings in a series of concrete tanks with Dorr mechanism. The water is purchased from the Morenci Water company, which has a pumping plant about 6 miles distant on Eagle river, and which supplies the town and practically all of the mines of the district. The tailings are conducted from a slag lined launder along the walls of Chase Creek canyon to a point below bunkers 14,000' away where it is stored in impounding reservoirs in the small cañons which empty into Morenci cañon.

The smelter has one 44x396" blast furnace, and 3 stands of small basic lined converters. Flue dust is mixed with concentrate slime tailings before being recharged into the furnace. About 85% of the total charge of new metal bearing material in 1916 was concentrates, or similar very fine material with only 15% coarse ore. The smelter has 2,000-ton ore bins, surmounted by a steel railroad trestle.

In 1915, 77,870 tons of ore, concentrates and flux were smelted with a saving of 94%, and in 1916, 140,938 tons, with a saving of 95.21%.

A 36" gauge railway connects the mines and smelters with the Arizona & New Mexico railroad, at Guthrie. A tunnel through Longfellow hill, completed 1909, gives direct rail connection with the mill.

The company operates an excellent hotel, and maintains a library and club room for its 1,241 employees.

Production: in 1915 was 376,604 tons of ore; averaging 2.83% copper, producing 15,333,976 lbs. of copper; in 1916 production was 470,583 tons of ore averaging 2.43% copper, from which 17,541,258 lbs. of fine copper were produced.

MOCTEZUMA COPPER CO.

Mine office: Nacozari, Sonora, Mex.

Officers: J. S. Williams, Jr., gen. mgr.; H. T. Hamilton, asst. gen. mgr.; C. I. Schultz, gen. supt.

Inc. 1896, in West Virginia. **Cap.**, \$3,000,000; issued, \$2,600,000. Is controlled through entire stock ownership by Phelps Dodge Corporation, and holds direct title to lands through Moctezuma Copper Co., S. A.

Inc. Feb. 4, 1896, in Mexico. **Cap.**, 500,000 pesos. **Dividends:** were 77% or \$2,262,000, 1902-07; none in 1908; \$998,000 in 1909; \$468,000 in 1910; \$754,000 in 1911; \$2,118,569 in 1912; \$1,950,000 in 1913; \$1,170,000 in 1914.

Property: about 2,500 acres of mineral land in the Moctezuma and Arizpe districts of Sonora, including the Pilares de Nacozari mine 6 miles east of Nacozari. Company also owns the Juarez and Nicolas ranches of about 35,000 acres, which carry considerable valuable timber.

The Pilares mine lies in a high and precipitous country near the divide of the Yaqui and Oposura rivers. The ore deposit is an oval shaped brecciated mass of latite having a major axis of 2,000' and a minor axis of 1,000', formed by two parallel systems of faults, one coursing nearly N. & S. and the other nearly E. & W. The N. & S. faults dip about 80°.

to the east. There were two flows of latite; the first while cooling was interrupted by the second causing the partly cooled mass to break up into the bombs and fragments which are barren of mineral and which are cemented together by the second and mineral bearing flow. The latite gives way to andesite and this to monzonite with depth. A "caliche" dike from 4' to 10' wide runs through the entire west side of the mine. The ore occurs mainly on the border of the breccia "pipe," but lesser bodies are found inside it as well. The ore carries chalcopyrite with pyrite and some bornite, chalcocite and some covellite, the ore being mostly of concentrating grade, averaged about 3.25% copper as mined, in 1916. There is a "chimney" outcrop with carbonate ore, but croppings are mainly brown, a dull red-stained porphyry, carrying hematite. The leached zone is about 20' in depth only, with payable ore coming in at depth of about 60'.

In addition to the Pilares mine, the company owns a number of other properties that have been operated for several years past by lessees, including the Churunibabi, Bella Union, Fortuna, San Francisco, El Vaquero, El Promontorio, and San Pedro. The Bella Union has high-grade ore, including oxides and native copper, shipments assaying up to 39% in copper tenor, with small gold and silver values. The Churunibabi property, yielding \$100,000 worth of silver ore to the lessees, from a rich gold-silver-copper orebody struck July, 1913, has been operated by the company for the past few years. During the year the main tunnel was driven 828' to connect with the Estrella shaft.

La Caridad mine shipped 343 tons of 15% copper and has about 8,000 tons of 1½% to 2% ore broken. Ore is enargite.

El Promontorio mine shipped 1,500 tons of ore averaging 22% copper, .14 oz. gold and 2.56 oz. silver per ton. In the lowest tunnel a 40' winze has a streak, 3" to 15", averaging 35% copper.

Development at Pilares mine include 4 shafts; three 3-compartment main working shafts, the Guadalupe 700', Pilares 1,200' and Esperanza 1,200' deep. The Guadalupe shaft is an underground shaft running from the 500' level to the 1,200' level. The Pilares and the Esperanza shafts are on the extreme ends of the ore body and run from the surface, 100' level, to the 1,300' level. Sinking to the 1,400' level is in progress. The Margarita shaft, on the claim of that name has been sunk and timbered to an inclined depth of about 400'. The ore body, which in 1916 was 3' wide and assayed 8% copper with some zinc, will be explored to a depth of 500' at which depth it will be connected by a drift with the 100' level of the Pilares orebody. A new shaft is contemplated 280' south of the Pilares shaft, drifts on all levels having been run to proposed site. Churn drilling on the site on the 1,200' level is in progress to determine extent of orebody as it is desired to sink new shaft in country rock outside of orebody.

The mile long Porvenir tunnel taps the deposit 600' below surface; 25-ton narrow gauge railway cars run from Nacozari into the tunnel direct to the mine ore chutes. The tunnel has storage bins in a 25x100' chamber to which ore is milled down from the upper workings, no ore being hoisted, all ore as broken being sent in chutes to the tunnel.

The mine employs 2 methods of ore extraction, the room-and-pillar with waste filling as work progresses, and shrinkage stoping with waste filling after all the ore has been extracted.

The mine has some enormous stopes, No. 4 stope, on the 3d level, having been 85' high, 125' wide and 150' long. New stope on the 600' level covers nearly 2 acres. The ground stands very well and the systems

of extraction used give minimum timber requirements at a cost of only a few cents per ton of ore mined. Costs are about 3 pesos per metric ton for ore loaded on the tram cars. No water is hoisted above the Porvenir tunnel level and very little water is raised from the workings below. The mine is well ventilated and is equipped with electric lights.

The Pilares orebody is one of the largest in the world and is comparable, in many respects, with that of the Rio Tinto. The orebody shows no decrease in value at 1,200' depth. **Ore reserves:** estimated Jan. 1, 1916, 3,220,000 tons; for Jan. 1, 1917, a decrease is reported due to inadequacy of hoisting facilities on lower levels. Such exploration as has been done the management reported as having been distinctly encouraging and much ore encountered.

During 1916, 23,252' of development work was accomplished of which 9,837' was drifting and 154' was shaft sinking. Of the total footage 37% was in ore.

An 80' steel head frame is being erected and a new hoist installed at the Esperanza shaft.

Equipment: includes electric hoists and 2 25-drill I-R air compressors, and two blacksmith shops, one at Pilares and one at Esperanza. There is an emergency steam plant at the mine having 2 boilers held in reserve in case of accident, but electricity is used throughout.

The power plant, at Nacozari, built in 1908, has four 435-h. p. Stirling water-tube boilers, equipped with Green fuel economizers, Foster superheaters and Rooney stokers, burning New Mexican coal, having a 196' reinforced concrete stack. The plant has three 1,000-k. w. Curtis turbo-generators giving a 6,600-volt current, and an auxiliary 50-k. w. steam turbine-generator set is used as an exciter. Current is transmitted at 6,600 volts to the mine and mill and at the mine is stepped down to 230 volts for the pumps, while the hoists and electric locomotives use a 250-volt direct current. Two 5-cylinder Nordberg-Carels Diesel engines will be installed this year.

The mine is connected with the mill by a 6-mile 30" gauge railway. Rolling stock includes four 60-ton locomotives and twenty 30-ton Ingoldsby steel side-dumping cars.

The 2,000-ton concentrator, designed and built by H. Kenyon Burch, at a cost of about \$1,000,000, is one of the most complete and efficient in existence. The crushing plant receives ore from the mine in 6,000-ton bins, whence it is fed by 2 automatic ore feeders, of special design, to grizzlies, with bars set 2½" apart, oversize, going to a No. 8 gyratory crusher, and undersize to a belt-conveyor, meeting material from the crusher, and going by belt conveyor to two 4x10" manganese trommels, with 1½" perforations. Undersize from the trommels goes to belt conveyors and oversize from the trommel goes to No. 5 gyratory crushers, breaking the material to 1" cubes, which joins the material from the trommels and is sent by belt conveyors to 4,000-ton storage bins.

Each 1,000-ton unit of the mill is equipped with 6 coarse and 12 fine jigs, 3 sets of rolls, Swain classifiers, Callow screens, 44 Wilfley tables and 72 Johnson vanners. From the storage bins the ore is fed by a portable ore feeder to a belt conveyor, passing over an automatic weighing machine and sampler, delivering it to an 18-mm. trommel. This trommel screens the ore, the coarse pieces going to bull jigs and undersize to 11-mm. trommels; the latter feed oversize to coarse jigs and undersize to 7-mm. trommels. These trommels in turn feed oversize to intermediate jigs and undersize to 4-mm. trommels, whose oversize goes in its turn to 2-mm. trommels; oversize from latter goes to fine jigs. The undersize from the

2-mm. trommels goes to 22-mesh Callow screens and thence to Wilfley tables handling oversize and undersize.

Slimes from the Wilfleys go to the vanner settling tanks and middlings from the Wilfleys go to the Chilean mills by elevators. Tailings from the bull jigs, coarse jigs and intermediate jigs go to either of 3 sets of 42x16" rolls, then by elevator to the mixing-box at the head of the trommels. Tailings from the fine jigs go to dewatering machines, and overflow from dewatering machines goes to vanner settling tanks, dewatered material going to the jig tailings bin and thence to Chilean mills, crushing to pass a 2½-mm. screen and thence to Callow screens of 22-mesh. Product is a concentrate of about 12% copper tenor, about 85% of the assay value being saved.

An aerial tramway carries tailings from the concentrator to a dump on the hillside, far above the river level.

Water is pumped from a well sunk at the side of the river by 1 triplex and 3 Worthington pumps, of 500 gals. capacity per minute, to 500,000-gal. tanks at the mill. Wash water from the concentrates is settled and re-used. A large dam 3 miles east of Nacozari, 90' in height, stores water sufficient for 2 years steady operation of the mill.

Flotation experiments are being carried on, Rork-Kraut and Callow machines being used.

The company built and owns the town of Nacozari, and a town at the Pilares mine. At Nacozari the company maintains both English and Spanish schools for the children of employes, and a well-equipped hospital and a free library, and amusement hall.

Forces normally are 1,300 men at the mine and mill, of which the great majority are Mexicans, with a few Japanese, no American labor being employed at the mine aside from shift-bosses and timbermen. Mining is performed under contract at 7 to 11 pesos per foot, and the larger part of the tramming is done by contract also, the mine proper employing about 200 miners, 300 muckers, 80 carmen and 75 contractors.

In 1916 the mill treated 715,070 tons of 3.27% copper ore; concentrates averaged 12.78% copper; extraction 80.5%; ratio of concentration, 4.967; 697 gal. fresh water used per ton of ore milled. Operations at the property were practically continuous for the entire year; although American bosses were absent 14% of the time.

Production:	Lbs. Copper	Oz.	Oz.

The Moctezuma is one of the world's really great copper mines and the management is of the best.

BUNKER HILL MINES CO.

Mine office: Tombstone, Ariz.

Officer: Dr. E. Grebe, supt.

Inc. to take over and operate the property of the old Tombstone Cons. Mines Co. at Tombstone, discovered in 1878 and at one time one of the largest producers of gold-silver-lead ore in the Southwest. At a depth of 560' the volume of water became so great all attempts to handle it were unsuccessful and operations were discontinued until Phelps Dodge Corp. acquired possession.

Development: in 1916 was carried out principally on the claims tribu-

tary to the following shafts: Flora Morrison, Grand Central, Telephone, Bunker Hill, Silver Plume, Oregon, Lucky Cuss, Tribute, West Side, Toughnut, Silver Thread and Tranquility. New work totaled 8,177' in 1916. Results from prospecting in the old workings and in new ground have not yet shown orebodies of great size or commercial importance.

The old cyanide plant of the Tombstone Cons. was converted into an experimental plant for the testing of Tombstone ores and was put into operation in June, 1915. Results up to 1917 were inconclusive.

Power is supplied by a central power plant from which compressed air is conveyed by pipes to the different mines. About 300 men are employed.

Production:

	Ore Tons	Gold Oz.	Silver Oz.	Lead Lbs.	Copper Lbs.	Manganese Lbs.

1915.....	10,746	1,373	109,783	269,303	23,760	1,171,599

Manganese Dioxide, 1,892,032 lbs.

During the year, 36,913 tons of ore were treated, 20,426 by cyaniding, containing an average of .10 oz. gold, 6.37 oz. silver, 2.03% lead, and 16,487 tons by concentration, containing an average of .015 oz. gold, 9.90 oz. silver and 24.3% manganese.

BURRO MOUNTAIN BRANCH

Mine office: Tyrone, Grant Co., N. M. E. M. Sawyer, mgr.

Property: 60 claims, 1,000 acres, bought 1906, from Southwestern Copper Co. The Savanna Copper Co.'s holdings of 2,600 acres were added in 1915, bringing the total acreage up to 4,464 acres. Property shows 36 porphyry dikes, carrying 5 orebodies of disseminated ore having 2% to 5% copper.

The old mine, 15 claims, known as the St. Louis, is said to have produced upwards of \$1,000,000 worth of ore, under former ownership, shipping ores ranging 15 to 25% in copper tenor.

Geology: property contains a number of large orebodies of disseminated chalcocite, so-called porphyry ore, that are genetically dependant upon intrusions of monzonite, in pre-Cambrian granite, both rocks being shattered and faulted. The largest orebody is entirely in porphyry, the next largest in a brecciated zone, associated with dikes of aplite and dark felsite (phases of the porphyry), cutting through granite. Actual stoping and milling operations began in March, 1916. The East orebody is mined by milling the ore into 55° chutes going down to the 4,700' Niagara tunnel, where it is loaded directly into standard gauge railway cars. The Breccia orebody is mined through No. 3 shaft, hoisted in 2-ton skips, dumped on an inclined belt conveyor, and discharged on a horizontal conveyor loading by tripping device into railway cars. Company has 5 Star churn drills, one electrically-driven, now at work.

The Burro Mtn. and Chemung mines have been united by the Niagara haulage tunnel, starting at the Tyrone terminus of the Burro Mountain branch of the A. T. & S. Fé railroad; this tunnel, 8x9', was driven to Leopold, a distance of about 1 mile, and serves the double purpose of drainage and haulage. While driving this tunnel the so-called Bison orebody was found.

The old concentrator, built 1905, and twice remodeled, has been dismantled. A standard-gauge 18-mile spur was built in 1913, at a cost of \$350,000, from the main line of the Santa Fé railroad to the mine and mill. A central power plant, equipped with 3 1,000-h. p. Diesel engines,

was built at Tyrone, near the collar of No. 2 shaft. Labor is almost exclusively Mexican, only the bosses being Americans. The new 1,000-ton concentrator, with flotation equipment, at Tyrone, went into operation April 12, 1916. It consists of two units and is located 3 miles from the portal of the haulage tunnel. It is an all-steel-concrete structure covering 500 sq. ft. There are 5 floors, all equipped with the Kahn ventilation system. With the two units, which can be later raised to four, the estimated cost of the plant was about \$1,000,000. J. T. Hall is supt.

Lands include a town site, improved with waterworks, electric lights and substantial buildings and numerous dwellings.

In 1914-15 work consisted mainly in completing the development, by underground work and churn drilling operations, of orebodies already known. At the end of 1914, thirteen holes, with an aggregate of 11,571', had been drilled. This work continued throughout 1915 and 1916, the holes being rather widely scattered and no effort made to define ore-limits, so that estimates of tonnage are not yet possible. The orebodies on the Mohawk and Thistle claims have been considerably extended as a result of churn drilling during the year. An unusual feature is the prospecting of the Mangas Valley where several holes passed through as much as 1,000' of recent Valley gravel before reaching bed rock.

Production: mine production for year 1916 was 257,501 tons with average of 2.12% copper, of which 12,353 tons were from the ore dumps. Ore milled was 253,782 tons of 2.117% copper from which was produced 26,362 tons of concentrates assaying 13.937% copper. Ratio of concentration was 9.627:1; saving, 68.39%. Tons milled per day were 1,189. Gross production of metals was 7,510,674 lbs. copper, 20,762 oz. silver from concentrates, precipitates and slag with 1,076,724 lbs. from lease ore, making a total of 8,587,398 lbs. of copper and 20,762 oz. of silver. Production of mill is for 213 days.

REPUBLIC IRON & STEEL CO.

Offices: 15 Exchange Place, Jersey City, N. J.; 17 Battery Place, New York; Youngstown, Ohio and Birmingham, Ala.

Officers: J. A. Topping, chairman; T. J. Bray, pres.; H. L. Rownd and J. W. Deetrick, v. p's.; R. Jones, Jr., sec.; H. M. Hurd, treas. and F. J. Webb, mgr.

Cap., \$30,000,000 com., \$25,000,000 pfd.; shares \$100 par; \$27,191,000 com. and \$25,000,000 pfd. outstanding. Funded debt outstanding, \$16,346,000 ten to thirty-year sinking fund mortgage gold 5s.

Dividends: 1¾% quarterly on pfd. and 1½% on com. stock.

Property: includes 5 iron mines in Michigan, 6 in Minnesota and 5 in Alabama; which yielded a total of 1,693,450 tons in season of 1916. Some of these are as follows:

Mine	Range	Mining System	Ore	Iron Content, %	Production 1916, Tons	Total Tons

UNITED COPPER CO.

Dead. Fully described Vol. XI, Copper Handbook.

The preferred stockholders' protective committee of the United Copper Co. stated Aug., 1915, that it had been unable to obtain any offer from the

holders of the company's pledged assets which justifies the committee in continuing its efforts either to formulate a reorganization plan or redeem the pledged assets; that \$750,000 would have to be provided to redeem assets, which would require a cash assessment of about \$20 per share, which it is believed could not be raised under existing conditions. Committee also stated that it had considered possibility of instituting proceedings to recover wasted assets, but decided that there were no reasonable prospects of obtaining substantial results in such proceedings. Preferred stockholders were notified that stock deposited with the committee would be returned on presentation of certificates of deposit to the Central Trust Co. of New York.

The \$10,500,000 cash which was turned over to the United Copper Co. at the time that corporation sold its principal physical assets to the Rede Metals Mining Co., controlled by the former Butte Coalition Mining Co., was made the subject of an investigation by the receivers of the United Company in 1914.

When F. A. Heinze was on trial in the United States Court in New York several years ago it was charged that for a time preferred dividends were paid from capital account, while two of the common dividends were not from earnings but from money borrowed from Heinze and his associates.

Explanation is yet to be made as to what became of the cash and assets of the United Copper Co. treasury, both before and after the Assets Realization Co. became entangled with it.

In May, 1917, the U. S. Supreme Court dismissed suit brought by several United Copper shareholders for recovery of \$15,000,000 damages from Amalgamated Copper Co., upholding refusal of the United company's directors to bring action.

U. S. SMELTING, REFINING & MINING CO.

General office: 55 Congress St., Boston, Mass. **Corporate office:** 85 Exchange Place, Portland, Maine. **Selling office:** United States Smelting Co., Inc., 120 Broadway, New York. F. Y. Robertson, mgr. metal sales.

Officers: W. C. Sharp, pres.; C. G. Rice, v. p.; Frederick Lyon, v. p. in charge of operations; S. J. Jennings, v. p. in charge of exploration and mining investment; C. W. Van Law, 2nd v. p. in charge of operations; F. W. Batchelder, sec.-treas.; John Laurie, comptroller; C. F. Moore, cons. engr.; O. J. Egleston, engr.; G. W. Cushing, traffic engr. Executive committee: W. G. Sharp (chairman), B. P. Clark, C. G. Rice, J. J. Storrow, D. G. Wing and S. W. Winslow. Directors: (Term expires 1917), Frederic Ayer, E. B. Bayley, A. W. Preston, D. A. Ritchie and S. W. Winslow, Jr. (Term expires 1918), R. S. Bradley, Frederick Lyon, J. J. Storrow and S. W. Winslow. (Term expires 1919), S. L. Bartlett, R. J. Edwards, J. J. Phelan and C. G. Rice. (Term expires 1920), C. F. Brooker, B. P. Clark, C. A. Hight, S. J. Jennings, R. T. Paine, 2d, and W. G. Sharp. H. P. Swedtser, clerk.

Inc. Jan., 1906, in Maine. **Cap.**, \$75,000,000; shares \$50 par, in \$37,500,000 of 7% preferred cumulative stock and \$37,500,000 common stock; issued \$24,317,775 preferred and \$17,555,887 common stock, Dec. 31, 1916. National Shawmut Bank, Boston, and Guaranty Trust Co., New York, registrars; Old Colony Trust Co., Boston, and Bankers Trust Co., New York, transfer agents. Annual meeting in May. Listed on Boston and New York Exchanges. Company had 8,846 pfd., and 2019 com. holders at end of 1916.

Dividends: rate is 7% on preferred stock, payable in quarterly dividends of $1\frac{3}{4}$; first dividend paid April 15, 1906. Dividends on the common stock are given in the table below. In 1916 the total was \$3.75 per share. In 1917, to Oct. 15, \$5 per share.

Financial Statement:

	Net Earnings	Deprec. & Reserve	Pfd. Dividend	Bal. for Common	Earned Common	Paid Com
1916....	\$9,737,664	\$1,839,200	\$1,702,225	\$6,196,239	40.93%	\$3.75

\$600,000 was written off 1915 earnings, and balance was written off during 1916 to pay off the cost of the three zinc smelters acquired in 1915, amounting to \$953,597.

The working capital of the company has been increased to \$13,700,000, and the company had at the end of the year cash on hand, \$5,105,678, as against current liabilities of \$6,595,399. Total assets and liabilities stood at \$83,932,051, against \$65,444,732 a year ago. The balance sheet as of Dec. 31, last shows:

Assets: capital assets, \$62,950,388; improvements, options and other deferred charges, \$1,229,412; ores, matte and by-products at cost, \$2,049,975; supplies, fuel and timber at cost, \$2,240,395; metals in transit, in process and on hand (at less than market value), \$6,561,728; notes receivable, \$666,624; accounts receivable, \$3,127,851; cash, \$5,105,678; total, \$83,932,051.

Liabilities: common stock, \$17,555,887; preferred stocks, \$24,317,775; capital stock of subsidiary companies not held by U. S. Sm., Ref. & Mng. Co., \$2,079,257; 10-year 6% gold convertible notes due Feb. 1, 1926, \$12,000,000; bonds of sub companies not owned, \$517,500; current liabilities, \$6,595,399; depreciation and reserve funds, \$7,466,608; undivided surplus, applicable to stocks of subsidiary companies not held by U. S. Sm., Ref. & Mng. Co., \$442,169; profit and loss surplus, \$12,957,455; total, \$83,932,051.

Net earnings for 8 months in 1917 were \$4,311,082, after paying for depreciation and interest, but not Federal taxes.

Company is a securities-holding corporation only, owning shares in the following subsidiaries:

*7 Held in treasury for subscription by U. S. S. R. & M. Co.—33,728 shares. Held for exchange of old Niagara Mng. & Sm. Co. stock, 5,804 shares.

June 1, 1916, the only outstanding obligation of the company was \$12,000,000 6% convertible gold notes, dated Feb. 1, 1916, and due Feb. 1, 1926; also \$517,500, bonds of subsidiary companies not owned in the consolidation.

The subsidiary companies are described hereunder:

Needles Mining and Smelting Co.

Custom lead and zinc concentrator. Address: Needles, Cal.

Mammoth Copper Mining Co.

Custom copper smelter. Address: Kennett, Cal.

Goldroad Mines Co.

Officers of Mammoth, Gold Road, and Needles companies: A. P. Anderson, gen. mgr.; G. W. Metcalfe, mgr.; R. E. Hanley, mine supt.; J. H. Kervin, smelter supt. and D. G. Stuart, cashier, all of Mammoth company; D. R. Muir, mgr. of Gold Road and Needles.

United States Smelting Co.

Custom lead and copper smelters and custom lead and zinc concentrating mills at Midvale, Utah. **Address:** Salt Lake City, Utah. Custom zinc smelters at Iola, Altoona, La Harpe, Kansas and Checotah, Oklahoma. **Address:** 413 Republic Bldg., Kansas City, Mo.

Officers of U. S. Smelting, Centennial-Eureka and Richmond-Eureka:

G. W. Heintz, gen. mgr.; C. E. Allen, mgr. of mines; L. D. Anderson, supt. Midvale smelter; J. F. Barnard, supt. Bingham mines; W. H. Eardley, mgr. zinc properties; A. P. Mayberry, supt. Centennial-Eureka; Ambrose Nord, cashier.

United States Metals Refining Co.

Custom copper smelter and electrolytic copper refinery at Chrome, N. J., Electrolytic lead refinery at Grasselli, Ind. **Address:** 120 Broadway, New York City, N. Y.

Officers: F. Y. Robertson, v. p. and gen. mgr.; R. W. Deacon, supt. copper refinery at Chrome; William Thum, supt. lead refinery at East Chicago; F. F. Colcord, cashier, New York.

Cia. de Real del Monte

Mines and mills at Pachuca and Real del Monte. **Address:** Pachuca, Hidalgo, Mexico.

Officers: S. M. Cancino, pres.; D. S. Calland, director.

U. S. Smelting, Refining & Mining Exploration Co.

For examination and purchase of metal mines. **Address:** 55 Congress St., Boston, Mass.; 120 Broadway, New York, N. Y.; 1504 Hobart Bldg., San Francisco, Cal.; Newhouse Bldg., Salt Lake City, Utah; 906 Mills Bldg., El Paso, Texas; Edificio La Mutua 411, Mexico, D. F.

Officers: C. W. Van Law, v. p. and gen. mgr.; A. P. Anderson, Pacific Coast mgr.; E. N. Funston, Colorado mgr.; D. D. Muir, Jr., inter-mountain mgr.

U. S. Fuel Co.

Coal mines in Utah and Wyoming.

Officers: A. B. Apperson, v. p. and gen. mgr.; R. M. McGraw, gen. supt.

U. S. Stores Co.

J. H. Horlick, mgr.

The total amount of ore from the Centennial-Eureka, Mammoth, Gold Road, Tennessee, and Bingham mines, also mines in Mexico was 1,022,306 tons, of which the values of the metal-contents were in the proportion of 39% copper, 8% lead, 15% zinc, 28% silver, and 10% gold. The Real del Monte mills were operated at 33% of their capacity, due to lack of supplies. The coal output was 756,931 tons.

Profits for 8 months in 1917 have been at the rate of \$18 per share on common stock. Owing to strikes and other troubles, resulting in decreased outputs, 1917 profits will be about \$3,000,000 less than in 1916, unless the Mexican properties come to the rescue. In July, Real del Monte made a profit of \$60,000; in August, \$160,000; and \$250,000 is expected monthly from then on, unless silver drops much lower.

Development at company's silver mines in Mexico in 1916 were exceptionally rich. Ore developed on the 1,400' level was reported to have a net value of \$15,000,000; while a reasonable extension of the orebodies would give a net valuation of \$75,000,000. Recent work continues to open rich ore. The company's operations have not been as seriously curtailed as those of other companies, and with peace in Mexico, these properties will break all records for silver production. Lack of supplies has been the main cause of intermittent operation of late, but in July, 1917, 57,000 tons of silver ore was treated. It is proposed to increase the capacity to 100,000 tons monthly.

Company is ably managed and in the hands of experienced, yet courageous, executive officials, so that an even more prosperous future is assured.

United States Smelting Co.

Office: 55 Congress St., Boston, Mass. **Operating office:** 920 Newhouse Bldg., Salt Lake City, Utah. **Works office:** Midvale, Salt Lake Co., Utah.

Officers: Wm. G. Sharp, pres.; C. G. Rice, v. p.; F. W. Batchelder, sec.-treas.; preceded with S. W. Winslow, B. Preston Clark, and J. J. Storrow, directors; Geo. W. Heintz, gen. mgr.; L. D. Anderson, smelter supt.

Is controlled, through ownership of entire capital stock issue, by the U. S. Sm., Ref. & Mng. Co.

Inc. Sept. 2, 1902, in Maine. **Cap.,** \$1,000,000; shares \$100 par; all outstanding.

The company owns the following property: (1) The Old Jordan, Telegraph & Galena mines, including 99 patented and 15 unpatented claims at Bingham, Utah. (2) The Midvale Smelter, at Midvale, Utah. (3) Three zinc smelters, in Kansas, with a total capacity of 70 tons spelter per day, purchased in 1915 to handle the output of the company's subsidiaries and to obtain the great profit between the price of ore and spelter; also a zinc smelter at Checotah, Oklahoma. (4) Lease on Ritz zinc mine in Oklahoma. (5) Lime quarry at Topcliffe, Utah. (6) This company also owns 10 shares of Centennial-Eureka Mng. Co., 1,690 shares Niagara Mining Co., 81 preferred and 41 common stock of the U. S. Sm., Ref. & Mining Co. stock.

The Bingham mining property includes very valuable mines producing silver-lead, copper, gold and zinc ores, in part complex. They have been operated since 1870, and by this company since 1899. The orebodies occur in limestone, which precludes the economic blocking out of large ore reserves, but the company states that 2 or 3 years supply is developed, the unexplored territory is large and the outlook promising. Ore is developed faster than it is extracted. The geology of the district is fully described in U. S. Geol. Survey Prof. Paper No. 38, 1905.

In 1914 the mines produced 194,898 tons of ore of an average value at the mine of \$7,198, at a mining cost of \$2.86. Production in 1915 amounted to 94,166 tons of lead and 34,313 tons of copper.

In 1916 the output was 109,586 tons of lead and 46,017 tons of copper ore. Pneumatic haulage apparatus is a success. The Niagara tunnel handles the whole output, so the 3-mile aerial tram was reerected at the Stowell mine in California.

Midvale Smelter

Midvale smelter, at Midvale, Utah, comprises a lead smelter, and lead and zinc concentrating mill, which treat not only the company's ores, but do a general custom business. The smelter has seven blast furnaces with a smelting capacity of 481,000 tons per year. It is equipped with modern blast and roasting furnaces, charging apparatus and bag houses which eliminate smelter fumes, and recover arsenic and cadmium.

All ore is received at the sampling plant, which contains 2 mills, one for oxidized and one for sulphide ores. The former is equipped with one 10"x20" Blake crusher, one No. 2 style D Gates crusher, one set 14"x27" Davis rolls, one set 14"x26" Colorado Iron Works rolls, two 42" Snyder samplers, two 27" Snyder samplers, giving final sample of 1 part in 720, 50-h. p. a. c. induction motor.

The sampling mill for sulphide ores, which is also used for a crushing plant, contains: one 10"x20" Blake crusher, two 36"x16" Allis Chalmers class B rolls, three 27" Snyder samplers, giving final sample of 1 part in 360, one 50-h. p. a. c. induction motor.

The **Lead Smelter**: of 1,750 tons daily capacity, contains: seven 250-ton blast furnaces, having 5 water jackets each side and one at each end; ten 3½" tuyeres each side. Each furnace is 48"x160" at tuyeres and measures 7', 11"x13', 4" at charge floor. The crucible is elliptical with I beam binders. The forehearth is 4', 5x9' and is 3" to 6" deep.

The matte pans are 5' dia. x 9" with anchors for embedding in the cast matte for handling by monorail crane. The slag is handled in Stearns-Rogers slag cars of 28 cu. ft. capacity which are emptied by tapping through hole 8" from bottom. The molten lead is drawn off from side of crucible into pots, wheeled to remelting plant, dumped into 4 remelting kettles of 9' dia. and 30 tons capacity.

Skimmings are handled by a Howard dross press. Most of the lead is drawn through iron siphon pipes and cast into anodes on a continuously revolving casting table carrying 10 moulds, but a small amount is cast into pigs. The anode plates are sent to Grasselli works of U. S. Metals Ref. Co. for electrolytic refining. The blast furnace building is ventilated by hoods, over forehearth and slag pots, with No. 12 Sirocco fan to baghouse, containing 768 cotton bags 12"x23' long.

Ore handling. Ore is bedded by means of 18" belt conveyor from oxide sample mill and Robins automatic reversing tripper. 3 Brownhoist electric scale charge larries make up charges and deliver into 6' gauge charge cars which dump directly into tops of blast furnaces.

The roasting department contains 26 converter roasters (worked during one 8-hr. shift only), each converter roaster consists of a 6'x6x3' high cast iron shell with 3' hood, bottom of grate bars, through which 9-oz. blast is blown for about 4 hours. Solid sintered cake is discharged by ram car, and carried by half gantry crane to a 24"x36" Farrel crusher which delivers the broken product to an inclined skip hoist discharging into R. R. cars. There are also 4 Wedge furnaces, each 21' dia. with 7 hearths; the feed is brought by belt conveyors; the product handled by pan and belt conveyors. Sulphur in product is still further eliminated in D. & L. plant. The plant also contains 6 Dwight-Lloyd sintering machines for which the feed is mixed in bins and on conveyor belts, and the product is discharged into R. R. cars.

The fumes pass into a brick baghouse 60'x283' in ground section and 58' high, with 8 separate compartments, 5 for roaster fumes, each compartment or bay having 416 woolen bags 18" dia.x32'-6" long; 3 handle part of the blast furnace fumes, each having 420 woolen bags. All bays have steel

hoppers under thimble floor provided with 9" screw conveyors for discharging dust into cars.

All Dwight-Lloyd roaster fumes pass into a 8½' balloon flue, leading into two 10' dia. cooling flues, where fumes from the ZnO furnace are added to neutralize SO₃.

Wedge furnace and converter roaster fumes pass into 8½' balloon flues and through a 122" fan run by 50-h. p. motor into two 10' cooling flues above. Slack lime is added to neutralize SO₃. All roaster fumes pass through 13'-6" Sturtevant fan run by 150-h. p. motor to roaster section of baghouse. From baghouse two No. 20 Sirocco fans run by 150-h. p. motor force gases into 16'-6"x245' steel stack, at same time drawing in fresh air for diluting gases. Gases issuing from stack must contain less than .75% by volume of SO₂ by Court decree. Part of the blast furnace fumes pass through rectangular brick flue with hopper bottoms to 15' Sturtevant fan run by 100-h. p. motor and then into blast furnace section of baghouse. Each of 3 blast furnace bays has a separate stack 6' dia.x100'. The blast furnace fumes not handled in this baghouse pass through a balloon flue 15' dia.x160' to a No. 14 Sirocco fan (run by 50-h. p. motor) into a brick chamber which is connected by air operated valves to a 5-compartment baghouse lined with asbestos sheet. This baghouse has 1,200 12"x34" cotton bags. Dust is collected in cars in tunnel under baghouse hoppers. Blast furnace fumes are neutralized with slaked lime before they enter baghouse.

Roaster dust is briquetted in Chrisholm-Boyd-White machine. Blast furnace dust averaging 40 to 50% arsenic is taken to arsenic plant.

The crude product carries 97 to 99% arsenious trioxide, which is removed through the doors, and sent, in buggies, over a monorail crane to the refining furnace, where charged direct into a 30x66" steel hopper in the top of the refining furnace. Access to the interior of the refining furnace is through three 9x15" doors on each side and a temperature of about 700° F. is maintained. The capacity of the refining furnace being 15 tons daily, and output of crude arsenic being only about 2 tons daily, from each Brunton furnace, the refining furnace is worked only part time. The product of the refining furnace is crystalline arsenious trioxide of 99.87% average tenor, which is sent to a 3' buhr-mill, ground and packed for shipment. The grinding is done in a small room, tightly closed, and connected with an exhaust fan discharging into a small baghouse, so that no arsenic may escape into the air. Workmen about the arsenic plant wear a one-piece suit of overalls, with a hood, furnished by the company, and also wear respirators, when entering the chambers, or otherwise coming in contact with the arsenic. All employes of the arsenic plant are required to take a bath and make a complete change of clothing when going off shift.

Residue from Brunton furnaces is ground in 3'x3'-6" pebble mill, treated with sulphuric acid, roasted in a reverberatory type roaster, ground again, agitated with water in a pachuca tank, filtered, the filtrate going into 8 electrolytic tanks having lead anodes and aluminum cathodes on which cadmium is recovered.

The Power Plant contains 4 250 h. p. batteries of water tube Stirling boilers (2 of which are in continuous operation) generating steam at 140 lbs. pressure; 2 batteries with American stokers and 2 with Roney stoker. Steam is used to operate 3 Nordberg tandem compound Corliss engines 12"x24"x36" each, direct connected to 175 cu. ft. Connersville blower, and 1 10"x18"x36" Nordberg cross compound Corliss engine tandem connected to 12"x12"x36" compressor for supplying air for forges, air hammers, air lift pumps, hoists and various pneumatic machinery. Main power plant includes

one 500-k. w. Curtis steam turbine, one 200-kva. synchronous motor generator set for D. C. current at 500 volts, one 150-k. w. D. C. generator, one 150-k. w. A. C. generator, both connected to 12"x24"x36" tandem compound engine by belt, one 200-k. w. D. C. generator connected to 16"x32"x36" tandem compound engines.

Electric current is supplied by the Utah Power & Light Co. at 44,000 volts stepped down to 480 volts in three 300-kva. single phase transformers and one 400-kva. 3 phase transformer. Current for electrostatic zinc mill and 150-ton concentrator is stepped up to 1,440 volts in 200-kva. auto transformer, and again stepped down at mill to 480 volts in 200-kva. auto transformer.

The **Concentrating Mill** has a capacity of 210,000 tons of ore per year. It treats the low-grade silver-lead ores of the Bingham mines, producing lead concentrates sent to the smelter, and a middling product containing zinc and iron sulphides, which is treated in the Huff electrostatic mill. The wet concentrating plant has two units, one of 150, the other of 450 tons daily capacity.

The 450-ton concentrator has the following equipment: one 10x20 Allis Chalmers-Blake crusher, three 36x16 Allis Chalmers style B rolls, 10 trommels, seven 3-compartment single Harz jigs, twenty 8' and 9' Callow tanks, two shovel wheels, six 16" Bucket elevators, two 5'x14' Denver Eng. Wks. tube mill, eleven 20" to 60" double cone classifiers, eight Deister slime tables, 11 Overstrom tables, 24 Wilfley tables, one 4-compartment concentrates bin, misc. settling tanks and centrifugal pumps, one 100-h. p., one 75-h. p., two 50-h. p., one 35-h. p., one 30-h. p., one 25-h. p. motors.

Concentration $2\frac{1}{2}$ to 1; extraction is 85 to 90% silver-gold-lead, 40% zinc, 80% copper.

The 150-ton plant at the concentrator contains one 9x15" Hodge Blake crusher, four 30x12" Allis Chalmers rolls, 7 trommels, four 3-compartment single Harz jigs, six 8' Callow tanks, one shovel wheel, one 24" Akins classifier, four 12" and 16" bucket elevators, nine 20" 60 60" double cone classifiers, 12 Wilfley tables, 4 Deister slime tables, one 2-compartment concentrates bin, misc. settling tank and centrifugal pumps, one 75 h. p. motor, two 35-h. p. motors. Ratio of concentration is $1\frac{3}{4}$ into 1. Extraction averages 85 to 90% gold, silver, lead, 50% zinc, 80% copper.

The 75-ton electrostatic zinc mill contains 1 zinc middlings receiving bin, one 60"x30' Ruggles-Cole dryer, 2 banks of Newaygo screens—16, 40, 60, 100 mesh; 9 Huff roughing machines, 12 Huff finishing machines, 6 combined roughing and finishing toboggan machines, one 35-h. p., one 50-h. p., one 10-h. p., three 5-h. p. induction motors; one baghouse with No. 70 A. Blower Co. fan for collecting dust from mill, with 64 12" dia.x16' cotton bags. Product 40% to 50% zinc and iron pyrites.

During 1916 a magnetic separator commenced treating pyrite, heretofore unprofitable; and in 1917 a Weatherby separator was installed for this work. Flotation is being tried on tailings. A thaw house was erected to aid unloading ore from cars. This also increased mill capacity.

Other Plants

The U. S. Smelting also owns and operates zinc smelters at Altoona, Iola and LaHarpe, Kansas, and operates under a lease the Ravenswood mine near Reeds, Mo. All smelters are equipped for either oxide or sulphide ores.

Altoona Zinc Plant: Altoona, Kansas. Local supt., I. A. Palmer. The property includes 30 acres, and has a capacity of 39,000 tons of ore per year. It contains 6 blocks, 12 furnaces, 3,960 retorts, the total capacity per day is 108 tons, producing approximately 30 tons spelter per day.

Iola Zinc Plant: Iola, Kansas. Local supt., A. R. Campbell. The plant has 34 acres land and a capacity of 34,000 tons of ore per year. It consists of 5 blocks, 10 furnaces, with 3,440 retorts. Total capacity per day 95 tons, producing approximately 25 tons spelter per day.

LaHarpe Zinc Plant: LaHarpe, Kansas. Local supt., A. R. Campbell. The plant has 19 acres and treats 18,000 tons of ore per year. The smelter has 3 blocks, 6 furnaces, 1,924 retorts. The total capacity per day is 52 tons, or approximately 15 tons of spelter.

All three smelters use natural gas as fuel, having 14,481 acres of gas land in fee or under lease. The total capacity per day is 225, or 7,650 tons per month, which is approximately 70 per day, or 2,100 tons per month of spelter.

Checotah Zinc Plant: Oklahoma: using natural gas, was purchased by cash and partly by transfer of the plant at Iola. The sum of \$350,000 was written off these plants, now standing at \$486,030. The cost of the 3 plants bought in 1915 has been written off.

Ravenswood Mine: Local supt., T. J. Rightly, Reeds, Jasper Co., Missouri. Mine production 218,000 tons per annum. The zinc mill has a capacity of 218,000 tons per annum. The mine was unwatered and production begun at the end of 1915.

In 1916 the company purchased the Marbury leases consisting of 60 acres lying between the Blue Goose and Beaver mines in the Cardin camp, and has started the development of the property by sinking two shafts to the ore deposit. The consideration given for the property is said to have been \$125,000. There were 20 drill holes put down and of these 18 were said to have struck good ore from 280 to 312'. The company moved its Ravenswood mill to the newly acquired lease. This mine is known as the Ritz.

U. S. Smelting, Refining & Mining Exploration Co.

Office: 120 Broadway, New York. **Operating office:** 508 Dooly Bldg., Salt Lake City, Utah.

Inc. in Maine. Subsidiary of the U. S. Sm., Ref. & Mng. Co., which owns the 900 shares issued of a total of 1,000 shares capital stock.

Officials: C. W. Van Law, v. p.-gen. mgr.; A. P. Anderson, Pacific Coast mgr.; E. N. Funston, Colorado mgr.; D. D. Muir, Jr., Inter-Mountain mgr.; C. F. Moore, cons. engr.; F. B. Weeks, field eng.

Company was organized for the purpose of exploring and developing new properties, which, when acquired, would be turned over to operating subsidiaries of the U. S. Sm., Ref. & Mining Co.

Leadville Unit. Leadville, Colo. H. S. Lee, mgr.; E. H. Hamilton, supt.

This unit unwatered the 407' Harvard shaft on Fryer Hill, and is sinking the several hundred feet through quartzite to the second contact. Thorough exploration and a geological study of the entire territory controlled by this unit is in progress. Property is equipped with hoist, compressor, etc.

In July, 1917, control was secured in the Sunnyside and Gold Prince mines near Silverton, Colo. Reserves were estimated at 850,000 tons. On 8 levels of the Sunnyside there are over 12,000' of openings. Veins are 6' wide in andesite and the ore contains 0.1 oz. gold, 6 oz. silver, 5½% lead, ½% copper and 9% zinc. A 500-ton mill is being erected at Eureka, nearby.

Arizona Unit. The Durham property in the Tortillita Mountains, 50 miles N. E. of Red Rock, Ariz., was explored by churn drills. The land adjoins that of the Tortillita Copper Co.

UNITED STATES STEEL CORPORATION

Through its subsidiaries this company controls about 140 iron mines in Alabama, Michigan, Minnesota and Wisconsin. The most important are described under their respective heads. In the season of 1916 there was mined a total of 33,355,169 tons of ore, which yielded 17,412,049 tons of pig iron.

WESTERN PRECIPITATION CO.

Office and laboratory: Walter A. Schmidt, gen. mgr., 1016 W. 9th St., Los Angeles, Cal. **Eastern office:** L. Webb, Widener Bldg. Philadelphia, Pa.

Company is well known and controls the Cottrell patents for electric precipitation of smelter dust and fumes. Installations are working at many important smelters, such as at Anaconda, Bunker Hill & Sullivan, International, Trail, Midvale, Garfield, Selby, Mammoth, Northport, Leadville, and several smelters in Japan; also at cement plants in Eastern and Western United States, and in foreign countries. Operations in the East are controlled by the Research Corporation, 63 Wall Street, New York.

YUKON GOLD CO.

Office: 120 Broadway, New York. Controlled by the Yukon Alaska Trust, inc. 1916 to take over the residuary assets of the dissolved Guggenheim Exploration Co.

Officers: Wm. Loeb, Jr., pres.; C. K. Lipman; v. p. and sec.; O. B. Perry, cons. engr. and gen. mgr.; with Daniel, Isaac, Morris and S. R. Guggenheim, E. L. Newhouse, F. R. Foraker, Charles Earl and R. W. Straus, directors; L. Fredrick, treas.; W. E. Bennett, asst. sec.; M. M. Van Keuren, comptroller; O. L. Myers, gen. aud.; F. R. Raiff, traffic mgr. and J. K. MacGowan, purch. agt.

Inc. Feb. 28, 1907, in Me. **Cap.** \$25,000,000 reduced, Jan., 1915, to \$17,500,000; shares \$5 par; all issued; \$14,213,125 stock owned by the Yukon Alaska Trust. Guaranty Trust Co., New York, registrar; D. A. Crockett, 120 Broadway, New York, transfer agent. Listed on New York and Boston Curb. Annual meeting 2nd Monday in January, at Augusta, Me.

Dividends: 8% (40c per share) quarterly from Sept., 1909 to Dec., 1911; 6% (30c per share) annually from April, 1912 to Sept., 1917. The annual distribution calls for \$1,050,000.

Comparative General Balance Sheet**Assets:**

	Property & Invest's	Equip.	Def'd Charges	Bullion & Cash	Other Current	Total

In 1916 the Yukon-Alaska Trust acquired 8 serial notes of \$625,000 each, bearing 5% interest, representing the loan to the Yukon Gold Co. of \$5,000,000, as shown above. The first note fell due on Feb. 1, 1917, but was extended for 8 years, the reason being the heavy expenditure on new properties.

Property: includes 650 claims in the Klondike, Yukon Territory; 24 claims on Flat and Greenstone creeks, Iditarod district, Alaska; considerable areas on the American, Feather, Trinity, and Yuba rivers, and Butte creek, California; lease on property of the Coeur d' Alene Mining Co., Prichard creek, near Murray, Idaho; and the Long Hike and O. K. lode claims, in the Jarbidge district, Elko county, Nev., the last operated by the Elkorro Mines Co., which see.

The new properties acquired by purchase or lease contain gold estimated to be worth \$8,000,000, of which the company's proportion will be \$3,500,000. In 1916, \$1,893,105 was spent on new property and equipment.

Heretofore Yukon Gold has confined its operations to placers, but the lode property in Nevada marks a departure from this policy.

Equipment: at Dawson, Yukon, 7 large dredges, 70 miles ditch, power plant, steam thawing apparatus and hydraulicking plant; at Iditarod, Alaska, 2 dredges; on 5 rivers in California, one dredge on each; in Idaho, one 7½ cu. ft. dredge; and at Elkorro mines, Nev., 100-ton cyanide mill.

Production:

	1916			1915		
	Yards	Yield Cents	Cost Cents	Yards	Yield Cents	Cost Cents
Alaska (dredges)	1,222,428	86.7 to 95.6	80.6 to 39.8	926,956	91.30	38.70
Klondike (dredges)	5,433,052	41.89	23.32	5,041,075	48.73	26.46
Klondike (sluicing)	2,245,084	19.40	11.90	3,031,647	13.60	7.00
California (3 dredges)	4,032,476	10.27	3.94	3,818,127	11.46	4.51

Total quantity 12,933,040

12,817,804

Company's financial and technical direction is excellent.

ZINC CONCENTRATING CO.

Officers: L. N. Godfrey, pres., 60 Congress St., Boston, Mass.; Augustus T. Clark, treas.; with D. L. Goff, Jas. B. Etherington, M. B. Ryan, Oscar Hoppe, Herbert H. Brooks, directors.

Cap., \$3,000,000; shares \$10 par; full-paid and non-assessable; all issued. Stock traded in on New York Curb.

Company owns all the patents and rights of the Campbell system of magnetic separation and the Dings' magnetic separators. The Campbell process has been successfully used at two plants, one at Linden, Wis., operated by the Linden Zinc Co. and one at Cuba, Wis., under lease to the Wisconsin Zinc Co. Company claims a regular zinc recovery of 95% and a total ore recovery, zinc, sulphur, iron, of from 85 to 90%.

The Linden Zinc Co. is reported paying \$9,000 annual royalty for one unit.

ALABAMA

ALABAMA COMPANY, THE

ALABAMA

Office: H. W. Coffin, gen. mgr., Birmingham, Ala.

Property: includes 10,164 acres of iron orelands in Etowah, Talladega and Jefferson Counties, Ala.; and in Polk Co., Ga.

Ore: production for the last 3 years was: 135,398, 166,582 and 257,958 tons, respectively.

ALASKA

Companies grouped by districts.

COPPER RIVER DISTRICT**ALASKA COPPER CORPORATION**

ALASKA

Office: 25 Pine St., New York. **Mine office:** Strelna, Alaska.**Officers:** Frederic B. Bard, pres.; Alvan Markle, treas.; Edward Barr, sec. **Directors:** Samuel D. Warriner, Alvan Markle, John W. B. Bausman, W. F. B. Stewart, George R. Bedford, M. J. Martin, Frank P. Lauer, Frederic B. Bard and D. George Dery. Howard W. DuBois, cons. engr.; Angus McLeod, supt.; C. C. Semple, min. engr.**Inc.** November, 1912, in Delaware. **Cap.**, \$10,000,000; shares \$5 par; fully paid and non-assessable; 1,740,000 shares issued. Guaranty Trust Co., New York, transfer agent; Columbia Trust Co., New York, registrar. Annual meeting, third Tuesday in February.

Company controls by ownership the majority of the capital stock of the Alaska Consolidated Copper Co. and holds an operating lease for 99 years from the latter company.

Property: 35 claims, 700 acres; eleven claims patented and balance in process of patent. Holdings comprise Nuggett group, situated about 18 miles from railroad station of Strelna, on the Copper River and North Western R. R., at an elevation of about 3,500'.

The property is crossed by a series of parallel fault fissure veins, in amygdaloidal greenstone, containing mostly bornite and some chalcopryrite, in a siliceous limestone gangue. The several parallel veins dip 83° N. W. and strike N. 40° E. One vein system has been followed on the surface along its strike for 3,500', by means of test pits sunk at frequent intervals. The main vein system is prominently exposed at the surface, the orebody said to have a width of 16' across its strike, and to average better than 5% copper. From the high-grade orebody, two carload shipments have been made from which smelter returns are reported to have averaged 49% copper and 13 oz. silver per ton. The property is being developed for mining both high-grade and disseminated ore. Total workings are about 4,500'.

Development: Underground workings of 2,320' were driven by hand drilling previous to the new management installing power equipment for carrying on all future development work. The power equipment includes three 30 h. p. of the N-S-O type of fuel oil engines. The air compressors are direct connected, furnishing 500 cu. ft. air per minute, at 100 lbs. pressure. The general equipment includes a No. 5 Leyner drill sharpener, one oil furnace for heating drill steel, four Tugger hoists and several air pumps. Both Ingersoll-Rand and Sullivan hammer and stoper drills are used. Employs about 100 men. Property considered meritorious, but needs large amount of money for development and equipment.

During summer of 1917, a 19-mile motor truck road, from the mine to rail at Strelna, was constructed. Ore shipments started in November, 1917. Plans are under way for erection of a concentrating plant.

ALASKA UNITED COPPER EXPLORATION CO. ALASKA

Office: 551 Coleman Block, Seattle, Wash. **Mine office:** Dan creek, Copper River district, Alaska.

Officers: L. C. Dillman, pres. and gen. mgr.; Jas. A. Munday, v. p.; E. V. Dillman, sec.; W. A. Mears, treas.; preceding officers: A. Ingraham, W. Hughes, Frank L. Huston, Jas. J. O'Keane and Thos. M. Dunn, trustees; C. C. Jones, cons. engr.

Inc. Nov. 14, 1906, in Washington. **Cap.**, \$12,500,000, shares \$1 par. Debentures, \$150,000 6% bonds. Annual meeting, first Monday in January.

Property: 23 claims, area 460 acres, comprising the Finch, Dillman and Porcupine groups, all five miles from the Copper River railroad, on branches of the Chitina and Nizina rivers, in the Copper River district, Alaska.

Exploratory work has been done on the various groups, property having a number of small tunnels and numerous trenches and open cuts, showing copper ore said to average 35%.

The company is primarily a holding company, prospecting and developing properties in its possession for sale to other parties.

Company controls the Alaska Westover Copper Co., which see.

HOUGHTON-ALASKA EXPLORATION CO. ALASKA

Company dissolved and property sold. Fully described in Vo. XII.

HUBBARD-ELLIOTT COPPER CO. ALASKA

Offices: 327 So. La Salle St., Chicago, Ill. **Home office:** 411 New York Blk., Seattle, Wash. **Mine office:** Elliott Creek, Chitina district, Alaska.

Officers: H. P. Elliott, pres.; R. Reichardt, 1st v. p.; T. J. Dolan, 2nd v. p.; A. J. Elliott, sec.; J. T. Evans, treas.; L. G. Hinckle, supt.

Inc. Jan., 1911, in Washington. **Cap.**, \$3,500,000; shares \$1 par; 1,500,000 shares issued in exchange, share for share, for stock in the old Hubbard-Elliott Copper Mines Development Co. of Alaska; 2,000,000 shares treasury stock.

On Feb. 28, 1917, company made a 15-year contract with an Eastern syndicate for the development of its properties. Syndicate will open up the mines and provide for the marketing of all ore extracted.

Property: 35 patented claims, 5 mill sites with U. S. government titles and 84 unpatented claims, over 2,500 acres, covering over 6 miles in Elliott Creek valley. Acquired an 8/12 interest in the adjoining U. G. I. group of 8 claims, 1917. Elliott creek is an affluent of the Kotsina river, about 15 miles above junction of the Kotsina with the Copper river.

Geology: copper ore occurs in fissure veins and associated replacement orebodies in greenstone with limestone beds above it. The prominent outcrops are practically all on the north side of Elliott creek, near the contact, which runs N. 75° W. and dips 80° N. All outcrops are in the greenstone underlying the limestone beds except on the Leland and Lawton claims which are in a well-defined porphyry dike. Above the limestone is found a heavy capping of conglomerates.

The principal ore minerals are bornite, glance and chalcopyrite. The total absence of surface oxidation due to glacial action is notable and sulphides occur in a calcite matrix in the veins and with a greenstone matrix.

Development is by tunnels.

Equipment: includes compressor, drills, etc. Hydro-electric power plant and concentrating mill installed in 1914.

JOSEVIG-KENNECOTT COPPER CO. ALASKA

Address: Alaska Bldg., Seattle, Wash.

Officers: D. K. McDonald, pres.; J. B. MacDougall, v. p., with M. E. Hay, W. L. Gazzam and J. W. Roberts, directors; W. H. Seagrave, mgr.

Inc. in Washington. **Cap.,** \$2,500,000; shares, \$1 par.

Property: 22 claims, 7 miles from Kennecott, Alaska. Ore occurrence is said to be identical with that of the Bonanza mine of the Kennecott Copper Corp. Several hundred tons of over 40% ore was opened late in 1916. Estimates of reserves are placed at \$2,000,000. One wide vein is opened by tunnel for 3,000'. One of the difficulties is transportation to rail at Kennecott and an aerial tram is proposed. A number of engineers have reported on the property.

When the first 500,000 shares were offered in New York, sales were slow, and the promoters were subjected to criticism by financial journals, one of which said that the backers' best "talking point" was the property's proximity to the Kennecott Copper mines. However, work now seems to be underway.

KENNECOTT COPPER CORPORATION

ALASKA

Office: 120 Broadway, New York.

Officers: Stephen Birch, pres.; Wm. Pierson Hamilton, v. p.; Thos. Cochran, H. O. Havemeyer, Seward Prosser, Samuel J. Clarke, H. F. Guggenheim, E. A. Guggenheim and W. C. Potter, directors; C. T. Ulrich, sec.; E. S. Pegram, treas.; F. W. Hills, comptroller; J. N. Steele, gen. counsel; J. K. MacGowan, pur. agt.

Inc. April 29, 1915, in New York. **Cap.,** \$6,000,000, increased May, 1915, to \$15,000,000, in 3,000,000 shares, fully paid and non-assessable.

On December 31, 1916, there were outstanding \$2,786,679 1/13 shares of the stock, issued for the following purposes:

	Shares
Cash (original incorporation)	100
For Kennecott Mines Co. property, assets and liabilities....	599,900
For Beatson Copper Co. property, assets and liabilities....	119,996
For 404,504 shares of Utah Copper Co.....	606,756
For all C. R. & N. W. Ry. Co. stock and bonds, and 15,902 3/4 shares of Alaska S. S. Co. stock.....	205,804
For 2,564,650 shares of stock of Braden Copper Mines Co. (all bonds acquired converted into stock).....	789,123 1/13
For \$10,000,000 Kennecott Copper Corporation bonds.....	400,000
Compensation to Underwriting Syndicate.....	65,000

Total 2,786,679 1/13

Bonds: authorized (June 1, 1915), \$10,000,000 1st mortgage 6% 10-year convertible Sinking Fund Gold Bonds. At the end of 1915 there were outstanding, \$218,000 bonds, which have all been converted into stock, so the Corporation has no bonded indebtedness.

D. A. Crockett, 120 Broadway, transfer agt.; Bankers Trust Co., New York, registrar. Annual meeting first Tuesday in May. Stock listed on New York Exchange.

Statement of Assets and Liabilities, December 31, 1916.

Property: Alaskan holdings of the Corporation include the Kennecott and Beatson mines; also 17 patented claims, 216 acres, at Latouche, and 11 lode claims bought in 1916.

The **Kennecott** group, 3 miles from Kennecott on the C. R. & N. W. R. R. includes the Bonanza and Jumbo mines, with 23 additional patented lode claims and 14 patented placer claims, 2,314 acres.

The **Bonanza** mine has one of the most remarkable orebodies ever found by a prospector. This great mass of high-grade ore, much of it carrying 60% copper, outcrops on the crest of a precipitous mountain overlooking the Kennecott river, a tributary of the Chitina, which flows into Copper river. In 1912 the ore reserves were estimated at 30,000 tons of 50 to 60% ore and 54,000 tons of 30% ore carrying \$13 per ton in silver, with 30,000 tons of broken ore as a talus pile beneath the outcrop. Recent development has indicated non persistence in depth.

There are no large masses of oxides or carbonates present, as glaciation and active erosion prevent the formation of an oxidized capping. The ore outcrops as massive chalcocite averaging about 50% copper and 0.2 oz. silver to each per cent copper. It was thought at first the chalcocite was primary, but later development showed chalcopyrite to be primary.

Geology: the various mining claims show Nicholai greenstone, consisting of a number of basaltic flows of lava, a hard close grained rock considerably altered and in places amygdaloidal, varying in color from brown to light green. The greenstone is overlaid by massive beds of Chitistone

limestone of Triassic age, with bedding planes parallel to the flow planes of the lava, the limestone being of a bluish color, weathered to gray at the surface. There also are diabase and andesite intrusions and dikes.

Ore occurs in more or less irregular replacement masses and in a fault zone, the orebodies being more or less parallel to the vertical fault planes, though the ore follows, to some extent, minor fault planes, as well as the bedding planes of the limestone making stockwerks and irregular masses in the crushed limestone. The outcrop is 20 to 40' wide, with an average of about 25', and is something over 400' in length, the southern half showing 2 nearly parallel bands of chalcocite, 4 to 10' in width, separated by about 10' of limestone, showing breaks in places, and at the northern end of the outcrop the chalcocite bands give place to stringers and interlacing seams of chalcocite and azurite, which thin out as they follow the vein northward and fade out as they pass into barren limestone.

In addition to the Bonanza outcrop there was a large amount of ore in the talus, or slide rock, broken off from the outcrop. This mass of broken ore and rock was about 300' wide, extending for about 500' or more down the slope from the outcrop, varying from 3 to 20' in depth. A number of testpits, sunk to the outcrop, showed an average of 4' depth, with an average assay of 13% copper, this including both boulders of chalcocite up to 200 lbs. in weight and barren limestone. Ore is extracted from the slide by a system of cuts. Two grades of ore mined with 70% and 15% copper, respectively.

Development: to depth of 1,130' is by tunnels. The highest tunnel, at an elevation of 6,200' above the sea level, extends through the vein, near the southern end of the outcrop, from the western face of the ridge, and there is a small system of workings from the eastern slope of the ridge, further north, the latter comprising an upper tunnel extending through the ridge, and a longer lower tunnel of about 300' length, directly underneath, with 10,500' of workings, Jan. 1, 1916.

Underground openings at all the company's mines during 1916 were extended 15,340', with satisfactory results.

The **Jumbo** mine is also being worked and had 9,692' of underground workings, Jan. 1, 1916. Orebodies on the 500' lowest level are larger and higher grade than on the upper levels. In stope 581, ore has been developed for a width of 50' and will average 70% copper. The Jumbo mine has been under development since 1912 and up to August 1, 1915, shipped 35,000 tons of ore averaging 39% copper, from development work only.

The Bonanza mine is connected with the mill at the lower camp, by a Bleichert aerial tram, in 2 sections, the upper of 7,000' and lower of 8,000', with a drop of 4,000'. The tram line has 40 towers, longest span 1,500', with ore bins at both terminals, and has an estimated hourly capacity of 25 tons. The lower camp has the mine buildings, power plant and mill.

Equipment: includes a small steam plant and an air compressor. Buildings include a bunk house, mess house, assay office and 10,000' sawmill.

The 700-ton concentrator is equipped with Blake & Symons crushers, Hancock jigs, bull jigs, rolls, Wilfley and Deister tables. Mill recovery averaged 82.27% and concentrates produced 53.6% copper. The average grade of ore treated in 1916 was 8.49% copper. Rich ore is hand sorted, and lower grade ores, though of excellent average tenor, are being concentrated in the mill and ore and concentrates shipped to the Tacoma smelter. The 300-ton ammonia leaching plant treated tailings from the concentrator, amounting to 62,450 tons assaying 1.48% copper. It produced 703 tons of 69.9% precipitate. Capacity is being increased to 700 tons daily.

Guggenheim interests have constructed the Copper River & Northwestern railway, at a cost of about \$20,000,000, this line of 195 miles length starting at Cordova, on the sea, and ending at the lower camp, having had to cope with tidal, river and glacial floods, blizzards and other difficulties inseparable from railway operations in an extremely mountainous country near the Arctic circle.

Revenue in 1916 was \$2,911,207, less \$1,142,536 for operation, leaving \$1,768,671 profit.

The Alaska Steamship Co. is also controlled by Kennecott. It carries ore to the smelter at Tacoma and returns with supplies for the mines. Income for 1916 was \$3,816,087; expenses, \$2,449,420; profit, \$2,025,561, including balance of \$658,893 from 1915. Dividends were \$1,740,000.

The Bonanza and Jumbo mines at Kennecott, in 1916, yielded 297,843 tons of 18.69% ore, of which 98,778 tons of 53.36% was shipped direct, the remainder, 229,717 tons of 8.49% being concentrated. The Beatson mine at Latouche shipped 6,608 tons of 7.23% and milled 177,803 tons of 2.13% ore. All the company's Alaskan mines produced 482,254 tons of ore.

The Beatson mine comprises 17 patented claims, 268 acres, about 3 miles from the northern end of Latouche island, within one-half mile of tide-water, where there is a good natural harbor. Mine was located, July 4, 1897, by Andrew K. Beatson, and began shipping, 1903. Country rock is slate; ore is chalcopyrite, pyrite and pyrrhotite, occurring in brecciated portions of the country rock. The orebody is a large lens; total length developed is about 800' with an average width of 100'. Ore assays up to 30% and as shipped returns 7.23% copper and 2 oz. silver per ton.

Development: includes 9,700' of underground workings. The ore is mined in an open pit and dropped through mill holes to the main tunnel level. Mine and mill are connected by an aerial tramway. A 700-ton concentrator, employing the oil flotation process and completed Feb, 1915, was enlarged in 1917 to treat 1,500 tons a day. The average grade of ore milled, 1916, was 2.12% copper; average recovery 78.91%; concentration ratio 8.59, and average grade of concentrates produced 14.29%. Buildings include rooming, mess and change houses, office, store and a hospital with physician in charge.

Situation, geology, ore, mining and milling methods and leaching of copper tailings with ammonia, were briefly described by H. M. Lawrence in the Eng. & Mng. Journal, Nov. 3, 1917. A 300-ton plant was erected 1917, and one of 800-ton capacity is under construction. Four 30' diam. leaching tanks with dome tops, hold 500 tons of tailing per charge in a depth of 15'. The tailing assays 1.46% copper, of which 1.14% is carbonate and the residue 0.58%. In April, 1917, 10,000 tons were treated, with 75% extraction of the carbonate. Cost is 86.5c per ton leached and 5.77c per lb. recovered.

Production: of copper was 108,372,783 lbs., at the following cost: mining and milling, 1.47c; freight to smelter, 2.49c; smelting and refining, 1.39c; selling expense, 0.26c; general, 0.04c; marine insurance, 0.15c; total, 5.80c; less 0.65c* for silver-content and 0.05c* for sundry earnings, leaving a net cost of 5.1c per pound.

The following figures show past production, costs and profits of the two Alaska companies prior to their acquisition by the Kennecott Corporation:

* Deduction. The average selling price of copper for the period was 25.34c per lb. The average product shipped from both mines during the year averaged 44.53% copper. Production for the first 7 months of 1917 was 45,062,000 lbs.

	Kennecott Mines Co.:		Profit
	Net Lbs. Copper Produced	Cost per Lb. Inc. Selling	
1916	6,872,000	5.10 cts.	\$1,390,893

1911 (9 months).....	3,078,444	7.44 cts.	163,939
	<hr/> 120,179,545	<hr/> 8.47 cts.	<hr/> \$21,628,077

Management estimates 5 years ore supply blocked out at the past average rate of production.

Copper production for 7 months of 1917 as shown above, was 45,062,000 lb., compared with 72,150,000 lb. in the same period of 1916. The last two months of this period in 1917 were affected by a miners' strike, making 60 days' output equal to less than July, 1916; but the first 5 months of 1917 were 16,166,000 lb. less than in that term of 1916. The strain of shipping high-grade ore evidently began to tell early in 1917.

The **Braden Copper** and **Utah Copper** companies are described under their respective titles.

MOTHER LODGE COPPER MINES CO. OF ALASKA ALASKA

Offices: 45 Broadway, New York, and 1317 Alaska Bldg., Seattle, Wash. Mine supt., W. Bertram Hancock, Kennecott, Alaska.

Officers: Jas. J. Godfrey, pres.; Scott Calhoun and W. H. Lenk, v. p.'s; C. L. Warner, sec.-treas., with Edwin N. Ohl, Isaac Starr and Chas. M. Eaton, directors; Geo. E. Baldwin, gen. mgr.

Inc. Nov., 1907, in Washington. **Cap.**, \$5,000,000; shares \$1 par; increased, Oct., 1916, to \$7,500,000; shares \$10 par; 4,750,000 issued.

Bonds: authorized Oct., 1916, \$1,000,000 6%, 10-year convertible gold bonds, of which \$500,000 were offered to shareholders at 95% of par net plus accrued interest. Company retains right to redeem bonds at 110% of par, with interest at 60 days' notice; bondholders may convert them into stock at \$10 per share.

Stock listed on New York Curb.

Property: 70 lode and placer claims, about 1,640 acres, including the Smith-Haglund-Sall group, adjoins the Bonanza and Jumbo mines of the Kennecott Copper Corporation, in the Copper River district, Kennecott, Alaska. Mine is 14 miles by wagon road from the railroad. The Houghton-Alaska mine was bought early in 1917.

Geology: conditions at this property, according to Herman Keller, are similar to those of the Bonanza mine. The base of the mountain is formed of amygdaloidal basalt, highly altered and called the Nicolai greenstone. This is covered by thick beds of Chitina limestone, dipping north. The oreshoots occur in the limestone, and exploration has shown that contrary to general belief, the ore does not occur along the greenstone contact, but in a favorable bed 90' above it, and then only in connection with the

Bonanza fault, or shear zone. This shear zone, 20 to 24' wide, cuts both greenstone and limestone and the ore is found in chimneys and as irregular bunchy masses along the zone and as impregnations in the limestone walls. The ore consists of nearly pure glance with minor and unimportant amounts of covellite and very little malachite, etc. Like the Bonanza ore, it carries gold and silver.

Development: by tunnels, known as the South, North, Regal, Marvelous and Pittsburgh; principal work is at the Marvelous tunnel. Development aggregated 7,806', Jan. 1, 1917.

Equipment: includes Sullivan air compressor, Otto gasoline engine, Lidgerwood hoist and a 7,300' aerial tramway, connecting main tunnel with the wagon road. Buildings include office, boarding house and several other log structures.

Power-plant of 500 k. w. was installed Aug., 1917. A 250-ton mill is to be built.

New work planned for 1916 includes crosscutting on 300' level of Bonanza incline; raise and winze from 200' Pittsburgh level.

Ore reserves: management estimates 114,328 tons ore developed, averaging 8 to 21% copper and 4 oz. silver per ton, at end of Dec., 1916; also 240,000 tons of probable ore between 600 and 800' levels, containing 2.3% copper and 6 oz. silver per ton. Net value of these reserves, after deducting \$5 a ton for mining and hoisting charges, estimated by management at about \$44,000,000.

Production: first shipment for 1917 season (March), 395 tons, averaged 60.61% copper and 13.82 oz. silver; 88 tons assayed 59.1% copper and 14.62 oz. silver; 315 tons returned 34.9% copper and 8.9 oz. silver per ton. In Aug. output was 250 tons daily.

Company can pay expenses with its high-grade ore, but shareholders must look to the milling ore for dividends. Money raised by bond issue will pay for new plant.

Property has been fully and favorably reported on by Herman A. Keller and by Arthur W. Jenks, and is a prospect of considerable merit.

NORTH MIDAS COPPER CO.

ALASKA

Office: 50 Congress St., Boston, Mass. **Mine office:** Strelna, Alaska.

Officers: F. A. Ball, pres.; W. D. Rich, v. p.; J. F. Crane, sec.-treas., with A. S. Nye, W. L. Hall, E. O. Powers, and G. M. Wheeler, directors.

Inc. 1916 in Maine. **Cap.**, \$1,500,000; shares \$1 par. Stock listed on Boston Curb. Old South Trust Co., Boston, registrar and transfer agents.

Property: near the Kuskulana river, in the Chitina district of the Copper River region, Alaska. Nearest railway is Strelna, on the Copper River and Northwestern, 146 miles from the terminus at Cordova.

Development: No. 1 tunnel cut a series of alternating limestone beds and porphyritic intrusions. Cupriferous pyrite in small quantity appears in the tunnel face. Above this tunnel another has exposed copper pyrite. A tunnel N. E. of the others has been driven 555' and an open cut below it shows quartz 1 to 4' thick, assaying 5 oz. gold and 22 oz. silver.

Twenty men employed.

REGAL MINES CO.

ALASKA

Subsidiary of the Great Northern Development Co., which see.

Office: 77 Franklin St., Boston, Mass. **Mine office:** Kennecott, Alaska.

Officers: Walter M. Briggs, pres.; H. I. Gaskill, sec.-treas.; James Phillips, Jr., C. Hartman Kuhn, Chas. S. Farnum, Mulford Martin, E. F. Gray, W. M. Briggs, J. M. Satterfield, directors; E. F. Gray, gen. mgr.

Inc. 1912 in Maine. **Cap.**, \$250,000; shares \$5 par; fully paid and non-assessable; issued \$28,014. Annual meeting, November 2.

Property: 17 claims, unpatented, 340 acres, near Kennecott, Copper River district. Developed by 115' shaft sunk on a contact between limestone and greenstone and showing copper glance ore. Assessment work only since 1914.

ELLAMAR

(See Latouche.)

JUNEAU DISTRICT

ALASKA DOUGLAS GOLD MINING CO.

ALASKA

Idle. Office: 809 Electric Bldg., Portland, Ore.

Officers: F. W. Bradley, pres.; F. A. Hammersmith, sec.-treas.

Cap., \$100,000; shares \$1 par; all issued.

Property on Douglas Island, Alaska. Assessment work only being done.

ALASKA-EBNER GOLD MINES CO.

ALASKA

Property, sold under bondholders' foreclosure for \$225,000, to A. W. Middleton, former treasurer, acting for a bondholders' protective and re-organization committee. Company's best asset was 100,000 shares Ebner Gold Mines Co. stock. Now being operated by the United States Smelting, Refining & Mining Exploration Co. Litigation described, Mines Handbook, Vol. XII.

Address: 170 Broadway, New York. **Mine office:** Juneau, Alaska.

Officers: Sanford Makeever, pres.; A. B. Dodd, v. p.; M. M. Makeever, sec.; J. Makeever, treas.; preceding officers and D. C. Bard, directors; A. B. Dodd, supt.

Inc. 1915, in Alaska. **Cap.,** \$1,000,000, shares \$1 par, none outstanding Feb. 3, 1916.

Lands consisting of 93 lode claims, 13 tunnel claims and 18 wharfage claims, total area 2,500 acres, are located 4 miles south of Juneau and adjoining property of the Alaska Gastineau on the southeast. They cover the extension of the Juneau gold belt and the ore is supposed to be of the same general character as that of the Alaska Gastineau.

Development work was started in the summer of 1915 on the Lott-Nelson group of 30 claims, located in the upper Sheep Creek basin. Roads were built, buildings constructed, and an air compressor put in, preparatory to driving a 3,000' exploratory and development tunnel in Sheep Creek mountain to cut upper part of orebody. In July, 1916, this tunnel had been driven 2,880' and \$100,000 is said to have been spent thus far on the development work. Did some diamond drilling in an attempt to cut the Gould & Curry vein, supposed to be the main orebody of the property. At last accounts, April, 1916, this drill hole had reached a depth of 1,575' in a horizontal hole without results. Company planned to drive a 9,000' tunnel at sea-level to cut the orebody at depth, and to build a mill on the beach south of that of the Alaska-Gastineau Co. Closed down, 1917; and property reported forfeited.

ALASKA GOLD MINES CO.

ALASKA

Office: 25 Broad St., New York. **Mine** near Juneau, Alaska.

Officers: Chas. Hayden, pres.; D. C. Jackling, v. p. and managing director; C. W. Peters, treas.; K. R. Babbitt, sec.; directors, Chas. Hayden, D. C. Jackling, K. R. Babbitt, C. M. MacNeil, Sherwood Aldrich, F. H. Goff, E. A. Clark, Wm. H. Coolidge, F. L. Ames, and J. B. Hardon.

Inc. Aug., 1912, in Maine. It is the holding company, owning \$11,781,101 of the \$12,000,000 capital stock, and \$3,269,000 of the \$3,500,000 bonds

of the Alaska Gastineau Mining Co. Property is described under title of Alaska Gastineau Mining Co.

Cap., \$7,500,000, increased Jan., 1915, to \$10,000,000, shares \$10 par, outstanding \$7,500,060. Of the unissued stock, \$500,000 is reserved for conversion of 10-year, 6% debentures. Transfer agents: Guaranty Trust Co., New York, and National Shawmut Bank, Boston. Registrars: Bankers Trust Co., New York, and First National Bank, Boston. Listed on the New York and Boston Stock Exchanges.

Bonded debt: \$2,999,800, consists of \$1,500,000 10-year, 6% convertible gold debentures, series "A"; dated March 1, 1915; due March 1, 1925; int. M. & S. 1, at Guaranty Trust Co., New York, Trustee, and \$1,500,000 10-year 6% convertible gold debentures, Series "B"; dated March 1, 1916, due March 1, 1926: Coupon, \$100, \$500 and \$1,000; principal may be registered. Authorized, \$1,500,000. These bonds were sold for purpose of providing funds for increasing the mining and milling operations of the Alaska Gastineau Mng. Co. Convertible at any time into stock of the company at \$30 per share. Subject to call as a whole, or in part, at 110 and interest at any time on, or after 3 years from their date. Company agrees that it will not, while any of these debentures are outstanding, mortgage or otherwise encumber any of its assets. Company is not, however, prohibited from issuing other debentures similar to series "A," and series "B," at any time and to any amount, provided that said debentures shall not be given priority over Series "A," and Series "B," debentures. Normal income tax deducted from interest. Listed on New York Stock Exchange.

Shares in Nov., 1917, selling around \$3, as compared with \$42 four years ago. Dividends are a long way off, but those in charge are doing everything possible to increase the profits.

Alaska Gastineau Mining Co.

Operating company for Alaska Gold. **Address:** Thane, Alaska.

Officers: B. L. Thane, mgr.; G. T. Jackson, asst. mgr.; E. Daveler, supt. of mills; B. B. Nieding, mine supt.

Inc. Jan. 14, 1911, in New York. **Cap.**, authorized and outstanding, \$12,000,000; shares \$5 par. Is controlled by the Alaska Gold Mines Co., which owns \$11,731,101 of the outstanding stock.

Bonded debt: consists of \$3,500,000 (Entire Issue) First Gold 6%;

dated Feb. 1, 1911, due Feb. 1, 1931. The Alaska Gold Mines Co. owns \$3,269,000 of the issue.

Balance sheet of Dec. 31, 1916, shows total assets of \$24,089,165, which includes mining grounds, titles and rights, \$14,355,438; mine development, construction and equipment, \$7,953,108; materials and supplies, \$503,566; merchandise at stores, \$40,457; product on hand and in transit, \$184,447; accts. receivable, \$139,432; cash, \$60,717; deferred charges to operations, \$746,255; deficit, \$105,740.

Liabilities: capital stock, \$12,000,000; bonded debt, \$3,500,000; notes payable, Alaska G. M. Co., \$7,612,452; acct. payable, \$89,483; pay-roll, \$64,729; bond interest accrued, \$822,500. Mining profit for 1916 was \$414,030; miscellaneous income, \$36,996; total operating profit, \$451,026.

The report for 1st quarter, 1917, shows revenue from bullion and concentrates produced, \$539,487; operating expenses, \$405,037; total operating profit, \$113,043; for 2nd quarter, 1917, produced \$577,616, less \$471,096 for operation, leaving a profit of \$114,234; for 3rd quarter, 1917, produced \$426,954; less \$420,781 for operation, leaving a profit of \$6,172, plus \$2,563 sundry income. Nine months' profit was \$236,012.

Properties: of the Alaska Gastineau Mining Co., situated in the vicinity of Juneau, Alaska, in what is known as the Juneau Gold Belt, comprise (Dec. 31, 1916) a net area of 2,166 acres, consisting of 1,672 acres of lodes, 219 acres of placers and 275 acres of millsites and homesteads. The mining claims of the company consist principally of 4 groups, formerly owned and operated independently of each other, locally known as the "Alaska Perseverance," "Ground Hog," "Silver Bow Basin," and "Sheep Creek" groups. They cover the so-called Gold Creek lode system of ore deposits, across a low spur of mountains from Gold Creek to Sheep Creek and extending into the basin of each stream, total length of lode system so covered being in excess of 2 miles. The company owns a 310-acre mill site near the mouth of Sheep Creek, on the Gastineau Channel. In addition to the above the company owns and controls lands, reservoir sites, power plant sites and rights-of-way on Salmon Creek, emptying into Gastineau Channel, in connection with its principal water power development; and also on Annex Creek and Carlson Creek, streams emptying into the Taku Inlet about 10 miles east of the mill, and on Granite Creek, Gold Creek and Lurvey Creek. The property of the Alaska Juneau Gold Mng. Co. adjoins the Alaska Gastineau on the west. The mineralized zone dips about 70° E. and in the main has a slate or a schist hanging wall and greenstone foot-wall. It is cut in a number of places by metagabbro dikes, intrusive into the vein. Gold-bearing quartz is irregularly distributed through the zone in the form of veinlets, stringers and masses. The height of vein measured on the dip above Sheep Creek tunnel and for the length of zone developed on No. 10 level is almost 2,000' with a length of 5,000'. Thickness of the main vein, as used for estimates of tonnage, is 70'. A solid block of ore this size would contain more than 50,000,000 tons. This vein is known as the Perseverance Block. It served as a basis for the purchase of the property. Another orebody, known as vein No. 2, has been opened up for several hundred feet, with an average width of over 100'. It is about midway of the length of the Alexander crosscut. On Jan. 1, 1915, the estimated tonnage of this block was 21,000,000 tons of fully-developed ore, with average assay value of \$1.75 per ton. Operating costs were calculated at 75c and tailing loss at 25c per ton. A third orebody, the Ground Hog or Footwall orebody, has been developed in a few places, principally on the Sheep Creek tunnel level, where it was opened up for 1,500' in driving the tunnel. At this point its width and value are as

large as those of the Perseverance vein, lying immediately north. The ore zone, known as No. 1, and lying between the Footwall vein and No. 2 vein, contains two, and possibly three, distinct veins, ranging in width up to 200' or more.

The several orebodies opened thus far in the Perseverance Block, are composed of schist, slate, and metagabbro and slate, with the highest grade ore found to date, occurring in the schist; it has averaged in excess of \$2 per ton; No. 2 East stope on the 5th level averages \$2.70 per ton. This orebody has a strong rake to the east appearing further away from the central shaft and workings on successively deeper levels, until on No. 10 level it is first found east of No. 2 shaft. The slate orebody is the lowest grade so far developed; west of No. 1 shaft the vein widens out to twice and three times the width of the original development of 70'; this widening of the ore zone has resulted in a decrease in assay values. East of No. 1 shaft and below No. 5 level the slate orebody is narrower and higher grade, \$1.50 to \$2.50 per ton. West of No. 1 shaft and below No. 9 level the orebody is made up of meta-gabbro and slate, the meta-gabbro dike replacing the foot-wall and making up a larger percentage of the orebody. This section so far as sampled and opened, is higher grade than the slate orebody west of the shaft, but lower grade than the schist orebody; it will furnish ore of an average grade.

It had originally been determined that if a mixture of ore could be made, approximating 25% from the schist orebody and 25% from the slate orebody, both east of the shaft, and 50% from the slate orebody west of the shaft, ore of an average grade would be sent to the mill so long as these percentages were maintained; actual results have proven this to be true, but due to unforeseen conditions underground this schedule could not be adhered to and the percentage of high grade ore as originally depended upon dropped in proportion to tonnage increase from 25%, as calculated, to 5%, Nov., 1915, and the profit per ton dropped accordingly. Without doubt new development work with the opening of new stopes, will overcome the difficulty and it will be possible to follow the original plan.

Principal development is by means of the Perseverance, or No. 1 shaft, 1,544' deep; No. 2 shaft extending from the 5th to the 10th level, with an oreway from the 10th to 13th level at this point; the Sheep Creek tunnel, or No. 13 level; and the Alexander or No. 10 level. The 8' by 10' Sheep Creek tunnel with length of 9,178' from the bottom of the Perseverance shaft to the portal near Sheep Creek was started Nov., 1912, and finished April 1, 1914. For the last 6 months of 1913 the average distance driven monthly was 583', during 3 of these months advancement was over 600', and in Nov., 661' were driven. The tunnel was driven both for the purpose of developing the property longitudinally and at depth, and to provide a transportation outlet for delivery of ores to the new mill. It is driven parallel to and in the foot-wall of the principal or Perseverance vein. At certain points, irregularities of the orebody threw portions of the vein into the direct course of the tunnel; at such places the ore was found to be of good value. The Alexander crosscut, 10th level, 700' above the Sheep Creek tunnel and 1,300' from the surface on the dip of the vein, runs from the Perseverance mine camp to No. 1 shaft, which is vertical and connects No. 13 level with the top of No. 5 level. It is used only for men and supplies, has a reinforced concrete shafthouse and is equipped on the 13th level, with an air driven hoist, which operates two cages. Between the 10th and 5th levels the mine is opened by levels spaced 200' apart. The ore is dropped from the different levels through

oreways to the 13th, or main haulage level, Sheep Creek tunnel. No. 1 oreway extends from No. 5 level to No. 13 level, parallels the vein and is almost wholly in the foot-wall. On No. 9 level there is a timber bulkhead which is used to break the fall of ore. It is hinged and can be pulled out of the way when not required. Oreway No. 2 extends from the 9th to the 13th level. It is expected to put these oreways in at 2,000' intervals.

Two methods of mining are used, shrinkage stoping in the gabbro where the back is so hard it must be drilled and blasted, and a caving system in the slate. Full sized stopes are 400' long with 40' pillars between. A 2-compartment raise is carried through the middle of each pillar, half of it being used as a manway, the other half as a skipway through which supplies are delivered from the level below by means of an air hoist. Stopes are started from the tops of chutes run along the foot-wall, a slice being taken across the lode at right angles to the dip. In order to start movement in the lode a cut is driven along the length of the stope and in the foot-wall. No attempt is made at sorting, the mining being done on a large scale and everything extracted put through the mill.

Haulage on the different levels is done in 4-ton cars of the Granby type, by means of 6-ton Baldwin storage-battery locomotives, thus eliminating the trolley-wire. The locomotives are operated for 16 hours, then charged for 8 hours. On the main haulage level four 12-ton cars can be loaded at the same time. Haulage to the mill is done over a narrow gauge railroad by electric locomotives of the trolley type. The railroad to the mill runs through Sheep Creek tunnel for 10,000', then along the north side of Sheep Creek for 6,000' to the coarse crushing plant. When the mine and mill are running at full capacity this railroad will handle from 10,000 to 12,000 tons of ore daily.

The milling plant was designed to handle a daily tonnage of 1,500 tons of ore in each of its 4 sections. Since starting operations Feb. 15, 1915, it has been demonstrated that the mill will handle from 10,000 to 12,000 tons of ore per day, necessitating a larger mine output. The mill is essentially a concentrator, accompanied by a separate small plant for retreatment of concentrates produced. It differs greatly from the conventional type of amalgamating gold mill, in that the main milling plant produces nothing but concentrates, at a ratio of about 60 into 1. A decided novelty has been introduced by crushing with rolls instead of stamps. In the retreatment plant the coarser gold containing some silver is separated from the concentrates and reduced to gold and silver bullion; this separation produces a small tonnage of lead concentrates containing gold and silver that is shipped to Pacific coast smelters. The residual portions of original concentrates, consisting chiefly of iron and zinc sulphides, are finely ground and amalgamated for gold and silver; resultant iron-zinc tailing being discarded.

The mill is built upon a very steep slope, the bottom floor is 192' above Gastineau Channel, the crushing plant 685' above the water. Supplies to the mill are handled over an inclined tramway, while supplies for the crushing plant or the mine are handled over a longer tramway to a loading station on the ore railroad. The course of the ore through the coarse crushing plant is as follows: From the mine cars to the rotary dump, capable of handling four 10-ton cars at once, to grizzly; oversize to two 36" by 42" rolls set to 5"; over caterpillar feeders to stationary inclined screens with 1½" square openings; oversize to two No. 8 gyratories set to 2"; to ore pocket beneath the crushing plant. This pocket is cut in solid rock, is 30' by 50' in cross-section and 225' in height, 110' of which is the

ore-pocket proper. Remaining 115' is a raise connecting the ore-pocket with the crushing plant. The bin has a capacity of 10,000 tons of ore. At the bottom of the bin 8 feeders supply ore to a 42" belt-conveyor, 608' long, that runs through a tunnel to the coarse ore-bins in the mill. From the bins the ore goes to stationary inclined screens, 1½" square openings; oversize to 72" x 24" rolls set to ⅞"; undersize to 54" x 24" rolls set to ⅜". Rolls are run on choke-feed and crush dry, and are of heavy design, having the large pulley in the form of an 8,000-lb. flywheel. Bearings are water-cooled. Roll shells are 6" thick and are shrunk onto the roll-cores. Five-ton skips, working in balance, raise the roll product 115' to a series of 10-mesh impact screens; undersize goes to concentrator; oversize is returned to the 54" rolls. Each of the 4 sections contains 15 impact screens, and there are two 54" rolls for every 12 screens. The two 72" rolls serve the entire 4 sections of the mill. Seven sets of skips are used; one set for each 72" roll, and one set for each of the 5 pairs of 54" rolls. Exhaust fans carry away the excessive dust caused by dry crushing.

The concentrating department has a primary set of 10 double-deck Garfield tables and 10 Wilfley tables per section. Products are tailings and a concentrate that assays nearly 50% lead, which is shipped. Tailing goes to a 4-spigot Janney classifier; product of first 3 spigots to tube-mills. Tube-mill product goes to a secondary set of 10 double-deck Garfield tables, followed by 10 Wilfley tables using as wash water the 4th spigot product of the classifier. Each primary Garfield table can handle 300 tons per day. A 15-h. p. motor drives 10 tables.

Hydro-electric power is used. The chief sources of supply at present are the Salmon Creek plants, 2 miles northwest of Juneau, and the Annex-Carlson Creek plant furnishing 4,000-h. p.; these furnish a minimum of 6,000-h. p. Ultimate capacity of the Annex Creek project will be 12,000-h. p. The Salmon Creek project necessitated the building of a concrete dam 165' high and 700' long on its crest. Base of dam is 1,000' above sea level. In order to get maximum benefit from the water available 2 power plants were built. No. 2 is a mile below the dam and operates under a head of 600'. Power Plant No. 1 is on the shore of Gastineau Channel, near the mouth of Salmon Creek. Water discharged from upper plant is conveyed by a 10,000' flume to No. 1 plant and there used under a head of 500'. Power plants No. 1 and No. 2 are each equipped with two 1,500-k. w. generating units with total capacity of 6,000-k. w. or 8,000-h. p. Office buildings, machine shops, sawmill, six 50-men bunk houses, messhouse and dock have been built on the beach below the reduction plant.

The average load for 1916 was 5,187 h. p., and that used for all purposes was 1,001 h. p. per daily ton, costing \$9.02 per h. p.-year, or 2.47c per ton milled.

Recent Work: New work in 1916 amounted to 24,562', exclusive of 15,675' of diamond-drilling, at a total cost of \$219,105. Total amount of work done since beginning of company's operations in July, 1912, to Jan. 1, 1917, 89,802' of exploration and 29,295' of diamond-drilling. No new orebodies of importance were encountered during the years' work, and operations proved a great disappointment. Recovered values per ton have been much less than expected, and there is but slight promise of an improvement in the average grade of ore now being developed in the Perseverance Block. No definite estimates can or should be made at present as to the ultimate tonnage the property may produce.

Samples during 1916—by moil and diamond-drill—numbered 20,880, making 59,750 to date. Coarse, free gold rendered checks difficult to agree. It has been found that (1) sampling of the slate zone would not

check with actual mill returns because it is difficult to define the limits of the orebody that will cave in mining, also on account of peculiarities in this deposit; (2) sampling of the orebody consisting of either schist or metagabbro was more satisfactory and uniformly averaged with actual milling results, due to the more even texture of the rock, better cores and moil samples and definite boundaries to the orebodies that could be maintained in mining; (3) on account of its greater width and irregularity the slate zone in the west section of the mine averaged uniformly lower grade than had been calculated; (4) the higher grade sections as developed lay east of the shaft where the schist orebodies had been encountered and opened; and (5) the slate zone west of the shaft showed a decrease in values beginning with No. 9 level and extending up to No. 6, where better values continued to the surface.

At beginning of 1915 the minimum estimate of fully developed, partly developed, and probable ore, was from 75,000,000 to 100,000,000 tons having a recoverable value of \$1.50 per ton. Allen H. Rogers reported in 1916, that tonnage developed and partly developed, amounting to 5,500,000 tons, would average about \$1.45 gross, and that after the newer areas are developed and contribute their proportion of milling ore, the mine should be able to supply the maximum capacity (10,000 tons) with ore that will yield a profit of 45 to 50c per ton. Management estimates ore reserves blocked out and broken down, Feb., 1917, as sufficient to maintain present rate of production of about 7,500 tons daily for 2 years.

On August 1, 1917, a re-survey of broken ore in stopes showed 2,240,235 tons remaining, an increase of 1,126,390 tons over the previous figure.

The first ore was run through the mill Feb. 15, 1915. Towards the end of the year a daily capacity of 6,000 tons was reached, but the grade of ore falling for a time, this tonnage was reduced to 4,000 tons daily. The original figure was a daily tonnage of ore handled of 6,000 tons, with a recoverable value of \$1.75 per ton and net profit of 75c per ton. During 1916, 1,892,788 tons of ore were milled. Operating profit was 23.8c per ton, or a total operating profit of \$451,026 for the year.

Production:

	Tons Milled	Gross Value	Yield	Tails	Extraction	Value Recov- ered	Oper. Exp. less Misc. Inc.	Profit P. t.
1917*..	1,707,647	\$1.111	\$0.905	\$0.206	81.46%	\$0.905	\$0.766	\$0.139
1916...	1,892,788	1.193	0.970	0.222	81.33%	0.970	0.732	0.238
1915...	1,115,294	1.156	0.937	0.219	81.06%	0.937	0.688	0.249

* 9 months.

Costs in 1916 were as follows: underground, 35.769c; ore transport, 2.643c; treatment, 26.861c; shipping and smelting, 2.897c; general, 6.604c; a total of 75.194c per ton; less 1.954c sundry credits, making 73.24c net cost.

All divisions of the property are complete, and nothing but vigorous development is contemplated. The management is optimistic, and considers that previous estimates may be justified. The whole project is highly meritorious, and it is a pity that results are not more favorable. Profits in 1917 will be much less than in 1916. Reviewing the third quarter of 1917, when only \$8,735 profit was made, the president blames labor shortage for affecting low tonnage, and sees little hope for improvement.

ALASKA JUNEAU GOLD MNG. CO.

ALASKA

Office: Crocker Bldg., San Francisco, Cal. Mine office: Juneau, Alaska.

Officers: F. W. Bradley, pres.; Wellington Gregg, Jr., v. p.; A. B. Davis, v. p.; G. D. Abbott, sec.-treas.; J. S. Wallace, asst. sec.; directors,

Property: The mineral area of the company covers a tract of land adjoining the property of the Alaska-Gastineau Mng. Co. on the west and that of the Ebner Gold Mng. Co. on the east, located one mile inland from Gastineau Channel. In addition the company owns a large tract of land stretching along the east side of the Channel south from the city of Juneau. This area, used as the mill site, is connected with the large mineral area by two narrow strips of land, one along Gold Creek and the other farther south through which a long transportation tunnel connects the mine and mill.

The mining claims include the first quartz claims located on the wide vein called "The Juneau Gold Belt" and are supposed to be in the center of the mineralization of the belt. The property owned by the Alaska-Juneau covers the outcrop of the vein or mineralized zone, for over a mile in length. The lode has a width between walls of 900' and dips 70° east. The orebody is composed of slate with gold bearing quartz, irregularly distributed through it in the form of veinlets, stringers and masses. Metagabbro dikes, intrusive into the vein, carry gold bearing quartz similarly distributed. The quartz distribution is not regular, but it is probable that, where the gold content of the vein is too low for commercial extraction, sorting can be resorted to and a mill feed obtained that will be higher than the average mass. Associated with the gold in the quartz is pyrite, pyrrhotite, galena and a little sphalerite. The foot-wall is greenstone, the hanging wall schist.

The vein had been operated in a surficial way for a great many years. Deep development was first planned in 1899, started in 1909, but not actively

pushed until 1910, when a main working crosscut, 8'x10', called the Gold Creek tunnel, was commenced at an elevation of 425' above sea level, starting from a point immediately behind the town of Juneau. At 6,540' from the portal, where the surface could be reached in the shortest possible distance, an 800' inclined raise in the hanging-wall was put through to surface. In driving the tunnel that portion of the vein lying west of the Silver Bow fault was crosscut diagonally for 650', disclosing orebodies of average assay values slightly less than \$2 per ton. The true width of the vein where cut is 500' with average assay value close to \$2 per ton. Although this is better than shown by any surface developments, it is believed this width and assay value will persist for considerable distances longitudinally and vertically. This belief is based on the result obtained from a 30-stamp mill working 5 months each year, from 1896 to 1914, on ore mined by open-pit work along the outcrop of the vein. During this time 295,807 tons were milled, yielding \$2.26 free gold per ton, obtained by milling 63% of ore mined. The rejected vein matter was gold bearing, but of lower grade. No attempt was made to save the values in the sulphides, which would have added about 20c per ton.

Ore extracted from the Gold Creek tunnel and the intermediate level opened from the incline raise at an elevation of 495' above the tunnel was milled in the new 40-stamp mill on Gastineau Channel. A total of 50,000 tons milled up to Dec. 1, 1914, averaged \$1.36 per ton, the low value undoubtedly being due to the dilution of ore with waste attendant upon the opening up of the two levels preparatory to stoping. In Dec., 1914, there was milled 9,657 tons of average assay value of \$1.74 per ton; in Jan., 1915, there was milled 12,000 tons of average grade of \$2.09 per ton.

Confidence in the persistence of the vein and its value is also derived from milling records of the 100-stamp Perseverance mill, now part of the Alaska Gold Mines Co., adjoining on the East, and the milling results obtained by a small mill operating on the Ebner property on the west.

The mine development work as outlined, and now under way, will give a daily tonnage of not less than 8,000 tons, making available for caving and extracting 7,500,000 tons of ore in one section of the vein. All tunnels are being double-tracked and so equipped that 16,000 tons of ore daily can be transported from the mine to the mill.

Selective mining was originally contemplated, but the method is now wholesale mining, which means caving a lot of waste with the ore and consequently reducing the average value of the mixture. Mining at Juneau is concisely described by F. W. Parsons in the *Engineering and Mining Journal* of Aug. 4, 1917.

The approximate total tonnage of the vein above the Gold Creek tunnel level and between the eastern and western ends of the property amounts to 500,000,000 tons of slate, metagabbro and quartz. From this by means of selective mining there should be taken 80,000,000 to 100,000,000 tons of vein matter suitable for milling that should yield, according to estimates made by the management, a net profit of from 70c to \$1 per ton, but when the new mill is in complete operation at the expected capacity of 10,000 tons per day, the mining of this tonnage involves mixing a large proportion of waste with the ore. The assay value per ton of this mixture will probably be around \$1, and the expected profit will be about 40c. That part of the vein below the Gold Creek tunnel would seem to promise an additional tonnage of the same value, but twice as great as that which lies above the tunnel level, inasmuch as a parallel vein 2 miles distant on Douglas Island is being mined at a depth of 2,000' below sea level.

New openings in 1916 totaled 22,577', compared with 16,775' in 1915,

and 5,671' in 1914; total to date, 52,322', or nearly 10 miles. Samples totaled 3,456, averaging 38.2c per ton, in the past 3 years.

The original stamp-mills in Silver Bow basin, and the present pilot-mill, from 1893 to 1917, treated 742,220 tons of ore averaging \$1.93 per ton, for gold only. In 1916 the 50-stamp mill operated continuously, treating 180,113 tons assaying 91.24c per ton.

On a large scale the feed should average \$1 per ton in gold, silver, lead and zinc; in 1916, it was 91.24c gold, 1.76c silver, 4.43c lead and 3.56c zinc per ton, a total of \$1.009. Of this 63.85c was extracted. Gold recovered in 1916 amounted to 4,714 oz., while galena concentrate was valued at \$93,476, and iron concentrate, \$16,759.

In 1913 F. W. Bradley made comparison between the average costs per ton in the 4 operating Douglas Island mines, and the estimated costs per ton at the Alaska-Juneau as follows: Douglas Island total mining costs \$0.95, total milling costs \$0.25, concentrate treatment, plant construction, etc., \$0.20, total \$1.40. Alaska-Juneau total mining costs \$0.40, total milling costs \$0.20, concentrate treatment, plant construction, etc., \$0.20, total \$0.80.

In March, 1917, the first of four 2,000-ton units of the new mill was started. Others commenced soon after. This mill and accessories cost \$2,532,027. In May there was treated 37,000 tons of 77c ore. The quantity handled is increasing each month, and 11,000 tons daily of \$1 ore is the ultimate expected quantity, mined and milled at 40 to 45c per ton.

Briefly, the plant includes: 2 revolving tipples, 2,000-ton coarse-ore bin, four 60" apron-feeders, four 8 x 5' grizzlies, with 8" openings, two 36 x 48" jaw-crushers, four 4 x 8' grizzlies with 3" openings, four No. 9 Gates gyratory crushers, four 30" conveyors, 4 distributing boxes, two 36" shuttle conveyors, twenty-four 30" apron feeders, twelve 8 x 6' ball mills, 12 revolving screens, 12 V-shaped tanks, 12 mechanical distributors, 48 roughing tables, 24 classifiers, 12 shovel wheels, twelve 6 x 12' tube-mills, 24 settling tanks, 24 mechanical distributors, 96 finishing tables, and 12 Wilfley tables. There is a retreatment department containing two 5 x 5' ball-pebble mills, pumps, classifiers and tables. Power-plant contains four 825-h. p. Stirling water-tube boilers, with economizers, and forced draft apparatus, one 9-stage Curtis 6,000-k. w. turbo-generator, condensers, and auxiliaries.

The railway between mine and mill cost \$167,144.

During 1916 there were 464 men employed at an average of \$3.82 per day. This number has since been considerably added to.

It is too soon yet to criticize results obtained at the Alaska Juneau, but the general impression is that early estimates of profits will not be attained. Calculating on 10,000 tons daily of \$1 ore, of which 80c will be recovered at a total cost of 45c per ton, we have a profit of \$3,500 daily, or say \$1,225,000 in 350 working days. On 1,400,000 shares issued, this would be about 80c per share per annum, allowing for other charges, or 7½%. Shares in Nov., 1917, reflected somewhat the market's attitude towards this meritorious undertaking, and were quoted at \$3 for the \$10 shares.

ALASKA MEXICAN GOLD MINING CO.

ALASKA

Address: Mills Bldg., San Francisco, Calif. **Mine office:** Douglas Island, Alaska. Under same management as the Alaska Treadwell, which see.

Inc. April, 1892, in Minnesota. **Cap.,** \$1,000,000 in 200,000 shares, \$5 par; 120,000 of which went to pay for the Alaska Mexican Gold Mine, and 60,000 were issued to the public by the Exploration Co., Ltd., of London. Annual meeting in May. Registration & Security Co., of San Francisco, registrars.

Comparative General Balance Sheet:**Assets—**

	Property & Plant	Cash	Reserve Fund	Bullion Suspense	Accounts Rec., etc.	Total
1916.....	\$733,235	\$47,775	\$93,909	\$143,798	\$2,046,896*
1915.....	674,195	5,175	93,909	\$15,314	146,332	934,926
1914.....	785,692	6,955	93,909	20,532	12,298	919,386

* Includes \$1,463 other assets, and \$1,059,391 ore subject to depletion, an item required by U. S. Income Tax Law, but which value is now unavailable owing to destruction of the mine in April, 1917.

Liabilities—

	Capital Stock	Accounts Pay., etc.	P. & L. Account	Total
1916.....	\$900,000	\$12,079	\$74,426	\$2,046,896*

1913.....	496,007	324,210	171,797	180,000	21,552	10,213*

* Including balance from previous year.

Property: Located on the east side of Douglas Island, between the 700' claim of the Alaska United on the west and the Ready Bullion mine of that company on the east. For a general description see Alaska Treadwell Gold Mining Co.

Development: includes the 1,570' Mexican shaft, devoted to general use, while all ore is hoisted through the 2,817' Central shaft on the 700' claim of the Alaska United, adjoining on the west. The orebody has been opened by levels from the 110' level to the 2,300' level; distance between levels is 110'. During 1916 development work done by the A. M. Co. amounted to 776' on its own property, 10' on the adjoining 700' claim of the A. U. Co., and 3,714' done jointly with the A. T. and the A. U. Cos.

Samples totaling 1,592, taken on five levels, averaged \$1.63 per ton. From the 1,100' downward ore has assayed as follows: \$3.60, \$3.02, \$2.63, \$1.23, 64c, \$1.23 and 79c per ton, the last being at 2,100'.

On July 27, 1916, surface evidences of a hanging-wall subsidence near the Treadwell—700 Ft. Claim boundary became apparent, and to protect the Treadwell, 700 Ft., and Mexican mines, heavy drawing of reserves of caved and broken ore was stopped. The Mexican mill only worked 279 days. From Aug. 1, 1916, the 240-stamp mill and half of the 300-stamp mill of the Treadwell was stopped. Salt water began to flow into the mine, and due precautions were taken. In April, 1917, the Mexican, Treadwell, and 700 Ft. mines were flooded and shut down indefinitely. For details see the Alaska Treadwell.

Ore reserves: Estimated Dec. 31, 1916, 157,000 tons ore in sight, average grade \$1.80 per ton; against 1,188,866 tons of \$1.87 ore in 1915.

The company has a 120-stamp mill that, in 1916, operated 34% of the time with steam power and 66% of the time with water power. Duty per

stamp per day was 5.24 tons, 1 lb. of chrome shoe crushed 2.31 tons ore, and 1 lb. of Treadwell die crushed 5.15 tons ore. Mill sands are used for filling stopes.

A cyanide plant is owned and operated jointly by the Alaska Mexican, Alaska Treadwell and Alaska United G. M. Cos., the A. M. Co. owning 20% of the plant. Power plants are in conjunction with those of the Alaska Treadwell, which see.

Average number men employed daily in 1916 was 122, with average wage paid each \$3.61. Miners received \$3.50 per day.

Production and profits since 1909 are as follows:

	Tons	Yield	Concentrates		Total	Oper.	Oper.	Div.
	Crushed	Free Gold	Tons Treated	Yield	p. Ton	p. Ton	p. Ton	Paid
1916.....	175,476	\$119,163*	4,398	\$155,860	\$1.57	\$1.51	\$0.06
1915.....	216,428	190,980	4,769	188,816	1.75	1.29	0.46	10%
1914.....	233,457	238,756	3,340	270,267	2.18	1.45	0.73	16%
1913.....	227,112	225,369	4,795	264,327	2.15	1.39	0.76	20%
1912.....	233,299	307,951	4,956	371,169	2.91	1.58	1.33	25%
1911.....	227,081	323,965	5,150	353,442	2.98	1.84	1.14	14%
1910.....	218,960	390,198	4,166	375,523	3.50	1.76	1.74	38%

* Including \$27,855 from copper plates.

Costs per ton for 1916 were: Mining, 91c; milling, 39c; cyaniding same as Alaska Treadwell. Mining costs include charges for 1,050' of development at \$21.38 per ft., and stoping 69,285 tons at \$1.04 per ton. Milling costs include crushing, 5.7c; tramming, 1.7c; stamping, 23c; concentrating, 8.7c.

As the Mexican may not produce any more ore, its total output may be given from 1894 to 1917; 4,445,807 tons, averaging \$2.61 per ton at cost of \$1.67. Out of profits, \$4,161,657, dividends absorbed \$3,507,381, or \$19.47 per \$5 share.

ALASKA TREADWELL GOLD MNG. CO.

ALASKA

Address: Mills Bldg., San Francisco, Cal. Mine office: Douglas Island, Alaska. **Officers:** F. W. Bradley, pres.; A. B. Davis, v. p.; F. A. Hammer-smith, sec.-treas. Preceding officers: E. W. Hopkins, H. S. King, directors; P. R. Bradley, cons. eng.; R. G. Wayland, gen. supt.

Inc. June 1, 1890, to take over the property of the Paris mine on Douglas Island, where operations had been conducted since 1882. Purchase price was \$5,000,000 in fully paid shares. **Cap.**, \$5,000,000; shares \$25 par. Metropolitan Trust Co., New York, registrar and transfer agent.

Comparative General Balance Sheet:

Assets—

	Property & Plant	Cash	Other Current	Supplies	Other Assets	Total
1916.....	\$3,942,947	\$245,023	\$956,034(a)	\$789,012	\$8,439,607(b)	\$14,372,623

(f) Deficit.

Dividends to Jan., 1917, aggregate \$78.93 per share.

Property: The Treadwell group of mines, consisting of the Alaska Treadwell, the Alaska Mexican and the Alaska United, which operates the 700' mine and the Ready Bullion, are under one management and are located on the east side of Douglas Island near the shore of Gastineau Channel. The A. T. property is farthest west. Geological conditions are the same in the mines of the 3 companies. Hanging wall of Treadwell is 1,000' distant from present shore line, while that of the Ready Bullion lies for the most part under tidal water. Though several orebodies have been found, the mines are all situated on the same lode and ore is practically of identical origin throughout. In the Alaska Treadwell, 700', and Alaska Mexican mines, the lode has been developed continuously for 3,500'. Between the Mexican and Ready Bullion mines is an undeveloped interval of 2,500'. Width of orebodies is from 300' to 400'.

Geology: the orebodies consist mainly of mineralized albite-diorite occurring in the form of intrusive dikes in black slate, whose structure they closely follow. They strike N. W.-S. E. and dip 50 degrees toward the N. E. The slates are metamorphosed shale. The ore-bearing dikes belong to a series of intrusives that appear interruptedly along the strike for a distance of about 3 miles in a zone 3,000' wide. Next to the shore of Gastineau Channel the border is defined by a heavy bed of greenstone that forms the hanging wall of both the orebodies and the intrusion zone. Many of the dikes of albite-diorite at a distance from the hanging wall have been greatly altered and impregnated with pyrite and no workable orebodies have yet been found in them. The ore consists mainly of rock impregnated with sulphides, principally pyrite, and in part shattered and filled by veins of calcite and quartz, which also contain sulphides. The ore-bearing dikes are considerably mineralized throughout, and often the whole mass can be mined. The characteristics of the deposit are believed to indicate that it was formed by ascending waters, with little, or no, subsequent secondary concentration. If this is correct there is little doubt that the ore will continue to a much greater depth than has been reached, and the limit of mining will probably depend finally upon increased costs, attendant upon operating at great depth.

Development: is by an 2,817' shaft with levels from the 110' to the 2,700' level. Upper four levels are at intervals of 110', below this at an interval of either 150' or 200', thus saving a large development expense. The 700' claim of the Alaska United adjoins on the east. During 1916 development work done by the A. T. Co. amounted to 3,044' on its own property, 1,542' for its own use on the adjoining 700' claim and 4,673' done jointly with the A. T. and the A. U. Cos. There was also 1,031' of diamond-drilling done. Sampling from 1,250' to 2,300' gave an average of \$2.02 per ton from 3,554 samples.

Ore reserves: below the 1,050' level amounted to 3,895,000 tons, averaging

\$1.81 per ton, at the end of 1916. This ore is now unavailable due to causes explained below. Value of the ore at 1,600' was \$3.80, at 1,750', \$1.46, at 2,100', \$1.80, and at 2,300', \$1.28 per ton.

In 1882 a 5-stamp mill was built, followed in 1887 by a mill of 120 stamps, and in 1888 by an additional 120 stamps. Between 1893 and 1896 the Mexican, 700', and Ready Bullion mines were equipped with mills, and in 1899 a new 300-stamp mill started operating at the Treadwell. In 1916 the 240-stamp mill operated 31% with water and 69% with electric power. In the 300-stamp mill electric power was used 58% of the time and water power 42%.

The Alaska Treadwell owns 60% of the cyanide plant operated by the 3 companies.

Steam power was formerly used, but this has been gradually changed to hydro-electric or steam electric power. Recent equipment at the Central power plant includes three 500-h. p. Stirling boilers, one 500-h. p. Heine boiler, one 2,000-k. w. turbo-generator, one 750-k. w. turbo-generator, and all accessories. Total capacity of completed plant is 4,750-k. w. Total cost to 1916 was \$266,173, of which the A. T. Co.'s share was \$159,704. The company's hydro-electric power is obtained from its plants on the mainland on Nugget Creek and Sheep Creek. The Treadwell Co. will furnish power to the Alaska-Juneau Gold Mng. Co.

The average number of men employed per day in 1916 was 621, with average wage of \$3.67. The company has ample facilities, dwellings, store, etc., for taking care of its employees. It also has its own fire department.

	Recent production:		Concentrates		Total	Oper.	Oper.	Div.
	Tons	Yield	Tons	Yield	Yield	Costs	Profits	
	Crushed	Free Gold	Treated		p. Ton	p. Ton	p. Ton	Paid
1916...	671,378	\$ 486,999	15,118	\$ 768,786	\$1.99	\$1.36	\$0.63	5%
1915...	900,211	936,092	19,177	892,631	2.03	1.23	0.80	13%

1912...	892,192	1,159,401	17,397	1,046,487	2.47	1.18	1.29	13%
1911(a)	1,348,504	1,879,613	25,673	1,378,818	2.42	1.40	1.02	16%

(a) May 15, 1910, to Dec. 31, 1911.

Costs in 1916 were as follows: mining, including 4,222' of development at \$22.80 per foot, 80.1c.; milling, 37.2c.; concentrate treatment, 11.8c.; and general, 11.4c.; a total of \$1.40 per ton. As the mills worked only part time, detailed costs are unnecessary.

From 1882 to 1917 the Treadwell mine has produced 16,349,663 tons of \$1.99 ore at a cost of \$1.36 per ton. Of the total profits amounting to \$18,200,338, dividends absorbed \$15,785,000, or 315%.

As the Alaska Treadwell mine will probably produce no more gold for an indefinite period, a brief review of events during 1916 is apropos, this covering the Alaska Mexican, Alaska United, and 700-Foot mines also.

Operations at the four mines had become so centralized that in July a Consolidation Committee, consisting of H. C. Perkins, Hennen Jennings, and F. W. Bradley, studied conditions at Treadwell and suggested a consolidation on the basis of 54% for the Treadwell, 12% by the Mexican, and 34% by the United companies. Future economic operations depended on such a scheme, and development and plant had been for years carried out with this idea.

As will be seen by figures given in the preceding reports, great quantities of ore had been extracted from the mines. On July 27, 1916, surface evidences of a hanging-wall subsidence near the Treadwell-700 boundary line began to be manifest, and to protect the future of the Treadwell, 700, and Mexican mines the heavy drawing of reserves of caved and broken ore was stopped. On Aug.

1, the 240 and half of the 300-stamp-mills were shut down and amalgamation was discontinued in all the mills, all gold being recovered by concentration.

In October a 127-page report was issued, including a financial program and a detailed geological report on surface subsidence and water conditions, by Livingston Wernecke. Underground conditions were discussed, causes of subsidence, flow of water, ventilation, and bulkheading. To prevent intrushes of water, numbers of bulkheads were proposed, also filling open stopes above 1,750' with tailing, and prospecting for the dike-fault at surface, which was partly the cause of subsidences.

On April 21, after warning had been given miners, the ground for 250' on each side of the Treadwell-700 Foot mines collapsed, and the water of Gastineau channel flooded the Treadwell, 700, and Mexican mines, necessitating their abandonment. It is considered possible that a deep level from the Ready Bullion mine, which is some distance away, may be driven to re-open the mines below the flooded area.

Thus ends the lives of three mines that have produced a total of 22,661,748 tons of ore, yielding gold worth \$54,886,968, of which \$23,072,567 was profit. Fully 12,000,000 tons of ore was lost by the subsidence, all profitable material.

ALASKA UNITED GOLD MNG. CO.

ALASKA

Address: Mills Bldg., San Francisco, Calif. Mine office: Douglas Island, Alaska. Under same management as the Alaska Treadwell.

Inc. Aug. 6, 1895. **Cap.**, \$1,000,000, shares \$5 par, issued \$901,000.

Comparative General Balance Sheet:

Assets—

	Property & Plant	Cash	Reserve Fund	Bullion Suspense	Accounts Rec., Etc.	Total
1916.....	\$910,120	\$7,991	\$201,810	\$4,296	\$28,921	\$3,807,361*

(d) Deficit.

Dividends to Jan., 1917, aggregate \$11.35 per share.

Property: Located on the east side of Douglas Island, includes the 700' mine, lying between the Alaska Treadwell and the Alaska Mexican properties, and the Ready Bullion mine east of the property adjoining the Mexican. For a general description see Alaska Treadwell G. M. Co. Apparently the ore shoot of the adjacent properties is rapidly diminishing in length, with depth, and at 2,300' level, the bulk of the ore will come from the 700' mine. The Ready Bullion property is opened by incline shaft No. 1 to the 2,200' level. As this shaft crosses the orebody, and large pillars of ore are left, incline shaft No. 2 was started, 1914, in the footwall, with dip of 70° and depth to the 2,200'

level of 1,885'. Levels from the 300' to the 1,800' are 150', and below the 1,800' level are 200' apart, this distance between levels eliminating much development expense. In 1916 exploration and development work amounted to 2,461' with 434' of enlarging No. 2 shaft.

The 700' Claim is developed by the 2,817' Central shaft with levels from the 98' to the 2,700' level. Workings of the Alaska Treadwell on the west and the Alaska Mexican on the east are connected with Central shaft levels, and hoisting through this shaft is done for the 3 companies. Of 1,144,713 tons of rock hoisted in 1916, 46,279 tons was waste. In 1916 exploration and development work totaled 7,307' for the United Co., and 3,714' was done jointly by the United, Mexican and Treadwell.

Ore reserves: of the Ready Bullion mine at the end of 1916 were estimated as 3,039,000 tons, average grade \$2.88 per ton, of the 700' claim mine, 3,694,000 tons, average grade \$1.90.

The company owns two stamp-mills. In 1916 the Ready Bullion 150-stamp-mill crushed 286,078 tons ore, operating 40% with water power and 60% electric power. Duty per stamp per day was 5.34 tons; one lb. chrome-steel shoes crushed 2.38 tons of ore and one lb. of dies crushed 4.74 tons of ore. The 700' claim mill of 150 stamps crushed 262,850 tons ore, operating 21% of time with steam power, 21% with water, and 58% with electric power. Duty per stamp per day was 5.15 tons, one lb. of chrome-steel shoes crushed 2.32 tons ore, and one lb. dies crushed 4.44 tons ore.

The company owns 29% of the cyanide mill, operated jointly by the 3 Treadwell companies. Of the 31,487 tons of concentrates treated in 1916, 11,972 tons were from A. U. mines. Power-plants are in conjunction with those of the Alaska Treadwell, which see. During 1916 the average daily number of men employed was 354, with average wage of \$3.44.

Recent production: (1) Ready Bullion mine, (2) 700-ft. claim mine.

(a) Total for both mines. (b) Dec. 16, 1910-Dec. 31, 1911.

(c) Loss, due to heavy development charge.

Costs per ton for Ready Bullion mine in 1916 were: Mining, \$1.00; milling, 34.4c.; cyaniding, same as Alaska Treadwell. Mining costs include charges for 2,366' of development work at \$12.66 per ft., and stoping 377,547 tons at 44.7c. per ton. Milling costs include crushing, 2.6c.; tramway, 2.2c.; stamping, 22.6c.; concentrating, 7c. Costs per ton for 700-Foot Claim in 1916 were: mining, \$1.81; milling, 39.4c.; cyaniding, same as Alaska Treadwell. Mining costs include charges for 7,771' of development work at \$20.40 per ft., stoping 284,566

tons at 81.7c. per ton. Milling costs include crushing, 5.8c.; tramming, 1.8c.; stamping, 24.2c.; concentrating, 7.6c.

Output in June, 1917, was 20,559 tons of ore yielding \$42,880 from concentrate. Including construction charge there was a loss incurred of \$28,141.

Alaska United is the only mine now being operated on Douglas Island. On April 21, the 700-Foot Claim, Treadwell, and Mexican mines were lost by flooding. The Ready Bullion mine is some distance away from these mines and escaped. From 1898 to 1917 the 700-Foot Claim yielded 2,400,868 tons of \$2.05 ore, at a cost of \$1.66 per ton, giving a profit of \$946,259. The Ready Bullion produced 3,967,135 tons of \$2.08 ore at a cost of \$1.56 per ton, and total profit of \$2,049,406. Of combined profits, \$2,995,664, \$2,045,270 was paid in dividends.

ALASKA WESTOVER COPPER CO.

ALASKA

Office: 551 Coleman Block, Seattle, Wash. Mine, 18 miles from Copper River railroad in the Chitina district.

Officers: L. C. Dillman, pres., W. A. Mears, sec.-treas.; preceding officers, F. B. Whiting, F. J. Perine, F. B. Chandler, trustees.

Property: The Westover group, title to which was transferred from the Alaska United Copper Explor'n Co. Owns 23 claims, about 460 acres, covering a contact between limestone and greenstone. The contact lies horizontally and the ore outcrop is from 6 to 14' thick and 43' long in a perpendicular bluff at 4,990' elevation.

Development consists of 1,000' of tunnels. One tunnel started at the south end is reported to have shown 4 to 20' of ore for 45' in a S. E. direction, and a crosscut on the ore body shows 2' of glance claimed to assay 50% copper. It widens to 14' for about 36'; is then cut off by a fault, but continues about 12' to the north.

CHICHAGOFF MINING CO.

ALASKA

Chichagoff Island, Alaska. Controlled by Hugh P. Wallace and W. R. Rust of Tacoma, Wash. James L. Freeburn, supt.; Angus Mackay, cons. engr.

Property: the Chicagoff mine, better known as the De Groff, 60 miles from Sitka, 125 miles from Juneau, carries high-grade, free milling quartz, said to average better than \$7 per ton. Reported to be shipping over \$50,000 in bullion a month.

Equipment: 30-stamp mill with tube mill section and daily capacity of 110 tons of ore. A flotation unit is planned. Company has hydro-electric plant with dam at Rust Lake. 125 men employed. See U. S. G. S. Bull. 504, p. 22.

EAGLE RIVER MINING CO.

ALASKA

Address: care D. C. Jackling, Hobart Bldg., San Francisco, Calif., who with his friends controls the company.

Property: a group of gold quartz claims is 4 miles from Echo Harbor and 25 miles from Juneau, Alaska, adjoining and on the same belt as the Yankee Basin and Cottrell groups. Ore occurs in 8 small shoots in black slate zone, broken by an elaborate faulting system and reported to average \$20 per ton.

Development: by tunnel, 2,000' long, that tapped ore at a depth of 700'. In 1915, 2,000' of diamond drilling in 7 holes was done. Property worked since 1903, producing upwards of \$500,000, according to reports.

JUALIN ALASKA MINES CO.

ALASKA

Company is a subsidiary of the Alguncian Development Co. Jean Vanophem, pres., 18 Rue Boissiere, Paris, France; C. G. Titus, mgr., Juneau, Alaska.

Property: 30 claims on the north shore of Berners Bay, in the Juneau region, is developed by 360' main shaft, crosscuts, and drifts. A drainage-tunnel to be 7,500' long when completed, has been driven 2,000'.

Ore is reported to be 90% free milling. **Production:** under former owners said to total 50,000 tons of \$11.20 per ton gold ore. Property was closed in

Aug., 1914, but reopened in May, 1915. To May, 1917, the output was 22,366 tons of \$11.10 ore.

Equipment: includes 5½-mile tram, connecting the mine with the wharf, 450-h. p. compressor and hydro-electric plant. Recent installations for winter service were 4 Petters semi-Diesel engines of 150-h. p. each. Plans are under way for increasing the mill capacity from 40 to 150 tons daily.

READY BULLION COPPER CO.

ALASKA

Mine near Juneau, Alaska, developed by 2,600' incline shaft. Developing on the 2,400' and 2,600' levels, July, 1917. Owing to shortage of labor, the mill operates day shift only.

KETCHIKAN DISTRICT

ALASKA CONSOLIDATED MINING & SMELTING CO.

ALASKA

Mines at Copper Mount, Sulzer P. O., Prince of Wales Island, Alaska.

Officers: Geo. H. Crosby, pres.-gen. mgr., Lonsdale Bldg., Duluth, Minn.; A. M. Sellwood, v. p., with A. L. Warner and Henry W. Armstrong, directors. Thos. Wright, supt.

Inc. Oct., 1912, in Ariz. **Cap.**, \$2,500,000, shares \$5 par; \$1,500,045 outstanding.

Company purchased property of the Alaska Copper Co. at sheriff's sale. Property consists of 23 claims, 18 patented and 5 being patented, with 15 acre mill site, known as the Copper Mountain group, situated on Copper Harbor, Prince of Wales Island, Alaska.

Property covers a contact metamorphic zone between granite and limestone with a porphyry intrusion along the contact. Orebodies are from 3 to 50' wide with mineralized zone 900' wide and quite attractive surface showings. Development by 4,600' of tunnels and several shallow shafts. Engineer on ground for past year has kept a few men at work waiting for company to be financed.

Equipment includes smelter, sawmill, tramway and many buildings, put up before sufficient ore had been found to keep smelter in operation. Reports made by W. H. Weed and other engineers on file in company office. No ore shipped since 1907. Idle.

ALASKA INDUSTRIAL CO.

ALASKA

Office: 115 Broadway, New York. Mine office: Sulzer, Prince of Wales Island, Alaska.

Officers: A. E. Spriggs, pres.; S. I. Frankenstein, v. p.; Belmont Ephraim, sec.; S. B. Thomas, treas.; Hon. Charles A. Sulzer, lessee.

Inc. in Washington. **Cap.**, \$1,000,000, shares \$1 par. Annual meeting, second Saturday in January.

Property: The Jumbo group of 35 claims, patented, area 700 acres, also 60 acres in mill sites and miscellaneous properties. Main holdings are near the head of Hetta inlet, 2 miles from the beach and 1,500 to 2,000' above tidewater.

Mine, known as the Jumbo, has a mineralized contact metamorphic zone up to 1,000' in width, with granite foot and limestone hanging, ore fading into the lime. Property shows 7 lenses and irregular masses, ore being mainly chalcopyrite, with some bornite and a little tetrahedrite in a gangue of magnetite, garnet, epidote and other contact minerals, together with occasional molybdenite. Ore averages 4 to 5% copper, with \$3 gold and silver per ton. Average recovery said to be 100 lbs. copper per ton of rock, at cost of seven cents per lb. copper produced.

Development is mainly by tunnel, with 4 shallow shafts and numerous open cuts. The tunnels are in series, lowest 500' vertically below the highest, all connected by winzes, and the mine has over 3 miles of workings; greatest depth of workings is 100'. The ore stands well, requiring little timbering, even in stopes up to 50' in width.

The property carries an available water power, rated at 5,000 h.p., and this has been partially developed by a 36" Pelton wheel, taking water from Beaver creek and actuating a 6-k.w. generator, and a 16" Pelton wheel taking water under a 330' head from Jumbo creek, through a 10" pipe line of 3,000' length, this actuating a 55-k.w. 3-phase 2,300-volt 60-cycle generator, current being stepped down to 220 volts for lighting and power. Mine is equipped with electric fans, blowers and Temple-Ingersoll electric drills.

A 9,000' Riblet aerial tram has 14 wooden towers with 22 half-ton buckets, operated by gravity with a 600' auxiliary tram. Capacity of tram line is 10 tons per hour. The main tram has small bins at the mine and 4,000-ton storage bins at tidewater, where there is a 200' wharf.

Equipment includes a 200-h.p. electric hoist and an Allis-Chalmers duplex air compressor, electrically driven. Buildings include a 35x40' warehouse, 30x35' power house, smithies, store, office, dwellings, bunkhouses and various smaller buildings.

Production was begun 1907, and now aggregates 137,000 tons, over \$1,000,000. Earnings have gone back into the property for development and permanent improvements. Company now shipping about 2,000 tons monthly to the Tacoma smelter.

Property considered valuable and management good.

ALASKA METALS CO.

ALASKA

Idle. Mine office: Bruce, Prince of Wales Island, Alaska. Harry Corbin, supt., at last accounts. Property on the west coast of Prince of Wales Island, formerly known as the Corbin mine, and the Copper Mountain Mine. No recent returns secured. Slightly developed.

ALASKA TIDEWATER COPPER CO.

ALASKA

Office: 602 Alaska Bldg., Seattle, Wash.

Officers: W. E. Hall, pres.; F. G. Swann, v. p.; R. C. Hill, sec.-treas., with H. E. Wills and R. B. Frue, directors; R. W. Sweet, Craig, Alaska, supt.

Inc. 1916, in Washington. Cap., \$1,000,000; shares \$1 par; 532,184 shares outstanding.

Property: 8 claims, 5 owned and 3 held under lease in the Ketchikan mining district, Prince of Wales Island. Ore carries a quartz vein, traversing diorite and limestone, having a pay shoot of chalcopryite ore 3-7' wide, said to carry gold, silver, copper and iron values, with average assays of 7.5% copper.

Development: 700' tunnel, 120' vertical shaft and drifts. Equipment includes an aerial tramway. Compressor plant being installed in 1917. Production in 1916 amounted to 134,949 lbs. copper, averaging 7.17%. Shipments were made to the Tacoma smelter. Management reports work for 1917 consists of sinking working shaft, with no shipments to date.

BEAVER MOUNTAIN MINING CO.

ALASKA

Idle. Mine office: Sulzer, Prince of Wales Island, Alaska. Henry Miller, pres.; George Comer, mgr., at last accounts. Lands: on the southern side of Beaver mountain, Hetta inlet. Development: by tunnels, showing ore carrying copper, nickel and cobalt. Operations confined to annual assessment work.

CYRMU COPPER CO.

ALASKA

Idle. Office: 117½ South Tenth St., Tacoma, Wash. Mine near Baldwin, Prince of Wales Island, Alaska. J. M. Miller, Jr., pres.; F. P. Hicks, v. p.; Frank D. Nash, sec.-treas.

Inc. 1905, in Washington. Cap., \$50,000; shares \$1 par.

Property: 6 claims, 100 acres, on Moira sound, shows 3 lenticular ore-bodies, reported by company as of 40' aggregate width, assaying 6 to 10% copper, 4 to 6 oz. silver and \$2 gold per ton, mainly from chalcopryite ores. Mine

has a 100' shaft and a 187' tunnel, with hoist and a 6-drill air compressor. A 4,000' surface tram conveys ore to a 1,000-ton ore bin.

Shipments in 1906 were 3,000 tons of copper ore, returning 4½% copper and \$1.25 in gold and silver. Idle since 1907, owing to litigation among the stockholders; reported under bond to a stock company organized by Geo. V. Bland, of Ketchikan, Alaska, in 1914.

IT MINE

ALASKA

Ketchikan, Alaska. Mine 1 mile from the shore on Kasaan bay, Prince of Wales Island, Alaska.

Being operated by the Granby Consolidated Company. Fully described in Vol. XII.

LAKINAW TAGISH AND MOIRA MINES CO.

ALASKA

Address, Carcross, Y. T. and Cymru mine, Moira Sound, via Ketchikan, Alaska. Holds bond on Cymru mine (which see) and on Portland (or Westlake King) group. Company is working the Yukon properties, formerly held and operated by the Conrad Consolidated Mines, now dead.

At the Cymru a 100' shaft has been sunk and the mine equipped with 3-drill compressor and gasoline hoist. A mile long tram with gasoline motor connects mine and shipping wharf; 300 tons of ore were shipped to Tacoma in July, 1916.

The Portland Group, near Mineral Lake, is 1½ miles from the Cymru. It shows a 4' vein carrying silver-zinc-lead and copper values, zinc being predominant.

Development: by 130' shaft. The ore is transported by 1,000' aerial train to Mineral Lake, from there by scows to the Cymru; 500 tons were reported ready for shipment to Oakland, Calif., in 1916. Ten men employed.

MOUNT ANDREW IRON & COPPER CO.

ALASKA

Former Office: Empire Bldg., Seattle, Wash. W. J. Rogers, supt.

Property: held under lease from the Mount Andrew Mining Co., on Kasaan Peninsula, Prince of Wales Island, Alaska.

Geology: ore carries chalcopyrite disseminated in magnetite, with hornblende gangue, and is practically unaltered at surface, masses of sulphide ore even showing glacial striations. Ore averages about 3.75% copper and \$1 to \$1.60 per ton in combined gold and silver values. The orebody has been stripped for about 2 acres and is developed by tunnels of 300' and 700', with a 70' blind shaft from the tunnel, and 10 small glory-holes, opened upwards to surface from the tunnels.

A 4,600' aerial tram of 40 tons hourly capacity leads from a 50-ton loading bin at the mine to a shipping bunker 500' from tide water.

Equipment: includes two 50 h. p. boilers, with 5-drill and 7-drill Ingersoll-Sergeant air compressors. Buildings include office, boarding house, bunk house and smithy.

Under option, 1913, to Granby Cons. M., S. & P. Co., Ltd., but relinquished. Reported working 1916.

Letters returned from Seattle address in Aug., 1917.

NIBLACK COPPER CO.

ALASKA

Niblack anchorage, Prince of Wales Island, Alaska. A. A. Wakefield, agent. Property formerly worked by the Niblack Copper Development Co., afterwards the Niblack Copper Co., is reported to have reverted to the Geo. M. Wakefield Mineral Land Co. Fully described in Vol. VIII, Copper Handbook. No work done on the property since 1912 and 1913 save annual representation. Niblack Copper Co. is said to still have a corporate existence.

NORTHLAND COPPER-GOLD GROUP.

ALASKA

Letters returned from last address, 518 Hinckley Bldg., Seattle, Wash., in 1917.

Property: 8 claims, in Ketchikan district, west coast of Prince of Wales Island, S. E. Alaska, said to show a 600 to 800' mineral zone containing numerous veins, traceable for 3 miles. Claims show limestone and greenstone porphyry intrusions, with flat dipping veins alongside, that run N. E. and S. W. The veins are from 1 to 8' thick and contain lenses of ore with chalcopyrite mixed with pyrite, lying beneath the greenstone hanging wall.

Development: by 70' crosscut tunnel and a 50' shaft, showing 3' of ore. A 112' tunnel taps this shaft and shows 18" solid 20% ore, according to owners. Shipments of 153 tons are said to have returned 10.05% copper, 26.3% iron, 14.2% silica, \$1.38 in silver and gold, or a total value of \$19.84 per ton. Smelting rate to Tacoma is \$1.50 per ton for this ore.

RUSH & BROWN GROUP.

ALASKA

Address: Kasaan, Prince of Wales Island, Alaska. U. S. Rush, mgr., and Geo. F. Brown, owners.

Property: 9 claims, 180 acres and 5-acre mill site, near the end of Kasaan Bay, 8 miles N. W. of Kasaan. The claims show greenstone intruded by granodiorite and carry three orebodies, 2 in an E. W. shear zone in the greenstone, the third orebody along the greenstone-diorite contact. The latter carries magnetite-chalcopyrite ore in a body of unknown extent, but opened for 200' in length, width of 63' and to a depth of 63'.

One shear zone contains the sulphide body. The ore occurs as massive chalcopyrite in stringers, bunches and lenses, and also as a commercial impregnation of the greenstone and chloritic schists. The massive chalcopyrite, without waste, assays 20% to 30% copper, with \$12 to \$18 gold. The lenticular shoots of the clean ore run with the shear zone, and are as much as 7' thick. Pyrite, quartz and calcite are practically absent. The sulphide body, in which these lenses occur, has an average width of 14', varying from 8' to 20' between walls. It has been developed to a depth of 250', and for a length of 170' on the 100' level; 345' on the 200' level, and 90' on the 250' level, with drifts on ore both ways from a winze on the 250' level.

On the footwall side, and at a distance of 30' from the hanging wall, a parallel short vein, evidently in the same shear zone, has been exposed for 45' on the 200' level.

Development: exclusive of stopes amounts to 2,000' of which 1,090' are in ore. It includes a 177' shaft with 1,350' of drifting on the 1st and 2nd levels, and a 50' winze from 2nd level to 250' level.

Equipment: includes a steam plant with hoist and necessary mine buildings. Ore is taken over a 3-mile private railway of 42" gauge to Venus Bay.

Work was suspended, 1907, because of the depression of the metal market, and was resumed July, 1910.

Production: for 1912 was about 700,000 lbs. fine copper, with small gold and silver values; 1,900 tons shipped in 1914. About 30,000 tons of ore have been shipped from the mine. Smelter returns for four years reported to range between 3.31%-7.1% copper, 0.12-0.20 oz. gold, and 0.52-1.03 oz. silver. Mine considered promising.

VICTORY COPPER MINING CO.

ALASKA

Inactive, and letters returned in Aug., 1917, from company's last office, 817 Alaska Bldg., Seattle, Wash. **Mine office:** Ketchikan, Gravina Island, Alaska.

Officers: M. McTernan, pres.; E. D. Fisher, v.-p.; Maurice D. Leehey, sec.; J. R. Kelley treas., Dr. C. O'Connor, C. J. Cronin and E. F. Tiernan, directors.

Inc. March, 1901, in Washington. **Cap.,** \$1,500,000, shares \$1 par; non-assessable; fully issued. Annual meeting, first Monday in September.

Property: 14 claims, 9 patented, 260 acres, on Seal Bay, Gravina Island, 22 miles S. of Ketchikan, extends from sea level to 4,000' above the beach.

Lands show granite, greenstone and limestone reported to be cut by 11 veins, of which 4 were developed. The main vein is estimated by management to average 22' in width, carrying chalcopryite with quartz gangue, and to assay about 5% copper, 19% sulphur, 19% iron and 52% silica, with \$2 per ton in combined gold and silver values.

Development: by 2,100' tunnel, intersecting 11 veins.

LA TOUCHE DISTRICT

(including Prince William Sound and Ellamar)

ALASKA HOMESTAKE MINING CO.

ALASKA

Address: Crary Bldg., Seattle, Wash.

Officers: Edw. Eckern, pres.-mgr.; S. A. Pepper, v. p.; Edmund Smith, sec.; C. P. Topliff, supt., with L. L. Bain, directors.

Inc. May, 1916, in Washington. **Cap.**, \$1,000,000; shares \$1 par; 600,000 shares outstanding.

Property: 4 claims, about 100 acres, at Port Wells, Prince William Sound, said to show shoots of gold-silver-lead ore, 12"-36" wide, in a contact deposit in granite, averaging \$50 per ton. Developed to depth of 250' by tunnel, in 400', Aug., 1917. About 5,000 tons of ore reported blocked out.

Equipment: includes gas hoist, 24-ton mill, 18-ton concentrator and compressor. About \$12,000 expended in development work to date. Is a prospect.

BEATSON COPPER CO.

ALASKA

Entire property, assets and liabilities acquired by the Kennecott Copper Corporation, and company dissolved Oct. 4, 1915.

W. A. DICKEY COPPER CO.

ALASKA

Office: 31 Nassau St., New York. **Mine office:** Ellamar, Alaska. W. A. Dickey, pres.-gen. mgr.; Duncan Edwards, v. p.-treas.; H. C. Bryan, sec. T. W. Blakney, supt.

Cap., \$50,000 Is a close corporation.

Property: 2 miles from tide water at Irish Cove, Prince William Sound, Alaska, is developed by tunnels and has over 1,000' of workings. Ore contains chalcopryite in lenses along shear zones, in greenstone, with gold and silver; lenses of gold ore have been developed to a depth of 300'. Shipments of 400 to 600 tons monthly of 12% ore were made to the Tacoma smelter in 1912.

Company bought the Mason-Gleason group, on Fidalgo Bay, for \$15,000. The latter group shows high-grade ore, but nearest shipping point is Irish Cove, 3 miles distant.

ELLAMAR MINING CO.

ALASKA

Office: 211 American Bank Bldg., Seattle, Wash. **Mine office:** L. L. Middekamp, supt., Ellamar, Prince William Sound, Alaska.

Officers: F. M. Jordan, pres.-treas.; C. S. Packer, sec.; preceding, with W. R. Rust and Chas. de Steigure, directors.

Inc., 1900, in Washington. **Cap.**, \$10,000,000; shares \$100 par. Reorganized in 1916 with \$2,500,000 capitalization; shares \$5 par. Gross earnings in 1915 amounted to \$740,000, \$722,000 from ore sales. Controlled by F. M. Jordan & Co., Seattle.

Property: 14 claims, patented, known as the Ellamar mine, at Ellamar, on Virgin Bay, 20 miles S. W. of Valdez. The mine has a 600' three-compartment vertical shaft, with levels at 100' intervals, and has about 3 miles of workings, said to block out about 250,000 tons of ore for stoping.

Ore: occurs in a lens 80x200' and lies wholly within the slate, pinching out 30' below the 500' level. Ore is mainly chalcopryite associated with pyrite, pyrrhotite and sphalerite in a gangue of slate, graywacke and quartz, assaying from 3 to 25% copper, 3 oz. silver and up to \$50 gold. Mine was the first copper producer in Alaska, beginning shipments in 1901. A cofferdam has been

built to permit mining orebody outcropping on the beach, below the ocean level, and from 1910 to 1913 mining was confined to that part of orebody between surface and 200' level. In 1913 development work was done on the 200, 300 and 400' levels. Geology fully described, p. 90, U. S. G. S. Bull. 605, 1915. Ore is mined by underhand filling.

Equipment: includes a 300 h. p. steam plant, with 3 boilers, a 3-drill Ingersoll-Rand air compressor, Nordberg compressor, a 12x24 Nordberg engine, a 60 h. p. hoist. In 1914 a 200-ton per hour aerial tramway and new loading dock were completed. The tramway conveys ore from mine bunkers a distance of 2,200' across shallow water to the loading dock, having 25' of water at low tide. Buildings include a machine shop, smithy, laboratory, mess house and 12 other buildings.

Costs are said to be about \$3 per ton, for ore loaded on vessels, with about \$3 transportation charges to the Tacoma smelter.

Production: 1911, over 16,000 tons, averaging 0.24 oz. gold, 0.80 oz. silver and 6% copper; 1912, 22,000 tons, averaging 0.30 oz. gold, 0.90 oz. silver and 2½% copper; 1913, 25,000 tons; 1914, 31,000 tons; 1915, 36,000 tons, averaging .168 oz. gold, .607 oz. silver, 2.18% copper; 1916, 46,000 tons, averaging .15 oz. gold, .60 oz. silver and 2.83% copper. 1917 shipments: 150 to 200 tons of 2% ore per day, high in iron, and holding \$3 to \$5 per ton in gold. Employs 80 men.

FIDALGO-ALASKA COPPER CO.

ALASKA

Ellamar, Alaska. Thos. Donahue, pres.; L. A. Levensaler, mgr.; E. D. Reiter, supt.

Property: 24 claims, about 15 miles from Ellamar and one-half mile east of Irish Cove, on the southern side of Fidalgo Bay, an inlet of Prince William Sound.

Development: includes a 450' main tunnel following a well-defined fracture zone, in slate, carrying 2 lenticular ore shoots, said to be 5x50' in cross-section, cut at 200' and 300' from portal, with many small stringers.

Ore: mainly chalcopryrite, said to give average assays of about 10% copper, occurs as cementing material of fractures, irregular stringers, disseminated grains and as lenticular replacements of country rock, the fracture zones being very erratic in size and extent.

Equipment: includes 1,000' aerial tram, ore bins and wharf, besides several mine buildings. Company employing 16 men at last reports, and management plans further development. Geology described on page 118, U. S. G. S. Bull. 605.

LATOUCHE COPPER MINING CO.

ALASKA

Latouche, Latouche Island, Alaska. Geo. Barrach, mgr.

Property: 7 claims, about one-half mile north of the Bonanza mine of the Beatson Copper Co., at the northern end of Latouche Island. The vein has been traced about 750', by trenches and pits, and is developed by a 750' tunnel, showing chalcopryrite, associated with pyrite and pyrrhotite, having small gold and silver values. There is an 1,175' ground tram to a shipping wharf.

Under development by W. A. Dickey, 1917. Shipment of 300 tons of sorted ore, August, 1917, reported made to the Tacoma smelter.

LATOUCHE ISLAND COPPER MINING CO., LTD.

ALASKA

Office: 330 Burke Bldg., Seattle, Wash. **Mine office:** Latouche, Latouche Island, Alaska.

Officers: Jas. A. Murphy, pres.; L. G. Wheeler, v. p.; A. E. Fraser, 2nd v. p.; C. P. McCormick, sec.; A. L. Cohen, treas.; preceding officers, Tenning Carlson and H. J. Jacobs, directors.

Inc. in Washington. **Cap.,** \$5,000,000; shares \$5 par.

Property: 42 claims, with about 4 miles of tidewater frontage, is on the N. E. shore of Latouche Island, 60 miles S. of Valdez. The property has 3 practically parallel N.-S. veins, of 5 to 15' estimated average width, with dip of about 65°, proven by trenches for about 3 miles.

Ore carries bornite and chalcopryite, with quartz gangue, and averages about 4% copper, with some gold-silver values. It closely resembles that of the Beatson mine, and is said to be amenable to flotation.

Development: by a shallow shaft and 4 short tunnels.

Equipment: includes a small hydro-electric plant having a water wheel and a Class E Rand air compressor.

REYNOLDS-ALASKA DEVELOPING CO.

ALASKA

Office: 45 W. 34th St., New York. **Mine office:** Latouche, Latouche Island, Alaska.

Officers: Marvin F. Butler, pres.; H. M. Coffin, v. p.; J. Frank Birdsell, sec.-treas.; preceding, with A. E. Austin, Hon. J. G. Brady, F. A. Reynolds, W. C. Gilbert, John Yule, O. C. McGilvara, Geo. K. Hinds and G. B. Wrigman, directors. F. A. Hancock, Latouche, supt.

Inc. 1903 in Washington. **Cap.,** \$3,000,000; shares \$1 par; in \$1,000,000 cumulative 6% preferred stock and \$2,000,000 common stock. Authorized March 3, 1908, a \$500,000 twenty-year 6% gold bond issue; issued, \$125,000. Annual meeting, first Tuesday in April.

Property: 102 claims, about 2,000 acres, in Valdez district, Prince William Sound, Alaska. Company was in receiver's hands until June, 1910, when discharged by court order. Former management fully described in Vol. X, Copper Handbook.

The Boulder Bay group of 31 claims, 620 acres, is on the mainland at eastern side of Prince William Sound. Claims show a contact deposit between greenstone and slate, carrying chalcopryite said to assay up to 11% copper and \$3 gold per ton, but averaging 2 to 4% copper. Developed by 2 tunnels. Equipment includes a 60 h. p. boiler and a 5-drill Rand air compressor.

The Iron Mountain group of 62 claims includes the Duchess and Duke properties, on Horseshoe Bay, Latouche Island. The Duke mine has a 4' vein of ore, formerly claimed to average 7% copper, slightly developed by a shaft now filled with water.

The Duchess mine, last worked in 1911, when 400' of drifting was done on the lower tunnel, is developed by 2 tunnels, the upper a 375' drift tunnel, and the lower having 500' of drifts on the orebody, which has an average width of 25'. This group shows massive sulphide ore, estimated by the management to average about 3% copper. Assessment work only has been done since 1911.

In 1916 the Duke shaft was unwatered and the orebody explored. Vein is 29' wide and has been opened 120'. Drifts are 300' below the lower Duchess tunnel. Ore is of similar character and value to that in the Duchess. Work was continued in the lower Duchess during 1916. Estimated ore opened above this tunnel is said to be over 600,000 tons, averaging 2% copper, \$2 gold, 40% iron and 43% sulphur; maximum width of orebody in last completed crosscut was 124'.

Equipment: includes a 200 h. p. hydro-electric installation, with a flume and steel pipe leading from Big Falls Creek to a Pelton wheel, direct-connected to two 40 k. w. generators; a 50 h. p. hoist and 2 Rand air compressors, of 5 drills aggregate capacity, with 6 air drills and 10 Ingersoll-Temple electric drills.

SEATTLE-ALASKA COPPER CO.

ALASKA

Office: 638 New York Blk., Seattle, Wash. **Mine office:** Latouche, Latouche Island, Alaska.

Officers: E. Sparks, pres.; Geo. W. Terwilliger, v. p.; Geo. J. Hodge, sec.; Jos Bjorn, treas., and O. B. Hess, directors.

Inc. in Washington. **Cap.**, \$1,000,000; shares \$1 par; non-assessable.

Property: 35 claims, about 700 acres, near Montgomery Bay, in the southern and central part of Latouche Island. Claims are in 2 groups, one of 10 claims on tide water, with another of 25 claims about a mile from the harbor, latter being said to carry the extension of the Beatson-Bonanza vein.

Development: by a 287' tunnel, on the Delta claim, showing a vein of 4 to 6' width; ore, when sorted, assays 11 to 22% copper. The Santa Clara No. 1 claim has a 101' shaft, with a 140' tunnel and an 85' crosscut, showing 2 veins, one of 4' width.

Equipment: includes steam power, and there is a mill operated by water power, having five 1,000-lb. stamps, with room for additional stamps, 2 Card tables, and 1 slime table. Shipments have been intermittently made to the Tacoma smelter since 1914.

STANDARD COPPER MINES CO.

ALASKA

Controlled by Galena Bay Mining Co.

Idle. Office: 68 William St., New York. **Mine office:** Landlock, S. E., Alaska.

Officers: Morris B. Mead, pres.; John L. Steele, v. p. and engr.; E. F. Bourke, sec.; J. O. Molander, treas.; Jas A. Bourke, gen. mgr., with Thos. R. Manley and Chas. Williams, directors.

Inc. Feb. 2, 1906, in New Jersey. **Cap.**, \$300,000; shares \$100 par; issued \$220,000. Bonds, \$300,000 issued. Is operated as a close corporation. Annual meeting, third Saturday in December.

Property: 13 claims, at Thorn Arm, on Landlock Bay, in the Prince William Sound district. The lands, which are very precipitous, show country rock of greenstone, reported to carry 17 fissure veins, of which 4, under development, carry lenticular shoots of ore estimated to average 6% copper, 1 oz. silver and 90 cts. gold per ton.

Development: by a shaft and tunnels of 290', 175', 85' and 660', with about 1,300' of workings, estimated to show 20,000 tons of ore with 12,000 tons blocked out for stoping.

The mine is connected with 500-ton ore bunkers on a wharf at tide-water by a 3,300' aerial tram, in 2 sections, 1 of 912' and 1 of 2,526' length.

THREE MAN MINING CO.

ALASKA

Office: 31 Nassau St., New York. **Mine office:** Landlock, Prince William Sound, Alaska.

Officers: W. A. Dickey, pres. and gen. mgr.; H. C. Bryan, sec.; Duncan Edward, treas.; officers are the directors.

Inc. in New York. **Cap.**, \$1,000; shares \$100 par; fully issued. Is a close corporation, having only 3 shareholders.

Property: 43 claims, 10 patented, 812 acres, on tidewater, at Landlock Bay, in the Valdez mining district of Alaska, giving the company nearly a mile along a great shear zone, only one end of which has been developed. The property, which has been under continuous development since 1903, is said to show 10 orebodies with a general E.-W. strike, occurring as fissure veins and as replacement deposits in shear zones in greenstone and slates. Orebodies reported to average 8' in width and to carry chalcopryite ore in lenticular shoots averaging 10% copper. Low-grade ore is continuous, with rich ore found mainly on the footwall in paystreaks of 1 to 8' width, the largest shoot carrying massive chalcopryite, assaying 10% copper, 1 oz. silver and 50 cts. gold per ton. The quantity of low-grade ore of concentrating tenor is very much greater than that of the smelting ore, but it is not available for present use.

Development: by tunnels, with 6,000' of workings. Six levels have been opened up on one orebody, giving a little over 600' of stoping depth on the

ore. Another orebody has been opened up on 3 levels, giving about 500' of stoping depth. No stoping has been done, all ore produced having been extracted from levels and upraises. Company claims to have over 200,000 tons of 3% copper ore developed.

The mine has no machinery or power equipment, owing to development by tunnel, but has 14 buildings, with ore bunkers on a wharf at tidewater, connected by a short ground tram with the portal of the 5th level.

Production: about 600 tons of 10% ore were shipped, 1910, to the Tacoma smelter, yielding 120,000 lbs. fine copper, and over 3,000 tons of 10% ore yielding 610,000 lbs. fine copper in 1912. No shipments were made in 1913 and 1914, but in 1915 300,000 lbs. copper was produced. Over 5,000 tons of 10% ore have been shipped. Total production to date is about 1,000,000 lbs. copper, shipments being under name of W. A. Dickey and not the company. Property considered promising.

UNITED METALS CO.

ALASKA

See Alaska Metals Co. Property is the Corbin mine, near Coppermount.

NOME DISTRICT

ALASKA MINES CORPORATION.

ALASKA

Address: c/o August Heckscher, 50 E. 42nd St., New York City.

Officers: Jas. Gayley, pres.; T. S. Cram, v. p.; W. S. Reed, sec.-treas., with August Heckscher, M. W. Newton, Louis Eisenlohr and E. E. Powell, directors. John H. Miles, mgr.

Inc. June, 1916, in Virginia. **Cap.**, \$10,000,000; shares \$1 par; \$4,000,000 outstanding. Stock listed on New York and Boston Curbs.

Property: about 2,200 acres of mineral land at Nome, owned outright and partly controlled by option to purchase. Diamond drill operations reported to have proved the existence of 165,000,000 yards of gold-bearing gravel, averaging 36 cts. per yd. Operates 3 dredges, with total capacity of 2,000,000 cu. yds. per dredging season of 8 months.

Equipment: includes electric power plant and an all-steel machine and repair shop. Plans for 1917 include construction of two 15' bucket boats, among the largest dredges in operation. The five dredges will handle 6,000,000 cu. yds. per season at an estimated cost of from 6-9 cts. per yd. Production in 1916 amounted to \$1,500,000.

CONSOLIDATED ALASKA CO.

ALASKA

Idle. Is a successor of Alaska Bonanza Mng., Trading and Trans. Co., reorganized 1900. Owned property at Nome, Alaska.

PIONEER MINING CO.

ALASKA

Office: Alaska Bldg., Seattle, Wash.

Officers: Jafet Lindeberg, pres. and mgr.; E. O. Lindblom, v. p.; J. E. Chilberg, sec.; G. W. Campbell, treas., with W. H. Metson and J. L. Hagelin, directors.

Inc. Dec. 27, 1901, in Washington. **Cap.**, \$5,000,000; shares \$1 par; all issued.

Profit for year ended Dec. 1, 1916, was \$242,904, of which \$100,000 was paid as No. 17 dividend. Surplus at end of year was \$240,153.

Dividends: 8% in 1902; 11% in 1906; 12% in 1907; 3% in 1908; 9% in 1909; 6% in 1910; 3% in 1911; 2% in 1915, and 4% in Jan., 1917; a total of 58% or \$2,900,000.

Property: placer areas in the Nome district, Alaska, worked by hydraulicking since 1899. They are fully equipped and plant stands in accounts as worth \$57,428. Company controls the Miocene Ditch and United Ditch companies.

SEWARD DISTRICT

ALASKA FREE GOLD MINING CO.**ALASKA**

Originally organized as a stock company, now operated under an 8-year lease that began in 1912. Wm. Martin is lessee.

Property: 22 claims, surveyed for patent, in Fishhook Creek Valley, Willow Creek district, south-central Alaska. It was on this property the first gold quartz of the district was discovered in 1906. Two orebodies have been opened on two different veins, that are sharp, clean fissures in quartz diorite, traceable for several hundred feet on surface. Ore treated in the mill has averaged about \$36 per ton. Development is by means of several tunnels, maximum length 100', with some stoping.

Equipment: includes 3 aerial tramways, mill and cyanide plant. Sixty men employed. Production is said to have been \$40,000. Operating costs are high, due to short season of 100 to 150 days each year, and the isolated position in which property is located. District will be made easily accessible by the Gov't railroad from Seward to Fairbanks, construction of which is under way. See U. S. G. S. Bull. 607, page 60. Installation of electric power planned for 1917.

GOLD BULLION MINING CO.**ALASKA**

Donald Harris, supt.

Property: 8 claims, on the S. E. wall of Craigie Creek Valley, 4 miles above mouth of Creek, in Willow Creek district, south-central Alaska.

Ore: gold quartz in vein from 2' to 14' wide.

Development: by several tunnels. Vein is said to be proven for a length of 3,500'.

Equipment: includes 2 aerial tramways, the longest 3,253', with a rise of 850'; a 7-stamp mill and small cyanide plant. Water power is used. About 70 men were employed in the 1915 season. Company reported to have taken an option in 1915 on property of the Brooklyn Dev. Co., located at the head of Willow Creek.

Operating costs in the Willow Creek district are high, due to short season of 100 to 150 days each year, and the isolated location of property. District will be made accessible by the Government railroad from Seward to Fairbanks, now being built. See U. S. Geol. Survey Bull. 607, pp. 66, 71.

INDEPENDENCE GOLD MINING CO.**ALASKA**

Seward, Alaska. **Property:** 5 claims and a mill site, in process of patent, in Fishhook Creek Valley, on the east slope of Granite Mountain, Willow Creek mining district. Mine located in 1907, and formerly owned and operated by the Alaska Gold Quartz Mining Co., shows 2 veins. The Granite Mtn., or main vein, from 2"-4' thick, occurs in quartz diorite, showing native gold, pyrite and chalcopyrite; strike N. 14°, 20° W., with dip 2° to 20° S. W. Developed by opencuts, stopes and several tunnels, longest 386' follows vein for 265', and at the face has an incline 480' deep on the vein. The Independence, or upper vein, 620' vertically above and running parallel to the Granite Mtn., has strike N. 12° W. with average dip of 42° W., averages 12" thick and is only slightly developed.

Equipment: includes 3 stamp mills, with one Nissen stamp and concentrator, 2 aerial trams connecting mine and mill. Production in the past has been mainly from the Granite Mtn. workings. Operated in 1917. No later returns. Probably idle.

KENAI-ALASKA GOLD MINING CO.**ALASKA**

Jas. Hayden, mgr., Seward, Alaska. **Property:** on Great Falls Lake, adjoining the Skeen-Lechner, shows a 2' vein, cut on the 260' level, which is said to carry ore mining better than \$60 per ton.

Developed: by 1,700' of tunnels and stopes.

Equipment: includes 5-stamp mill, operating since 1914, and a 6,000' aerial tram connecting mine and mill.

MABEL MINING, MILLING & POWER CO.

ALASKA

Address: Anchorage, Alaska.

Officers: W. E. Barthoff, pres.; F. Lawton, v. p.; T. Caveny, sec.-treas.; above, with J. H. Barthoff, F. McCoy and W. Martin, directors.

Inc. Nov. 1, 1915, in Alaska. **Cap.**, \$100,000; shares \$1 par.

Property: 11 unpatented claims in Willow Creek district, said to show a quartz vein in diorite, dipping 42° S. W., with N. W.-S. E. course. Orebody varies from 1" to 7' in width, and yields over \$50 gold per ton.

Development: by tunnels.

Equipment: includes 3,500' aerial tram, 1 mile of ditch, No. 1 Denver quartz mill, 20-ton crusher, and water power.

Production: \$12,000 in 1916, and \$10,000 from May 28 to June 26, 1917. Seasons are short, with probably not over 120 days available for surface work.

TALKEETNA MINING CO.

ALASKA

Address: Wasilla, Alaska.

Officers: D. M. Fulton, pres.; E. H. Barthoff, v. p.; C. T. Hatcher, sec.; K. I. Fulton, mgr.-treas., with H. McGregor, directors.

Inc. Sept. 25, 1915, in Washington. **Cap.**, \$1,000,000; shares \$1 par; 800,000 issued. Annual meeting 1st Monday in October. Operating expenses for 1916 amounted to \$7,000.

Property: 8 claims, in Willow Creek district, about 40 miles N. of Anchorage, said to show a quartz vein in diorite, carrying gold ore assaying \$10-\$200 per ton.

Development: by several tunnels, longest 130'.

Equipment: includes 2 aerial tramways and 15-ton mill. Further development planned, 1917-1918.

WILLOW CREEK MINES CO.

ALASKA

Address: Doheny & Thomson, Knik, Alaska. Company leases and operates the Gold Bullion mine, one of the largest gold producers of the Willow Creek district. Plant includes 12 stamps, 2 concentrators and cyanide annex.

VALDEZ DISTRICT

ALASKA PITTSBURGH GOLD MINING CO.

ALASKA

Office: 702 Arrott Bldg., Pittsburgh, Pa. Mine office: Valdez, Alaska.

Officers: B. C. Wiltse, pres.; A. L. Miller, v. p.; O. A. MacVay, sec.; Wilber Galbraith, treas., with V. H. Chlebus and W. E. Flick, directors.

Inc. in Delaware. **Cap.**, \$1,000,000; shares \$1 par. 425,000 shares outstanding. Annual meeting, first Tuesday in March.

Property: 8 claims, 160 acres, known as the Dailey-Bennett mine, on Bettles Bay, Prince William Sound, Alaska. Ore, carrying gold and silver, occurs in a porphyry dike, cutting through slate. Course is northerly, with dip of 20°. The orebody has been opened up for about 5,000' at surface, showing galena, sphalerite and arsenopyrite, also free gold. Mill tests reported to average \$13.59 p. t. Developed by 400' tunnel. Ore reserves estimated by management at 18,000 tons, June, 1917.

ALASKA STANDARD COPPER MINING CO.

ALASKA

Office: Suit 921, 115 Broadway, New York City. M. L. Hewitt, pres.; John L. Steele, mgr.

Inc. in South Dakota. **Cap.**, \$2,000,000; shares \$1 par; 700,000 shares issued. Security Transfer & Registrar Co., N. Y., transfer agents and registrar. Company holds a 3½-year lease, with option to purchase at \$500,000, on the Standard mine of the Standard Copper Mines Co., at Landlock Bay, Prince William Sound, about 30 miles from Valdez.

Property: 7 patented claims and a mill-site, 150 acres, said to carry a 6' vein of copper-gold-silver ore.

Development: by 3 tunnels to depth of 430', reported to have proved 300,-000 tons of 4% ore and 10,127 tons of 8% ore. Fourteen men employed. Management plans driving a new deep tunnel in 1917 to cut the orebody at a depth of 2,000'. Standard Copper Mines Co. is described in Vols. X and XI. Is a Mary L. Hewitt promotion.

ALICE MINING CO.

ALASKA

Address: Valdez, Alaska. Property consists of the Alice mine, situated at sea level on west side of Shoup Bay, 1½ miles northwest of the Cliff mine. The vein, located in March, 1910, is a well-defined fissure, strike N. 60° W., dip 70° S., width from a few inches to 2½'. Ore minerals include gold, pyrite, chalcopryrite, arsenopyrite, and sphalerite. The country rock is composed of graywackes, slates and green schists.

Development: at beginning of 1915 consisted of a 247' tunnel, a two-compartment shaft, 170' deep, and 100' of drifting at the bottom of the shaft. **Equipment:** Includes 100 h. p. boiler, 3-drill air compressor, 50-light dynamo, 5 h. p. steam engine, steam hoist, pumps, blacksmith shop, mess house and bunk house. Small shipments were made to Valdez in 1913; no returns available. At last reports, Aug., 1914, work was at a standstill, pending a settlement of financial difficulties. See U. S. G. S. Bull. 622, p. 175.

CAMERON-JOHNSON GOLD MINING CO.

ALASKA

Reorganized in 1916 as Valdez Gold Co. J. D. McDougall, supt.

Valdez, Alaska. Owns a group of claims on the right side of Shoup Glacier, N. W. of Valdez, which show fissure veins in graywacke and argillite.

Ore: free milling gold quartz. About 3% of the ore is said to be sulphides of iron, lead and zinc.

Development: several hundred feet of tunnels. The upper workings are mainly on the Treasury Note vein, said to show from 3" to 36" ore. Lower workings are chiefly on the Mazuma claim, said to have the largest vein, as well as lowest grade on the property. In 1914 over 700' of work was done.

Equipment: includes a 3,850' aerial tram, 5-stamp mill, a 7' Lane mill, concentrator and bunkhouse. Power is supplied by a No. 3 Pelton water wheel operating under a 240' head. Thirty men are employed on the property. Report for 1913 shows an expenditure of \$41,267, with a production of 180 oz. bullion in test runs. See U. S. G. S. Bull. 622, p. 172.

GALENA BAY MINING CO.

ALASKA

Offices: 540 Orchestra Bldg., Chicago, Ill., and 811 Lowman Bldg., Seattle, Wash. **Mine office:** Valdez, Prince William Sound, Alaska.

Officers: J. B. Carter, pres. and mgr.; A. Stamford White, v. p.; Albert Barge, sec.; J. S. Jurey, asst. sec.; L. J. Rusk, treas.; Chas. Sonnenstad, supt.

Inc. 1906, in Washington. **Cap.**, \$500,000; shares \$1 par, non-assessable; 486,001 shares outstanding. Stock held by voting trust of 7 trustees (J. B. Carter, Arthur W. Cutten, E. C. Bodenoch, R. E. Pearse, B. G. Proctor, L. J. Rusk, C. A. Hayes and John S. Jurey, who are also directors) for a term of 10 years, the Continental & Commercial Trust & Savings Bank issuing trust certificates, in lieu of stock, which are negotiable and transferable. Annual meeting, second Tuesday in October.

Property: company now owns control of the Nikolai Mining Co.

The company's holdings proper, acquired in 1907, are all on Galena Bay, about 30 miles from Valdez, and include the Sunnyside, Copper Crown, Starvation, Sheep Run, Vesuvius, and 20 other claims, 22 of which are patented.

Development: by 2,200' adit on the Starvation, 400' adit on the Sunnyside, with only surface work and diamond drilling on the Copper Crown and Sheep Run claims. Ore occurs in lenses of chalcopryrite, pyrrhotite, quartz

and calcite, 4-5' long and up to 14" in width. On the Copper Crown a 4' vein of solid sulphide ore was opened up in a N. E. shear zone, assaying \$3-\$4 gold per ton. Geology fully described, p. 100, U. S. G. S. Bulletin 605. Work done since 1912 has been that necessary to secure patents, but regular work is to start as soon as plans are perfected.

GOLD KING MINING CO.

ALASKA

Probably dead. Described, Vol. XII.

Chas. R. Crawford, mgr., at last accounts, Valdez, Prince William Sound, Alaska.

Property: Gold King mine, at elevation of 3,750' on east end of an ice-surrounded mountain rising out of Columbia Glacier, 6 miles from Shoup Bay and 15 miles from Valdez. Reached by 8-mile trail from head of Shoup Bay.

Ore: free milling gold in quartz veins in graywacke. Veins vary in width from 2" to 36". Development by tunnels.

Equipment: includes 2-stamp mill, amalgamating plates, and a concentrator, operated by gasoline engines during about 6 months each year; production said to be about \$15,000 monthly.

GRANITE GOLD MINING CO.

ALASKA

Valdez, Alaska. **Officers:** B. F. Millard, pres. and treas.; W. R. Millard, 1st v. p.; O. S. Larsen, 2nd v. p.; J. W. Gilson, sec.; above, with S. L. Carter and Jafet Lindeberg, directors.

Inc. 1913, in Alaska, upon purchase from original locators for \$50,000. **Cap.**, \$500,000; shares \$1 par; outstanding, 430,000 shares. Annual meeting, first Tuesday in October. **Transfer office:** Childberg Bldg., Seattle, Wash. Listed on New York Curb, Spokane and Seattle Exchanges.

Company claims to have spent \$330,000 to March, 1916, on the property, and to have had a total production of \$277,000. Monthly expenses \$8,000 to \$10,000, with a monthly output of \$20,000; surplus March 1, 1916, \$21,000. Initial dividend, 2 cts. per share, paid April 10, 1916, and 2 cts. paid in May.

Property: 3 claims, 60 acres, unpatented, on the west side of Port Wells, on the coast between Hobo Bay and Harrison Lagoon, covers 3,000' of a vein of 3-3½' average width, strike N. 60° W., dip 31° N. Country rock consists of interbedded slates, graywackes and argillites cut by large masses of granite. Present development is said to indicate a split in the vein on the 200' level, continuing as two veins below this level. Metallic ore minerals are gold, and the sulphides of iron, zinc, lead and antimony. Ore said to run from \$6 to \$50, with average of \$12 per ton. See U. S. G. S. Bull. 622, pp. 136-138.

Development: 200' incline shaft and tunnels, with 4 levels opened up from 300' to 500' in length. Total underground workings, about 3,000'. Two levels are worked through the shaft, the other two through the 900' lower tunnel level. Reported in April vein had been cut on lower tunnel level about 900' from portal, said to give an additional 300' of back.

Equipment: includes 15 h. p. gasoline hoist, 180 h. p. oil-burning engine, 5 gasoline engines of from 7 to 36 h. p., 150 h. p. electric generator, 100 h. p. motor operating an air compressor, 600 cu. ft. capacity, 4,800' transmission line, and a 70-ton concentrator equipped with a 10-stamp Hendy mill, 7' Lane mill, crushers and rolls.

Production: 1916, averaged 60 to 70 tons per day, yielding about \$20,000 gross per month.

Reported in June that mill had been closed down, that a mistake had been made in figuring ore reserves and that development work was being done in an attempt to open up ore. Milling resumed in November, 1916. Good ore was opened on hoist, 210, and 350' levels. In April, 1917, an option was taken on adjoining property for \$100,000.

GREAT BRITAIN GROUP**ALASKA**

Owned by a Vancouver and Victoria syndicate. **Property:** at Whalebone Cove, on the western shore of South Valdez Island, Alaska, comprises 4 claims, showing bornite, tetrahedrite and chalcocite ore, occurring in the contact between limestone and altered lime.

Development: by 3 tunnels, showing 4 to 12% copper ore. Ore blocked out estimated at 1,800 tons by F. J. Crossland. Shipments of 700 to 800 tons have been made to the Tacoma smelter, said to average 3% copper. A 500-ton bunker was being erected on the beach for loading shipments on vessels. Probably idle. No returns secured.

GREAT NORTHERN DEVELOPMENT CO.**ALASKA**

Operating office: Valdez, Alaska. **Mine and works office:** Philips, Alaska.

Officers: Jas. Phillips, Jr., pres.; E. F. Gray, v. p.; Walter M. Briggs, sec.-treas.; Edwin F. Gray, gen. mgr.; preceding officers, J. C. Fairchild, H. F. Knoblauch and H. I. Gaskill, directors.

Inc. 1906, in Maine. **Cap.**, \$1,000,000; shares \$10 par, non-assessable; issued, 70,100. Is a holding company. Annual meeting, first Tuesday in November. Petley Morse & Co., auditors, 43 Exchange Place, New York.

Property: a solid tract of about 165 claims, about 3,000 acres, on the south bank of the Kotsina river, below the mouth of Roaring Creek, near the Copper River Railroad, and about 60 miles from the Bonanza mine of the Kenecott Co. Lands apparently lie in the greenstone formation.

Development: work totals 8,000', and is said to have opened up a large low-grade copper mine. Management plans to install flotation plant, 1918.

HEMPLE COPPER MINING CO.**ALASKA**

Valdez, Alaska. **Mine office:** Landlock, Alaska. **Officers:** S. A. Hemple, pres., treas. and gen. mgr.; F. S. Sylvester, v. p.; S. I. Hemple, sec.; preceding, with Arthur Lang and R. P. Ferguson, directors; Fred Mills, supt.

Inc. March, 1910, in Alaska. **Cap.**, \$1,000,000; shares \$1 par; non-assessable. Company is said to have expended considerably over \$75,000 on the property.

Property: 6 claims, 4 patented, 120 acres, with a 2-acre mill site, all timbered, near the Standard and Three Man mines, at Landlock Bay. Shows greenstone, slate and quartzite, carrying 3 veins with 5 or 6 shoots, said to average 24' in width and to be traceable 2,000', carrying chalcopyrite giving average assays of 3 to 6% copper. Mine is opened by tunnels of 50', 300', 575' and 800', with about 2,000' of workings, estimated by management to show about 200,000 tons of ore blocked out for stoping, which estimate seems high. There is no power plant, but property has 6 buildings and gasoline engine. Working two shifts, 1917, in the expectation of opening up the orebody on the 700' level.

LANDLOCK BAY COPPER MINING CO.**ALASKA**

Office: Valdez, Alaska. **Mine office:** Landlock, Alaska. Dr. W. A. Rystrom, pres. and mgr.

Inc. 1907. **Cap.**, \$1,000,000; shares \$1 par; issued 750,000 shares.

Property: 7 claims, 140 acres, on a small peninsula, with tide water on both sides, has 2 tunnels on the western side, besides a shallow shaft, 500' of drifts, a winze and raises, showing chalcopyrite, sphalerite and pyrrhotite ore assaying 7½% copper. Developing at last accounts. Geology fully described, p. 97, Bull. 605, U. S. G. S.—1915.

PATTEN CO-OPERATING CO.**ALASKA**

Address: Valdez, Alaska. W. E. Patten, mgr.

Cap., \$100,000; shares \$100 par.

Property: 23 claims, 475 acres, in Valdez mining district. Ore occurs as contact deposit in shale and bornite, carrying gold, silver and nickel values.

Development: by 400' of underground workings.

Equipment: includes compressor, steam power, pump, tramway. Management plans installing electric power in 1917 and erecting a 150-ton smelter.

RAE-WALLACE MINING CO.

ALASKA

Address: Don S. Rae, mgr., Gyde-Taylor Bldg., Wallace, Ida. Mine in the Willow Creek district, Alaska, reported under development, Sept., 1917.

RAMSEY-RUTHERFORD GOLD MINING CO.

ALASKA

Valdez, Alaska. **Inc.** in Sept., 1913.

Property: 10 miles N. E. of Valdez at an elevation of 3,500'; trail to the mine goes over Valdez glacier, making transportation difficult.

Ore: free milling gold quartz in fissure veins in graywacke.

Development: at the end of 1914 consisted of a 162' shaft with 500' of workings.

Equipment: includes several gasoline engines, air compressor, and a 5-stamp mill, which cannot be operated during the winter. In 1915 company employed 20 men and was reported to have considerable ore blocked out. Prospecting only being done, 1916-17. See U. S. G. S. Bull. 622, pp. 159-161.

SEA COAST MINING CO.

ALASKA

Address: Seattle, Wash., and Valdez, Alaska.

Officers: C. Christopher, pres.; Earl R. Pulver, sec.-mgr.

Property: 8 claims on Shoups Bay, near Valdez, said to show 6 gold quartz veins in graywacke and argillite. Developed by tunnels. Sampling is said to give results of \$30 per ton. Development work was being done, 1916, and a 10-stamp mill, hydro-electric power plant, 1,800' aerial tram were being built; an air compressor will also be added. Mill and power plant sites are near the landing, while the mine workings are at elevations from 1,750' to 2,600'. See U. S. G. S. Bulletin 622, p. 178.

VALDEZ CREEK PLACER MINES

ALASKA

Office: 705-8 Newport Bldg., Boston, Mass. **Mine office:** McKinley, Alaska.

Officers: G. W. Sias, pres.; F. E. Nye, v. p. and sec.; R. B. Griffin, treas.; also trustees.

Inc. Nov. 1, 1911, as Express Trust Co., in Massachusetts. **Cap.**, \$2,500,000; shares of no par value, non-assessable; 2,408,186 issued. Bonds: \$500,000 authorized, of which \$454,100 are outstanding.

Assets as at Dec. 31, 1916, are given as \$6,720,505, including properties, \$6,163,198; development, \$246,010; equipment, \$178,625; cash, \$1,120; bonds, etc., receivable, \$89,470; accounts receivable, \$21,154; interest prepaid, \$11,556. Liabilities include nominal share capital, \$5,571,465; mortgage, \$500,000; notes, \$567,642; and accounts payable, \$81,398.

Gross earnings in 1916 were \$23,436, and expenses, \$113,516.

Property: placer claims on Valdez Creek, headwaters of Susitna River, Alaska. Examined by Forbes Rickard and Pierre Bouery. A large quantity of gravel awaits hydraulicking, for which ditches, piping, power plant, etc., have been constructed. The property is in a remote district and the cost of securing supplies is high, 4.8 cents per lb. from Chitina, a distance of 240 miles. The season is short also.

Production: in 1916 was 36,000 cu. yds. of 62-cent gravel. Since company acquired property it has yielded \$69,880. Prior to this about \$300,000 was recovered by simple methods.

ARIZONA

AJO, PIMA COUNTY

AJO CONSOLIDATED COPPER CO.

ARIZONA

Office: Calais, Maine.

Officers: Jas. Phillips, Jr., pres.; Walter M. Briggs, v. p.-treas.; H. I. Gaskill, sec., with Jeremiah Hourin, H. C. Slack, Guy Murchie and A. D. Parker, directors. James P. Gaskill, mine supt., Ajo, Pima Co., Ariz.

Inc. Dec. 5, 1912, in Me. **Cap.**, \$6,000,000; shares \$10 par; non-assessable; 600,000 shares outstanding. Annual meeting, June 14th.

Property purchased in 1917 by New Cornelia Copper Co., which see.

AJO CORNELIA COPPER CO.

ARIZONA

Address: P. O. Box 78, Miami, Ariz.

Officers: Ed. J. Grant, pres.-mgr.; E. B. Shockley, v. p.; J. D. Elliot, sec.-treas., with I. L. Greninger and J. B. Johnston, directors.

Inc. Dec. 11, 1916, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; 768,000 shares outstanding.

Property: 14 claims, 280 acres, adjoining the Ajo Consolidated at Ajo, Pima county, carries a lenticular deposit of carbonate and sulphide ore in rhyolite, said to average better than 10% in gold-silver-copper. Assessment work done in 1916. Is a prospect of doubtful merit.

ARIZONA CORNELIA MINES CO.

ARIZONA

Office: Tucson, Arizona.

Officers: John Nelson, v. p. and treas.; Tom K. Richey, sec., with John Latz and M. G. Adams, directors.

Inc. 1917 in Ariz. **Cap.**, \$2,000,000; shares \$1 par.

Property: 7 claims, adjoining the New Cornelia in the Ajo district, Pima Co. Company plans diamond-drill exploratory work.

COLONIAL COPPER CO.

ARIZONA

Norwood, Mass. Geo. H. Morrill, Jr., former president, reported that company was sold out on foreclosure sale, March, 1916.

Inc. April 29, 1910, in Maine. **Cap.**, \$3,000,000; shares \$10 par, non-assessable; issued, \$1,720,000. Was a reconstruction of the Growler Copper Co. Bonds, \$500,000 authorized, at 5%; issued, \$41,000. Annual meeting, first Monday in June.

Property: 30 claims, 26 patented, 516 acres, in 2 groups, also a 10-acre mill site, apparently held under bond and lease, in the Growler Mountains, 15 miles south of Ajo and about 60 miles southeast of Gila Bend, the railway junction point. The Copper Hill group, of 18 claims, shows an ore zone up to 300' wide, between diabase and limestone, with a gossan traceable 1½ miles, reported by company to carry 3 veins, of 2 to 7' width, having oxidized ores, silicates, bornite and chalcocite, giving assays of 2 to 46% copper, 1 to 66 oz. silver and 0.12 to 2 oz. gold per ton.

Development: by the 100' Daisy shaft, 260' Copper Hill shaft, and 320' Yellow Hammer shaft, and the 185' Copper Hill tunnel, with a total of 1,600' of workings, estimated by management to show about \$1,000,000 worth of ore.

Equipment: includes 170 h. p. steam plant, with 8 h. p., 26 h. p. and 70 h. p. hoists, and a 2-drill Ingersoll-Rand air compressor. Buildings include assay office and commissary, boarding house and smithy, with 6 tent houses. Idle.

CORNELIA AJO COPPER CO.

ARIZONA

Office: 50 Broadway, New York City, and Tucson, Ariz. **Mine address:** Frank C. Meyer, supt., Ajo, Pima Co., Ariz.

Officers: J. P. Harvey, pres.; J. B. Wright, v. p.; E. I. Chapman, sec.; H. J. Schellenberg, treas.; preceding, with Nathan Kendall, C. H. McArthur and W. P. Michel, directors. Security Transfer & Registrar Co., transfer agents; Corporation Trust Co., registrar.

Inc. in Delaware. **Cap.**, \$2,500,000; shares \$1 par; 1,340,000 outstanding; fully paid and non-assessable.

Property: 27 mining claims and option on 2 others, making a contiguous group with combined area of about 500 acres, on the southern slope of the Ajo Mountains adjoining the New Cornelia and the Ajo Cons. Copper Companies at Ajo, Ariz. Owns property of Cornelia Extension Copper Co.

Geology: in general is similar to that of the New Cornelia Copper Co., which see, but claims are wholly outside the area of mineralized monzonite. Samples from the shallow shafts and open cuts are reported to run from 1.5% to 38% copper.

Development: no 1917 development reported. Old development consists of open cuts, trenches and shallow shafts up to 50' deep. Company prospectus states that property would be developed by diamond drilling to a depth of 1,000' to 1,500', and a main shaft would be sunk to 200' depth in 1918.

CORNELIA WEST MINING CO.

ARIZONA

E. E. Ganz, trustee, Phoenix, Ariz.

Company organized by Phoenix, Ariz., people to take over the 12 claims of Geo. Sayer adjoining the New Cornelia Copper Co. The contract cost of the property was \$37,500. It was reported that company would incorporate for \$7,500,000, shares \$5 each. Very little development work has been accomplished to show value of the property.

LITTLE AJO COPPER MINING CO.

ARIZONA

Officers: W. A. Knox, pres., Apex, Mo.; C. C. Wheeler, v. p.; O. T. Richey, sec.; C. E. Walker, treas., all of Tucson, Ariz.

Inc. 1917. **Cap.**, \$1,000,000; shares \$1 par. First allotment of 100,000 shares treasury stock offered at 25 cents.

Property: 3 claims adjoining the mines of the New Cornelia, Ajo Consolidated and Cornelia Ajo, at Ajo, Arizona. Greater portion of the claims is covered with conglomerate, while the bottom of a 50' shaft is said to show slightly altered porphyry.

NEW CORNELIA COPPER CO.

ARIZONA

Subsidiary of the Calumet & Arizona Mining Co. Gordon R. Campbell, sec., Calumet, Mich. **Operating office:** Ajo and Warren, Ariz. Same directorate as the Calumet & Arizona Mng. Co., with Dr. L. D. Ricketts and Geo. H. Augustine.

Inc. Sept. 28, 1909, in Delaware, as a reconstruction of the Cornelia Copper Co. **Cap.**, \$8,000,000; shares \$5 par; non-assessable; issued, \$6,000,000.

Company authorized an issue of \$4,000,000 6% 12-year sinking fund gold bonds, dated Sept. 1, 1915, maturing Sept. 1, 1927, convertible into stock at \$10 per share, to finance the purchase of necessary equipment and construction work. All subscribed at par. 76% of the stock and \$3,100,000 bonds owned by C. & A. Co.

History: company's early history and its experiments with new processes are fully described in Vols. VI, VIII and X, Copper Handbook. In 1910, the General Development Co. bought 20,000 shares of stock for \$20,000, spending the money under an option for a stock control, putting down 5 diamond-drill holes, deepest 188', which showed the ground to be oxidized to a depth of about 30', followed by sulphides, estimated by the company to average 2 to 2.75% copper. The option was forfeited 1910 and property was leased to H. C.

Chamberlain, who shipped concentrates from 800 tons of 4% ore to the Copper Queen smelter.

In 1911 the Calumet & Arizona Mining Co. took an option on 76% of New Cornelia stock, and under the direction of John C. Greenway, general manager, and Dr. L. D. Ricketts, cons. engr., proved the existence of a large body of low-grade copper ore. Laboratory tests showed that the carbonate ore could be treated by leaching with dilute sulphuric acid and the sulphide ore by flotation.

Experimental leaching plants of one ton and later of 40 tons per day capacity were erected at Ajo and tests made for over a year. Results of 310 charges showed: average heads, 1.31% copper; average tails, .271% copper; extraction, 79.36%, and 0.88 lbs. per k. w. hr.

Meanwhile wells were drilled to locate a water supply, and a shaft sunk on a hole 7 miles from the property found a satisfactory water stratum. In the summer of 1915 the Tucson, Cornelia and Gila Bend Railroad from Gila to Ajo was started, and completed in Feb., 1916. Work was immediately started on a 5,000-ton leaching and electrolytic precipitation plant, which was in operation in May, 1917. Rated production of this plant is 100,000 lbs. of cathode copper daily, but this will be increased later.

In July, 1917, the New Cornelia Copper Co. acquired the property of the adjoining Ajo Consolidated Copper Co. property, in which a substantial tonnage of similar ore has been developed by diamond drilling and underground work.

Property: 55 patented and 38 unpatented claims, and one patented and 14 unpatented mill sites at Ajo, 44 miles south of Gila Bend, Ariz. Property comprises about 1,704 acres, 55 of which constitute the New Cornelia orebody.

Property of the Ajo Consolidated, 7 patented, and 52 unpatented claims, adjoins the New Cornelia on the south, and the orebody as developed, a continuation of the New Cornelia, covers about 21 acres.

Geology: claims cover an area of rhyolite, lava, breccia and tuff beds, intruded by a huge mass of monzonite porphyry, which cuts and uplifts the rhyolite. There were subsequent intrusions of diorite and diabase porphyry, probably connected with the great mass of Tertiary basalt and andesite lava flows which cover the surrounding country. Mineralization has formed a low-grade disseminated deposit with high-grade veins in monzonite and narrow rich veins in the adjoining rhyolite. The disseminated orebody, covering about 55 acres, has a pear-shaped outline. The depth of the ore varies from less than 50' on the outskirts to more than 600' in the center of the orebody.

In the Ajo Consolidated property the disseminated mineralization often extends beyond the monzonite into thoroughly brecciated rhyolite, but in general the ore followed the contact of the two rocks, dipping steeply S. W. and more flatly and irregularly to the S. E. For about 300' along the contact there is a lens of ore of much higher grade than the average.

The original mineralization was chalcopyrite and bornite with comparatively little pyrite. Surface alteration has converted the primary sulphide minerals to malachite to a depth of about 20' below the deepest arroyos and 150' below the highest hills. The plane of demarcation between carbonates and sulphides is almost horizontal, agreeing with the present ground water level. Chalcocite is rare in the New Cornelia orebody, but locally of much importance in the Ajo Consolidated ground, particularly in the ore in rhyolite below the water level.

Development: 84 diamond drill holes of an average depth of 300', with over 5,000' of underground work to check results obtained have proved the existence in the New Cornelia orebody of 11,954,400 tons of carbonate ore carrying 1.54% copper and 28,303,600 tons of sulphide ore carrying 1.5% copper, or a total of 40,258,000 tons carrying 1.51% copper.

Sixty-four diamond drill holes of an average depth of 445' and a large amount of underground development have indicated the existence on Ajo Consolidated ground of 846,100 tons of carbonate ore averaging 1.96% copper, and 11,998,800 tons of sulphide ore averaging 1.79% copper, or a total of 12,844,900 tons carrying 1.8% copper. The extent of the orebody to the south and east has not been determined. Several drill holes on both properties stopped in ore at from 400' to 600'.

Ore reserves: total estimated tonnage, based on a 1% minimum basis, is 53,102,900 tons carbonate ore, carrying 1.58% copper. Gold and silver values in the carbonate ore are negligibly small, but the sulphide ore carries between 30 c. and 50 c. per ton in precious metals.

All the carbonate ore and about 22,500,000 tons of the sulphide ore are available for steam shovel mining. The occurrence of ore at the surface obviates stripping and loss of ore or vitiation of grade through admixture of ore with capping. Grade of ore already mined has averaged .12% above estimates.

Equipment: plant is located about one mile from the orebody, with which it is connected by a double-tracked standard gauge railroad. Ore is loaded into cars by three 100-ton steam shovels, the cars dumping directly into the large crusher.

Ore is crushed to 6" size in a large gyratory crusher; 4 smaller gyratory crushers reduce it to 3" cubes before it goes by belt conveyors to the storage bins. From the 10,000-ton storage bins the ore is carried by 4 pan conveyors to 12 Symons disc crushers, reducing it to $\frac{1}{4}$ " in size.

From the crushing plant the ore is carried by an overhead conveyor 100' long to 11 leaching tanks, each 88' square and 15' deep, built of reinforced cement lined with lead. The conveyor advances across the tanks at 12' an hour. Each tank holds 5,000 tons of ore, and each charge remains in the tank 8 days. The acid solution is handled by two 3,500 gal. a minute horizontal centrifugal pumps.

The pregnant solution from the tanks is treated in 4 sulphur dioxide gas towers, 20' in diam. and 40' high, to change ferrous to ferric iron, and then pumped into the 152 electrolytic tanks, holding 77 cathodes. The anodes are of lead, and the starting cathode sheet is 3' square, weighs 16 lbs., but accumulates copper by the electric current until it weighs 165 lbs., when it is withdrawn. The discarded solution goes over scrap iron. The sulphur dioxide gas is made by burning pyrites in 4 Wedge furnaces and purified by the Cottrell process.

The \$1,000,000 power plant has 5 oil-fed 825 h. p. boilers, 2 steam turbines of 7,500 k.w. capacity, 3 rotary converters.

Production: late in 1916 shipments of silicious ore were begun to Douglas, where the ore is used as a flux in the C. & A. smelter. About 200 tons of 2.5% ore being shipped daily, 1917, for this purpose, and both grade and tonnage will be increased by mining the higher grade ore in the recently acquired Ajo Consolidated property.

New Cornelia is a big mine, resembling the Chino in occurrence and size, but its output is at present oxidized ore. When the deeper-seated sulphide ore is mined a concentrator will either be added or a battery of roasting furnaces installed.

It is believed that the new plant will produce about 35,000,000 lbs. of copper yearly at a cost of 9.5 cts. per lb., giving the stock an intrinsic value far above the market price, even with copper at 15 c. The stock is considered a good investment.

*BAGDAD, HILLSIDE, YAVAPAI COUNTY***ARIZONA HILLSIDE DEVELOPMENT CO.****ARIZONA**

Address: 308 Continental Bank Bldg., Salt Lake City, and Hillside, Ariz.

Officers: E. R. Pembroke, pres.; P. P. Clark, v. p.; J. H. Wimwood, sec.-treas.; directors.

Inc. Sept., 1917, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; 750,000 issued.

Property: 400 acres in Eureka district, Yavapai Co., Ariz., showing a fissure vein in a crushed or sheet zone in schist, dipping W. with N.-S. course. Orebody is up to 14' thick. Ore carries zinc, silver, copper and lead, shipments returning 45% zinc, 6 to 9 oz. silver, 4 to 6% lead, and 1 to 2% copper.

Development: by 200' incline shaft. Reserves are estimated at 10,000 tons. Mine was only recently taken over by this company and is in process of development.

BAGDAD COPPER CO.**ARIZONA**

Office: Suite 3249, No. 120 Broadway, New York. Mine at Bagdad, via Hillside, Yavapai Co., Ariz.

Officers: E. B. Bronson, pres.; F. C. Hart, v. p.; B. E. Page, sec.-tres.; Herman Cook, asst. treas.; preceding officers, H. Richardson, Gideon Giroux and G. D. Hopkins, directors.

Inc. in 1911 in Delaware. **Cap.**, \$6,500,000; shares \$5 par; outstanding, 1,097,428 shares.

In May, 1911, an unsuccessful attempt was made to finance the company by the offer of 100,000 shares to the public at \$4 a share. In Oct., 1912, a 2-year bond on the property was given to the General Development Co. of New York (Lewisohn), and this company at once began drilling operations to develop more ore. Work with 3 churn drills was carried on up to April, 1913, when the bond was relinquished, but a new option on control of the company was taken in Oct., 1913, and is still in force.

Property: 53 patented claims and 9 unpatented, over 1,000 acres, in the Copper Creek region, Eureka district, Yavapai Co., 26 miles by wagon road from Hillside, on the Santa Fé line to Phoenix. Company has spent over \$600,000 on the property in purchase and in development.

Development: by tunnels and churn drilling. There were about 8,000' of underground workings and 33,255' of drilling Oct., 1915. In 1911 Allen H. Rogers estimated 4,324,500 tons of ore, averaging 1.93% copper. In 1912 F. H. Clark estimated 4,883,600 tons, averaging 1.934% copper. In 1914 H. A. Geisendorfer made detailed estimates of 6,031,000 tons of blocked ore, averaging 1.77% copper and 7,246,200 tons probable ore, averaging 1.60% copper, a total of 13,277,200 tons of ore, averaging 1.68% copper, underlying 67.88 acres. Average thickness of ore is estimated at 58.4'.

In 1915 a reconnaissance survey for a branch railroad was made. Work planned includes a branch railroad, water-power installation, mining equipment and a 3,000-ton concentrator.

NIAGARA COPPER CO.**ARIZONA**

Presumably dead, and mine near Bagdad, Ariz., idle. See Copper Handbook, Vol. XI.

*BISBEE, COCHISE COUNTY***BISBEE COPPER MINING & DEVELOPING CO.****ARIZONA**

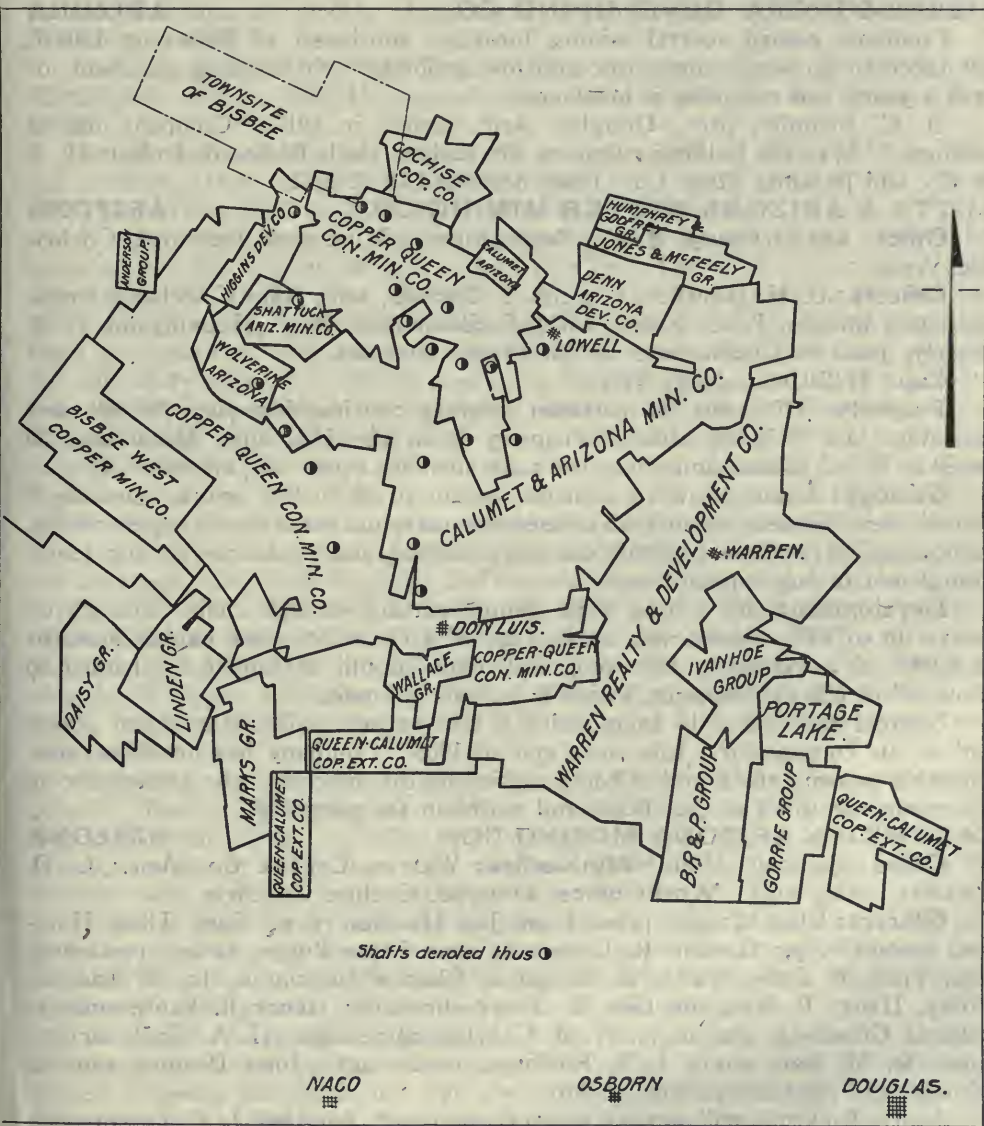

Office: Bisbee, Ariz.

Officers: Daniel B. Seed, pres.; Joseph Water, v. p.; W. G. Hubbard, treas.; A. H. Livingston, sec.; above, with P. Winwood, directors.

Inc. 1916, in Arizona. **Cap.**, \$1,500,000; shares \$1 par, non-assessable.

Property: 19 claims, 12 patented, 273 acres, comprising the Winwood group and other claims, located ½ mile north of Lowell and a mile east of Bisbee. Claims adjoin the Arizona group, bonded 1916 by the Copper Queen Co., but relinquished. Lands are north of the Denn Arizona. They are not near the Copper Queen mines, as claimed, but are north of the Dividend fault and lie outside of the recognized ore belt. Claims are said to show iron outcrops and some copper carbonate ore, but the U. S. Geological Survey map shows that none of the productive limestone formations of the district occur on the property. The map indicates schist and a very small acreage of porphyry on the southerly claims, but most of the group is covered by the barren cretaceous rocks.

Although one drill hole is down over 1,000', July, 1917, sampling of the

PROPERTY MAP OF BISBEE DISTRICT, ARIZONA

drill cores has not shown any commercial values. A 3-compartment shaft is being sunk near the drill hole on the Pauline claim.

In our opinion the claims are entirely out of the mineralized area and have little, if any, chance of becoming profitably productive.

A New York brokerage house has sent out very attractive-looking advertising matter regarding Bisbee and the Bisbee Copper Mining & Dev. Co., which contains many misleading statements.

The property is not in the "heart of the Bisbee Copper Camp," and such gross misrepresentation cannot be too strongly condemned.

Development on the property is quite insufficient to predict its becoming a "second Calumet & Arizona" and an "early dividend payer," and the public buying stock on such promises is doomed to be disappointed. Apparently the company is basing all its hopes of developing a mine on its geographical position in utter disregard of geologic conditions.

BISBEE-SONORA DEVELOPING CO.

ARIZONA

Company owned several mining locations southwest of Bisbee in 1906-7, but failed to do assessment work and lost property. No meeting was held for over 4 years, and company is insolvent.

H. C. Beumler, pres., Douglas, Ariz., writes in 1917: "Company out of business." Was the holding company for Badger Hall, Bisbee & Duluth M. & D. Co. and Paradise Mng. Co. Fully described, Vol. XII.

BUTTE & ARIZONA COPPER MINING CO.

ARIZONA

Office: 619 Hennessy Block, Butte, Mont. Mine near Hereford, Cochise Co., Ariz.

Officers: B. H. Dunshee, v. p.; A. S. Nichols, sec.; John C. Adams, treas.; preceding officers, L. O. Evans, Chas. S. Shoemaker, A. P. Henningson, C. B. Mosely, John E. Corette and D. M. Watts, directors.

Cap., \$1,250,000; shares \$1 par.

Property: 14 claims, 11 patented, costing considerably over \$60,000, was exchanged for \$450,000 stock. Property is in the Huachuca Mountains, 35 miles S. W. of Bisbee, and about the same distance north of Cananea.

Geology: claims show an ochrous gossan of 10 to 300' width, covering a contact vein between syenite and limestone carrying occasional copper oxides, carbonates, pyrite and argentiferous gray copper, and chalcocite of fair tenor, though not in large quantities.

Development: by a long main tunnel cutting several small veins giving assays up to 18% copper with an average of 4.5% tenor, mine having upwards of 3,900' of workings. Main vein, 350' from mouth of tunnel, is claimed to show 39' of 6% chalcopyrite, which is an overestimate.

Nearest railroad is 15 miles, with a fair wagon road. Has steam power and an air compressor. Idle since end of 1908. Company has no debts, considerable treasury stock and is being carried by the directors, who are advancing the money required to pay taxes and maintain the property.

CALUMET & ARIZONA MINING CO.

ARIZONA

Office: Calumet, Mich. **Mine office:** Warren, Cochise Co., Ariz.; L. D. Ricketts, acting mgr. **Works office:** Douglas, Cochise Co., Ariz.

Officers: Chas. Briggs, pres.; Capt. Jas. Hoatson, v. p.; Capt. Thos. Hoatson, second v. p.; Gordon R. Campbell, sec.; Peter Ruppe, treas.; preceding, with Thos. F. Cole, Walter B. Congdon, Chas. d'Autremont, Jr., William E. Corey, Henry R. Rea, and Geo. E. Tener, directors; Henry B. Paull, auditor; John C. Greenway, gen. mgr.; W. B. Gohring, mine supt.; H. A. Clark, smelter supt.; D. M. Rait, engr.; J. B. Rawlings, purch. agt. John Hooper, supt. at Jerome, and M. Curley, supt. at Ajo.

L. D. Ricketts will act as general manager, pending J. C. Greenway's absence on war work.

Inc. March, 1901, in Arizona. **Cap.**, \$2,500,000; shares \$10 par, increased Feb. 15, 1911, to \$6,500,000; shares \$10 par; issued 642,462 shares; held for exchange, 338 shares. The company, which already controlled the Superior & Pittsburgh Copper Co., through ownership of 1,494,333 shares out of a total of 1,499,792 shares issued, in Feb., 1916, took over the property. All S. & P. assets were transferred to the C. & A. Co., effective Dec. 31, 1915, basis of exchange being $3\frac{1}{2}$ shares Superior & Pittsburgh for 1 Calumet & Arizona, and a bonus of \$1 per share for quick delivery of stock. American Trust Co., Boston, and Mechanics and Metals National Bank, New York, registrars; State Street Trust Co., Boston, and Bankers' Trust Co., New York, transfer agents. Stock is listed on the New York and Boston Stock Exchanges. Annual meeting, second Monday in April.

Balance sheet of Dec. 31, 1916, gave quick assets of \$8,276,703, including cash, \$2,643,570; copper, silver and gold in process, \$3,898,137; notes and accounts receivable, \$1,045,614; supplies and items in suspense, \$689,382; accounts payable are \$670,040.

Total surplus, \$38,083,964. Total earnings on copper, gold and silver were \$20,495,430; interest, \$92,511; expenditures were \$9,431,105; net income, \$11,155,005.

Dividends have been as follows: \$2 in 1903; \$6.50 in 1904; \$8.50 in 1905; \$13 in 1906; \$16.50 in 1907; \$4 in 1908, 1909, 1910, 1911; \$4.25 in 1912; \$5 in 1913; \$3 in 1914; \$3.25 in 1915; \$9 in 1916; \$9 to Sept., 1917.

In 1911 the company took an option on the New Cornelia claims, 243 acres in the Ajo district, 42 miles south of Gila. The C. & A. was to receive treasury stock of the New Cornelia Copper Co. (described under its own title), for all money expended in development work on the property. It exercised its option in 1913 and now owns 918,821 shares, 76.57% of the stock of the subsidiary company. Stock cost C. & A. \$1,617,325, about \$1.76 per share. Later it subscribed at par for \$3,100,000 bonds of an issue of \$4,000,000, which amount it set aside from earnings over dividends during 1914-15. It built jointly, with the E. P. & S. W., the 43-mile Tucson, Cornelia and Gila Bend Railroad, running from Gila Bend to Cornelia. All told, C. & A. has about \$6,000,000 in New Cornelia, so that dividends during the years 1914-1916 were necessarily lower than earnings would warrant if it had not had this extra burden to carry. The New Cornelia Co. entered the producing class in June, 1917.

The C. & A. also took an option on 70% of the \$1,000,000 capital stock of the Gadsden Copper Co., at Jerome, Arizona, in October, 1916, and is obligated to spend \$100,000 in exploration work on the property. Property consists of 39 claims adjoining the United Verde Extension Mining Co. on the south. In Sept., 1917, property was fully equipped and shaft was down seven hundred feet.

Property: includes the original claims at Bisbee, claims formerly owned by the Superior & Pittsburgh C. Co., bought Dec. 31, 1915; the American Saginaw group, bought in 1912; the Calumet & Bisbee group and the Higgins group, bought in 1913; total area of about 2,068 acres, patented, within the mineral zone of the Warren district, Ariz.

Side-line agreements with the Copper Queen Cons. Mng. Co., the Denn-Arizona Mng. Co. and the Shattuck Arizona Copper Co., insure freedom from possible litigation, and continuance of the friendly feeling and neighborly co-operation existing from the very inception of this company.

Geology: the mine is opened in limestone, near a porphyry contact, with occasional porphyritic intrusions. The surface gives small indications of values, showing but small and infrequent outcrops, the existence of the original orebodies in the Irish Mag claim, farthest to the north, having been inferred from underground work in the adjoining territory of the Copper Queen,

grade sulphide ore is blocked out. A 15-mile railway will be required to render this property a producer.

Equipment: surface equipment is very complete. The original machinery plant was clustered about the Irish Mag shaft, on a steep hillside, where limited room was secured by grading, but the principal plant is now at the Oliver shaft, including five 280 h. p. marine boilers, burning crude petroleum, with storage tanks.

The principal compressor plant, at the Oliver, has a 35-drill Sullivan Corliss cross-compound 2-stage air compressor, with 17x34" steam cylinder and 20x34" air cylinder, having a piston displacement of 6,600 cu. ft. of free air per minute. There also are 3 Sullivan straight-line air compressors. Much of the ore is so soft that it can be bored with a breast auger, thus reducing requirements in the way of air for power drills. Electricity is used extensively on surface and also for pumping. The electric power plant at the Oliver shaft has 1,000 k. w., 500 k. w. and 300 k. w. Westinghouse-Parsons 2,200-volt, 60-cycle, 3-phase turbo-generators, two 220 k. w. 2,200-volt 60-cycle 3-phase motors, direct-connected with the steam turbine, a 300 k. w. General Electric rotary converter, transforming a 2,200-volt alternating current to a 550-volt direct current, for operating the street-car line to Warren.

The steel-frame machine shop is divided into two 60x48' parts, for the machine shop and smithy. Adjoining is a plate shop, 40x128', of steel frame, with corrugated iron roof and siding. There is a framing mill at the Irish Mag shaft, also a warehouse and office building. A 60x125' administration building is planned to be erected at Warren, the town site adjacent to the Calumet & Arizona. A hospital with an efficient staff is maintained for the employees, and a model changing house has hot and cold running water, tub and shower baths and lockers for 500 men. Fire protection is furnished by direct pipe lines to large storage tanks, all hose couplings being made to connect with those of the Bisbee fire department. An automatic telephone system has stations underground and on surface, and is connected with the smelter at Douglas.

The company's smelter is located at Douglas, 25 miles from the mine, receiving ore over the El Paso & Southwestern Railway, at a very favorable freight rate. The original smelter was blown in Nov. 15, 1902, and has been twice enlarged, giving the old works a capacity of nearly 3,000 tons daily.

The Smelter

The new smelter, completed 1913 at a cost of about \$2,000,000, was designed by C. H. Redpath and built and equipped with the able assistance of Messrs. Greenway and Wood. It is fully described by Richard H. Vail, in the Eng. and Min. Journal, vol. 98, p. 102, July 18, 1914. The works consist of a sampling mill, crushing plant, calcining plant, reverberatory, blast furnace and converter departments and 6 mixing beds, each of 10,000 tons capacity, together with a 5,000-ton coke storage bed.

The crushing and sampling plant, 40x84' on the ground and 5 stories high, is built of steel and concrete throughout, and is divided into 2 sections, operating independently of each other. Each section has a crushing and sampling department. Ore from the crushers at the receiving bins is delivered over an incline conveyor to the crushing and sampling plant, where the large sizes are screened out for the blast furnaces. The sampling department, equipped with Snyder automatic samplers, cuts the ore 4 times, making a sample weighing 1.6 or 3.2 lbs., as desired, per ton of ore passing through. The plant is flexible and ore may be crushed and screened and discharged at any desired size.

The material from the sampling and crushing plant is passed to mixing beds similar to those in use at the Cananea smelter, there being 3 beds for

coarse and 3 for fine ore. The coarse ore mixed with coke is conveyed directly to the coke charge bins over the blast-furnace charge floor, the fine ore going directly to the calciner, or roaster plant.

The roaster plant has twenty-four 258" Herreshoff roasters, having a capacity of approximately 80 tons of fine ore per day. The plant is equipped with a tile and steel dust chamber, 60x140x70' high, equipped with baffles and wires and roofed with copper, discharging into a brick-lined steel chimney, 20' inside diameter by 279' high.

Twelve of these roasters were completed early in 1917, and are being used in connection with a newly constructed sulphuric acid plant, which is furnishing 200 tons of 60 degree Baume acid to the New Cornelia Copper Co.

A 222x460' building, of steel frame, sheathed with iron, covers the blast furnace, reverberatory, converter, and copper-casting departments. The blast-furnace department consists of two 48x40' blast furnaces, and has a steel dust chamber, 60x180x70' high, equipped with suitable baffles and wires. The gases from the converters will also pass through this chamber and be discharged into a brick-lined steel chimney, 25' inside diameter by 305' high. Ore and coke is discharged directly from the bin over the charge floor into cars resting upon platform scales, the charge car being propelled from the scales to the charge doors of the furnace by an electric motor.

The reverberatory department contains 4 reverberatory furnaces, 19x100' in size, with a foundation and building for a fifth furnace in place. Each furnace is equipped with two 712 h. p. Stirling boilers. The furnaces are charged directly from the calcine cars running on a track overhead. Matte is tapped into 20-ton pots, and transferred by cranes to the converters, slag being skimmed directly into 25-ton pots, running on tracks underneath and just in front of the skimming end of the furnaces.

The converter department, having a main converter aisle 55' wide, and two 40-ton electric traveling cranes, has stands for 6 Great Falls type converters. There are also 2 straight-line casting machines and other necessary equipment. The converter slag is poured directly into the reverberatory furnace.

The power house, formerly 80x160' in size, was increased, 1907, by the building of a transverse section 100x100' in size, the new building being divided through the center by a row of columns into 2 bays, each 50' wide, and each served by a 10-ton hand-power traveling crane. Equipment includes two 14 & 28x36 Allis-Chalmers Tandem Corliss engines, all driving No. 10 Connersville blowers. One 22 & 48 & 52 & 52x48 and one 22 & 42 & 48 & 48x48 Nordberg cross compound Corliss blowing engines, and one 20 & 40 & 44 & 44x48 Allis-Chalmers blowing engines.

There are also a 750 k. w. and a 500 k. w. Allis-Chalmers steam turbine, driving 440-volt, 60-cycle, 3-phase generators, and one 165 k. w. and one 200 k. w. motor generator sets for converting alternating current to direct current for cranes and locomotives.

There are also 2 triple expansion steam pumps, size 8 & 12 & 20 & 22x24, and 3 motor-driven centrifugal pumps for water service; also two 14 & 25 & 2-36x24 Prescott steam condensers. Steam is supplied from the boilers over the reverberatory furnaces and the old boiler plant is closed down.

The smelter plant includes a machine shop and smithy, both of steel frame, and a considerable number of dwellings.

Ore reserves: October, 1916, are given as 1,976,815 tons of 4.99% ore, compared with 1,610,264 tons in 1915.

Production: up to July, 1917, the Calumet & Arizona mines at Bisbee have produced 5,763,226 dry tons of ore, yielding 634,694,594 lbs. copper and \$6,913,072 in gold and silver. This tonnage is exclusive of the Superior & Pittsburgh production prior to consolidation.

(a) Per pound copper, after crediting gold and silver.

* First nine months.

During 1916, 843,813 tons of ore were mined, dry weight. There was shipped 35,785 tons of low-grade sulphide ore to Sasco and Miami, where a premium was paid for high iron and sulphur contents. Smelter treated 1,085,082 tons of dry ore, of which 275,581 tons were custom ores.

Production for 1917 was somewhat hampered by labor strikes, resulting in the forcible deportation in July of 1,168 "undesirables," belonging to the I. W. W., by the citizens of Bisbee.

Mining operations for 1916 at the Bisbee properties were the largest in the history of the company. Over 162,703 more wet tons of ore were mined than in 1915, and nearly 6 miles more of development work was done. Although an enormous tonnage was shipped, ore reserves showed a very large increase.

Safety organization, which was formed in 1915, did very effective work. With 26.6% more men employed at top-notch production for entire year, total accident rate decreased 18.1%, while fatal accidents decreased 47.7%. New hospital, to cost \$100,000, will be started in 1917.

Has extremely valuable holdings at Bisbee, only part of which are explored. It is reasonable to assume a 20-year life for this area.

In 1912, when copper sold at 12.6 c. per pound, Calumet & Arizona stock sold as high as \$83.25 per share. In 1916, with net earnings of \$11,156,836, and copper averaging 25.75c, the stock sold as low as \$66. In 1917, the earnings for first six months were nearly \$6,000,000, equivalent to \$9.10 per share. The stock is a safe and profitable investment at present prices.

An analysis of the 1916 balance sheet by Geo. L. Walker shows cash and current assets of \$10.30 per share outstanding after setting aside \$843,387 for depreciation, etc. In addition it owns New Cornelia stock, which at \$18 per share and bonds at par, is equivalent to \$30.72 for each share; sundry investments equivalent to 84 c. per share, giving a total value of \$42.08 for the stock, exclusive of its Bisbee holdings its smelter and sulphuric acid plant. As these Bisbee and Douglas properties earned \$17.35 per share of issued stock in 1916, it is evident that the shares represent an actual value in excess of \$100, and that New Cornelia will soon replace any probable lessening of earnings in future years.

COCHISE COPPER CO.

ARIZONA

Property reported sold to Standard Mining Co., for \$100,000, Oct., 1914.

COCHISE DEVELOPMENT CO.

ARIZONA

Bisbee, Cochise Co., Ariz. **Officers:** Lemuel C. Shattuck, pres.; Chas. L. Jones, v. p.-gen. mgr.; T. O. McGrath, sec.; Jos. M. Muheim, treas.

Inc. Aug. 1, 1905, in Arizona. **Cap.**, \$1,000,000; shares \$10 par, succeeding the Cochise Copper Mining Co. Annual meeting, second Tuesday in January.

Property: 16 claims, 176 acres, abutting on the Holbrook mine of the

Copper Queen Consolidated, and lying north of the Dividend fault and Dubacher gulch.

Development: by a 900' three-compartment shaft. Drifts on the 300', 600' and 900' levels show small bunches of sulphide ore.

Equipment: includes a 100 h. p. boiler, a 10x30" first-motion double-drum hoist, good for 1,200', and a 6-drill Sullivan straight-line air compressor. Buildings are an engine house, boiler house, 20x40' carpenter shop, 20x30' smithy, and a coal trestle. Idle since 1907.

COPPER QUEEN CONSOLIDATED MINING CO.

ARIZONA

Branch of Phelps-Dodge Corporation, which see.

DENN-ARIZONA COPPER CO.

ARIZONA

Bisbee, Cochise Co., Ariz. **Officers:** Martin Pattison, pres.; Lemuel C. Shattuck, treas.; J. G. Williams, sec.; Byron M. Pattison, Thos. Bardon and H. L. Mundy, directors.

Inc. Jan. 14, 1907, in Minn., as successor of Denn-Arizona Development Co. **Cap.**, \$3,500,000; shares \$10 par, fully issued; increased June, 1917, to \$5,000,000, and 55,000 shares new stock offered for sale, at \$10.

Property: 13 claims, patented, 200 acres, immediately east of the Junction shaft of the Superior & Pittsburgh. The Dividend fault traverses the company's ground for about 4,000', and big orebodies have been found on adjoining properties near this fault. Mine has a 1,600' shaft, started in conglomerate but penetrating limestone at 840', with upwards of a mile of workings. The 1,000' and 1,100' levels show considerable leached ore, with little commercial ore, though carrying occasional small bodies of rich cuprite. The 1,250' and 1,350' levels also show large areas of leached ore, with some low-grade sulphides on the 1,250' level, and a little native copper on the 1,350' level. The lower level has a little ore of 12 to 15% copper tenor. Management estimates the average tenor of ore developed, almost exclusively oxides and carbonates, at 8% copper. Apparently some good orebodies may be developed at 1,800' or deeper, though the ore is erratic. The mine is wet, and has two 1,000-gal. triple-expansion pumps on the 1,000' level, and five 800-gal. sinking pumps.

Equipment: includes a 1,600 h. p. steam plant, with 6-drill and 25--drill Sullivan air compressors, and an 18x36" Ottumwa Corliss first-motion hoist, raising double-deck cages. There is a railroad spur to the mine.

Last production, 1909, was 99,222 lbs. fine copper and 41 oz. gold. Development work was energetically carried on despite very heavy pumping expenses until 1912, when an unusual influx swamped the pumps and the mine was closed down.

Operations were resumed in Sept., 1917, the shaft retimbered, a station cut on 1,400' level, and a crosscut driven.

The Denn has an excellent chance of making a big mine, the claims covering an extension of the big ore zone of the camp, but the ore horizon at this point is lower than on the other properties. The deep development of the Junction, C. & A. and Saginaw properties will drain this ground as well as prove it, and further exploration will be easily and cheaply done. There is strong probability that this company and the Shattuck will be merged at some future time. Property is a splendid prospect. It may be several years before it makes a mine, but eventually, we believe, will be a valuable one.

EMPIRE STATE MINING CO.

ARIZONA

Office: 182 Buick Ave., Utica, N. Y. **Mine office:** Bisbee, Cochise Co., Ariz.

Officers: R. E. King, pres.; F. L. Guillaume, v. p.-treas.; E. M. Penny, sec.; W. A. Fenn, Geo. P. Langford, John A. Losee, John A. Urschel, directors. John A. Collins, gen. mgr. and purch. agt.; O. P. Zane, cons. engr. and supt.

Inc. June 27, 1904, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; 813,000 shares issued. Annual meeting in June.

Property: 11 claims, 230 acres, near the Modern mine, about 5 miles N. W. of Bisbee, is developed by a 1,400' tunnel, said to show about 150' of low-grade copper ore, slightly auriferous and argentiferous, estimated to average about \$8 per ton. Ore is found in small stringers, typical of the district, and property is not considered well located. Idle since June, 1914.

HARTFORD-ARIZONA COPPER MINING CO.

ARIZONA

Hamburg, Cochise Co., Ariz. Henry Hamburg, pres. and mgr. In Sept., 1913, the Arizona Corporation Commission authorized the company to incur a \$100,000 6% bond issue, for further mine development. Owns the Wisconsin group in the Huachuca mountains. Company has surveyed a line for tramway to wagon road and will ship to Hereford or to a point on Fort Huachuca branch of the El Paso & S. W. R. R. Property developed by tunnels, has steam plant and compressor and employed 30 men at last accounts. No recent returns secured.

HIGGINS LEASING CO.

ARIZONA

Inc. 1912, to prospect the Higgins property for silver-lead and copper ores. Lease has expired and property reverted to owner, Thos. Higgins, of Los Angeles, in 1916.

OCOTILLO COPPER MINING CO.

ARIZONA

Office: 502 Corby-Forsee Bldg., St. Joseph, Mo. **Mine office:** Bisbee, Ariz.

Officers: R. A. Grant, pres.; C. A. Blair, v. p.; T. G. Sortor, sec.-treas.

Inc. "under the common law" in Ariz. **Cap.**, \$2,000,000; shares \$1 par; \$1,000,000 in treasury. Stock offered the public, 1917, at 35 c. a share, either on the installment plan or with a 10% discount for cash.

Property: 16 claims, about 320 acres, 4 miles from Bisbee, Cochise Co., Ariz., said to be in lime and granite porphyry. A shaft is being sunk on a vein near the lime-porphyry contact on the Lucky Tramp claim. Material is impregnated with iron and carries some gold-copper values. Assays of the ore at 10', 20' and 40' in depth are given as \$2, \$5 and \$40 per ton.

Company's prospectus devoted mostly to the big producing mines of Arizona, their dividend records, etc., and advises investment in the Ocotillo mine, which, it states, may raise another crop of millionaires. This prospect, for it is not even a near-mine, is in an unpromising area outside of Bisbee. Investors are warned to await results of development to at least 100' in depth.

PORTAGE LAKE & BISBEE MNG. CO.

ARIZONA

Office: care John Funkey, Hancock, Mich. **Mine address:** Bisbee, Ariz. Chas. Lewis, treas.

Inc. April, 1903, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; succeeding Portage Lake & Calumet Development Co.

Property: 12 claims, 3 fractional, 191 acres, several patented, 3 miles S. E. of Bisbee, S. E. of Warren Dev. Co., showing country rock of limestone, with a porphyry contact. The mine has a 2-compartment 302' shaft, with a small compressor, Worthington pump, 75 h. p. hoist, etc. Inactive many years.

QUEEN CALUMET COPPER EXTENSION CO.

ARIZONA

Address: 121 So. Central Ave., Phoenix, Ariz., or Bisbee, Ariz.

Officers: Jas. Wood, pres.; P. L. Woodman, v. p. and gen. mgr.; J. F. Cleaveland, sec.; Chas. A. McDonald, treas., with A. K. Stacy, W. W. Perkins and W. W. Searles, directors.

Inc. Dec. 12, 1916, in Ariz. **Cap.**, \$1,500,000; shares \$1 par.

Property: the Don Luis group of patented claims, about 421 acres, and the Gold Knob group of 253 acres in the Warren mining district, Cochise County. Structural geological conditions warrant drilling, which will be done.

RADIUM MINES CO.

ARIZONA

W. H. Mercer, mgr., Globe, Ariz.

Property: 60 claims, 4 miles north of the Old Dominion mine, Globe, said to show vanadium ore in a vein or mineralized fault zone in diabase. The ore shows galena associated with iron oxide and manganese; vanadanite occurs as crystalline incrustations around other minerals, but has not yet been found in commercial quantities.

RED MOUNTAIN DEVELOPMENT CO.

ARIZONA

Office: P. O. Box 3007, Lowell, Ariz.

Officers: Frank Briggs, pres., treas. and gen. mgr.; Wm. Hawley, v. p.; E. J. Briggs, sec.

Inc. Oct. 5, 1908, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; non-assessable. Annual meeting, second Tuesday in September.

Property: 17 claims, 340 acres, crossed by the Southern Pacific Railway, shows schist, porphyry and limestone, with a vein claimed to be 130' wide and traceable 2 miles, carrying copper and lead ores, including copper oxides and chalcopyrite.

Development: consists of a 100' shaft. Idle owing to lack of funds.

SHATTUCK-ARIZONA COPPER CO.

ARIZONA

Office: 120 Broadway, New York. **Mine office:** Bisbee, Cochise Co., Ariz.

Officers: Thos. Bardqn, pres.; H. L. Mundy, v. p.; Archibald M. Chisholm, sec.-treas.; Lemuel C. Shattuck, managing director; preceding officers and Louis W. Hill, directors; Norman E. LaMond, asst. sec.; Arthur Houle, supt.; T. O. McGrath, auditor.

Inc. March 22, 1904, in Minnesota. **Cap.**, \$3,500,000; shares \$10 par; non-assessable; fully issued. Company is closely connected, in ownership and management, with the Denn-Arizona Copper Co. National Shawmut Bank, Boston, and Bankers' Trust Co., New York, registrars; Old Colony Trust Co., Boston, and Guaranty Trust Co., New York, transfer agents. Shares listed on the Boston and New York Stock Exchanges. Annual meeting, third Saturday in February.

Dividends: \$2 in 1910; \$1 in 1911; \$1.50 in 1913; \$1.50 in 1914; \$2.50 in 1915; \$4.75 in 1916; \$5 in 1917, to October 20.

Annual report for 1916 shows net profits of \$3,074,013, as compared with \$1,174,028 in 1915. Total net surplus, Dec. 31, 1916, was \$2,274,256. Net profit for first 5 months of 1917 was at a rate of \$8.70 per share per year.

Property: 8 claims, patented, 109 acres, lying in the northeastern portion of the Bisbee camp, about one-half mile south of the original workings of the Copper Queen, and to the north of the Calumet & Arizona. The property shows carboniferous limestone, with intrusive porphyry dikes, and a big fault, covered with a silicious gossan of 30 to 50' width. Ores carry copper and lead with gold, silver and vanadium values, and are oxidized down to 800', with low-grade sulphides at depth.

The orebodies occur as irregular replacements along certain bedding planes, and along dike contacts.

Development: the mine is opened by a 935' three-compartment shaft, 15x4' 6" in size, connected with the Uncle Sam shaft of the Copper Queen on the 800' level, with the Powell shaft of the Calumet & Arizona on the 600' level, and with the workings of the Wolverine & Arizona on the 200' level. Mining work was begun Aug., 1904, and ore shipments started Sept., 1906, continuing until Nov., 1907, when the panic put a stop to all work for some months. Production was resumed Dec. 4, 1908. The mine is opened by levels at 100' intervals, from 100' to 900' inclusive, and to March 31, 1917, had 118,539' of workings. New work in 1916 totaled 21,822'; 1917, first quarter, 6,477'.

Development during 1916 was done on all levels from 100' to 900', inclusive, and company's report for that year cites following various orebodies, giving their approximate dimensions as they stood at end of year.

On the 100' level a zone 160' in length showing 30' width of 6% copper oxide ore was exposed on the Southwest claim. The long axis of the orebody strikes N. E.-S. W., with development faces continuing in good copper ore. This orebody is an upward continuation of important ore find on 200' level made during 1916, and is expected to develop a large tonnage during 1917.

On the Southwest claim, not yet entirely exposed, an orebody on the 200' level, continuing upward above the 100' level, 240' in length and over 40' wide, assays 5½% copper; and a 80' body of lead-silver ore assaying 12% lead, and \$5 gold and silver per ton, has been partly blocked out on this level, adding a large quantity to previously known silicious lead ore. A silicious lead orebody on the 300' level, 100' thick, assays 10% lead and \$3 gold and silver.

High-grade orebody on Iron Prince claim, 400' level, has exposed kidneys of glance ores averaging 35% copper and 20 oz. silver per ton. A good tonnage of 6% copper carbonate ore is also exposed here. Recent developments on 500' level exposed a width of 14' of carbonate ores assaying 12% copper. The lead ore tonnage on the 600' level was greatly increased by intermediate developments. Shipments from this territory netted profit of approximately \$15 per ton. Orebody averaging 8% copper, encountered on the 700' level, as exposed, shows 18' width and face continuing in ore. A primary sulphide orebody on the Copper Rock claim, 800' level, at last reports 520' long and 21' thick, assaying 4% copper, has developed a large tonnage, and a substantial tonnage of 3% semi-oxidized ores have been exposed and developed on the 900' level.

Plans are under way for a 300-ton daily capacity mill to treat the silicious oxidized ores of lead, of which there is indicated approximately 1,000,000 tons, assaying 10% to 12% lead and \$1 gold and 6 oz. silver per ton. Recent experiments indicate a profit of at least \$4 per ton can be realized on this ore at normal market prices for lead and silver. Many of these orebodies are only partly developed. Development of new ore has exceeded shipments since January 1, 1916, when the total and partly developed reserves were estimated as 921,968 tons, containing approximately 56,600,000 lbs. copper, 70,000,000 lbs. lead, and \$4,000,000 in gold and silver.

The ore is smelted by the Calumet & Arizona Mining Co. at Douglas, Arizona, under contract in effect to July 1, 1923. About 500 men are constantly employed, and 550 tons of copper ore are shipped daily, returning about 6% copper, with appreciable gold and silver. Until company's own mill is completed, about 150 tons of lead ore are shipped weekly to El Paso for treatment.

Equipment: 12 mine buildings, including machine shop, carpenter shop, smithy, boiler house, engine house, warehouse, sawmill, and a change house with accommodations for 300 men.

The 750 h. p. steam plant has five 150 h. p. boilers. The main hoist is an 18x48" Allis-Chalmers duplex double-drum engine, working under 125 lbs. steam pressure, with 2 drums, each carrying 1,500' of 1½" round steel cable, capable of handling continuously a 15,000-lb. unbalanced load at a vertical hoisting speed of 2,000' per minute. The air plant includes a 40-drill Sullivan cross-compound air compressor. Fuel is petroleum, with a normal yearly consumption of about 20,000 bbls.

A 3,300' aerial tram of 500 tons daily capacity, with average grade of 18%, supported by 14 towers of 12 to 40' height, built of 12" timber and set on concrete foundations, leads from a 1,000-ton ore bin near the shaft to the El Paso & Southwestern Railway, the buckets discharging loads direct into 50-ton ore cars.

Recent Production:

	Copper Lbs.	Lead Lbs.	Silver Oz.	Gold Oz.	Copper Cost	Per Lb. Sold
1917.....(a)	9,010,647	1,799,433	120,847	1,202
1916.....	18,161,763	3,413,445	314,718	4,721	8.71 cts.	23.18 cts.
1915.....	11,154,211	2,345,342	201,869	3,151	(b) 8.44 cts.	18.5 cts.
1914.....	10,846,918		198,419	2,444	(b) 8.47 cts.	14.13 cts.
1913.....	13,219,756		236,000	2,033	7.22 cts.	

(a) First 8 months. (b) Under curtailed production from Aug. 14 to Oct. 23 when shipments were discontinued, resumed in April, 1915.

Producing about 18 million lbs. of copper annually at a cost of 8½c, the company can earn about \$3.50 per share on a 15c copper market, with much increased earnings if a higher price is realized.

Labor troubles and shortage curtailed 1917 production considerably. Reported in Sept. that a 400-ton flotation mill would be built.

TWO PEAKS MINING CO.**ARIZONA**

Address: Turner, Ariz.

Officers: W. G. Gilmore, pres.; J. C. Akard, v. p.; E. P. A. Larrieu, sec.-treas.; with J. S. Trowbridge and T. D. M. Larrieu, directors.

Inc. Jan. 4, 1916, in Arizona. **Cap.**, \$2,500,000; shares \$2.50 par; 432,054 issued.

Income: \$102 from ore and \$1,773 from shares sold in 1916; \$3,817 operating expenses.

Property: 45 claims, 1,012 acres, at S. end of Whetstone Mts., Cochise Co., Ariz., said to show a contact with a mineralized shear zone striking S. 48° W., through the overlying monzonite porphyry, below which is limestone. Ore occurs as lenses in sheeting planes and through the porphyry mass, and according to company carries 3.16% copper, 0.034 oz. gold and 2 oz. silver per ton in shear zone. Minerals are chalcopyrite in shear zone, and bornite and chalcopyrite in contact deposit. Carload in 1916 averaged 4.03% copper.

Development: by shafts 36, 55, 60 and 100' deep, and by 270 to 280' tunnels. Workings to depth of 150'; total, 1,500'.

WARREN REALTY & DEVELOPMENT CO.**ARIZONA**

Property sold in 1917 to Phelps, Dodge & Co., and company liquidated. For description, see Vol. XII.

WOLVERINE & ARIZONA MINING CO.**ARIZONA**

Office: Calumet, Mich. Marc Bailey, mine supt., Bisbee, Ariz.

Officers: John Daniell, pres.; Paul P. Roehm, v. p.; Edw. Ulseth, 2nd v. p.; W. Frank James, treas.; Chas. Chynoweth, sec.; preceding, with W. H. Brophy and Fred C. Smith, directors. Jos. Bosch, supt.

Inc. March, 1905, in Arizona, as successor of Wolverine & Arizona Development Co. **Cap.**, \$3,000,000; shares \$15 par; issued 118,674 shares, par value 1,457,340, subject to assessment, and 21,792 shares, par value \$326,880, of full-paid stock. Levied 25-cent assessments March 19, 1906; Sept. 17, 1906; June 17, 1907; Nov. 18, 1907. Annual meeting, second Wednesday in November.

Receipts for fiscal year ending Sept. 30, 1916, totaled \$188,892, including \$155,975 from 1915, and \$28,588 ore sales; with total disbursements of \$77,997, including \$34,369 for mining and \$29,699 for dividends. Cash on hand, \$108,654; but by Sept., 1917, this was reduced to \$90,000.

Dividends: 10 cts. per share, in Dec., 1914; 25 cts. per share, in Dec., 1915; 21 cts. in 1916.

Property: 9 claims, 152 acres, known as the Cairo, Memphis, Kentucky, Georgia, Louisiana, Chicago, Warren, George and Broken Promise. The Georgia claim lies 600' from lands of the Calumet & Arizona, and is about 3,000' from the Irish Mag shaft of that company, and from the Spray and

Holbrook shafts of the Copper Queen. The Uncle Sam and White Tail Deer claims of the Copper Queen are adjacent to the Wolverine & Arizona.

Development: claims lie along the high limestone ridge W. of Bisbee, extending westward to the open valley, and the first development was begun on the farthestmost side of the group. The Broken Promise shaft, 700' deep, with 3 compartments, cut mineralized limestone showing considerable iron but no ore in commercial quantity. A drift on the 500' level, running 850' toward the Pittsburg & Duluth group (Cal. & Ariz.) cut leached ore and ledge matter, carrying traces of copper. Drifts running in other directions showed leached ore, but not in encouraging quantities, and work in this area was suspended, 1909.

Exploratory work on the western claims proving disappointing, the easternmost claims were prospected in 1906 by diamond drill and a hole 410' deep passed into 50' of 4 to 10% oxidized copper ore near the Shattuck mine. This orebody being inaccessible from the Broken Promise shaft, the use of the Higgins tunnel was acquired and the ore opened up from the Bisbee side of the mountain. The tunnel was extended 310' to the Wolverine boundary and then southerly to intersect the orebody on the Wolverine ground. Orebody proved to be a replacement deposit of rich oxidized ore, lying within the limits of the Warren claim, about 2,700' from the tunnel portal. After working out the oxidized ore down to the Shattuck boundary, exploration upward was begun and a fine body of sulphide ore was developed in the footwall limestone above the oxidized zone.

In 1916 the sulphide copper ore was worked out in the east end of the Warren claim. The oxide zone is supplying ore at present. Exploration amounted to 1,844'. A tunnel to explore the Shattuck fault, which crosses the property, has been put in. During Sept., 1917, the tunnel through the Higgins mine opened 7% ore. New workings in the Broken Promise are producing 4½% ore.

The mine has been a small but steady shipper of high-grade ore to the Douglas smelter, this ore paying all working expenses and building up a small surplus. It formerly averaged about 10% copper, but the sulphide ore is of lower grade. The mine has about 3,000' of workings and its orebodies connect downward with great stopes in the Shattuck mine, the deposit being the top of one of the ore-shoots of that property. The mine is connected underground with the Uncle Sam mine of the Copper Queen Co., as well as with the workings of the Shattuck mine.

Equipment: includes a 250 h. p. steam plant, 2 single-drum hoists and a 6-drill air compressor, all at the Broken Promise shaft and all unused for several years.

Production: 2,524 tons, netting \$37,962 in 1910; 984 tons, netting \$11,873 in 1911; 762 tons, netting \$12,861 in 1912. The output for fiscal year ending Sept. 30, 1915, yielded \$130,370, or \$17.13 per ton. In 1915-16 the output was 1,193 tons, averaging \$23.96 per ton, equal to \$28,588.

The property is excellently handled.

BOUSE, YUMA COUNTY

ARGUS COPPER & GOLD MINING CO.

ARIZONA

Address: Planet, Ariz.

Officers: A. B. Jones, pres.; D. M. Jones, v. p.; A. B. Hardwick, sec.

Inc. in Arizona. **Cap.,** \$2,000,000; shares \$1 par; 500,000 shares in treasury.

Property: 46 claims, 920 acres, adjoining the Planet mine at Planet, Yuma County, slightly developed and said to show several well-defined veins, carrying gold-copper ore, which will assay from \$5-\$20 gold and 10% copper per ton.

BLACK GIANT MINES CO.**ARIZONA****Mine office:** Salome, Ariz.

Officers: P. J. Lyons, pres., Mobile, Ala.; D. W. Hall, v. pres.-mgr., Salome, Ariz.; C. R. Hall, sec.-treas.; preceding officers, G. S. Leatherbury, J. B. Davis and H. H. Smith, directors, all of Mobile, Ala.

Inc. April 3, 1917, in Ariz. **Cap.**, \$1,500,000; shares \$1 par; 750,000 shares outstanding. No bonds. Annual meeting, first Monday in January. Transfer office, Mobile, Ala.

Property: 11 claims, 220 acres, located in the Harcuvar Mountains, about 18 miles N. E. of Salome, in Cunningham Pass. Work was started, 1917, on a vertical shaft down 160', but planned to sink to 500'. Orebody reported to be from 25-100' long, nearly vertical, and running N. W.-S. E. It is a fissure, with iron gossan. Values are in copper and gold.

Equipment: 25 h. p. Fairbanks-Morse gasoline hoist and 2-drill Inge soll compressor. Work begun in 1916.

BLUE BELL MINING & REDUCTION CO.**ARIZONA**

Mine P. O.: Swansea, Yuma Co., Ariz. **W. P. Martin**, pres.; **E. T. Miner**, v. p. and supt.; **K. E. Newcomb**, sec.

Property: 23 claims, about 5 miles from Swansea, just across the Bill William's Fork River from the Swansea pumping plant.

Development: 200' two-compartment shaft and several hundred feet of tunnels, showing ore carrying up to 10% copper, with fair gold and silver values.

No. recent returns.

BOWYER GOLD & COPPER CO.**ARIZONA**

Office: Quartzite, Ariz. **Mine office:** Bouse, Yuma Co., Ariz. **Jos. Bowyer**, pres.; **E. N. Jenkins**, v. p. and sec.; with **E. E. Northrop**, **E. B. White** and **Geo. Mee**, directors. **Phoenix National Bank**, treas.

Inc. July 15, 1909, in Ariz. **Cap.**, \$5,000,000; shares \$5 par, non-assessable. Annual meeting, first Monday after first Tuesday in July.

Property: 7 claims, known as the Bowyer group, also 160 acres miscellaneous lands, in the Plomosa district, on the western slope of the Dome Rock Mountains, about 20 miles west of Bouse. Property has 3 contact deposits, between schist hanging and limestone foot, showing 50 to 200' gossans and carrying malachite and chalcocite, estimated to average 2 to 10% copper and \$1 to \$10 gold per ton. Company has sunk a 50' shaft near the hanging wall, all in ore, and has reached the sulphide ore beneath the leached zone. Management plans development work and the installation of hoist and air drills in 1917.

CLARA CONS. GOLD & COPPER MNG. CO.**ARIZONA**

Declared bankrupt, Jan. 27, 1912. Reorganized as the Swansea Consolidated Gold & Copper Mining Co., receiving 1,500,000 shares of the total of 4,000,000 shares for the transfer of the property with its indebtedness and liabilities. A suit was filed against the Clara Consolidated in Oct., 1912, by **George Mitchell**, former president, for \$75,000, and by **Mary Mitchell** for ejectment from several mining claims valued at \$25,000 and the recovery of \$200 a month rental therefrom. At last accounts, this suit had not been settled. The Swansea Cons. is also bankrupt.

Property leased in 1916 to **W. A. Clarke** interests for 10 years.

COPPER CHIEF MINES CO.**ARIZONA**

Office: **Wm. J. Coughlin**, fiscal agent, 381 Main St., Bristol, Conn.

Mine address: Bouse, Ariz.

Officers: **Richard Darling**, pres. and treas.; **Quartzite, Ariz.;** **Richard Darling, Jr.**, v. p.; **B. A. Darling**, sec.

Inc. 1910, in Ariz. **Cap.**, \$5,000,000; shares \$1 par; outstanding, \$3,000,000.

Property: 28 claims, patented, 560 acres, 20 miles S. W. of Bouse, shows schist and greenstone with a contact deposit dipping at 35° and containing copper and gold ore that assays 1.3% to 20% copper.

Developed by 2-compartment 304' vertical shaft, which has passed through greenstone into a replacement body of copper ore in limestone. Shaft will be continued to water level, as ore deposit is leached above it.

Examined by L. A. Dunham, E.M., in 1910, who reported that the remarkably favorable iron outcrops on all the claims of this company would probably be underlain by high-grade copper ore.

Equipment: includes a 25 h. p. gasoline hoist, a small compressor and 50 h. p. engine.

EXCELSIOR GOLD & COPPER CO.

ARIZONA

Gus Mudersbach, pres., Bouse, Yuma Co., Ariz.

Inc. Aug. 1, 1902, in Ariz. **Cap.**, \$2,000,000; \$1 par; stock owned by two Flagstaff men and the president. Is the successor of the Record Mines Co.

Property: the Mudersbach mine, with 31 claims, 8 miles S. of Bouse, on the main road to Quartzite, in the foothills of the Palomas Mountains. The property covers the strike of a mineralized contact metamorphic zone showing gossan of specular hematite, underlaid by oxidized ores to shallow depth, succeeded by copper sulphides, an average sampling said to have given 4.5% copper.

Ore: occurs as bornite, chalcopyrite, pyrite and hematite in a garnet-epidote gangue; it is an irregular bunchy replacement, a few inches to a few feet thick, of limestone resting on schist and altered by quartz monzonite.

Development: by the 150' Excelsior shaft, with drifts at 50', 100' and 130', and the 200' Mammoth shaft, with 600' of drifts and crosscuts.

Equipment: includes two 15 h. p. gasoline hoists, a gas engine and air compressor. The mine is developing, with a small force.

Production: 48 tons of 12% ore shipped in 1916, and a carload of 4.25% copper ore with 50% iron and another of 6% ore. 1917 work consisted of a level at 50' depth of No. 2 shaft; sulphide ore has been cut in the 200' level of the No. 1 shaft.

GOLDZONA-SCOTCHMAN MINING CO.

ARIZONA

Address: Bouse, Yuma Co., Ariz.

Inc. by R. King, W. C. Miller, B. A. Kipp and others, of Los Angeles, Cal.

Property: 600 acres, on which \$100,000 has been spent. **Equipment:** gasoline hoist, compressor, drills, buildings.

GREATER AJO COPPER CO.

ARIZONA

Miami, Ariz. **Officers:** G. F. Senner, pres.; A. E. Soderman, v. p.; J. Considine, sec.-treas.; preceding, with A. B. Saling, R. L. Payne, E. Becher and B. S. Garcia, directors.

Cap., \$5,000,000.

Property: at Palomas, Yuma Co., Ariz.

The prospectus—if it can be called such—of this company is unique. It talks of nearly everything, the property receiving small space. One engineer predicts the Greater Ajo to be "The biggest mine in the State of Arizona."

INLAND COPPER CO.

ARIZONA

Idle. Letters to 1017 Commerce Bldg., Kansas City, Mo., and to the mine at Planet, Yuma Co., Ariz., unanswered. L. E. Corbin, pres.; A. W. Bork, v. p.; S. D. Dodson, sec.-treas.

Inc. in Arizona. **Cap.**, \$5,000,000; shares \$1 par; non-assessable.

Property: 40 claims, including 2 groups of about 15 claims each, in the Bill Williams range, near the Bill Williams Fork River, with a mill site, smelter site and water rights. The mine has 2 tunnels, and a 2-compartment shaft equipped with an 18 h. p. gasoline hoist. Company advertised for copper

ores, presumably to show its stockholders, since it had no reduction plant of its own. Is not regarded favorably.

MOHICAN COPPER CO.

ARIZONA

Office: 340 Wilcox Bldg., Los Angeles, Calif. Mine office: J. V. Allison, Bouse, Ariz.

Officers: W. C. Miller, pres.; B. A. Kipp, v. p.; Rol. King, sec.; with G. M. Swindell and A. Herrman, directors.

Inc. Mar., 1914. Cap., \$2,000,000; shares \$1 par; non-assessable; 1,000,000 issued.

Property: 30 claims, 9 patented, in Plomosa district, Yuma Co., Ariz., said to show copper sulphide ore.

Development: by shafts 32, 60, 110 and 500' deep, with total workings of 1,000'. New shaft to be sunk to 1,000' depth.

Equipment: includes hoist and compressor. Mill and 50-ton K. & K. flotation plant ordered, 1917.

MUDERSBACH MINE

ARIZONA

See Excelsior Gold & Copper Co.

NEW LA PAZ GOLD MINING CO.

ARIZONA

Office: 930 Merchants' National Bank Bldg., Los Angeles, Cal.

Officers: O. L. Grimsley, pres.; W. H. E. Bravender, v. p.; Leo Keller, sec.; G. A. Scroggs, treas., with Geo. Renwick and S. G. Marshutz, directors.

Inc. May 2, 1910, in Arizona. Cap., \$1,000,000; shares \$1 par; non-assessable; 933,282 issued. Operating expenses in 1916 were \$12,291.

Property: 14 claims, 1,606 acres, in La Paz or Weaver district, Yuma Co., Ariz., 55 miles W. S. W. of Vicksburg, said to show a deposit of gold-bearing gravel 6 to 40' deep, lying on decomposed granite and porphyry. There are reported to be 5,300,000 cu. yds. of gravel, averaging \$2.15 per yard. Operations to be by hydraulicking, for which a 1,750,000 gal. storage dam and 12 in. pipe line from Colorado River are being constructed.

Property reported on by A. J. Condee, E. Shurley Wilson, A. B. Hall and E. A. Rasor. If \$2 per yard can be recovered, good profits should be made by this company.

NEW PLANET COPPER MINING CO.

ARIZONA

Office: 61 Broadway, New York.

Officers: Alex. Rae, pres.; Geo. S. Barton, v. p.; Herman Cook, sec.-treas., with Julius H. Susmann, S. S. Rosenstamm, Geo. Crompton and T. M. Lloyd, directors.

Inc. July 13, 1909, in Delaware. Cap., \$4,000,000; shares \$5 par; non-assessable; issued 342,905 shares. Is a reconstruction of the Planet Copper Mining Co., stock of which was retired by exchange for 240,000 shares of New Planet stock. Farmers' Loan & Trust Co., New York, registrar. Annual meeting, third Wednesday in June.

Property: the Planet mine, with 31 patented, 10 unpatented and 3 fraction claims, 800 acres, in the Harcuvar district, on the southern bank of the Bill Williams Fork River, 21½ miles from Bouse on the Santa Fe cutoff and about 6 miles from Swansea.

Geology: copper occurs mainly as oxidized ore, though nucleal particles of sulphides mixed with specular hematite are seen in the deeper workings. The orebodies are replacements in limestone, the ore bed developed at the Planet shaft lying on the contact between this rock and underlying gneiss. This deposit is 3 to 20' thick and dips 15° south. Much high-grade ore has been shipped from other parts of the property in past years; it was found as crusts, or shells, about impure hematite in limestone, especially near bodies of amphibolic rock now altered to black gneiss. A deep-seated mass of granite is the not improbable source of mineralization, although later igneous activity is

shown in a volcanic plug not far distant and in the basalt flows which cover the surrounding country. The geology is very fully discussed in U. S. G. S. Bull. 451, p. 47, written by Howland Bancroft.

The ore deposits show a heavy iron gossan, mainly of hematite, apparently of workable grade, and it has been estimated that the property shows about 500,000 tons of 60% iron ore. The main orebody developed in the Planet shaft is about 300' in width, has a thickness of 4' 3", and an average copper content of 5.9%, according to a report by A. H. Kellar.

Development: aside from open cut and tunnels, is mainly at the Planet shaft, an incline sunk on the ore bed at an average angle of 15° to a depth of 733'. There are drifts, crosscuts, etc., amounting to 2,500'. A vertical 350' shaft connects with these workings and gives ventilation.

The old workings include 8 tunnels, longest 225', and 12 vertical pits and shafts, of 25 to 325' depth. About \$150,000 was expended under the management of the General Development Co. in sinking the vertical shaft and putting down a number of churn-drill holes, 3 holes showing low-grade sulphide ore below the old workings.

The Planet mine is probably the oldest copper mine in Arizona. It was opened in 1864, worked in a small way until 1874, and reopened in 1884, when a 36" circular blast furnace was erected. The property was taken over, 1902, by the predecessor of the present company. The mine produced, 1864-74, upwards of \$500,000 worth of high-grade ore, ranging from 15 to 40% in copper, which was presumably shipped down the Colorado River to Guaymas, and thence to Swansea, for reduction.

Equipment: includes a 75 h. p. gasoline plant, with two hoists and a 5-drill air compressor. Buildings include a carpenter shop, smithy, 2 shaft houses and 3 dwellings.

Property considered as still unproven, churn drilling being too limited to determine existence, or non-existence, of large orebodies, and the greater part of the area is unexplored. Property leased to Northwestern Leasing & Development Co. from Oct. 1, 1915, to Oct. 1, 1918.

Lessees are shipping ore and paying royalty to the New Planet Co., which has been able to pay off its debts and now has over \$70,000 in treasury.

NORTHWESTERN LEASING & DEVELOPMENT CO. ARIZONA

Address: New Planet Copper Mining Co., 61 Broadway, New York.

Company has a 3-year lease on the New Planet copper mine (which see), to Oct. 1, 1918. Leasers agree to do 300 shifts per month and to pay royalty of 10 to 20% of the net smelter returns.

Is a close corporation, financed by Globe and Miami mine officials.

RECORD MINES CO. ARIZONA

At one time operated the Mudersbach mine at Bouse, now owned by the Excelsior Gold and Copper Co., which see.

SHAMROCK MINING CO. ARIZONA

Duncan, Yuma Co., Ariz. **Officers:** Robt. McEntee, pres.; Lawrence McEntee, v. p., with B. F. Barbour and G. N. Neal of Birmingham, Ala., directors.

Property: 840 acres, in the footslopes of the Plomosa range, Vicksburg district, Yuma Co.

Equipment: includes hoist, compressor, etc.

Production: made intermittently since 1913; has consisted of high-grade ore, running from \$800 to \$1,050 per carload.

SWANSEA CONS. GOLD & COPPER MINING CO. ARIZONA

O. M. Souden, trustee, c/o U. S. Nat'l Bank, Los Angeles, Calif. Leased to Judge W. J. Thomas of Los Angeles, early in 1915; operated, 1916, by the Thomas Estate.

In May, 1917, W. A. Clark of Jerome secured a 10-year lease on the mine,

calling for a 1,000' shaft, 50% royalty on ore, to be not under \$5,000,000 in 10 years. Shipments were 30 cars per week in Sept., 1917.

Trustee's report for 4 months ended Feb. 23, 1917, showed a net cash balance of \$47,311, plus \$22,335 carried forward, making \$69,646. There were shipped 452 cars of ore, worth \$252,466.

In May, 1917, company was discharged from bankruptcy, and had \$30,000 on hand. There is still a bonded debt of \$1,000,000. Company has 3,000,000 shares outstanding.

Property: reported as 132 claims, 3,300 acres, about 10 miles from Planet, includes the Signal mine, erroneously called the Clara, and the Moro and Clara groups, at Swansea, Yuma Co., Ariz.

Geology: the Signal orebody is a replacement deposit formed in a limestone bed 15 to 100' thick, associated with overlying shales and amphibolitic schist and resting on granite gneiss, all of pre-Cambrian age. The outcrop is an irregular replacement, 30' wide, of copper-stained hematite, dipping at 52° N. This orebody extends 150' downward in the mine, is 20 to 30' wide, 90' long, and contains boulders of unreplaced limestone. The orebody is encased in soft chloritic schist derived from amphibolite and appears to rest on a strong fault plane that separates the granitic gneiss from the sedimentary series. Two parallel, smaller, but similar orebodies occur in the hanging wall of the deposit. The ore consists of soft, red hematite with manganese-oxide and chlorite, holding grains and nodules of chalcopyrite and pyrite. The ore as a whole averages perhaps 2.5% copper, though 4% ore is obtained for smelting by rough sorting. See U. S. G. S. Bull. 451, pp. 59-67.

Development: by 2 main shafts with extensive underground workings along the main fault or lode, and by stopes on 3 orebodies. The mine has 4 vertical and 2 inclined shafts. No. 1 shaft, 400' deep, vertical, has a 15 h. p. Fairbanks & Morse gasoline hoist, raising ore with a bucket. No. 2 shaft, 325' deep, is an incline, and has a 50 h. p. Western gasoline hoist, operating a 2-ton skip. No. 3 shaft, also inclined, is 200' deep. No. 4 shaft, the largest and deepest, 3 compartments, is 500' deep, with a hoist. No. 5 shaft, 373' deep, has a 75 h. p. steam hoist, and No. 6 shaft, 250' deep, has a 25 h. p. steam hoist. Some drilling done 1908, with a Keystone churn drill, showed another orebody.

Equipment: the power plant has two 250 h. p. boilers, a 300 k. w. d. c. Westinghouse motor, and a 150 k. w. belt-driven Ideal motor, latter operating pumps at the Bill Williams Fork River, supplying water to the mine and works through 3" and 6" pipe lines. Buildings include a machine shop, sawmill and other structures.

The smelter has a Mitchell water-jacket blast furnace of 750 tons rated daily capacity. A reverberatory furnace was partly completed when the mine closed down in 1913.

The power house has a 15,000 cu. ft. Nordberg air compressor, and a Connersville blower direct-connected to a Hamilton Corliss compound engine. Slags are handled by a Jeffrey electric locomotive. The smelter building is of structural steel. The converted department has 2 stands and 9' shells, rotated electrically, with a 40-ton electric crane, having 2 auxiliary hoists, and a silica mill, with electric motor, for linings.

The mines and works are connected with the Santa Fé, Prescott & Phoenix Railway by a 21-mile line, known as the Arizona & Swansea Railroad, operated, but not owned by the company. The property is an example of enthusiasm run wild, coupled with reckless stock selling and the foolish construction of surface works before the development of enough ore to keep them busy.

UNITED MINES COMPANY OF ARIZONA

ARIZONA

Address: Russ M. Hess, supt., Bouse, Ariz.

Officers: J. C. Denton, pres.; George D. Christy and L. M. Hart, v. p.'s;

A. G. Halm, treas.; E. A. Goodrich, sec., with H. E. Woods and Geo. Tisdale, directors.

Inc. May, 1916, in Ariz. **Cap.**, \$1,750,000; shares \$1 par; 900,000 in treasury.

Property: 30 claims, 600 acres near Bouse, Ariz., including former holdings of Little Butte Cons. Mines Co., the Arizona Pride and Bullion groups.

Geology: the holdings are in an extensive district of pre-Cambrian schists, quartzites and limestones, cut by intrusive granites and other igneous rocks, and covered by recent volcanic flows. The ore deposits of the country, though varied in nature, carry gold, silver or copper ores. The typical copper ores of the region contain specular red hematite, and the deposits worked at Planet, Mineral Hill and the Clara are largely replacements of limestone beds.

The **Little Butte** claims cover an area of sedimentary rocks running E. W. and dipping at 50°, including a 1,500' belt of brown limestone in part overlaid by an old rhyolite breccia. These rocks are faulted against a coarse granite, the fault being mineralized, though nearby, the limestone caps and covers the granite. The vein outcrop shows an interlacing network of quartz-hematite stringers forming a wide lode. The underground workings show irregular lenticular bunches of oxidized ore on and above the 120' level, and close to the granite hanging-wall, with 75' or so of altered andesite (rhyolite) between the lode and the limestone. Shipments of 388 tons yielded \$8,040, or \$20.72 per ton. The lode is in part leached below these residual masses of ore, and former development was stopped at 388', below which the richer ore probably lies. The association of chlorite, specularite and quartz indicates that the mineralization will extend downward to very considerable depth, and the ores will be chalcopyritic.

Development: a 700' incline shaft with 1,000' of levels at depths of 75, 120, 210 and 310'. Water was encountered at 200', but the lowest limit of oxidation has not yet been reached. The 120' level shows ore bunches for 600' along the drift. The 210' level shows mainly leached vein matter with occasional bunches of copper ore, but the leached material is said to average \$7 per ton for 200' along the drift. Similar conditions obtain at 300', but the best ore in the mine is said to have been found on this level. Crosscutting was under way at 650' depth in June, 1916.

The **Arizona Pride Group** claims cover part of the granite area in which gold-bearing quartz veins occur. Development includes 50' and 60' shafts, both showing ore.

The **Bullion Group** covers a sedimentary area, cut by intrusions of diorite and andesite, with veins following the intrusive contacts. A 205' shaft on one vein has not yet reached water level, the filling being leached.

Production: under former owners the Little Butte mine shipments produced 73,400 lbs. copper, the ore averaging \$7.60 per ton gold, 9.4% copper, 29% iron and 32.4% silica.

In April, 1917, property was examined by Henry C. Carr, who considered the gold-bearing vein of secondary consideration without a treatment plant. Copper ore will probably be found in commercial quantities at greater depth—predicted at 750'. Work is being done systematically.

The property has merit and warrants carefully planned development, as conditions promise extensive bodies of chalcopyrite ore in depth.

CASA GRANDE, PINAL COUNTY

ATLAS DEVELOPMENT CO.

ARIZONA

Office: 1025 People's Gas Bldg., Chicago, Ill. E. P. Ryan, supt., Casa Grande, Ariz.

Officers: Potter Palmer, Jr., pres.; H. L. Hollis, v. p.-managing director; E. F. Bryant, treas.; A. Hunter, sec.

Had an option on the Lake Shore mine, about 30 miles from Casa Grande, from Frank M. Leonard and associates for \$500,000, owners to retain a $\frac{1}{8}$ interest. A payment due July 15, 1917, not being made, the mine reverted to owners in August, and present status of company is unknown. Company shipped about \$50,000 worth of $5\frac{1}{2}\%$ ore from Jan. 1-July 15, 1917.

BROWNELL-ARIZONA MINING & SMELTING CO. ARIZONA

Mine office: Casa Grande, Pinal Co., Ariz.

Property: formerly held by Producer Mining & Smelting Co., is supposed to include the Jack Rabbit mine, 80 acres, in Pinal Co., together with the Producer and Century-Chief group of 320 acres, and Index group of 220 acres, in Pima county, all in the Quijotoa Mountains. Company sold stock, 1910, on the strength of a clever brochure, written by Alfred Henry Lewis, the talented writer, whose statements are not hampered by a knowledge of copper mining. Company not favorably regarded.

COBRITA MINES CO. ARIZONA

Salome, Ariz. Inc. 1916.

Property: the Cobrita group of 14 claims, at Salome. Has 300' tunnel and 200' shaft, with good copper-gold ore in tunnel.

KEYSTONE DEVELOPMENT CO. ARIZONA

Operating the Isabella mine, 20 miles from Casa Grande, Pinal Co., Ariz., at last accounts. Reported to have some 7% copper ore.

LAKE SHORE MINE ARIZONA

Address: Frank M. Leonard, mgr., 312 E. 2nd St., Tucson, Ariz. **Mine address:** Casa Grande.

Property: 35 claims, 3 patented, 50 miles W. of Tucson and 35 miles S. of Casa Grande, carries a contact deposit in granite and andesite. The ore channel runs N.-S. and dips 45° . Over one million tons of 3% ore being developed above water level.

Development: by 285' vertical shaft bottomed in copper sulphide ore, Property has been examined and reported on by Frank W. Royer, A. J. Waters and Thos. H. Leggat. Property promising, but being 30 miles from a railroad, must develop reserves big enough to warrant building one.

Mine was optioned to Atlas Dev. Co., but option was forfeited Aug., 1917.

CHLORIDE, MOHAVE COUNTY

ARIZONA BASE ORES MINING & MILLING CO. ARIZONA

Address: c/o C. R. Harris, Kingman, Ariz.

Inc. 1917, in Ariz. Cap., \$100,000; shares 10 cts. par.

Property: in the Wallapai Mtns., is to be developed in 1917, shaft sunk to 200', and compressor installed.

ARIZONA BUTTE MINES CO. ARIZONA

Office: Kingman, Ariz. H. M. Crowther, pres. and mgr.

Inc. Feb., 1916, in Arizona. Cap., \$150,000; shares 10 c par.

Property: 27 claims, 17 patented, 250 acres; includes the Banner mine and 5 other one-time producers, 10 miles south of Chloride. Development by 2,300' Banner tunnel, which is being driven 7,500'. The De la Fontaine mine in the Chloride district is opened to depth of 400' by incline shaft.

Ore: mainly silver-lead, occurs in 8' vein said to average \$15 per ton.

Equipment: 200-ton mill, reported to make a saving of from 75-95%, at an average milling cost of 65c per ton. 40 men employed.

Production: totaled \$350,000 to end of 1916.

ARIZONA CHLORIDE MINING CO.**ARIZONA**

Officers: John B. Hughes, pres. and treas.; Edw. B. Hughes, v. p.; I. M. Thompson, sec.; F. W. Jacques, supt.

Inc. in Arizona. Cap., \$200,000.

Property: 138 acres, in the Wallapai district, near Chloride, Mohave Co., Ariz. The Windy Point mine is developed by a 145' shaft in gneiss. Ore is mainly pyrite, arsenopyrite and chalcopyrite, occurring in a fissure vein, 2-4' wide, with strike N. 42° W. and dip 77° N. E., said to run 3 oz. gold, 486 oz. silver and 21.5% copper p. t. The Bobby Burns group of 7 claims in the same district, acquired in February, 1917, is developed to depth of 250' by tunnels said to have proved copper ore of commercial value. Sinking new shaft.

Production: totaled \$300,000 to end of 1916.

ARIZONA COPPERFIELDS, INC.**ARIZONA**

Office: Care Wm. B. Ridgely, pres., 40 Exchange Place, New York City; R. W. Gnekow, sec.; Geo. Z. Médalie, v. p.

Is holding company for Copperfield Porphyry Copper Mining Co. Address: Kingman, Ariz. J. J. Beeson, geologist.

Inc. 1916, in Del. Cap., \$5,000,000; share \$1 par; 3,000,000 issued.

Property: about 200 acres, 4 miles from Chloride in Wallapai mining district, Mohave Co., Ariz., 22 miles north of Kingman. Ground covers high bluffs, called Ithaca and Goat Peaks, of old turquoise mines, which were drilled some years ago and very low-grade copper ore found. Copperfield group covers lower slopes where waters leaching bluffs would gather. Surface for 1,000' across said to show copper stain.

Development: by 200' shallow tunnel, reported to show 2% copper, both as native and sulphide, and 3 shallow (50') churn drill holes. Property is not a new discovery, and the 4-drill-holes used to "indicate" tonnage showed values too low to be of commercial interest. Control of the Copperfield Porphyry company was acquired July, 1916, by the Arizona Copperfields, Inc., which took over more than 89% of the capital stock. Was a promotion of George Graham Rice, New York.

In 1917 work comprised necessary amount for assessment requirements, mostly by 2 crosscuts at bottom of 58' shaft on Oakland No. 1 claim. This work showed the rock to carry 1.2% copper, according to the company's report.

Property evidently contains an undetermined amount of low grade copper bearing material. Actual legal ownership apparently still held by Copperfield Porphyry.

BULLION HILL MINES CO.**ARIZONA**

Controlled by Knight Investment Co., Provo, Utah.

Mine at Chloride, Ariz.

Officers: J. Knight, pres., Provo, Utah; A. M. McDonald, v. p., Eureka, Utah; W. L. Mangum, sec.-treas., with J. W. Knight and M. C. Godbe, directors; H. M. Eakin, supt.

Cap., 1,000,000 shares, par value 10c; all issued. Annual meeting 2nd Wednesday in February.

Property: 4 claims, near the Tennessee mine. One old shaft on property is being re-timbered. Property is in prospective state.

CERBAT SILVER MINES CO.**ARIZONA**

Office: Kingman, Ariz.

Officers: M. S. McEniry, pres.; E. W. Hokom, sec.-treas., with W. L. Hokom and J. M. Sheridan, directors.

Property: the old Imperial and White Elephant claims in the Wallapai mining district, 12 miles from Kingman and 3½, from Cerbat, Ariz.

Development: White Elephant claim has a 285' shaft. The Imperial claim is being developed on the 125' level, using a 15 h. p. hoist.

Company organized to lease property with option privilege.

Production: the White Elephant has yielded \$100,000.

CHARCOAL CANYON MINING CO.

ARIZONA

Address: J. P. Ryan, pres.-sec., Chloride, Ariz.

Property: 5 claims, near Cerbat, 9 miles S. of Chloride, Mohave Co., Ariz.

Development: by open cut that exposed ore 50' wide and 200' long. Thirty tons of this yielded \$27 gold per ton. Exploratory work is underway.

CHLORIDE MINING CO.

ARIZONA

Address: F. C. Smith, mgr., Chloride, Ariz.

Officers: J. C. Callaghan, pres.; C. R. Bone, sec.; G. A. MacDonald, treas.; all of Phoenix, Ariz.

Property: the Hidden Treasure group of 8 claims, 2½ miles S. of Chloride, Mohave Co., Ariz. Country rock is granite, traversed by 3 parallel veins, said to be traceable for 3,000'. The most northerly pair include a parallel dike of rhyolite. A fourth vein parallels the S. vein for 1,000' then junctions with it. The whole formation is 100' wide. Ore carries pyrite, with silver-gold values, and galena and blende.

Development: by 500' crosscut tunnel.

CHLORIDE QUEEN MINING CO.

ARIZONA

Office: Phoenix, Ariz. J. C. Wilson, supt., Chloride.

Officers: C. C. Thompson, pres.; R. C. Sanfley, v. p.; R. A. Jarret, sec.; W. S. Goldworthy, treas.; all of Phoenix, Ariz.

Property: 5 claims and 2 fractions, better known as Sunday School and Silver Mtn. groups, near Chloride.

Developed by 6 shallow shafts and 220' tunnel.

CHLORIDE SAMOA MINES CO.

ARIZONA

Office: 715 Higgins Bldg., Los Angeles, Cal. **Mine office:** Kingman, Mohave Co., Ariz.

Officers: L. Hoffman, pres.; A. B. Seelye, v. p.; J. H. Hoffman, sec.-treas., with C. Hoffman and R. Mangold, directors.

Inc. Feb. 26, 1917, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; 1,019,050 issued.

Property: the Samoa mine, formerly owned by Chloride Gold Mining Co., consists of 6 claims, 1 patented, 125 acres, in Wallapai district, 3½ miles E. of Chloride, Ariz., said to show vertical quartz vein in granite, 8 to 36" wide and 400' long. Ore is a sulphide said to carry gold, silver, lead and iron worth \$40 per ton. Lead content is given as 8% and iron 24%.

Development: by 300' shaft and 3,500' of workings. Crosscut tunnel being driven 1,664' to open deposit to depth of 710'. Six veins are expected to be cut, all widening in depth, according to a cross section published.

Equipment: 15 h. p. Witte hoist and 2 compressors.

Production: 96 carloads of ore in 1903-1908, the last of 30 tons assaying 1.2 oz. gold, 11.5 oz. silver, 3% lead, worth \$28.79 per ton. Total yield about \$250,000.

Prospectus states that the 6 parallel fissures are substantially identical in character with the Granite Mountain mine of Montana, and that there is proven calculative ore estimated at \$5,000,000, which is interesting if true.

CHLORIDE X-RAY MINING CO.

ARIZONA

Main office: 33 N. First Ave., Phoenix, Ariz. Mine at Chloride, Ariz.

Officers: T. A. Barker, pres.; S. Chittick, v. p.; A. W. Galpin, sec.; W. H. Mann, treas.; J. Spargo, mine mgr.

Inc. in Arizona. **Cap.,** 1,500,000 shares, par \$1, issued 700,000 fully paid non-assessable; no bonds.

Property: Hillside group of 6 claims, in the Chloride district near base of Rainbow Mountain. Developed by a tunnel 643' long in May, 1917, reported to have 400' of vein $3\frac{1}{2}'$ wide carrying \$30 per ton. Tunnel is being driven to intercept the X-Ray vein. Property is a prospect that is to be listed on N. Y. Curb and which company says "will thus give our stock-holders a chance to realize speculative profits."

C. O. D. MINING CO.

ARIZONA

Merged 1917 with Rico Consolidated Co. **Address:** R. M. Wilde, Kingman, Ariz.

Property: idle for several years and credited with a production of \$1,300,000, was reopened 1917. Mine has 400' shaft and two others, 150' deep.

COPPER FAME MINING CO.

ARIZONA

Address: P. O. Box 692, Kingman, Ariz.

Officers: S. E. Barron, pres.-treas.; R. L. Gray, v. p.; E. L. Betsworth, sec.; above with F. L. Rogers and C. W. Herndon, directors.

Inc. 1917 in Ariz. **Cap.,** \$1,500,000; shares \$1 par; 250,000 shares offered the public at 10c to raise funds for development and equipment. Company paid 700,000 shares of stock to the Gold Cliff Exploration Co. for its property.

Property: 10 claims, 153 acres, in the Cerbat range, Wallapai mining district, Mohave Co., Ariz., 16 miles N. of Kingman. Claims adjoin the Union Basin Mining Co. property and show quartz bearing fissure veins in igneous rocks, with ore in shoots.

Development: by many shallow shafts, deepest 60', and a 110' tunnel with 15' crosscut. All openings reported to expose ore, assays being given as \$4 to \$20 gold, 10 to 20 oz. silver, 3 to 30% zinc and 5 to 23% copper, higher values undoubtedly from picked samples.

COPPERFIELD PORPHYRY COPPER MINING CO.

ARIZONA

Controlled by the Arizona Copperfields, Inc., which see.

Idle. **Address:** 40 Exchange Place, New York City.

Cap., \$1,000,000; shares \$1 par; 500,000 in treasury; 100,000 offered at 25c.

Property: 200 acres, in Grand, Wash, Mineral Park section, Wallapai mining district, Mohave Co., Ariz., about 4 miles from Chloride and 22 miles north of Kingman. Ground covers high bluffs, called Ithaca and Goat Peaks, of old turquoise mines, which were drilled some years ago and very low-grade copper ore found. Copperfield group covers lower slopes where waters leaching bluffs would gather. Surface for 1,000' across said to show copper stain.

Development: by 200' shallow tunnel, reported to show 2% copper, both as native and sulphide, and 3 churn drill holes. Property is not a new discovery, and the 4-drill holes used to "indicate" tonnage showed values too low to be of commercial interest. Control of the company was acquired July, 1916, by the Arizona Copperfields, Inc., a promotion of George Graham Rice, which took over more than 89% of the capital stock.

DISTAFF CHLORIDE MINING CO.

ARIZONA

Address: J. R. Evans, Chloride, Ariz.

Officers: J. R. Evans, pres.; D. L. Parham, v. p.; B. W. Evans, sec.-treas.

Inc. 1916 in Arizona.

Property: 4 claims, 70 acres in Chloride district, Mohave Co., Ariz.

Ore carries silver, with some gold and lead. Work resumed in October, 1916.

Development: by 285' shaft with 5 levels. All work on the Distaff vein up to 1917 had been done by lessees.

Equipment: includes 25 h. p. gas. engine, compressor, etc.

Production: totaled \$200,000 to end of 1916.

ELKHART MINES CO.

ARIZONA

Address: Chloride, Ariz.

Property: 8 claims, 3 fractions and millsite, in Chloride district, Mohave Co., Ariz. In November, 1916, was taken over by R. E. Whitcomb and others of San Francisco. Ore is said to be rich and similar in character to that of the Tennessee.

Development: by 1,000' shaft. Mine has yielded ore from surface to 500' level.

Equipment: includes 150-ton mill, employing flotation.

Production: totaled \$1,150,000 to end of 1916.

EMERALD ISLE COPPER CO.

ARIZONA

Address: Robt. Jacobson, cons. engr., Chloride, Ariz.; A. J. Brawly and C. W. Gould of St. Paul, directors.

Operating about 3 miles S. of Chloride. Reserves said to be 200,000 tons of 2.85% copper ore.

Equipped with 70-ton experimental leaching plant and crusher, producing 2,300 lbs. electrolytic copper daily (Aug., 1917). Mine has electric power, compressor, etc.

EMERSON MINE

ARIZONA

Address: E. M. Bind, mgr., Chloride, Ariz.

Property: 6 claims, 5 patented, in Chloride district, Mohave Co., Ariz., has an 18" vein said to carry 19% copper, 3 oz. silver and \$2.80 gold per ton.

Development: by 175' shaft and 3 tunnels, 100 to 142' long, also 108' winze below one tunnel. Reopening was started in December, 1916. Ore carries gold and a little silver. In April, 1917, 18" of rich copper-silver ore had been opened at 200'.

Equipment: 80 h. p. gas. engine, 6-drill compressor, etc. Shipments were started last Spring.

ENTERPRISE MG., REDUCTION & IMPROVEMENT CO.

ARIZONA

Kingman, Mohave Co., Ariz. Maj. W. A. Mensch, pres. and gen. mgr., 1729 29th St., San Diego, Cal.

Property and equipment reported sold at sheriff's sale for a debt of \$2,169 in 1914. Described Vol. XI, Copper Handbook.

FRISCO GOLD MINES CO.

ARIZONA

Office: Jas. A. Roberts, sec., 257 Broadway, New York City; Ray L. Dimmick, mine supt., Kingman, Ariz.

Officers: C. S. Merrill, pres.; Chas. A. Lindsley, v. p., with P. G. Bartlett, directors.

Inc. 1913 in Maine. **Cap.** 3,000,000 shares; 2,920,000 issued.

Property: shows gold-silver ore in veins in rhyolite. Closed down 1916-17.

GENERAL METALS CO.

ARIZONA

Address: G. W. Peer, mgr., Chloride, Ariz.

Officers: G. W. Peer, pres.; R. M. Martin, v. p.; B. M. Brown, sec.

Property: the Copper Age group of 7 claims, 2 miles S. E. of Chloride, Mohave Co., Ariz.

Control of this company is held by the Arizona Ore Reduction Co. of Chloride, which also controls the Immediate Ore Reduction Process, which

intended late in 1916 to erect 6 or 8 custom plants in Arizona, using the "Immediate" process.

Development: by shafts, 20 to 250' deep; a main 500' shaft and over 2,000' of workings. Considerable copper ore is said to have been opened.

Equipment: includes 150 ton "Immediate" plant.

GEORGIA MINING CO.

ARIZONA

Head office: 210 Judge Bldg., Salt Lake City, Utah. **Mine office:** Chloride, Arizona.

Cap., 1,000,000 shares, 10c par.

Officers: A. O. Jacobson, pres.; A. H. Godbe, v. p.; John Pingree, treas.; E. H. Matson, sec.; above with H. M. Eakin, supt., F. W. Price, L. R. Eccles, G. S. Holmes, G. S. Holmes, Jr. and P. O. Perkins, directors; W. T. Beardsley, asst. sec.

Property: 2 claims between the Tennessee and Payroll mines, both large producers. Ore carries zinc, lead, copper and gold values.

Development: main shaft down 300'. Good ore was cut at 100' and 200'.

Equipment: gasoline engine, hoist, compressor and machine-drills. Employs 14 men. Considered promising.

GLADSTONE UNITED METALS CO.

ARIZONA

Address: Phoenix, Ariz. F. C. Smith, supt., Chloride, Ariz.

Officers: F. G. Smith, pres.; W. B. Twitchell, v. p.; W. T. Smith, sec.-treas.

Inc. 1916 in Arizona. **Cap.,** 150,000 shares, \$1 par.

Property: 7 claims, 3 miles east of Chloride, Mohave Co., Ariz. Idle several years. Claims show igneous rocks, which at surface show much alteration and subsequent mineralization. Rhyolite dikes run into one main dike, in which are the veins. The Gladstone vein 15' thick with 6' of quartz ore on hanging wall side, and altered prophyry between this and narrow foot-wall quartz streak.

Development: by shaft 140' deep, drift, and tunnel. Said to show a strong vein at 120', assaying \$35 per ton in gold, silver, zinc, copper and lead. Surface showings on Gladstone and Longfellow claims regarded as good.

Equipment: hoist, blacksmith-shop, bunk-house.

Work will be continued on the main vein. A mill is contemplated.

GOLCONDA CONSOLIDATED

ARIZONA

A. W. Clapp, mgr., Golconda, Ariz.

Inc. Dec., 1915, in Ariz. **Cap.,** \$1,250,000; \$1 par.

Has a lease and bond on the Fredonia and Fredonia No. 2 lode claims, owned by the Ryan Cattle Co., and situated N. of Kingman, in the Wallapai mining district. Company is promoted by a Mr. Wills and was chiefly advertised as a neighbor of Mr. Amster's Golconda mine.

GOLCONDA EXTENSION MINING CO.

ARIZONA

Idle. **Address:** O. D. M. Gaddis, Kingman, Ariz.

Officers: J. E. Perry, pres.; C. Metcalfe, sec.-treas.; O. D. M. Gaddis, directors.

Cap., 1,000,000 shares, all issued, 85% held by Messrs. Gaddis and Perry.

Property: 19 claims, 3 patented, adjoining the Golconda mine on the N., 16 miles N. of Kingman. A number of mineralized veins run through property.

Development: by main shaft, down 354', and considerable openings. Lessees extracted 2,500 tons of \$80 ore. At 280' there is said to be 4' of gold-silver ore.

Production: totaled \$500,000 to end of 1916.

Regarded as promising but needs development.

GOLCONDA MINE

ARIZONA

See Union Basin Mining Co.

GOLD BACK MINING CO.

ARIZONA

Address: Edw. Copley, mgr., Chloride, Ariz.; S. S. Wold, pres., Pasadena, Cal.

Property: 2 claims owned and 2 under option, 2 miles south of Mohave Co., Ariz., showing fissure vein carrying complex, gold-silver-lead-copper-zinc ore. Development on 150' level said to show 7' of ore assaying \$5 gold and silver, \$20 lead, \$15 copper, and \$9 zinc (June, 1917).

Larger hoist and compressor to be installed.

GRAND GULCH MINING CO.

ARIZONA

Office: 503 McIntyre Bldg., Salt Lake City, Utah.

Officers: Wm. H. McIntyre, pres.; Frank R. Snow, v. p.; W. P. Jennings, sec.-treas.; preceding officers, Jas. E. Jennings, W. Little, Jos. A. Jennings, directors; W. P. Jennings, mgr.; S. R. Calloway, supt. St. Thomas, Clark Co., Nev.

Inc. Sept. 15, 1874, in Utah. **Cap.**, \$30,000; shares 10c par; issued 240,000.

Dividends: total \$47,935 to June, 1917. Annual meeting, first Monday in February.

Property: 9 claims, 1 patented, 180 acres, in the Bentley district of Mohave county, Ariz., but more easily accessible from Nevada than from southern or central Arizona, owing to the barrier to access presented by the Grand cañon of the Colorado river. Property shows sandstone and limestone carrying an apparently circular zone of copper impregnations, also having copper in the bedding planes. Ores occur as cuprite, melaconite, malachite, azurite and chalcocite, estimated by management to assay 35% copper and 4 oz. silver per ton.

Development: by a 500' shaft. Mine is 45 miles from St. Thomas, Nev., railroad terminal on the Salt Lake Route. The mine has been in practically continuous operation since 1899.

Equipment: includes a 22 h. p. gasoline hoist, good for 800' depth, and a 2-drill air compressor. There are 9 buildings and a small and antiquated smelter, of no present value.

Production: in 1916 amounted to 3,277 tons of ore containing 10 to 39% copper. To June, 1917, 339 tons of 15% ore were shipped. Employs 70 men.

GRANITE POINT SILVER-LEAD MNG. DEV. CO.

ARIZONA

Operating an old-time silver-lead mine in the Wallapai range, Mohave Co., Ariz., near the Leviathan molybdenum mine. Property is being reopened by E. Hausman and W. D. Kinsey, of Jerome, Ariz.

Development: by 300' tunnel which is to be driven 1,800'. Average sample of the main ledge is reported to assay \$16.40 in gold-silver-lead.

HACKBERRY CONSOLIDATED MINING CO.

ARIZONA

Address: Hackberry, Ariz.

Officers: G. S. Holmes, pres.; Chas. E. Green, sec.; Wm. Neagle, supt.

Inc. March, 1917. **Cap.**, \$1,000,000; shares \$1 par. Took over the old Hackberry mine, located in 1874 by W. B. Ridenour, in the Peacock district, 26 miles N. W. of Kingman, Ariz.

The mine is credited with a production of \$2,000,000 in high-grade silver ore. In the early days a 500' incline shaft, giving a vertical depth of 360, was sunk on the vein. At this depth water stopped operations, but not before all ore above water level had been stoped out. Ore is said to have occurred in a 2½' vein. In later years a vertical shaft was sunk to the water level, a small amount of exploratory work done and the mine allowed to fill with water. In July, 1917, drifting was reported to have disclosed a

9' body of ore averaging \$60 a ton. Management plans to build a mill. Hoist and compressor have been installed and mine unwatered.

Shipping to Needles and Selby smelters, 1917.

HOLMES MIDNIGHT MINES CO.

ARIZONA

Reported sold in 1916 to G. H. Holmes, Salt Lake City, Utah, for \$250,000 and transferred to company; 85% of stock held by Mr. Holmes and by Jim Murray of Butte, Mont.

Property: 6 claims, 1½ miles S. of Chloride, Mohave Co., Ariz., said to have 25,000 tons of gold-copper ore developed above 300' level. Ore-body on 100' level, 56' thick, averages 10% zinc and \$7 gold.

Equipment: includes 10-stamp mill and concentrator, with hoist good for 1,000'.

Production: totaled \$100,000 to end of 1916.

HUGHES ARIZONA COPPER CO.

ARIZONA

Office: Continental Sec. & Inv. Co., 607 McIntyre Bldg., Salt Lake City, Utah. John B. Hughes, pres., Chloride, Ariz.

Inc. 1916.

Property: 5 claims known as the Copperhill and Alma mines, 2½ miles S. E. of Chloride, Ariz. Also has a 2-year lease on the Bay State mine of the Arizona-Bay State Co., providing for a 15% royalty on all ore extracted. Veins are well defined, 10' to 20' wide and traceable 3,000' across claims.

Development: by 500' tunnel said to be driven on the vein, and for about half this distance, in ore. A shaft has been started and was 100' deep, May, 1917.

Lessees working on the Bay State claim that the ore carries antimony besides copper, silver, lead and zinc values.

JEMISON MINES CO.

ARIZONA

Head office: Wallace, Idaho. **Mine office:** Chloride, Ariz.

Officers: G. W. Kays, pres.; Henry Kehoe, v. p.; Charles McKinnis, sec.-treas. and gen. mgr., with C. G. Crook and J. P. Smith, directors.

Inc. 1917 in Arizona. **Cap.**, \$1,500,000; shares \$1 par; non-assessable.

Property: 4 claims and fractions, 17 miles N. of Kingman, in the Wallapai district, Mohave Co., Ariz., ½ mile from the well-known Golconda mine at Chloride.

Development: main tunnel 500' long, being extended E. 350' to connect with old workings above. Ore-shoot has been proven continuous for 300' and is from 3 to 7' wide, with \$25 to \$48 per ton in gold, silver and copper values. A shoot carrying arsenopyrite on the foot-wall contains as high as 10 oz. gold per ton. Near this shoot a shaft is being sunk in ore from the main tunnel, hand-sorted ore paying half the expenses.

Equipment: 25 h. p. Fairbanks-Morse hoist, 5-drill compressor, pump, houses, etc.

One of the promising prospects of this district.

JUNO MINE

ARIZONA

Address: Wm. Miller or Mrs. Sophy Loy, Long Beach, Calif.

Property: one of the earliest locations in the Chloride district, Mohave Co.

Development: by 570' shaft and 2,000' open-cut. **Production:** totaled \$500,000 to end of 1916.

Stated late in 1916 that mine was to be taken over by Eastern capital.

KEYSTONE CONSOLIDATED MINING CO.

ARIZONA

Address: Chloride, Ariz.

Officers: G. S. Holmes, pres.; W. O. Kay, v. p.; T. H. Fitzgerald, sec.; John Pingree, treas., with C. G. Greene, directors; F. W. Sherman, mgr.

Property: the Keystone mine, 4 claims, in Mineral Park, Cerbat Range, formerly owned by Ross D. McCausland of Kingman.

Ore: silver-zinc-copper bearing, containing 2 to 4% copper, 12 to 24% zinc and over 30 oz. silver per ton, as sampled from dumps. Past production said to be \$150,000.

Development: shaft 300' deep, with three levels. Vein has been opened for 750'.

Equipment: includes a 250-ton mill using the Fields process, which was started in May, 1917, but proved a failure. In July re-modeling was started, installing another flotation system and accessories to treat dump ore and if successful, mine will be re-opened.

Probably a fair mine, but had a wrongly-designed plant rushed up before it was needed. Company was consolidated with the Silver Keystone Co., in 1917.

Production: totaled \$150,000 to end of 1916.

LA ANOZIRA GOLD MINING CO.

ARIZONA

Office: 218 Colorado Bldg., Denver.

Officers: Walter C. Williams, pres.; Thos. B. Everett, v. p. and engr.; J. C. McDowell, sec. and mgr.

Inc. Oct. 27, 1914, in Ariz. **Cap.**, \$1,000,000; shares \$1 par; non-assessable.

Property: 2 claims in the Cerbat Mtns., Mohave county, about 12 miles from Kingman, said to carry a 4' vein of free gold, running from \$6 to \$80 per ton. In a stock selling campaign to raise funds for a mill, the president stated, Dec. 14, 1914: "The mine is developed by 640' of tunnels, 230' of shafts, all in ore. Shafts have been sunk to connect tunnels with surface and, in fact, a mine is fully proven by the thousands of dollars of work done. The property has been thus developed and is now ready for a mill."

In Oct., 1915, the public was notified that, "Our mines are well located; producing properties all around us. We have large development, large tonnage of high-class ore, and everything at hand for grand success, only awaiting the time when we have our 50-ton mill (which is ordered) paid for. Our directors will not incur debts. We go on the policy of 'Safety First.' We have not much money to raise to pay for this mill and get it installed. This should attract the attention of investors because this company agrees to return your full invested money within one year from date of certificate and you to retain the stock. The physical value of the property is such that the company feels justified in making this liberal offer. The lowest estimated earnings will return all the stockholders' money as promised, with a large dividend in addition." To date, Sept., 1917, no further report of development, mill or profits has reached us.

The above is enough to warn the wary investor.

LEVIATHAN MINES CO.

ARIZONA

Office: 1508 Pioneer Bldg., St. Paul, Minn. **Mine office:** Yucca, Ariz.

Officers: Theo. Hollister, pres.; A. J. Brawley, v. p.; G. H. Prudden, sec.-treas., with A. A. Nystrom, Ola Hakason, C. E. Bernhardt and W. C. Gould, directors; I. C. Stricker, supt.

Inc. Oct. 14, 1914, in Ariz. **Cap.**, \$1,000,000; shares \$1 par; 759,402 shares issued. Annual meeting first Tuesday in Dec.

Property: the Whale & Copper Canyon mines, 7 claims, about 120 acres, in the Copper canyon, Cedar mining district, Mohave Co., Ariz., shows copper-molybdenite-silver-lead ore in 2 quartz veins traversing an altered granite. The main orebody said to be 7' wide and proven for 3,000' in length, runs N. 8° E. and dips 80° E. Ore said to average 2-4.5% molybdenum, 2-3% copper, 2-6 oz. silver, 60c-\$1 gold. Vein reported to be 14' wide at 100' level.

Development: 115' shaft and 2 tunnels 60' and 400' long with 200" and 400' drifts. Shaft being sunk to 250' level.

Ore reserves: estimated at 40,000 tons averaging 2-4% molybdenum and 2½% copper.

Equipment: includes 100 h. p. and 50 h. p. oil engines, with complete concentrating plant of 50-70 tons daily capacity.

LOS ANGELES GEM CO.

ARIZONA

Office: Los Angeles, Cal. **Mine office:** Kingman, Mohave Co., Ariz. E. E. Peck, pres. and gen. mgr. C. W. Morrell, sec.-treas.

Property: includes a variscite mine in Esmeralda Co., Nev., but the principal property is the George Washington group of 6 claims in Mineral Park, near Kingman. This property carries a vein of 18 to 24" width, developed by a 143' upper tunnel and a 370' lower tunnel, said to show ore assaying up to 4% copper, 200 oz. silver and \$4 gold per ton. The company mined turquoise from the claims for some years, before developing copper.

Equipment: includes gasoline hoist.

MERRIMAC MINE

ARIZONA

Owned by Geo. Cleeland of Philadelphia, Pa., but bonded to J. C. Rankin in June, 1917.

Property: a mile west of Chloride, is developed by 400' incline shaft and new shaft sunk in 1917. The vein is said to be 22' wide, and cuts through porphyry and diorite. Ore carries gold, silver, lead and zinc.

Production: totaled \$175,000 to end of 1916.

MIDDLE GOLCONDA MINES CO.

ARIZONA

Address: Golconda, Ariz.

Officers: John Mulligan, pres.; J. E. Suits, v. p.; J. B. Speed, sec.-treas.; C. B. Bell, gen. mgr., with J. Winchester, directors.

Inc. in Arizona. Cap., \$1,000,000; shares \$1 par; 660,385 issued.

Property: 4 claims, fractional, adjoining Golconda mine on N. and crossed by Golconda vein, 3 to 10' wide.

Geology: zinc ore, with small amount of lead, occurs in shoots, or expansions of the vein, 6 to 20' wide.

Development: by tunnels, upper one showing good ore, and lower one mill ore only. Silver ore reported opened in upper level in July, 1917.

Intermittent shipments of high-grade ore being made. Property lacks water and camp-site. Funds needed for development. Erection of a mill contemplated in August, 1917.

MINNESOTA-CONNOR MINING & MILLING CO.

ARIZONA

Address: P. S. Virgin, mgr., Chloride, Ariz.

Officers: H. B. Hanford, pres.; J. T. Jackson, v. p.; J. S. Freemann, sec.; J. O. Kerbaugh, treas.; the first three at Philadelphia, Pa.

Property: 13 claims, 1½ miles S. of Chloride, Mohave Co., Ariz., said to carry the outcrops of 17 distinct veins.

Development: by 725' vertical steel-lined shaft, also 4 inclines from 100 to 530' deep. At 600' depth the main vein is 15 to 25' wide, but of low grade. At 700' it is 38' wide, also poor. West of the shaft is a 20' vein, the Pluto, which is expected to join with the Minnesota below 700'.

Equipment: three 100 h. p. boilers, 75 h. p. hoist, 900 cu. ft. compressor, lighting plant, mill engine and 150-ton concentrator.

Production: totaled \$1,150,000 to end of 1916. Work was suspended late in 1916 for want of funds.

MOLLY GIBSON-CHLORIDE MINES CO.

ARIZONA

Address: W. J. Sims, Chloride, Ariz.

Property: 3 claims, 1,000', S. W. of the Tennessee mine, Chloride

district, Mohave Co., Ariz. Ore carries silver and lead, with some gold and copper as far as opened to 200' depth.

Production: totaled \$100,000 to 1916.

Property: being promoted by W. B. Twitchell and others in March, 1917.

NEEDLES MINING & SMELTING CO.

ARIZONA

Is a subsidiary of the U. S. S. R. & M. Co., which see. **Mine office:** Chloride, Mohave Co., Ariz. **Works office:** Needles, San Bernardino Co., Calif. A. P. Anderson, gen. mgr.; D. R. Muir, mgr., of this and the Gold Roads Mines Co., Needles, Calif., and Gold Road, Ariz.

Inc. 1909, in Me., as successor of Arizona-Mexican Mng. & Sm. Co. **Cap.**, \$5,000,000; shares \$5 par; entire stock issued is owned by United States Sm., Ref. & Mng. Co. Company does not publish a separate report.

Company owns the following properties:

First: the Tennessee mine, at Chloride, Ariz., the terminal of a branch line from Kingman on the main line of the Santa Fe R. R. The mine consists of the Empire No. 2, Tennessee, Great Lead and Tennessee South patented claims. The group has been operated since 1909 under a bond and lease running ten years.

The ore contains gold, silver, lead and zinc in varying proportions and occurs in a fissure vein between pegmatite and schist, striking north and south. The ore shoot averages about 300' in length and 6' in width and has been followed down to the 1,170' level. The ore is being extracted through a shaft which up to date has reached a depth of 1,400'. Indications are that the ore shoot will be followed in undiminishing strength to a much greater depth than has been yet achieved.

The mine is equipped with hoists run by steam power and is well supplied with shops, compressors and all necessary accessories.

The output is about 200 tons of ore a day, carrying 5% lead and 10% to 14% zinc, shipped to the company's plant at Needles where two products are obtained, a lead concentrate carrying gold and silver which is shipped to the company's smelters at Midvale, Utah, and a zinc concentrate which is shipped to Kansas and Oklahoma smelters of the U. S. S. Co. The present output is about 800 tons of lead concentrates and 1,200 tons of zinc concentrates per month.

Early in 1916, the Empire mine was unwatered and the shaft deepened as exploration at the Tennessee has shown that the orebodies are persistent downward. The company is also operating the Comanche and Durango mines, the latter showing 7' of zinc ore in the bottom of a 70' shaft.

Second: Champion mines, 12 miles north of Kingman, consists of the following unpatented claims: Champion, Champion No. 2, and Primrose, 52.75 acres. These claims, like the Banner group, were acquired as a prospect and some development work was done which yielded a small tonnage of gold, silver, lead and zinc ore, which was shipped to the company's mill at Needles. They are now being worked by lessees.

Champion is shipping about one car daily to Needles.

Third: the Stockton Hill group of mines, at Stockton Hill, Mohave Co., Ariz., 290.5 acres. No work is being done on this group at present.

Fourth: the milling plant at Needles, Calif., a concentrating plant of 125 tons daily capacity, equipped with crushers, jigs, tables and a flotation plant, the latter for the recovery of zinc values from tailings. This plant treats mainly the ore from the above-mentioned Tennessee mine. It also treats small tonnage of custom ores. The plant is thoroughly modern and well-equipped for economic work.

Production: the Tennessee mine yielded over \$18,000,000 to the end of 1916, and the Champion over \$200,000.

NEW JERSEY MINING CO.**ARIZONA****Address:** Ed. Mingle, mgr., Chloride, Ariz.**Property:** 2 claims, $\frac{3}{4}$ mile E. of the Tennessee mine, Chloride district, Mohave Co., Ariz.**Development:** by tunnel and winze, opening the vein to a depth of 320'. At 300' is 6 to 8" of gold-silver-lead ore.**Equipment:** hoist and 30-ton mill. Production to the end of 1916 totaled \$50,000. Shipments averaged \$31 per ton.**PAYROLL MINE****ARIZONA****Address:** A. W. Henning, mgr., Chloride, Ariz.; T. B. Scott, New York, owner. Reported under 10-year lease to F. L. Martin.**Property:** $1\frac{1}{2}$ miles E. of Chloride, Mohave Co., Ariz.**Development:** by 400' vertical shaft. On the bottom level over 290' has been driven in ore, the shoot being from 1 to 8' wide. At 200' the vein was 12' wide for 290'. Minerals are mostly zinc, with a little gold and silver.**Equipment:** electric hoist, compressor, etc.**Production:** totaled \$50,000 to end of 1916.

Shipping 35 tons of lead-zinc ore per day, Sept., 1917, to mill at Needles.

POLARIS MINING CO.**ARIZONA****Office:** 520 Lyceum Bldg., Duluth, Minn.**Officers:** W. A. Eaton, pres.; J. O. Davis, v. p.; G. L. Maycroft, sec-treas.; above with A. E. Fritz, G. A. Eaton, O. E. Dahly, B. P. Wheeler and G. D. Tulian, directors.**Inc.** 1916 in Minn. **Cap.**, \$1,000,000; shares \$1 par; 294,281 issued. Company is successor of the Summit Gold Mng. Co., which in turn succeeded Summit Copper Co. Stockholders of Summit Gold Mng. Co. were offered stock in Polaris, share for share with payment of 25c a share.**Property:** 21 claims, 5 patented, known as the Klondyke mine, about 400 acres and a mill site, adjoining the Golconda mine on the south, in the Virginia district, Mohave Co., Ariz., about 22 miles N. W. of Chloride, the nearest railway station.**Geology:** of district is described in U. S. Geol. Survey Bull. No. 397. Claims said to show Golconda, Tub and Blackfoot veins, and 5 others.**Ore:** gold-bearing quartz occurs in a vein up to 50' in width. In 1897 a 10-stamp amalgamation mill was erected near the property and mine is credited with production of 3,000-4,000 tons of ore running from \$8 to \$37 per ton. Gold is finely disseminated and as only a 32% extraction could be made, operations were suspended.**Development:** by 300' tunnel.

Transportation, water, etc., are some of the difficult problems confronting the company.

Is a prospect which development alone can prove.

RAINBOW MOUNTAIN MINING CO.**ARIZONA****Address:** 702 Gas & Elec. Bldg., Denver, Colo. Mine at Chloride, Ariz.**Officers:** C. E. Walker, pres.; G. E. McCarn, v. p.; B. F. Williams, sec.; H. L. McCarn, treas. and gen. mgr.**Inc.** 1907, in Arizona. **Cap.**, \$1,000,000; shares \$1 par.**Property:** 9 claims, unpatented, on Rainbow Mt., 2 miles E. of Chloride, Wallapai mining district, Mohave Co. Claims said to show a vertical vein containing gold-silver-lead-zinc ore.**Development:** work totals 3,000' including 780' of tunnels and 450' shaft, with 4 levels opened up. Company claims to have 10,000 tons of ore partly blocked out, May, 1917, mostly on "South" ore shoot.

Equipment: includes an 80 h. p. hoist and 2-mile aerial tram, 300 cu. ft. compressor, Cornish pump.

Management plans driving a 3,000' crosscut tunnel to cut vein at 1,000', in 1917-18.

Production: shipments to Needles smelter, totaling 3,000 tons, of silver-gold-lead ore, have yielded \$140,000 to end of 1916.

RATTLESNAKE MINE

ARIZONA

Address: F. E. Braly, supt., Chloride, Mohave Co., Ariz.

Property: developed by shallow shaft, showing gold-silver-lead ore. Shaft is being sunk to 200', in 1917.

RED GAP GOLD MINES CO.

ARIZONA

Officers: C. C. Ward, pres.; C. W. Hernden, v. p.; C. M. Pedley, sec.-treas.

Inc. 1917, in Arizona. **Cap.**, \$1,500,000; shares \$1 par.

Property: a group of claims in the Weaver district, 25 miles N. W. of Chloride, developed by tunnels and drifts said to expose veins from 10-12' wide, showing gold-silver values. A prospect.

REDEMPTION COPPER MINING & MILLING CO.

ARIZONA

Dead. Lost its property, 1914.

The mine near Chloride, Mohave Co., Ariz. was sold to Dr. M. Taylor Uhler, Philadelphia, in 1917. See Vol. XII.

RICO CONSOLIDATED MINING CO.

ARIZONA

Address: R. W. Wilde, Desert Power & Water Co., Kingman, Ariz. W. J. Hennessey, supt.

Property: the Rico and C. O. D. mines, 12 miles N. of Kingman, Mohave Co., Ariz. The C. O. D. was acquired in Sept., 1917. It has produced \$1,500,000 of silver and gold, and has been unwatered to 400' depth.

Equipment: hoists and mill, the latter being overhauled.

Production: from the C. O. D. mine totaled \$1,300,000 to the end of 1916.

SCHUYKILL MINING CO.

ARIZONA

Address: T. J. Torpey, supt., Chloride, Ariz. H. A. Broughton, pres., San Francisco, Calif.

Property: 2 patented claims, on the S. adjoining the Tennessee mine, Chloride district, Mohave Co., Ariz.

Development: by 800' incline shaft and levels at each 100'. The vein is almost vertical, dips slightly E. and strikes N. 9° W. At 500' the shoot is 5' wide. In a tunnel connected with the 200' level, the shoot is 8' wide. Mine has an ore pile of \$23 mill ore; value being in gold, silver, lead and zinc. Reserves above 500' were estimated at 70,000 tons of \$45 ore.

Equipment: 100 h. p. steam hoist, 108 h. p. gas. engine, 460 cu. ft. Sullivan angle-compound compressor, lighting plant, etc. A flotation plant was planned in 1917.

Production: totaled \$125,000 to end of 1916.

SILVER HILL MINING & MILLING CO.

ARIZONA

Address: H. M. Henning, mgr., Chloride, Ariz.

Officers: H. M. Henning, pres.; Geo. Cunningham, v. p.; H. G. Benson, sec.-treas.

Property: 3 patented claims and millsite, ¼ mile S. W. of Chloride, Mohave Co., Ariz.

Development: by 1,000' vertical shaft, also 5 inclines from 75 to 250' and a 600' tunnel. Good ore is said to have been opened at several points. Dumps contain over 12,000 tons of \$10 ore.

A 200-ton mill, employing gravity and flotation concentration was contemplated.

Production: totaled \$100,000 to end of 1916.

SILVER KEYSTONE CO.**ARIZONA**

Address: F. W. Sherman, supt., Chloride, Ariz.

Consolidated with Keystone Consolidated Mining Co., whose mill is treating ore from both mines.

SILVER KNIGHT MINE**ARIZONA**

Address: Chas. Parisia, mgr., Chloride, Ariz. T. N. Barndall, Pittsburgh, Pa., owner.

Property: 2 claims, said to be on the S. extension of the Tennessee vein, Chloride district, Mohave Co.

Development: by vertical shaft, reported to have opened good lead ore.

TELLURIDE & CHLORIDE LEASING, M. & M. CO.**ARIZONA**

Address: H. L. Heath, supt., Chloride, Ariz.; G. R. Harkness, v. p.; J. M. McMillan, sec.-treas.

Property: the Schenectady mine, 3 claims and a millsite, in Chloride district, only 585' north of Tennessee mine, has 5' fissure vein, crossed by Genevieve vein.

Development: sinking a shaft to 400' depth in June, 1917, with good silver ore reported at 225'.

Production: totaled \$10,000 to end of 1916.

TENNESSEE MINE**ARIZONA**

Chloride, Ariz. See Needles Mng. & Sm. Co.

TINTIC MINE**ARIZONA**

Property: 1½ miles W. of Chloride, Mohave Co., Ariz.

Development: to 100' depth. Vein is from 3 to 5' wide, and considered promising.

Production: totaled \$100,000 of gold to end of 1916.

TOWNE MINING CO.**ARIZONA**

Address: J. E. Shank, sec., Chloride, Ariz.; S. S. Jones, pres.; Dan Murphy, v. p.

Property: the Towne mine, 1½ miles S. of Chloride, Mohave Co., developed by 225' vertical shaft.

Production: totaled \$1,300,000 to end of 1916, mostly silver ore. Smelter returns show carloads assaying 7 oz. gold and 600 oz. silver per ton. For this production the ore was selected, but systematic operations are now being pursued.

UNION BASIN MINING CO.**ARIZONA**

Office: 67 Milk St., Boston, Mass. Mine office: Golconda,, Mohave Co., Ariz.

Officers: N. L. Amster, pres.; C. R. Jeffers, v. p. and sec.-treas., with Otto Sussman, directors; J. D. Wanvig, supt.

Inc. in Ariz. Cap., \$700,000; shares 70c par; 835,350 outstanding. Annual meeting, third Tuesday in March.

Initial dividend paid in Dec., 1916, amounting to \$85,000.

Property: the Golconda zinc mine, at Golconda, near Chloride and 16 miles N. of Kingman.

Development: by 1,400' shaft. At this depth the vein is reported to be 1,000' long and 5' wide. The rich shoot is 4" wide, assaying 12% zinc and \$8 per ton in gold and silver.

Production: totaled \$8,000,000 to end of 1916.

Equipment: includes a 200-ton flotation mill, being overhauled. Electric power is obtained from the Desert Power & Water Co. at Kingman. Property is an important producer.

UTAH-ARIZONA GOLD & COPPER MINING CO.**ARIZONA**

Idle. Office: 625 Dooly Bldg., Salt Lake City, Utah.

Officers: Heber S. Cutler, pres.; J. F. Shelley, v. p. and gen. mgr.,

Shelley, Idaho; John W. Geiger, sec.-treas.; preceding officers, W. J. Burton, Geo. F. Shelley and M. Thomas, directors.

Inc. Nov. 11, 1907, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; assessable; issued 961,023. Annual meeting, second Tuesday in September.

Property: 60 claims, unpatented, about 1,200 acres, and a 20-acre mill site, in the Weaver district, 18 miles N. W. of Chloride, Mohave Co., Ariz., the nearest rail point. Claims show quartz veins traversing granite and mica-schist, carrying gold-copper ore. Property includes the Golden Gate mine, developed by 2 incline shafts of 125' and 135', on parallel veins, and several short tunnels, with total of about 2,000' of workings.

Equipment: includes a 5-stamp mill, idle since 1914.

WESTERN ORE CONCENTRATION CO.

ARIZONA

Address: F. E. Steffy, gen. mgr., Chloride, Ariz. Company operates a 250-ton custom plant including a 9x15" Blake crusher, two 14x30" Reliance rolls, Marcy ball mill, Hancock jig, 10 Wilfley tables and Kraut & Kohlberg (K & K) flotation unit.

CROWN KING DISTRICT, YAVAPAI COUNTY

ALGONKIAN MINES CO.

ARIZONA

Office: Room 1000, No. 35 E. 41st St., New York City. **Mine address:** A. C. Wardle, supt., Crown King, Ariz.

Officers: John B. Frioh, v. p.; John L. Schellenberg, sec.; J. Edward Michel, treas.; together with Geo. F. Shurtleff and Ralph H. Cameron, directors.

Property: 17 claims, 5 patented, 335 acres, in Crown King section of Bradshaw mountains, 4 miles east of Crown King, Yavapai Co. Claims cover 4 miles along a diabase dike traceable 10 miles N. W.-S. E., cutting Yavapai schist. The schist is intruded by several porphyry dikes, or sheets parallel to the schistosity. Mineralization is said to occur in the porphyry at the diabase contact.

Development: by tunnels and shaft totals 2,400'. The lower or Algonkian tunnel, 1,100', runs along the dike contact, on the Anaconda claim. For 350' it is reported to follow the apex of an ore shoot; a 200' raise run from the tunnel to the surface at 322', is said to be on the orebody. This air shaft continues as a 50' winze below the tunnel and a drift N. from the bottom shows galena with occasional bunches of glance and chalcopryrite. This will be made the working shaft and sunk for 1,000' depth.

The Algonkian tunnel is being extended 300'-500' farther south to cut another indicated orebody at a depth of over 500'.

On the Gold Lock claim a small cross vein, recently discovered by new work, shows 8-10" of high-grade silver ore, one sample carrying 180 oz. per ton. Property examined by Jas. P. Harvey.

Equipment: includes Western Oil 60 h. p. hoist and air compressor.

Company officers report ample funds on hand for a year's development work and no debts.

BIG SEVEN GROUP

ARIZONA

Near Harrington, Yavapai Co., Ariz. Mine, developed by 1,200' tunnel, shows a well-defined vein with high values in gold-silver-copper. Ten men employed at last accounts.

BLACK ROCK (LTD.) MINING & MILLING CO.**ARIZONA****Address:** Constellation, Ariz. Inc. in 1910 in Arizona.**Property:** 3 patented claims, about 12 miles east of Wickenburg. Developed by 360' shaft, drifts and crosscuts, on a vein from which some ore is reported to have been extracted.**Equipment:** includes hoist and 2 Huntington mills.**BRADSHAW REDUCTION CO.****ARIZONA****Office:** Crown King, Ariz.**Officers:** F. S. Vielé, pres. and treas, Prescott; D. B. Gemmill, sec. and mgr., Crown King; J. F. O'Brien, F. W. Stehr, G. D. Morris, directors; Mark Gemmill, supt. **Transfer office:** Prescott, Ariz.**Inc.** Aug., 1916, in Arizona, to take over properties of the Yavapai Cons. G. S. C. Co., and to establish a custom mill at Crown King and Old Tiger mines. **Cap.**, 1,000,000 shares; \$1 par; non-assessable; 400,000 shares outstanding; no bonds. Annual meeting in August.**Property:** 78 claims, 34 patented, about 1,500 acres, includes the Wildflower and Crown King mines.**Development:** company is reopening Crown King mine and development of further stoping ore in the Wildflower.

In 1916 the 480' Crown King shaft was retimbered. Two upraises, 40' and 60', have been made on the orebody 600' from the shaft on the 480' level, blocking out 20,000 tons of \$20 ore. According to old reports there is between 40,000 and 60,000 tons of similar ore blocked out.

Equipment: company has rebuilt 150-ton Crown King mill and a 2-mile tramway between it and the Wildflower mine and will remodel the mill at the Old Tiger mine.

Company has made considerable money treating the old tailing dumps of the district and has evolved a process which promises to be equally successful with the Wildflower ores. It is the only important producer of the district; has very capable management, and directors able to finance the company's undertakings.

GOLD KING MINING CO.**ARIZONA****Address:** Crown King, Yavapai Co., Ariz.**Inc.** Mar. 11, 1904, in Arizona. **Cap.**, 1,000,000 shares; \$10 par; 450,000 outstanding. Bonds authorized, \$100,000; \$10,000 outstanding.**Officers:** Everett Moffitt, pres.; G. A. Brownlee, sec-treas., of Muncie, Ind., with W. E. Toohey, W. R. Conklin, F. Harrod, D. Fisher, A. McDill, W. Purcell and I. N. Godden, directors.**Property:** 22 claims in Peck district, Bradshaw mountains, Yavapai Co., Ariz.**Development:** by tunnels 1,500', 1,100', 800' and 600' long which open a vein in schist and porphyry to 600' depth. Workings total 6,000'. Ore contains gold, silver, copper.

Expenses in 1916 were \$10,000. An air-compressor is to be installed.

Considered an over-capitalized company doing but little work.

LAKE SUPERIOR & WESTERN MINING CO.**ARIZONA****Office:** 208 Glencoe Bldg., Duluth, Minn.**Officers:** A. Hagberg, pres.; A. Bjorkman, v. p.; A. Borgquist, sec.; A. Johnson, treas., with Magnus Olson, John Peterson, A. R. Norman, Ed. Falk and A. Kolstad, directors.**Inc.** 1912, in Ariz. **Cap.**, \$1,000,000; shares \$1 par; \$250,000 issued; assessable, subject to calls from 60c-\$1. Authorized bond issue \$300,000; \$134,000 bonds outstanding. Annual meeting, first Tuesday in February. Is a holding company, owning a ½ interest in the Big Pine Cons. Mng. Co., which sec.

Company owned the Mascot gold mine and a 100-ton cyanide plant at Crown King. After expenditure of \$250,000 on the mine and mill, ore proved to be too low-grade to pay and property was abandoned. In 1915 a consolidation was effected with the Big Pine Cons. Mng. Co., a \$500,000 corporation, on the following basis: 200,000 shares of the 500,000 shares of capital stock were issued for the Big Pine properties and 200,000 shares and \$32,150 in cash was paid the Lake Superior & Western Co. for its mill, which has been moved to the Big Pine ground.

MONTEZUMA MINING & MILLING CO.**ARIZONA**

Address: Crown King, Ariz.

Officers: J. P. Waldron, pres.; Phillip Nohe, v. p.; P. Fink, sec.; A. Waldron, treas., with F. Fink and M. Devaul, directors.

Inc. in Arizona. **Cap.,** \$1,000,000; shares \$1 par; non-assessable.

Property: 7 claims, 5 patented, 120 acres, in Pine Grove district, 4 miles from Crown King. Shafts and tunnels reported to have opened some high-grade ore.

In March, 1917, property was leased to H. K. Kinsiman, who will extend the 700' tunnel in the Bear claim.

NELSON MINING CO.**ARIZONA**

Office: 609 Land Title Bldg., Philadelphia, Pa. **Mine office:** Crown King, Yavapai Co., Ariz.

Officers: Henry Kirst, pres.; E. T. Gillespie, v. p.; Paul R. Brown, sec.-treas.; G. P. Harrington, gen. mgr., with N. P. Bishop, A. J. Pusey and Solomon Fuld, directors.

Property: between town of Crown King and mine of that name. Has fissure vein 3' wide, developed by 2 adits, 225' apart vertically, the lower one 3,000', the upper 1,000' long, and 300' incline shaft on vein.

Numerous assays show gold-silver values in commercial quantities; also some lead, zinc and copper. Development is underway. Ore is being sent to the new flotation mill of the Bradshaw Reduction Co. at Crown King, adjoining the Nelson mine. The zinc-content, a detriment in the past, is now valuable, forming by flotation an iron and a zinc concentrate desired by smelters.

Equipment: includes 25 h. p. gasoline hoist and air compressor. Company is reported to employ an average force of 15 men.

ORO BELLE DEVELOPMENT CO.**ARIZONA**

Address: Crown King, Yavapai Co., Ariz.

Inc. in 1915 by C. C. Cowan to operate the Oro Belle and Gray Eagle gold mines, which see, under lease.

Forfeited lease, 1916, after shipping 56 tons of ore to the Humboldt smelter.

ORO BELLE & GRAY EAGLE GROUP**ARIZONA**

Address: Mrs. Hattie Barnes, owner, care Theron Davis, 170 Broadway, New York. Mine formerly owned by Tiger Gold Mng. Co.

Property: 10 patented claims, 172 acres, 5 miles S. E. of Crown King, Arizona, shows pyrite and chalcopyrite in fissure veins, 2-15' wide. Veins strike N., dip 60° W. Ore is said to assay \$20 gold, 2 oz. silver and 1% copper per ton.

Development: by 8 tunnels, longest 1,000', and a 600' shaft.

Ore reserves: estimated April, 1916, at 5,000 tons of \$20 ore.

Equipment: includes a 50 h. p. steam hoist, compressor and 20-stamp, 60-ton mill.

Production: 19,010 lbs. fine copper, 9,937 oz. silver and 4,313 oz. gold in 1907; 3,639 oz. silver and 1,823 oz. gold in 1908; 4,802 lbs. fine copper,

2,725 oz. silver and 1,226 oz. gold in 1909. Property was idle until Oct., 1915, when leased to Oro Belle Dev. Co. Again idle, 1917.

Mine credited with total production to date of \$700,000.

PACIFIC COPPER MINING CO.

ARIZONA

Office: 415 Board of Trade Bldg., Kansas City, Mo. **Mine office:** Crown King, Yavapai Co., Ariz. John Kelley, pres.; W. J. Morse, sec.

Inc. Feb. 8, 1907, in Arizona. **Cap.**, \$3,000,000; shares \$1 par; non-assessable; issued, \$2,397,616.67.

Property: 30 claims, 10 patented, 600 acres, including a mill and smelter site, 4 miles from Harrington and 9 miles from a railway, in the Silver Mountain district of the Bradshaw mountains. Claims show a hornblende phase of Yavapai schist, with an intrusive porphyry dike of 50 to 150' width, carrying contact deposits of 9', of 14' and of 25' estimated average width, traceable 3,000', with N.-E. strike. Gossans are much leached, carrying honeycombed hematite and limonite, with occasional copper carbonates.

Ores: malachite and azurite, succeeded at 50' by secondary chalcocite, bornite and chalcopyrite. The management estimates ore to range from 3 to 15% in copper, with good silver and gold values.

Development: consists of 1,500' of work, with a 500' shaft and several prospect workings.

Equipment: includes a 120 h. p. plant, with an 80 h. p. 3-cycle vertical engine, connected to a 4-drill Sullivan air compressor, a 20 k. w. triplex pump, and a 40 h. p. gasoline hoist. Presumably idle.

RANDOLPH-GEMMILL DEVELOPMENT CO.

ARIZONA

Addresses: Crown King, Ariz., and Prescott, Ariz.

Officers: M. P. Randolph, pres.; F. S. Viele, v. p.; David B. Gemmill, engr.

Property: the remodeled Crown King mill, in which 70-80 tons per day of the old tails from the mill are retreated. These tails are complex, carrying 0.3 oz. gold, 4½ oz. silver, 11% zinc, 0.8% copper, 10% iron, 53% insoluble; they are tailed, and treated by oil flotation making a 4 to 1 concentrate. The bulk concentrate is retreated making 15 tons zinc and 7 tons iron concentrate from each 100 tons tails. Zinc product carries 43% zinc, 10% iron, 4½% copper, 15 oz. silver and 0.6 oz. gold; the iron product carries 1½ oz. gold, 10 oz. silver, 2½% copper, 12% zinc, 30% iron and 5% insoluble. These products yield a net profit of about \$4 per ton of tails treated after paying \$1.50 per ton royalty.

SARATOGA MINING CO.

ARIZONA

Crown King, Yavapai Co., Ariz. J. L. Deming, mgr. According to report the company was reorganized in 1915, and in Dec., 1915, completed a 75-ton mill to treat Saratoga ore and also the dump ore of the adjoining Crown King mine, belonging to the Yavapai Consolidated Gold-Silver-Copper Co. The shaft will be deepened to the 250' level.

TIGER GOLD MINING CO.

ARIZONA

Formerly owned the Oro Belle & Gray Eagle mine, Crown King, Ariz.

TUSCUMBIA MINING & MILLING CO.

ARIZONA

Jas. H. Sullivan, supt., Crown King, Ariz.

Inc. March, 1916, in Arizona. **Cap.**, \$1,000,000; shares \$1 par.

Property: the Tuscumbia mine, in the Bradshaw Mtn. district, carrying a lode with silver ores, said to be like those of Tonopah. A shoot opened May, 1916, is reported to show 3.8% copper and 115 oz. silver per ton in a shoot 50' long and 4' wide.

In March, 1917, ore was coming from 4 adits to a depth of 300'.

YAVAPAI CONS. GOLD-SILVER-COPPER CO. ARIZONA

Office: Prescott, Ariz. **Mine office:** Crown King, Yavapai Co., Ariz.

Officers: T. G. Norris, pres.; A. W. Edwards, v. p.; G. D. Morris, sec.-treas.; L. B. Mulhearn, asst. sec.-treas.

Lands: 18 claims, partly patented, including the Old Reliable mine, 3 miles from Crown King; the Wildflower group, in Pine Grove district; the Tiger group, in the Bradshaw mountains, and the Crowned King mines, in the Bradshaw mountains. The last named group, 18 claims, bought from B. A. Turner, receiver of the old corporation, for \$75,000, half in cash and half in shares, has been a considerable producer, mainly of gold.

Property: is leased to the Bradshaw Reduction Co.

Development: by several thousand feet of old workings on a contact vein, between porphyry and syenite, carrying slightly auriferous and highly argentiferous copper ores, opened by a 170' shaft.

Equipment: includes steam power, compressors, 10-stamp mill and 200-ton concentrator. About 20,000 tons of old tailings were sold in 1915 and are being treated in a flotation plant.

*DOUGLAS, INCLUDING PARADISE, COCHISE COUNTY***HILLTOP MINES (not Inc.) ARIZONA**

Principal owners: J. O. Fife, Kansas City; P. J. Kasper, Chicago; R. O. Fife, trustee. Dos Cabezas, Cochise Co., Ariz.

Property: 50 unpatented claims, 1,000 acres, in California mining district, Chiricahua Mountains, Cochise Co., Ariz., said to show copper, lead, zinc, silver ore in quartz veins and contact deposits; strike N. W.-S. E., dip 60° S. W. Ten shoots reported opened up on 800' level, 2' to 10' wide and 30' to 110' long, said to show assays of 20 to 40% lead, 1 to 3% copper and 6 to 10 oz. silver.

Development: by 2 tunnels, one 1,100' long, the other 2,600' long; greatest depth of working 800'. Total underground workings, 5,000'. No ore blocked out and has been cut on one level only. No shipments made in 1916.

Equipment: includes a 70 h. p. Snow-Diesel engine and an Ingersoll-Rand compressor, capacity 385 cu. ft. Management is planning to drive 2 more tunnels.

MANHATTAN DEVELOPMENT CO. ARIZONA

Office: Post Office Blk., Houghton, Mich. A. O. Koppes, supt.; J. H. Rice, pres.; W. G. Rice, sec.-treas.

Inc. March, 1905, in Arizona. **Cap.**, \$200,000; shares \$10 par; \$5.50 paid in.

Property: 37 claims, 600 acres, owned in fee, in the California district, near Paradise, Cochise Co., Ariz., carries upwards of 2 miles of the outcrop of a mineralized zone lying W. and N. of the holdings of the Chiricahua Development Co.

Development: by several shallow shafts, deepest 80', and a 450' cross-cut tunnel, latter showing leached ore and a little high-grade ore, with indications of persistent values at greater depth.

In 1913, company purchased the Arnold Mining Co. property, near Santa Cruz, Sonora, for \$88,000. This property is developed by a 300' shaft and has shipped 12% ore to the Cananea smelter. The company's previous operations have been mainly in the Yaqui region of Sonora.

PARADISE MINING CO. ARIZONA

Paradise, Cochise Co., Ariz., is controlled through ownership of 60% of stock, by Bisbee-Sonora Development Co., which see.

SAN SIMON COPPER CO.**ARIZONA**

Idle. **Office:** Marquette, Mich. **Mine office:** Paradise, Cochise Co., Ariz.

Officers: Nathan M. Kaufman, pres.; Hon. Norman W. Haire, v. p.; S. R. Kaufman, sec.-treas.; preceding with Thos. F. Cole, John A. Duncan, Wm. G. Rice and Thos. H. Collins, directors.

Inc. 1907, in Arizona, as a reconstruction of the Chiricahua Development Co. **Cap.**, \$2,500,000; shares \$10 par.

Property: 40 claims, 7 patented, about 750 acres, 16 miles from nearest railway, at Rodeo, previously operated by Capt. Thos. Burns as a silver mine.

Development: a 750' crosscut tunnel with a 100' winze 700' from the portal, cutting 50' of leached ore, apparently the apex of a sulphide orebody. Also the 400' Mars shaft, bottomed in chalcopryrite ore of 2 to 4% copper tenor. The 400' Planet shaft has drifts on the 4th level.

Equipment: includes two 150 h. p. boilers, two 2,000' Lake Shore double-drum hoists, and a 16-drill Sullivan air compressor. Only assessment work done in recent years.

SIGNAL POINT MINING CO.**ARIZONA**

Office: 40 First National Bank Bldg., Douglas, Ariz.

Officers: G. E. Hemphill, pres. and gen mgr.; E. G. Richards, v. p.; Z. T. Phillips, sec.-treas., with E. A. Hemphill and Charles Stephens, directors.

Inc. July 10, 1915, in Arizona. **Cap.**, \$600,000; shares 50c par; 800,000 issued.

Property: 19 claims, 12 miles E. of Douglas, near International Boundary.

Development: one shaft 120', another 150' deep, equipped with gaso-line hoists. No. 1 shaft was sunk on an iron dike, showing traces of copper and silver, and up to \$3 gold per ton. This shaft is to be sunk to 300', followed by crosscutting. No. 2 passed through 40' of gold, silver, copper, lead ore into a leached zone. Churn drills are to be used for prospecting other areas.

SULLIVAN COPPER DEVELOPMENT CO.**ARIZONA**

Office: care P. H. Nelson, pres., 610 Lonsdale Bldg., Duluth, Minn. **Mine office:** Paradise, Cochise Co., Ariz. Geo. H. Crosby, sec.-treas.

Property: 14 claims, 6 patented, 4 miles west of San Simon, Chiricahua Mts., has opencuts, showing leached copper ore and a little very rich ore, and has a 60' tunnel showing lead ore. Management considered good and property promising. Idle, except for annual assessment work.

*FLORENCE, PINAL COUNTY***ARIZONA-HANCOCK COPPER CO.****ARIZONA**

Idle seven years. **Office:** Hancock, Mich. **Mine office:** Florence, Pinal Co., Ariz.

Officers: John D. Cuddihy, pres.; Alfred C. Sieboth, v. p.; Henry L. Baer, sec.-treas.; preceding officers, C. D. Hanchette, F. C. Mayworm and Philip Carroll, directors.

Inc. in Arizona, as successor to Arizona-Hancock Consolidated Mining Co.

Property: 4 claims, patented, 2 miles south of Superior, showing a vein traversing 2 claims, parallel to the vein of the Lake Superior & Arizona, with diabase footwall and limestone hanging, opened by a short

tunnel and a winze of 55', with drifts on 2 levels, showing lead above and copper below.

MAVERICK COPPER CO.

ARIZONA

Florence, Pinal Co., Ariz. Geo. Lobb and Eugene Woodbury, managers.

Property: known as the Iron Spring mine, shows a strong outcrop, carrying finely disseminated chalcocite, estimated to average 3% copper.

Development: by a shallow shaft and a number of prospect pits and shafts. Annual assessment work only has been done since 1910, when the Copper Queen Co. relinquished its \$100,000 bond on the group.

NEWBURY MNG. CO.

ARIZONA

c/o Makeever Bros., 170 B'way, New York.

Property near Cochran, on Ariz. Eastern R.R., east of Florence. To save property from sale, Makeever Bros. of Boston put up \$10,000, but after their engineers had examined it, the firm abandoned the property.

*GLEESON, INCLUDING COURTLAND AND PEARCE,
COCHISE COUNTY*

ARIZONA GOLD & COPPER MINING CO.

ARIZONA

Clerk's office: Burlington, Vt. **Mine office:** Gleeson, Cochise Co., Ariz. L. V. Hastings, v. p.; Hamilton S. Peck, sec.

Inc., July 28, 1911, in Vermont. **Cap.,** \$100,000; shares \$5 par; as successor of the Vermont & Arizona Copper Co.

Property: 11 claims, 220 acres, 4 miles from Gleeson, in the Turquoise district, on the western slope of the Dragoon mountains, show 2 gold and silver veins and several copper veins, giving average assays of \$6 gold and 3% copper per ton.

Development: a 230' main shaft and 2 tunnels, longest 125'. Company claims to have developed a large body of low-grade milling ore.

Equipment: includes steam power and 12 h. p. hoist. Property idle owing to lack of funds.

COMMONWEALTH EXTENSION MINING CO.

ARIZONA

J. S. Metcalf, supt., Pearce, Ariz. C. W. Hicks, pres. Control held in Bisbee, Ariz.

Property: a tract adjoining the Commonwealth mine on the E. and S. E. shows a mineralized contact that carries high-grade ore in the adjacent mine.

Development: a 250' shaft sunk in andesite with 230' level, equivalent to 7th level of the Commonwealth and corresponding to the water level of the district.

Equipment: includes steam plant, hoist and compressor.

COMMONWEALTH MINING & MILLING CO.

ARIZONA

Property: the Commonwealth silver mine, at Pearce, Cochise Co., Ariz., closed down permanently in 1917, and complete 350-ton equipment being sold. Although some rich shoots were found at depth, none persisted, and operations became unprofitable. See Vol. XII for description and other data.

COPPERROX MINING COMPANY OF ARIZONA

ARIZONA

Office: 96 Harris Ave., Providence, R. I. Mine near Courtland, Cochise Co., Ariz. T. F. Gilbane, pres.; Geo. F. Wordley, 1st v. p.; Thomson E. Going, 2nd v. p.; Hon. G. W. Esterbrooks, sec.-treas.

Inc. Jan. 17, 1910, in Arizona, as successor of the Arizona Copper Syndicate of Providence. **Cap.,** \$1,000,000; shares \$1 par.

Property: 28 claims, 18 patented, and 2 mill sites, patented, in the Dragoon Mountains, 3 miles from Courtland. Property is slightly developed, hav-

ing a 236' shaft and about 500' of tunnels on a contact said to be traceable 3 miles, with surface ores carrying gold, copper and manganese, said to assay up to 16.5% copper. President reports, 1916, that a manganiferous "Mother-lode" has been opened up by recent work. Company is merely a holding concern and will lease or sell controlling interest.

GREAT WESTERN COPPER CO.

ARIZONA

Courtland, Cochise Co., Ariz. Wm. J. Young, Jr., pres.; Edw. A. Young, sec.; C. H. Young, treas., all of Clinton, Iowa; F. J. Gibbons, gen. supt.

Inc. Oct. 22, 1900, in Arizona. **Cap.**, \$1,000,000; shares \$10 par; non-assessable; fully issued.

Property: 23 patented claims, 407 acres, in the Turquoise district, acquired 17 years ago. Limestone is intruded and altered by monzonite and quartz-monzonite porphyry. The Humboldt, first opened, yielded high-grade ore from the surface to 150', where it apparently ended. Nothing has been proved definitely at depth, and diamond-drilling is proceeding to 1,000' or more. Pay ore is still being extracted from this claim by lessees. In 1908, good ore was opened in the Mary to 200', and high-grade ended here also, but drilling is under way. So far, it cannot be said to be either encouraging or otherwise for chances of striking commercial ore at 1,200' or deeper. Lessees are mining ore from the Mary. Sulphide ore was opened in the Mame in 1909, and produced until 1914.

Development: 25,000' of workings from 4 shafts, 310', 300', 430' and 200' deep, respectively.

Equipment: includes a 150 h. p. electric plant driven by steam power and having one 150 k. w. generator, a 600 cu. ft. air compressor, 2 electric hoists, electric pump, etc.

Production: in 1916 was 1,197,920 lbs. Ore averaged nearly 6% copper.

LEADVILLE MINING CO.

ARIZONA

Courtland, Cochise Co., Ariz.

Officers: Wm. Holmes, pres.-gen. mgr.; W. D. Monmonier, sec., Pearce, Ariz.; Calvin Glenn and W. A. Stilson, directors.

Inc. 1905, in Arizona. **Cap.**, \$600,000; shares \$1 par.

Property was bonded, June, 1916, to the Needles Mining & Smelting Co. for \$600,000, but was relinquished.

Property: 13 claims, 199 acres, patented, in the Turquoise district, includes the Leadville and Maid of Sunshine mines, showing contact deposits between monzonite and limestone. Ores are mainly malachite, azurite and chrysocolla, with some chalcopryrite, and pyrite showing in the Maid of Sunshine mine. The orebodies, under development, carry an average of about 8% copper. Company is developing the Lower group on the 300' level. There are 5 shafts, deepest 365', and a 60' tunnel.

Equipment: includes a 250 h. p. steam plant, 2 hoists and air compressor. Company resumed active operations, Oct., 1915.

Shipments: about 15 tons of 8% copper ore daily, and management estimates 100,000 tons ore in sight.

Property was under bond, 1916-17, to U. S. Smelting Co. interests, and extensively churn drilled, but bond given up in July, 1917.

LEONARD COPPER CO.

ARIZONA

Gleeson, Cochise Co., Ariz. J. W. Bennie, Clifton, Ariz., mgr.; J. E. Penberthy, supt., Gleeson.

Inc. 1910 by interests closely connected with the Shannon Copper Co., and property is under lease to that company.

Property: the Copper Belle mine, 8 claims, in the Turquoise or Courtland district, is opened by a vertical shaft and about 1 mile of underground workings, developing several orebodies on 3 different contacts. Ore is nearly solid pyrite, with considerable chalcopryrite and some bornite.

Equipment: includes steam plant with 2 hoists, compressor, repair shop, etc. Output 150 tons per day, loaded directly into railway cars at mine and shipped over the A. E. & S. P. Railroad to Clifton.

MASCOT MINING CO.

ARIZONA

Last address: 1318 Majestic Bldg., Detroit, Mich. Company not favorably regarded. See Copper Handbook, Vol. XI, for full description of properties. Letters neither answered nor returned.

TEJON MINING CO.

ARIZONA

Office: Bakersfield, Calif. L. I. Thiers, supt., Gleeson, Cochise Co., Ariz.

Inc. in Arizona. Cap., \$1,000,000; shares \$1 par.

Property: 8 patented claims, 150 acres, at Gleeson, in the Turquoise or Courtland district, Arizona, adjoining the Copper Belle mine of the Leonard Copper Co. mine, shows heavy bedded limestone dipping steeply eastward into the mountain ridge and cut by intrusive bodies of monzonite and later quartz porphyry. Ore occurs as a contact deposit. Average assays reported at 5% copper, 6 oz. silver, 0.07 oz. gold per ton.

Development: by the 500' Tejon shaft, and by several old tunnels with extensive drifts and stopes in oxidized ore.

Equipment: modern and complete, includes electric and steam power, compressor, etc. Railway is close at hand. Property appears meritorious and management good.

GLOBE AND MIAMI, GILA COUNTY

(See Miami District)

HAYDEN, CHRISTMAS AND WINKELMAN, GILA COUNTY

ASH CREEK GOLD MINING & MILLING CO.

ARIZONA

Address: Winkelman, Ariz.

Officers: E. W. Childs, pres.; J. H. Pool, v. p. and mgr.; F. M. Pool, sec.-treas., with Dr. P. M. Butler and E. Rargel, directors.

Inc. in Arizona. Cap., \$1,000,000; shares \$1 par; 150,000 shares outstanding.

Property: 10 claims, 200 acres, 5 miles E. of Winkelman, Gila Co., Ariz.

Ore: occurs in fissure vein, 4' wide, in andesite, diorite and diabase, said to show a 30" shoot of sulphide ore, assaying .42 oz. gold and 2.13% copper.

Development: by tunnels and shaft, totaling 600'. Property reported on by R. W. Hollis, Phoenix, who recommends development at depth and erection of a small mill.

BALL COPPER CO.

ARIZONA

Office: 723 Title Ins. Bldg., Los Angeles, Cal. **Mine office:** Winkelman, Pinal Co., Ariz. Chas. E. Finney, pres.; Edward W. Brooks, v. p.; Robt. J. Simpson, sec.-treas.; preceding officers, C. T. Joslin, Jos. Ball, H. L. McNair and C. E. Finney, Jr., directors.

Inc. Feb. 1, 1908, in Arizona. **Cap.,** \$3,000,000; shares \$10 par; \$1,250,000 issued. Bonds, \$50,000 outstanding, at 6%. Annual meeting, third Tuesday in January. Company owns 40,000 shares of the London Arizona Consolidated Copper Co., and has transferred its mineral claims to that company; they are described under that title.

CHOLLA COPPER CO.

ARIZONA

Office, Winkelman, Ariz.

Officers: E. R. Rice, J. F. Shaw, D. R. Williamson, R. J. Rice and A. Williamson.

Inc. Jan., 1917, in Arizona. **Cap.**, \$1,000,000; shares \$1 par.

Property: Henry Owen group of 12 claims, about 18 miles from Hayden. Values are in copper and gold.

COPPER STATE MINING CO.

ARIZONA

Office: 936 Plymouth Bldg., Minneapolis, Minn.

Officers: Martin E. Tew, pres.; John A. Nelson, 1st v. p.; E. E. McCarthy, 2nd v. p.-treas.; S. H. Hudson, sec.; preceding officers, Geo. P. Douglas, A. M. Anderson and Walter De La Hunt, directors.

W. C. Steubing, mgr.; Geo. S. Croyle, supt. and electrician; Gilbert O. Tew, store mgr. Mine address: Copper Creek, Ariz.

Inc. 1915 in Ariz., as a successor to the Calumet & Copper Creek Mining Co., the Old Reliable Copper Co., the Copper Creek Mining Co. and other companies. **Cap.**, \$7,500,000; \$2,000,000 issued. All stock certificates held in trust under a pooling agreement until Jan. 1, 1918, or until the financing of the company has been completed.

Property: 7 claims, unpatented, including 100 acres mill and smelter sites, and 100 acres miscellaneous lands; also 28 patented claims under option, making total area 2,000 acres in the Copper Creek, or Bunker Hill, district, Graham and Pinal counties, Ariz. Properties are in the Copper Creek basin, on the western slope of the Galiuro Mountains, 31 miles S. E. of Winkelman and Hayden, on the Arizona Eastern R. R.

Claims include the Sycamore Flat, Cumberland, Sioux Chief, Silver Reef, American Eagle, Copper Giant and Old Reliable groups. Country rock in lower basin is diorite, with porphyry intrusions, showing a large number of ore bodies, there being several different breccias and oxidized zones carrying mineral, ore bodies usually being elliptical, but sometimes occurring in chimneys. Outcrops, of which there are more than 50, are very prominent. Oxidized ores, including chrysocolla, are found at and near the surface, sometimes in commercial quantities, giving place, at shallow depth, to sulphides, chalcopryite, bornite and chalcocite, associated with pyrite, in altered and brecciated diorite, some native copper showing in flakes and grains along shear zones. Company reports that one orebody 300' wide and 420' long has been developed to 342' depth, in a porphyry breccia.

The Old Reliable mine has an orebody with the second largest outcrop in the district, same having a sectional area of 147,000 square feet, or about $3\frac{1}{2}$ acres. Development is by an upper tunnel, with back of 775' and 13 cross-cuts, and a lower tunnel 800', with about 3,800' of workings, estimated by manager to show 250,000 tons of 3% ore ready for stoping, and an additional 350,000 tons of 2.25% ore partly blocked out.

The American Eagle group has 3 prospect tunnels, a 1,025' working tunnel, and a 300' three-compartment shaft, with about 3,500' of workings, showing oxidized ores at surface, with an orebody reported to be developed for about 50x100'. This mine is estimated by company to have developed about 60,000 tons of ore, averaging 3.78% copper and 8 oz. silver, with a trace of gold. The mine has electric lights underground, and equipment consists of a 75 h. p. electric hoist good for 500', 3-drill and 1-drill electric air compressors and a smithy.

The Prince mine, under option, is developed by a 300' shaft and drifts on 3 levels. Company claims 300,000 tons of ore averaging 3.56% copper in this mine. On the Globe mine a shaft has been sunk 650' and 100,000 tons of 3.08% ore are said to be blocked out on the 150', 250' and 450' levels. The Copper Giant mine, said to have an outcrop of nearly 4 acres, has a 200' shaft connecting at depth of 124' with a tunnel from which 2 drifts several hundred feet in length have been driven into the ore breccia. In the Silver Reef, Kimbro, Copper Reef, Sioux Chief, Rough Rider and several other claims belonging to the company, copper ore has been exposed by short tunnels and shallow shafts.

Hand-sorted ore from these workings has been shipped to smelters, giving returns of 12% to 30% copper and \$5.50 to \$27 gold and silver per ton. From the Cumberland and Lead Carbonate mines, in which veins of galena have been exposed, several carloads of ore netting \$45 per ton and upward in gold, silver, copper and lead have been shipped.

A 180-ton concentrating mill was built several years ago. Power plant consists of two 100 h. p. boilers, a 200 h. p. Corliss engine, a 160 k. w. 2,300-v. G. E. dynamo. A 3-phase transmission line, 4 miles long, supported by steel towers, connects power plant with mill and 3 of the mines. Water supply system includes 5 miles of 2½" pipe, and a concrete dam 26½' high and 131' across the canyon, creating a reservoir holding 8,000,000 gals. of water. Company also owns and operates a 2¾-mile narrow gauge railroad, connecting the Old Reliable mine with the mill, equipped with 18-ton Porter locomotive and 8 cars; a 31-mile telephone line connecting the mine with Mammoth, Winkelman and Hayden, and a store, used as a commissary and office building. A 60 h. p. distillate engine and 4-drill air compressor are installed at the Old Reliable mine. Other improvements are a machine shop, assay office, ice-making plant and 25 buildings for employees. Additional equipment of the past year includes a 285 h. p. McIntosh & Seymour Diesel engine with direct-connected generator, a 5-drill air compressor, a 5'x6' Marcy ball mill and Callow flotation cells.

Production: by former owners in 1914 was 8,400 tons of ore, making 758 tons of concentrates averaging 28.26% copper, or a total of 428,421 lbs. copper. Production from Nov., 1916, to June, 1917, was 362 tons of concentrates, averaging 24% copper, from ore extracted in development work. Company plans further systematic development, the building of concentrating mill in the San Pedro Valley and the extension of the narrow-gauge railroad to this point.

Property has merit if handled for ore and not as a stock-selling proposition.

GILA CAÑON CONSOLIDATED COPPER CO.

ARIZONA

Office: c/o R. W. Hollis, mgr., Phoenix, Ariz. **Mine office:** Chilito, Pinal Co., Ariz.

Inc. 1916 in Ariz. **Cap.,** \$750,000; shares 50 c. par.

Officers: J. C. Callaghan, Phoenix, Ariz., pres.; R. W. Hollis, E.M., v. p.-gen. mgr.; R. A. Lewis, treas.; Norman McMillan, sec., above, with C. H. McArthur and F. S. Dawson, directors.

Property: 17 claims, known as Schneider group, adjoins that of London Arizona on west, in Banner district, Gila County, 4 miles from Ariz. Eastern R.R. and only 6 miles from A. S. & R. smelter at Hayden.

Development: principal work done from crosscut tunnel 1,800' long at depth of 350' to 400', with total of over 3,500' underground work. From Aug., 1916, to May, 1917, new work totaled 1,200', exclusive of surface work. Net yield from surface or smelted past years, \$150,000.

Property shows ore at many places, but gives no indication of disseminated or porphyry ore, such as those of Miami and Ray, and though it is a contact metamorphic deposit, it is quite unlike that of Christmas. The geologic character observed and the presence of commercial ore at many points is indicative of diffused mineralization, with workable concentrations of ore in one marked bedding horizon, where cut by fractures. Deep development work to date disappointing, ore not going down to tunnel level, but several very promising veins are practically undeveloped as yet. Can be operated at a profit if development expenses were eliminated, shipments having paid for all development to date. Forty men employed. Company derives revenue from lessees' production. Much surface ore is too low grade to ship and experiments have been made with leaching, but owing to lime content, acid treatment cannot be

used; the Benedict ammonia process, used by Calumet & Hecla Co. in Michigan, is applicable.

Production: from Aug., 1916, to May, 1917, 94 railway cars of about 4,700 tons of ore were shipped to the Hayden smelter, netting \$54,279.

Regular shipments of 2 cars weekly being made, 1917. Examined and reported on by W. H. Weed in 1917.

GILA CANYON COPPER CO.

ARIZONA

Dead. Property sold to Gila Cañon Consolidated Copper Co., which see Described, Vol. XII.

GILA COPPER SULPHIDE CO.

ARIZONA

Office: Room 514, 49 Wall St., New York. **Mine office:** Christmas, Ariz.

Officers: B. P. Cheney, pres.; G. D. Morris, sec.-treas.; L. B. Mulhearn, asst. sec.-treas.; preceding, with N. W. Jordan, C. S. Glead, F. L. Stoessel, R. E. Sloan and W. G. Bushnell, directors.

Inc. 1909, in Ariz., by the Development Co. of America, which bought the property from the Saddle Mountain Mining Co. **Cap.**, \$2,500,000; shares \$10 par, non-assessable. In treasury for bond conversion, \$1,000,000. To June 1, 1917, company had retired \$168,600 of its \$1,000,000 outstanding 1st mtge. 5-yr. 6% convertible bonds.

Company spent over \$500,000 developing its property at Christmas, which is now being operated under a smelting contract by the American Smelting & Refining Co. Mines still belong to the Gila Co., which can resume direct management at will.

Property: 2 groups, comprising 53 claims, 817 acres, 49 patented, and 640 acres coal land. Holdings include Christmas mine and claims in Banner district, Gila County, and coal, gold and copper claims in the Saddle Mountain district, Pinal county, all within a radius of 6 miles.

The Saddle Mountain group of gold and silver claims, patented, 265 acres, with 3,450' of workings, shows base dry ore, with little lead and zinc and traces of copper, an average of 300 assays showing \$13 per ton in gold and silver values.

There are also 640 acres of patented coal lands, in the lower basin of Deer Creek, showing two veins of dirty bituminous coal, developed by a 175' incline shaft and 800' of workings, equipped with a small steam hoist and pump. There is a bee-hive coke oven for testing the coal.

The Christmas mine is at the junction of Christmas canyon with the Gila River, on the north side of the stream, 8 miles from Winkelman. The mine was opened, 1883, but closed, 1884, because found to be located on the San Carlos Indian Reservation, and remained idle until the lands were restored to the public domain, by executive order of the President, Dec. 2, 1902.

Geology: property shows heavily bedded white and gray carboniferous limestone, in various stages of alteration, near a granite porphyry contact. Ore occurs mainly as replacements in limestone, with garnetiferous gangue, carrying sulphides, mainly chalcopyrite, but with bornite and some copper glance. The contact zone has shown copper ore wherever opened and the porphyry also carries copper ore. Four main orebodies are under development, ranging from 4 to 135' in width. Orebody contains nuclear blocks of undigested limestone, surrounded by ore, hence it is difficult to measure tonnage developed. Ore mined gave average assays of about 3% copper and 30 to 40 cts. per ton in combined gold and silver values.

Development: at Christmas is by 4 shafts, to depth of 850', all showing oxidized and sulphide ores. The mine has open cast workings of 30,000 sq. ft. area, showing carbonate ores. Much new and important work and equipment is being added. Improvements on the property include the construction of an

aerial tram, connecting the mines with the Arizona Eastern Railroad, and production began early in 1916.

Production for 6 months ending June 30, 1917, 357,736 lbs. copper, netting \$245,231. Employs 175 men.

LAVELL GOLD MINING CO.

ARIZONA

Office: Woodbury & Co., fiscal agents, 44 Pine St., New York.

Officers: G. B. Leighton, pres.; C. P. Woodbury, v. p.; St. John Smith, sec.-treas., 66 Broadway, N. Y.; E. C. Jacobs, supt., Winkelman, Ariz.

Cap., \$2,000,000; shares \$1 par; 400,000 offered at par, Oct., 1917.

Property: the Apex group, 19 claims, 386 acres, elevation 4,300', in the Banner district, 6 miles N. of Hayden Junction and 21 miles S. of Globe, Gila Co., Ariz. South of the property is the London & Arizona, S. W. is the Gila Canyon Copper and N. E. is the Copper Belt group of mines, all adjoining.

Examined in 1917 by J. M. Boutwell, C. H. James, E. H. Dawson and E. C. Brown.

Geology: the claims show diabase overlain by pre-Cambrian quartzite, capped by limestone. The diabase in places intrudes the upper formations. The sedimentary series has been distorted, faulted and intruded by a series of quartz porphyry and rhyolite porphyry dikes. Ore is gold and copper bearing and occurs as flat lenses or beds, replacing limestone and shale mainly along a bedding plane, but also as veins along contacts of quartz porphyry dikes and in places along fissures in limestone near dikes. The usual ore is gold-bearing, next in importance being copper-lead-silver ore.

Development: by 12 tunnels, from 40 to 320' long, and 6 shafts from 10 to 35' deep, on the Apex claims. No. 3 is in 320', and is said to have opened ore 250' long and 60' at the widest point. Forty samples ranged from 0.25 to 9 oz. gold, 2 to 10 oz. silver, and 7 to 35% lead. Above No. 3 tunnel is a 100' raise and below it a 200' winze. Shipments to El Paso totaled 365 tons, valued at \$10,004.

Property seems to have merit and the promotion to be conservatively handled.

LONDON ARIZONA CONSOLIDATED COPPER CO.

ARIZONA

Office: 723 Title Insurance Bldg., Los Angeles, Calif. **Mine office:** Chilito, Gila Co., Ariz.

Officers: Chas. E. Finney, pres.; Herbert L. McNair, v. p.; Edw. W. Brooks, v. p.; Robert J. Simpson, sec.-treas., with F. B. Pugh, B. P. Cheney, D. Karl Kurtz, John E. Coffin and E. L. Finney, directors. Edward W. Brooks, cons. engr. and geologist. Harry Scott, supt.

Inc. Sept. 18, 1913, in Maine, as a merger of the London Arizona, London Range, London Shamrock and Ball Copper companies. **Cap.,** \$12,000,000; shares \$5 par, fully paid and non-assessable; 920,500 shares outstanding. **Bonds:** \$303,000 6% outstanding. Commercial Trust & Savings Bank, Los Angeles, trustee. Citizens' Trust & Savings Bank, Los Angeles, registrar. Annual meeting, first Tuesday in Oct. Company started out with a treasury fund of \$500,000.

Property: 132 claims, 2,300 acres, in the Banner mining district (Ray quadrangle), 5 miles N. of Hayden. Claims form a compact group covering an extensive, well-mineralized area.

Geology: the tract shows a series of 1,500' of well-bedded limestone, quartzite and shales resting on a laccolithic mass of diabase; these rocks are broken, faulted and later intruded by dikes and sheets of diorite porphyry, presumably the offshoots of an underlying batholithic mass of granite material. The ore occurs in contact metamorphic deposits and replacements, especially in the limestone. Much of the ore consists of garnet (andradite, the lime and iron species) intergrown with specular hematite copper sulphides

and a variety of iron-magnesian lime silicate minerals. The copper ore occurs largely in "blanket" deposits, but also in fissures and vertical contacts. The main ore outcrop is 10 to 30' wide and about three-fourths of a mile long, lying between beds of limestone and quartzite.

Silver-lead ores do not occur in the contact deposits, but are found in limestone along the dike contacts where contact alteration is not noticeable. Some 2,000 tons of lead carbonate ore shipped, 1913, averaged 28% lead, 40c gold and 3 oz. silver per ton.

Development: includes the 300' Curtain shaft, 182' Arizona, 190' Red Bird and 90' O'Carroll shafts, the 200' Roberts tunnel and 250' Johnson tunnel, total underground development amounting to 2,500'. The Roberts tunnel is developing what appears to be a large body of copper sulphides, carrying from 3-6% copper. Shipments of copper carbonates being made to Hayden smelter carry 5-8% copper, 1-5 oz. silver and from 20-40c gold.

Management plans development work on a comprehensive scale. The company has a strong directorate, an experienced management and promises to become an important producer.

In 1917, cons. engr. Brooks reported ore reserves of 200,000 tons, averaging about 4.5% copper, in the O'Carroll vein.

OVERLAND MINING CO.

ARIZONA

Mine near Winkelman, Ariz., adjoins the London Range mine of the London Arizona Copper Co. and "79" mine on the south and west. Claims carry an extension of the main dike system of the London range, showing metamorphic contact orebodies. Hayden Junction is the nearest railway point. Mine reported under lease to M. H. Murphy and W. E. Dunlap, of Kingman, in 1915.

Company has hoist, boilers, etc. No recent returns.

PINAL DEVELOPMENT CO.

ARIZONA

Address: 1401 No. 3rd St., Phoenix, Ariz.

Officers: J. C. Devine, pres., treas. and mgr.; E. A. Tovrea, v. p.; C. T. Carpenter, sec.; E. M. Blake, J. H. Robinson, E. P. Palmer and Arthur Luhrs, directors.

Inc. Dec., 1915, in Ariz. Cap., \$1,500,000; \$1 par; non-assessable; 700,000 shares issued.

Property: 47 claims, 940 acres, known as the Renfro group, near Hayden, Ariz., adjoins the Troy-Manhattan at Troy, nearly due E. of Ray, Pinal Co., Ariz. Ore occurs on plane between limestone and shale, as irregular replacements on bedding plane. Ore horizon, 15' thick. Ore carries oxidized copper minerals, no sulphides being found; also carries low gold-silver values and 10 to 20% copper.

Development: by several tunnels, main one 1,600' long, with about 2,500' of workings to depth of 600'. In June, 1917, a 3' streak of high-grade copper ore was struck, and a raise and winze were driven on it. Production started Sept., 1917.

Property is under excellent management, and is regarded as a legitimate mining venture.

SADDLE MOUNTAIN MINING CO.

ARIZONA

Office: 902 Chapel St., New Haven, Conn.

Officers: Frank M. Travis, pres.; C. M. Robinson, sec.-treas.

Inc. 1902, in Arizona. Cap., \$2,500,000, increased from \$1,000,000; shares \$1 par; outstanding, 1,306,585 shares. Bonds: none.

Property: consists only of \$300,000 par value of the capital stock of the Gila C. Sulphide Co., which acquired in October, 1909, the property of the Saddle Mountain Mining Co., subject to the latter's authorized outstanding first mortgage bond issue of \$1,000,000, all of which was ex-

changed for an equal issue, \$1,000,000 first mortgage 6% bonds of the Gila Copper Sulphide Co., due April 1, 1918, convertible at par into stock of the Gila Copper Sulphide Co., at the option of the bondholder. Interest payable April 1 and October 1. Of this issue, prior to December 1, 1917, \$248,600 par value were retired out of earnings, leaving outstanding, December 1, 1917, \$751,400, due, principal and interest, April 1, 1918.

For description of the property, see Gila Copper Sulphide Co.

TROY ARIZONA COPPER CO.

ARIZONA

Address: A. K. Sloan, sec.-treas., 15 Maiden Lane, New York City. **Mine office:** Kelvin, Pinal County, Ariz.

Officers: John F. Galvin, pres.; Calvin Page, v. p.; Brackley Shaw and Henry Rudolph, directors. R. G. Mead, supt.

Cap., \$3,000,000; shares \$10 par. Company is a reconstruction of the old Troy Copper Co., succeeded by Troy-Manhattan C. Co., which in turn was succeeded by the Troy Consolidated Mining Co., fully described in Vol. IX, Copper Handbook. Operations of all these "Troy" companies proved disappointing.

Property: 85 claims, 1,600 acres, $3\frac{1}{2}$ miles N. E. of Erman, on the Arizona Eastern R. R., known as Troy, Climax and Manhattan groups. The Troy group said to have 12 and Manhattan group 6 veins.

Development: reported to aggregate over 5 miles, including several shafts, deepest 500'. Company's engineer stated that while a large tonnage of ore is not blocked out, yet with a moderate amount of work several hundred thousand tons could readily be made available. Examined and reported on by Leo Von Rosenberg, but inspection proves the work very superficial and conclusions, in our opinion, unwarranted.

In Aug., 1917, a 500' shaft was being sunk at the Climax claim, to explore the sulphide zone. Mine is producing and shipping. Teaming costs are high, which makes it necessary to sort ore carefully.

Present management considered good and property promising.

HUMBOLDT, INCLUDING BIG BUG, YAVAPAI COUNTY

ALADDIN MINING CO.

ARIZONA

W. A. Kent, mgr., Prescott, Ariz., writes as follows: "I do not feel at liberty to fill out blank you send. All those entitled to receive the information asked for receive it direct." Company has a 5-year lease on Paymaster mine and 8 other claims, the property of the Oriental Mining Co., in Big Bug district, near Poland. Lottie mine of same group has 4,400' tunnel and 20-stamp mill.

ARIZONA COPPER-GOLD MINES CO.

ARIZONA

Office: 1011 Pabst Bldg., Milwaukee, Wis. **Mine office:** Cherry, Yavapai Co., Ariz. R. H. Burmister, pres. and gen. mgr.

Inc. Oct. 12, 1903, in Arizona, as Arizona Gold Lode Mines Co., and reorganized, April 10, 1906, under present title. **Cap.,** \$1,500,000; shares \$1 par. Company thrown into receivership and property acquired February, 1914, by bondholders, who plan reorganization and continuation of development work.

Lands: 17 claims, 340 acres, in the Cherry Creek district, 15 miles northeast of Humboldt, including the Bugler group of 4 claims. Development includes several short tunnels, and the Leghorn shaft of 600' depth, with about 3,500' of workings, on a 2' fissure vein. The ore apparently averages about 2% copper, with gold values.

Equipment: includes a 40 h. p. hoist, good for 1,000' depth, and a 3-drill air compressor. A 40-ton mill, at the Leghorn shaft, has a 10' Lane slow-speed Chilean mill. For early history, see Vol. XI, Copper Handbook.

ARIZONA NATIONAL MINING CO.**ARIZONA**

Address: Humboldt, Ariz.

Inc. July, 1916. Cap., \$250,000; increased March, 1917, to \$500,000; shares \$1 par.

Operates the Anderson silver-lead mine, about 2 miles west of Humboldt. Has a small mill. Shipping some ore and concentrates in 1917.

ARIZONA SMELTING CO.**ARIZONA**

Merged with Consolidated Arizona Smelting Co. in 1914.

BELCHER MINING CO.**ARIZONA**

Apparently inactive, and letters returned by P. O. from Providence, Ariz. Fully described, Vol. XII.

BLACK CHIEF COPPER CO.**ARIZONA**

Mine near Dewey, Yavapai Co., Ariz. John Milligan, pres.; J. M. Sullivan, v. p.-mgr.; Eugene Milligan, sec.-treas.; preceding officers are the directors.

Inc. 1908, in Arizona. Cap., \$2,000,000; \$1 par; 1,170,000 shares issued. Annual meeting, 2nd Tuesday in July. About \$30,000 expended to date.

Property: 6 claims, 10 miles south of Jerome, known as the Uncle Sam group, has tunnel, 200' shaft, drifts and crosscuts, with a total of 1,300' of underground workings, showing ore said to give assays up to 25% copper, \$4 gold, \$3 silver, 6% zinc and 10% lead. Has a hoist and 2 pumps. Plans doing extensive development work during next two years.

CHAPARRAL MINING CO.**ARIZONA**

Officers: L. W. Smith, Cleveland, Ohio, gen. mgr.; J. F. Rogers, Columbus, Ohio, sec.-treas.; W. H. Jones, Chaparral, Ariz., supt.

Company has a lease on the Little Jessie gold mine, owned by the Ohio Mines Co., at Chaparral, Yavapai Co., Ariz.

Property has not produced much since 1897. Production at that time was \$800,000. Active operations last year were discontinued till the 650' shaft is retimbered to the bottom.

Management states that lack of capital prevented development and production in past, and that operations will be resumed shortly.

CONSOLIDATED ARIZONA SMELTING CO.**ARIZONA**

Office: 15 Broad St., New York City. Mine offices: Mayer and Middleton, Yavapai Co., Ariz. Smelter and works office: Humboldt, Ariz. G. M. Colvocoresses, gen. mgr.; W. V. de Camp, supt.

Officers: C. A. Kittle, pres.; E. S. Hooley, v. p.; F. A. Dillingham, v. p.; F. W. Thompson, sec.-treas., with R. W. Kelley, H. E. Rogers, J. H. Flagler, C. W. Hill and R. M. Thompson, directors; O. F. Janssen, aud.

Inc. Dec. 22, 1908, in Maine. Cap., \$9,200,000; shares \$5 par; 1,663,000 issued. 177,000 reserved for bond conversion. Bonded debt: \$1,200,000 5% 30-year income bonds authorized, \$885,000 outstanding, and \$1,000,000 6% 20-year gold bonds, \$250,000 outstanding. In June, 1917, it was decided to purchase at par, \$250,000 of the refunding 6% bonds, the full amount outstanding of this issue. Payment will be spread over 3½ years after which the property will be free of mortgage indebtedness.

Dividends: initial dividend of 10c a share was declared June 28, 1917; 5c paid Aug. 15, and 5c on Nov. 15.

Acquired at foreclosure sale the properties of the Cons. Ariz. Sm. Co. (see Vol. X), and the Ariz. Sm. Co. The intricate relationship of the old company and its subsidiaries is fully described in Vol. X.

Columbia Trust Co., trustee of 6% bonds; Equitable Trust Co., trustee of 5% bonds; Guaranty Trust Co., transfer agents; all of New York City.

Balance sheet of Dec. 31, 1916, showed: current assets of \$952,399 which included \$624,819 in cash, bullion, etc.; inventories, \$317,199; current liabilities, \$446,728; leaving \$306,203 as surplus. Total assets, \$10,202,932, in-

cluding property, \$9,250,533; profit and loss account showed net profit of \$859,014 derived from gold, silver, and copper produced, valued at \$3,686,535 at a production cost of \$2,813,770. Interest charges on 6% bonds were \$13,750.

Earnings for nine months in 1917 were \$685,777 compared with \$566,725 for same period in 1916.

Property: 40 claims, 20 patented, 725 acres, near Mayer and near Midleton, Yavapai Co., Ariz. The most valuable mines owned are the Blue Bell and De Soto mines. The smelter is at Humboldt.

The **Blue Bell** mine, 3 claims, carries fissure veins with quartzite foot and granodiorite hanging wall.

Development: 6 shafts, deepest 1,000' and 2 short tunnels, with about 19,000' of underground workings. Ore contains pyrite and chalcopyrite, all slightly argentiferous and auriferous. The Blue Bell vein was opened for 350' on the 1,000' level, where it is 15' wide, and averages 3.3% Cu. with 1.2 oz. silver and .04 oz. gold per ton. In Oct., 1917, this vein was being opened at 1,200'.

New work in 1916 totaled 4,819' at a cost of about \$13.11 per foot, developing about 319,750 tons of ore. Produced 75,070 tons with average content of \$1.70 in gold and silver and 3.278% copper. Reserves estimated at 479,500 tons carrying 3.3% copper and \$1.50 in gold and silver on Dec. 31, 1916, of which 21,248 tons were broken in the stopes.

Mine is connected with the Bradshaw Mountain R. R. by a tram line, and has electric machinery taking current over an 18-mile transmission line.

The **De Soto** mine is developed by 4 tunnels, 5,000' in length, to depth of 1,000', with total workings of 13,000'. New work, in 1916, totaled 1,814', at a cost of \$9.53 per ft. Ore reserves amounting to 72,882 tons were developed of about the same average grade as the Blue Bell ore. Reserves estimated, Dec. 31, 1916, at 103,500 tons. Production in 1916 was 34,382 tons, carrying \$1.58 silver and gold and 3.375% copper.

Ore reserves: for both the Blue Bell and De Soto mines are given as 583,000 tons.

Equipment: the reduction plant, well placed for custom business, includes sampling, concentrating, roasting, smelting and converting departments, with a machine shop and smithy. All buildings are of structural steel frame, with brick walls or corrugated-iron sheathing, floored with cement. This plant was reconstructed in 1914, and is described by G. M. Colvocoresses, in the Eng. and Min. Journal, Sept. 5, 1914, p. 425. It consists of one 22½', 7-hearth Wedge roasting furnace, 2 reverberatory furnaces, one blast furnace and 2 converter stands with basic lined converters. The blast furnace has treated 10 tons per sq. ft. of hearth. (See Mng. & Sci. Press, July 21, 1917.)

A 250-ton Minerals Separation flotation plant was installed in 1913. The concentrator has two 200-ton units, each having one 10x20" and two 7x10" Blake crushers, 1 centrifugal crusher, 3 elevators, 2 sets of rolls, one 25' Hancock jig, 10 Wilfley tables, 8 Overstrom tables, 8 vanners, 4 trommels, 8 Callow tanks and Richards, Johnson and Anaconda classifiers. The mill has a large slime pond, and overflow water is returned to the mill for re-use.

During 1916, \$359,482 was expended for new construction. The concentrator was largely rebuilt; the crushing and sampling plants, destroyed by fire, were rebuilt; blast furnace was reconstructed to treat 250 tons daily; new roasting plant should be completed in 1917.

During 1916, 80,304 tons of ore and old tailings were treated, making

an average recovery of 92.5% copper; 80.3% gold and 79.9% silver values. The ratio of concentration was 3.28 to 1; the mill produced 24,514 tons concentrates, containing 9.68% copper. Management plans to increase capacity from 220 tons in 1916 to 500 tons in 1917, erecting new crushing and receiving plant, in 2 sections, 1 for concentrating and 1 for smelting ores. Average cost of milling, including flotation royalty was \$1.51 per ton in 1916, as against \$1.20 in 1915. See Concentration at Humboldt, Ariz., E. & M. J., July 14, 1917.

The first unit of the remodeled smelter is a 7-hearth Wedge roaster, 22' 6" diam., fitted with auxiliary oil-burners and supported on step bearings instead of trunnion. There are two reverberatory furnaces, burning oil and rated at 400 tons daily capacity. Matte from the reverberatory furnaces is tapped into a launder, which delivers it to a ladle in the converter room. Production averages 1,000,000 lbs. blister copper per month from company ore and custom material. The blast-furnace department has both lead and copper stacks, with a 200-ton 48x60" lead furnace, and a 250-ton water-jacket blast furnace for copper. Slags are granulated. The stack is of reinforced concrete, 180' high, 18' in diameter at the base and 11' at the top.

The converter department has 2 stands, with shells of barrel type, rotated electrically. Equipment includes a 40-ton Whiting electric crane with a 15-ton auxiliary crane, cranes also taking hot slag from the converters and pouring same into the reverberatories and delivering shells.

The power plant has four 345 h. p. Stirling water-tube boilers, burning waste gases from the reverberatories, steam being sent therefrom through a 10" pipe line, under 150-lb. pressure. Machinery includes 2 Connorsville blowers, a Nordberg duplex cross-compound air compressor, with 40x42" air cylinder and 18x36x42" steam cylinders. There are two 300 k. w. 480-volt 3-phase 60-cycle generators, direct-connected to two 16x32x36" Nordberg cross-compound engines, and an electric turbine pump. Electric power is furnished the Blue Bell mine, 18 miles distant, current being transmitted at 15,000 volts, stepped down to 440 volts, at the Blue Bell transformer station.

The smelter treated 103,748 tons of ore and concentrates in 1916, producing 11,989,139 lbs. copper; 150,012 oz. silver; 5,972 oz. gold, which is double the production of 1916. Shipments averaged 6.68% copper and .062 oz. in gold and 1.55 oz. in silver per ton. Total cost per pound copper produced was 13.901c as compared with 13.32c in 1915, and average price received was 28.87c. Total cost of milling, including flotation royalty was \$1.51 per ton as compared with \$1.20 in 1915, and smelting cost was \$3.94 per ton as against \$3.34 in 1915.

Production:

	Tons Mined	Copper lbs.	Silver Oz.	Gold Oz.	Profit
1917*.....	107,077	5,969,300	124,294	4,894	\$685,777
1916.....	109,452	7,242,347	127,228	4,858	859,015
1915.....	90,531	5,473,740	100,682	3,174	194,943

* From Jan. 1 to Sept. 30.

Management is working along sound and progressive lines.

FORD MINING CO.

ARIZONA

Probably dead. Described, Vol. XII.

HUMBOLDT CONSOLIDATED COPPER CO.

ARIZONA

Formerly Shill Gold Mining Co., and name changed, 1917.

Address: c/o Salt River Valley Bank, Mesa, Ariz.

Officers: F. J. Davis, pres.; G. W. Silverthorne, sec.-treas.; M. G. Shill, Frank Griffin and W. J. Lempke, directors.

Inc. 1914, in Ariz. **Cap.**, \$1,200,000; shares \$1 par. Company offered 50,000 shares at 50c in Jan., 1917.

Property: the Mesa Copper Group, one mile south of Humboldt smelter, shows veins in Yavapai schist belt.

Development: two shafts with levels at 100' and 200', said to block out 12,500 tons of \$12 to \$75 ore.

HUMBOLDT ORE CO.

ARIZONA

Controlled by Consolidated Arizona Smelting Co.

MOUNTAIN DRIVER & CALAMITY JANE MINES

ARIZONA

Address: Alex Denny, Chaparral, Yavapai Co., Ariz.

Property: two claims, 40 acres, near Henrietta, in Big Bug district, 8 miles from Humboldt smelter. Ore occurs in quartz-porphry and carries copper and gold.

Development: consists of 150' shaft. Not working at present.

OHIO MINES CO.

ARIZONA

Office: 614 Outlook Bldg., Columbus, Ohio.

Officers: H. W. Whitaker, pres.; J. M. Rittenour, v. p.; J. F. Rogers, sec.-treas.; preceding officers, R. S. Barbee, Thos. M. Murphy, W. G. Brossman, H. W. Whitaker, J. D. Brown, L. W. Smith and J. S. Jones, directors.

Inc. Jan., 1909, in Arizona. **Cap.**, \$2,500,000; shares \$1 par; in \$200,000 preferred and \$2,300,000 common stock; issued 1,810,837 shares; \$250,000 first 7% mortgage notes, \$50,000 issued. Annual meeting, third Monday in January.

Property: 14 claims, partly patented, 400 acres, with a 5-acre mill site, and water-rights on the Agua Fria River, 6 miles from the mine, in the Big Bug district. Property was bought of the Jessie Mines Co., whose promoters managed to escape jail.

Ore: gold, with small silver values, occurring in granite.

Development: by 3 shafts, 659', 206' and 200' deep, with 7,000' of workings, and the mine is said to have produced upwards of \$750,000 in gold, under an ownership previous to that of the Jessie Mines Co. Property under lease to Chaparral Mining Co., which has been doing development work only since Jan., 1916.

SHILL GOLD MINING CO.

ARIZONA

Name changed, 1917, to Humboldt Cons. Copper Co., which see.

WOLF ARIZONA COPPER CO.

ARIZONA

Office: Carl H. Wolf, 26 Cortlandt St., New York. **Mine office:** McCabe, Yavapai Co., Ariz.

Officers: Carl H. Wolf, pres.; H. C. Wolf, sec., and W. J. Woestendick, treas. Above are the directors.

Inc. in Delaware. **Cap.**, \$1,000,000; shares \$1 par; non-assessable. Expenditures in 1916, \$15,000.

Property: 7 claims, 6 patented, 85 acres, in Big Bug district, Yavapai Co., Ariz., includes the McCabe and Gladstone mines. Examined by O. Longacre and W. C. Thomas. Claims said to show a vein in quartz diorite, dipping 75° and pitching E.-W. Ore shoots are from 10" to 5' wide. Ore carries zinc, lead, gold, silver and copper; first class averaging \$35 and second class \$15 per ton.

Development: by 800 and 1,100' incline shafts, workings totaling about 5 miles. Reserves blocked out are given as 4,000 tons first class and 40,000 tons second class ore.

Equipment: includes steam hoist, compressor, pumps, 10-stamp mill and 100-ton Callow flotation plant.

Company is said to have a dump containing 20,000 tons of \$6 tailing available for treatment.

JEROME (VERDE) DISTRICT, YAVAPAI COUNTY

This list includes several companies operating at Payson, in the Tonto Basin country.

ARIZONA VERDE COPPER MINING CO.**ARIZONA**

Mail returned from the advertised post-office address: c/o W. M. Lazenby, P. O. Box 814, Phoenix, Ariz.

Property: 26 claims, near Clarkdale, a $\frac{3}{4}$ interest in 16 claims in the New River district and 41 claims in the Cave Creek district. Company also has a 2-year option on 1,700,000 shares of stock in the Golden Reef Mining Co., owning the Golden Reef mine, 35 miles from Phoenix. Offering stock at 50c a share, May, 1917, solely on the prospective value of its holdings, calling itself "a corporation, with the possibilities of another Guggenheim Exploration Company," which is interesting, if true.

ARKANSAS & ARIZONA COPPER CO.**ARIZONA**

Office and mine: Jerome, Yavapai Co., Ariz. John F. Boyle, pres.; H. P. Tear, v. p.; J. E. Leeper, mgr., Jerome, Ariz.; H. N. Jasper, sec.-treas., Little Rock, Ark.; preceding officers and W. D. Tickner, directors; W. H. Galligan, supt.

Inc. June 25, 1906, in Arizona. **Cap.**, \$1,500,000; increased Jan., 1912, to \$3,000,000, and 1916 to \$6,750,000; shares \$1 par. Company refinanced in 1915 and bond issue of \$150,000 authorized for further development work; \$68,800 issued.

Property: the Royal Irish group, 14 claims, 280 acres in the Verde district. Claims show felsite porphyry and diorite cut by olivine basalt dikes running north and south and dipping 60° to the east. Orebodies lie on each side of the basalt in the porphyry and quartz schist. Orebody said to be 85' wide where encountered on 1,400' level and shows chalcopryite and some bornite. Extent of shoot not yet determined. Company acquired the adjoining claims, 230 acres, of the Mowles Copper Co. in May, 1916.

Development: by 1,650' shaft with about 6,000' of workings.

Equipment: includes three 150 h. p. boilers, 1 hoist good for 2,000', air compressors, machine shop, power house, and a mile of road, connecting with United Verde Copper Co. railroad. Employs 50 men. Controlled by the Goodrich-Lockhart Co., 60 Broadway, New York City.

The property was shut down indefinitely, August, 1917, after spending \$100,000 in a crosscut on the 1,000' level. The pumps are out, but conditions warrant drifting on the pyrite bodies cut in the crosscut, in the hope of getting copper ore.

BALLARD GROUP**ARIZONA**

Address: S. S. Ballard, Jerome, Ariz., owner. Formerly owned by United Verde, Jr. Co.

Property: 110 acres, 86 patented, at Jerome, midway between United Verde Copper Co. and United Verde Extension on the north and Copper Chief, Equator and Green Monster on the south. Development work amounts to 1,100'. Ore contains copper, gold and silver.

BIG JEROME COPPER CO.**ARIZONA**

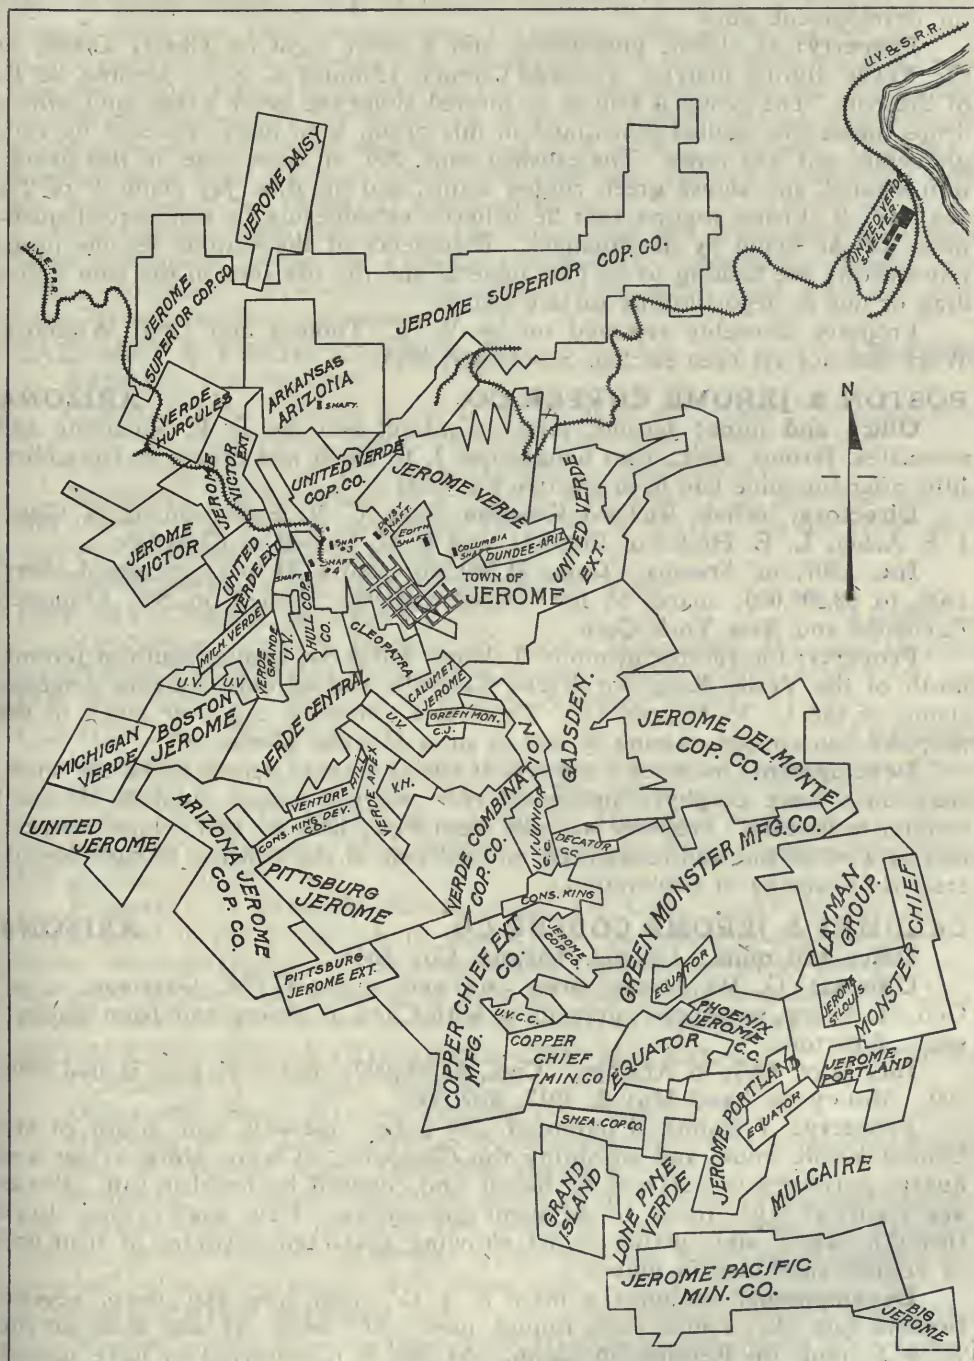

Fiscal office: Arizona Securities & Trust Co., Phoenix, Ariz.

Officers: L. L. Wallace, pres.; F. M. Dorsey, v. p.; Fred T. Sheppe, sec.; above, with C. T. Talbert and J. B. Bourne, directors.

Inc. in Arizona. **Cap.**, \$2,500,000; shares 25c par; 5,000,000 shares given in payment for property are pooled, balance are said to be treasury share.

Property: 32 claims, about 640 acres, 1½ miles S. W. of the United Verde Co. and adjoining the Pittsburg Jerome property and the Copper Shoe group in the southern part of the camp, near the Shea group.

No development work of importance has been done on the property up to July, 1917. Unfavorably regarded. N. Y. Tribune shows it to be a twin fake of the Arizona-Ray of Wilson & Co.

PROPERTY MAP OF VERDE DISTRICT, ARIZONA

BLUE MONSTER COPPER CO.**ARIZONA****Address:** Room 817, 7 Water St., Boston, Mass., and Cherry, Ariz.**Officers:** L. N. Wombacher, pres.; Thos. Sutcliffe, v. p.; Jos. H. Morgan, sec., Prescott; P. J. Keohane, treas., with Jos. Lee, directors.**Inc.** Dec. 26, 1916, in Arizona. **Cap.**, \$2,000,000; shares \$1 par. Property acquired for 640,000 shares, which are held in pool until \$75,000 has been raised for development work.**Property:** 33 claims, unpatented, and a water right on Cherry Creek, in the Verde mining district, Yavapai County, 12 miles S. E. of Jerome, 32 E. of Prescott. The group is said to be located along the great Verde fault, which drops limestones against schist, and in this group is in places covered by conglomerate and lava flows. The crushed zone, 300' or more wide, in this group, iron stained, and shows green copper stains, and on Blue Jay claim 4' of 2% ore. W. B. Fisher reports that he believes valuable ore in commercial quantities will be found by development. Experience at the various Jerome properties shows the faulting to be post mineral and the ore seen in the fault either drag or due to deposition by surface waters.

Property favorably reported on by W. C. Thomas and Cyril Wigmore. Work had not yet been started, September, 1917.

BOSTON & JEROME COPPER CO.**ARIZONA****Office and mine:** Jerome, Ariz. Contract held by S. F. Valentine and associates, Jerome, Ariz., who bought out J. C. Scott and others in December, 1916, after the mine had been inactive for years.**Directors:** include Richard Kingdon, Supt. U. V. Extension, E. S. Clark, J. S. Acker, L. E. Hesler of Prescott, and E. C. Farrell of Clarkdale.**Inc.** 1907, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; increased, May, 1908, to \$2,500,000; shares \$5 par; issued \$129,090. Listed on San Francisco Exchange and New York Curb.**Property:** the Juniper group of 9 claims, 146 acres, 2 miles south of Jerome, north of the Verde King (or Verde Central), and adjoins outlying detached claims of the U. V. Copper Co. There is a limestone cap over much of the property, but copper staining is said to show in some places.**Development:** includes 3 tunnels of 400' aggregate length, and a 130' shaft, sunk on a large porphyry and schist reef carrying copper sulphide in small amount in bottom. Property was idle from Feb., 1908, to 1917. Is a prospect, that is west of the well-recognized mineral belt of the district, though considered to be worthy of exploration.**CALUMET & JEROME COPPER CO.****ARIZONA****Office and mine:** Jerome, Yavapai Co., Ariz.**Officers:** G. W. Avery, pres. and gen. mgr.; C. M. Garrison, v. p.; Geo. H. Avery, sec.-treas.; preceding, with Chas. P. Avery and John Rauber, supt., directors.**Inc.** May, 1907, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; issued 600,000. Money on hand May 1, 1917, \$160,000.**Property:** 7 claims, 3 patented, 100 acres, one-half mile south of the United Verde mine, and adjoining the Cleopatra. Claims show schist and quartz porphyry in part cut by basalt and covered by basaltic tuff. Rocks are identical with those of adjacent properties. New shaft going down through basalt, and cutting schist showing scattered particles of iron and of copper sulphides in places.**Development:** includes a main 8' x 15' shaft now 600' deep, several tunnels, one 115', a new main tunnel, now 1,100' long. It was sunk on the N. & S. fault on Remington claim. At 360' it is reported to have passed through the fault into mineralized green schist. Headings on the 600' level

are said to show "schist impregnated with pyrite and chalcopryrite, and similar rock is cut in a winze sunk from the 600' level."

Equipment: a 285 h. p. McIntosh Seymour Diesel engine direct connected to a 200 K. V. A., C-W. Generator and Exciter with Panel board and G. E. current regulator for 480 volts; a No. 10 Imperial, I.-R. Type, 513 cu. ft. compressor driven by a 75 h. p. Westinghouse motor; Lidgerwood double drum hoist counter balance, driven by a 75 h. p. Westinghouse motor; good for 1,600' depth; No. 17 Buffalo blower driven by 10 h. p. A. C. motor; No. 5 Leyner drill sharpener and oil furnace; 9 I.-R. jack hammer drills; 2 No. 148 Leyner Ingersoll drilling machines; No. 7 Cameron special sinking pump; 2, 4 stage No. 3 electric station pumps, cap. 170 gal. per min. against 540' head, driven by two 50 h. p. A. C. motors. There are 3 cages, 8 mine cars; 40' head frame; two 5,000 gal. cooling towers; two 5,000 gal. water tanks; two 10,000 gal. crude oil tanks.

The market manipulation of the stock and the misleading and often false statements given by various newspapers concerning alleged ore-bodies disclosed by crosscuts and drifts of the mine, have hurt the good name of a promising prospect.

CALUMET & VERDE COPPER CO.

ARIZONA

Address: Jerome, Ariz.

Officers: John Rauber, pres.; H. M. Gibbes, sec.; Geo. S. Avery, Wm. Blue and N. C. McLeod, directors, being Calumet-Jerome interests.

Inc. Nov., 1916, in Ariz. Cap., \$1,000,000; shares \$1 par.

Property: a 2/3 interest in 4 claims, 3 patented, viz., 101, 102 and 103 and the Ohio; 1/3 interest owned by Hon. W. A. Clark. Claims show chalcopryrite and glance ore in black schist.

Development: a 300' tunnel and shallow shafts.

CHERRY CREEK MINES CO.

ARIZONA

Mine office: Cherry, Yavapai Co., Ariz. Main shaft, 115', said to show a vein with 3' paystreak giving assays of about 12.5% copper, 4 oz. silver and \$9.60 gold per ton. Drilling operations reported in 1914.

CLEOPATRA COPPER CO.

ARIZONA

Is controlled by United Verde interests. Jerome, Yavapai Co., Ariz.

Officers: R. E. Tally, pres.; Thomas Taylor, v. p.; S. F. Denison, sec.; preceding officers H. R. Brown and C. V. Hopkins, directors.

Inc. 1901 in Arizona. Cap., \$10,000,000; shares \$1 par, assessable; 8,644,156 shares issued.

Property: 11 patented claims, about 149 acres, south of the United Verde mine in the Verde mining district, shows fissure and gash veins carrying ores assaying 1 to 65% copper and 1 to 500 oz. silver per ton, with fair gold values. Has 6 shafts, of 25 to 150' depth, and 9 tunnels, the Dillon tunnel, 3,200' long, planned to connect with the "1888" shaft.

CONS. KING DEV. & COLUMBIA COP. MG. CO.

ARIZONA

Controlled by United Verde Co.

Office and mine: Jerome, Yavapai Co., Ariz.

Officers: R. E. Tally, pres.; S. F. Denison, sec.; C. L. Nabers, auditor.

Inc. in Arizona. Cap., \$6,000,000; shares \$1 par.

Property: 11 claims, 154 acres, south of the United Verde mine, showing several bodies of oxidized and sulphide ores, carrying fair values in copper, gold and silver. Mine has a 100' shaft and a 750' tunnel, with about one-half mile of workings. Idle since 1913.

COPPER CHIEF MINING CO.

ARIZONA

Worked under lease and bond by Hayden Development Co., Jerome, Yavapai Co., Ariz. W. S. Fulton, pres., Waterbury, Conn. Owned by

the Hayden and Midgeon estates, Torrington, Conn., Franklin Brooks, Colorado Springs, Colo. and Arthur Hendey. J. F. Matson, supt.

Property: 21 claims, 11 patented, adjoining Senator Clark's Iron King mine in the Black Hills range, $3\frac{1}{2}$ miles S. E. of Jerome. Two isolated claims cover the water supply and mill-site. The claims are in the belt of metamorphosed igneous rocks and schists forming the southern extension of the United Verde or Jerome schist area. The Copper Chief-Iron King orebody which runs across 3 of the claims, is 60 to 95' wide, and consists of copper-bearing iron oxide carrying gold, silver and a little copper, the total value being from \$8 to \$13 per ton.

Development work on this deposit shows that it extends downward about 315' below the outcrop. Material composing this lens is completely oxidized from the surface down to a depth of 226'. The bottom of the lens consists of massive pyrite with about 5' of enriched ore between the sulphide and the overlying oxidized material. Less than half of the orebody is payable ore in the oxidized zone and about 15% of the lower lying sulphides can be mined at a profit.

Development: by 400' shaft, 2,225' of work on the 100', 160', 220' and 280' levels. The Wonderful shaft now being sunk is 100' deep. A crosscut tunnel is being driven to connect with the bottom of the shaft. Mine reported to have a large tonnage of low-grade oxidized ore, which cannot stand transportation to a distance. Future of the property depends upon development of sulphide ore in quantity.

Ore reserves: 58,000 tons of oxidized ore of \$12 gold and silver content; 8,240 tons of mixed oxide and sulphide, 1,000 tons of \$50 per ton enriched ore and 8,000 tons of other ores running from \$15 to \$25 per ton.

The Wonderful claim has been developed by a 160' tunnel and 4 winzes with ore estimated at \$25,000.

Equipment: includes 200-ton cyanide mill, erected in 1915, electric power, air compressor and hoist. Company employs 30 men, operations having been curtailed more than 50% in June, 1917, because of the high cost of supplies and labor. Mill temporarily shut down.

Production: from Jan. 1, 1916 to Nov. 1, 1916, was 30,148 tons with total net profit of \$48,199. Gross value of ore milled was from \$8.03 to \$13.72 per ton with a recovery of 66% to 79%. Smelter shipments, Sept., 1917, amounted to about 320 tons of 3% copper ore per month.

COPPER LODGE MINES CO.

ARIZONA

Address: care Industrial Dev. Corp., 608 South Dearborn St., Chicago, Ill.

Mine in the Cherry Creek district between Jerome and Mayer, Ariz. H. P. Dickinson, managing director and supt. in charge.

Inc. Feb., 1917 in Arizona. **Cap.**, \$1,500,000. Controlled by Industrial Development Corp.

Property: Leghorn mines of 8 patented claims held on 4 year bond and lease for \$100,000. Former operators sunk an inclined shaft to 640' with drifts at every 100', and are reported to have opened up gold bearing ore on each level averaging \$20. The vein $1\frac{1}{2}'$ to 4' wide is a true fissure in granite. A Lane mill was built and \$80,000 in bullion recovered. Internal dissension closed the property. Present company have renovated the mill and resumed operations, July, 1917.

Development: 640' shaft, unwatered June, 1917, and now being sunk to 1,000' level. Copper ore occurs on 400' level. It is said that in bottom of shaft stringers of solid copper sulphides assaying 40% have been encountered.

DUNDEE-ARIZONA COPPER CO.**ARIZONA**

Phoenix, Ariz.

Officers: Alex. Mackay, pres.; W. C. Foster, v. p.; A. J. Smith, sec-treas., with L. H. Chalmers and F. S. Stephen, directors.

Inc. March 21, 1916, in Arizona. **Cap.**, \$500,000; shares \$1 par; outstanding 425,000 shares, of which 225,000 belonging to F. S. Stephen and Alex. Mackay, former owners, were in escrow until Sept. 20, 1917. Equitable Trust Co., New York, transfer agent. U. S. Corporation Co., New York registrar. Listed on New York curb as a prospect.

Treasurer's statement of Jan. 31, 1917, shows assets, \$726,446, which includes cash, \$55,309; accounts receivable, contracts sale treasury stock, \$40,875; mining property, \$512,495; buildings, machinery, \$13,088; mine development and office expenses, \$29,680.

Property: 2 claims, the Greenup and Greenflower, lying between United Verde Extension on the east and Jerome Verde on the west, at Jerome; also a half interest with the United Verde Extension Co. in Jerome Tunnel Co., consisting of 5 claims and tunnel rights.

Claims show a blanket deposit of 6% conglomerate ore on the surface, 900' long and 5' wide, now being mined and shipped and reported to net the company about \$20 a ton.

Bottom of shaft is in cherty limestone with 40' to 75' of sandstone below it and above the ore bearing schist.

Development: main shaft is 475' deep; main tunnel, 220' long, with total underground workings of 984'.

Equipment: includes 80 h. p. gasoline engine and 500 cu. ft. compressor. New pumping plant installed, 1917, will permit resumption of shaft sinking.

EQUATOR MINING & SMELTING CO.**ARIZONA**

Idle. Office: 20 Exchange Place, New York, N. Y. **Mine office:** Jerome, Yavapai Co., Ariz.

Officers: Hon. Wm. A. Clark, pres.; Jas. A. MacDonald, v. p.; Harry H. St. Clair, sec.-treas.; preceding with Chas. W. Clark and Jas. H. Anderson, directors.

Inc. March 19, 1900, in West Virginia. **Cap.**, \$500,000; shares \$5 par; issued, \$250,000. Annual meeting, third Monday in February.

Property: the Iron King mine, on Equator hill, adjoining the Copper Chief, 6 miles by wagon road, south of Jerome, shows a lenticular, canoe-shaped body of pyrite ore in schist near a granite porphyry contact. Mine owns North half of the Copper Chief orebody.

Closed down since 1904.

EUREKA GOLD AND COPPER MINING CO.**ARIZONA**

Address: Jerome, Yavapai Co., Ariz. Dr. A. J. Murietta, pres.; A. A. Macpherson, sec.-treas.

Property: 8 claims, 7 miles south of Jerome, near the Iron King mine, is opened by 2 tunnels, showing a 30' vein with an 8' paystreak carrying bornite and chalcopryite, with occasional visible gold, but has not developed ore in commercial quantities. Mainly idle, for some years, excepting annual assessment work.

GADSDEN COPPER CO.**ARIZONA**

Address: Jerome, Yavapai Co., Ariz. J. K. Hooper, supt.

Officers: M. S. Cunningham, pres., Bisbee; Fred Sutter, sec.

Inc. in Dela. **Cap.**, \$1,000,000; shares \$1 par; 300,000 issued for property. Control is held by the Calumet & Arizona Mining Co., which has an option on 70% of the stock, agreeing to spend \$100,000 on the property, or about \$10,000 monthly.

Property: 35 claims, including the Monster, News Mining Co., Walker-Larrimore and Howe groups. Land lies between the United Verde Extension and Green Monster properties.

Development: sinking a 3-compartment shaft to 1,000' depth was started, Jan., 1917. Work was retarded by bad ground and much water, but a depth of 740' had been reached by Oct. 21st, 1917.

The site selected for the shaft is in the limestone covered area, north of the great Verde fault and about ½ mile from the Verde Combination shaft. Although this site shows no mineralization whatever, it is calculated by C. & A. engineers to reach underlying geological conditions of promise. Schist was cut at 400' and quartz and jasper at 700' in depth.

Equipment: one of the best in the camp, includes electric hoist and pump. Average flow of water is from 40-45 gal. per minute. Employs 32 men.

GILA COUNTY EAST VERDE MNG. & SMTG. CO. ARIZONA

Address: Payson, Gila Co., Ariz., in Tonto Basin, East of Jerome.

Inc. 1917 in Ariz. **Cap.**, \$750,000; shares \$1 par.

Directors: W. W. Brooker, E. R. Oliver, F. H. Gardner, T. S. Rush, O. L. Scribner, E. R. Lindsey and F. W. Washchek.

The articles of incorporation show the usual preamble, but specify no special property to be developed as yet.

GRAND ISLAND MINING CO.

ARIZONA

Address: Jerome, Yavapai Co., Ariz. Jas. P. Rice, supt.

Officers: R. E. Morrison, pres.; P. Smily, v. p.; E. Rucker, sec.; D. J. Shea, treas., with W. W. Elliott, directors.

Inc. 1908 in Ariz. **Cap.**, \$1,500,000; \$1 par; 1,424,395 shares issued.

Property: 14 claims, in the Jerome Copper district, adjoining the Copper Chief and Shea mines on the south. Idle since 1912, until company secured funds during the boom of 1916. Claims show a quartz vein in porphyry schist and diorite, carrying copper ore with gold-silver values.

Development: by 208' shaft with S. W. crosscut on 200' level, in jasper and schist, expected to cut ledge at 285' from shaft. Miners' strike in district during May resulted in temporary shut-down. Fourteen men employed. Diamond-drilling underway. Small hoist, compressor, etc., installed.

Considered a fair prospect.

GREAT VERDE EXTENSION COPPER CO.

ARIZONA

Address: Shea Bldg., Jerome, Ariz. J. W. Hubbard, supt.

Officers: W. P. Geary, pres.; O. S. Wakeling, v. p. and gen. mgr.; H. H. Major, sec.-treas.

Inc. 1916 in Arizona. **Cap.**, \$750,000; shares 25c par.

Property: 9 fractional claims, adjacent and E. of the United Verde Extension, at Jerome.

Development: by 3-compartment shaft, down 53', Oct., 1917, in sand stone and limestone and reported to show carbonates, chalcopryrite and some copper glance. A hoist will be installed Oct., 1917.

One of the many new speculative promotions, during the boom at Jerome.

GREEN MONSTER MINING CO.

ARIZONA

Jerome, Ariz. D. R. Finlayson, supt.

Officers: Neill E. Bailey, pres., Prescott, Ariz.; David Morgan, v. p., Jerome, Ariz., with T. A. Riordan, Flagstaff; W. W. Lawhon and W. S. Humbert, of Phoenix, directors; G. G. Fuller, sec., Jerome; Walter Harvey Weed, cons. engr.; Le Roy Anderson, gen. counsel.

Inc. Dec. 8, 1915 in Ariz. **Cap.**, \$750,000; shares 50c par; 300,000 shares in treasury, and cash balance in bank Nov. 1, 1917, \$208,066.

The financial statement of Oct. 31st, 1917 shows cost of properties, \$365,116; buildings, machinery, etc., \$54,119; cash, Liberty bonds, etc., \$208,066; accts. receivable, and supplies, \$27,065; development expense, \$102,259; taxes paid, \$941; deferred operating expenses paid, \$46,594; total, \$804,162.

Property: 37 unpatented and 32 patented claims, all but two in one group, situated 3 to 4 miles S. E. of Jerome; the 2 other claims adjoin the Calumet & Jerome and the Verde Combination. The group includes the Cliff mine, once the property of the Geo. A. Treadwell Mining Co.; also the Brookshire mine. The tract shows several large jasper outcrops, that of the Cliff claim showing commercial ore at the surface.

Development: work for 1916 comprised about 1,500' of underground work besides road and camp building, and installation of electric equipment. The Gorge tunnel of the Cliff claim was extended and extensive exploration work, mostly by tunnel, was done at both the Revenue and Amazon properties.

In 1917 company started a deep exploratory shaft called the Dorothy May (505' in Oct.), on the Revenue claim and began extensive development by shaft, winze and crosscut on the Cliff claim, where a small body of chalcopryrite ore of commercial tenor was cut in the Gorge tunnel. The new Cliff shaft was sunk 192' to connect with the Gorge tunnel, and drifts started both east and west on a mineralized quartz porphyry-diorite contact. The work shows two white intrusive, or water course dikes, the alleged ore enrichers of the Jerome district.

In Nov., 1917, the east drift of the Gorge tunnel workings on the Cliff claim, encountered an orebody showing 2' of chalcopryrite ore that assayed 5% to 9% copper.

Property contains very promising surface outcrops, perhaps the best seen in the district. The first year's development work and the equipment of the property were carried out with great skill and economy, under the direction of W. S. Humbert. The property is regarded as the best of the undeveloped tracts in Jerome and the company's operations are supervised by expert financial legal and technical men who compose its board of directors.

HAYDEN DEVELOPMENT CO.

ARIZONA

Operating the Copper Chief mine of the Copper Chief Mining Co., which see.

HAYNES COPPER CO.

ARIZONA

Succeeded 1916, by Jerome-Victor Extension Copper Co., which see.

HULL COPPER CO.

ARIZONA

Jerome, Yavapai Co., Ariz.

Officers: Robt. E. Tally, pres. and gen. mgr.; Thos. Taylor, v. p.; S. F. Dennison, sec.; C. L. Nabers, aud., with H. R. Brown and C. V. Hopkins, directors.

Inc. 1906, in Arizona. **Cap.**, \$10,000,000; shares \$1 par, fully issued; non-assessable.

Suit filed, July, 1917, at Prescott, Ariz., against S. F. Dennison, sec., administrator of the estate of G. W. Hull, by minority stockholders, for the purpose of forcing the surrender and redistribution of 7,521,727 shares of stock for cancellation; also requiring an accounting and a temporary

injunction to stop the "levying, seizing or selling" of Hull Copper Co.'s property or assets. *

Property: 21 claims, partly fractional, patented, 249 acres, shows syenite, diorite and slate, a continuation of the formation of the United Verde, adjoining, reported by company to show 21 orebodies, carrying some oxidized ores, but mainly sulphides, as developed. The "1888" shaft, of 475' depth, has produced a small amount of ore, but not at a profit.

Development: the Hull property and that of the Cleopatra Copper Co. have been developed by a 5,200' adit driven from Deception gulch, through Cleopatra ground into the Hull property. A winze has been started on the lode at 5,000' from the portal.

The Dillon tunnel extends completely around two sides of the United Verde ground. There are many drifts branching out from the tunnel and these usually follow a fracture plane in the rock showing 1 or 2' of fractured country rock, which usually shows pyrite and may be slightly copper-stained. These drifts twist and turn in a manner showing lack of system and finally branch out like a tree, each branch following a fracture plane, some of which show 2 or 3" of copper ore, and some are not even copper-stained. These fracture planes are described as being "leaders" from the big orebodies below, and because the country rock contains a small amount of pyrite disseminated through it, these ragged workings were stated to block out low-grade concentrating ore.

On the Silent claim a drift from the tunnel exposed an irregular body of excellent chalcopyrite from which 2 shipments were made, the ore assaying $8\frac{1}{2}\%$ copper. The stope is about 60' long, in places is 12' wide and of irregular height. A 160' raise shows it to branch into 2 seams of 2' and 3' wide. An inaccessible winze was said to show 13' of ore, but inasmuch as shipments had ceased, this seems questionable. Beyond this orebody the tunnel turns the southwest corner of the United Verde property and follows along its western boundary to the "1888" shaft. For part of this distance the tunnel follows a lens of quartz devoid of copper. Aside from the 1 lens of chalcopyrite mentioned the showing in the tunnel is exceedingly discouraging. The mine has upward of 2 miles of openings, but the manager states that these old workings are not deep enough to develop the extension of the main orebodies of the United Verde.

Equipment: includes a 94 h. p. steam plant and a gasoline engine, with 2 hoists, one being a steam hoist, installed 1909, at the "1888" shaft. There also is a small air compressor.

JEROME COPPER MINING CO.

ARIZONA

Is controlled by the General Development Co. (A. Lewisohn).

Address: A. L. Johns, supt., Jerome, Yavapai Co., Ariz.

Officers: E. A. Kastner, pres. and treas.; H. Brinkenmeyer, v. p.; G. N. Hoffman, sec., all of Prescott, Ariz.; Homer King, F. M. Burdick, Gus Zorke, B. M. Orde, F. Wellington Hay, Geo. A. Gilbert and H. E. Crawford, directors.

Inc. Nov. 25, 1916, in Arizona. **Cap.**, \$2,000,000; shares \$1 par.

Property: 5 patented (one fractional) claims, N. and W. of the Green Monster at Jerome, and long known as the Hooker Ewing group.

Development: 480' tunnel being driven to cut a diorite-schist contact exposed in 98' shaft at 860' from portal; it should be cut by Jan. 1st, 1918.

Work started in Sept., 1917, after construction of a road and erection of machinery.

JEROME DAISY COPPER CO.

ARIZONA

Address: Box L, Jerome, Ariz.

Officers: J. F. Mowles, pres.; R. Kingdon, v. p.; A. J. Kisselburg, sec.; J. J. Cain, treas., with J. F. Hubbard, H. D. McVay and A. G. Dulmage, directors; J. F. Mowles, supt.

Inc. Oct. 5, 1916, in Arizona. **Cap.**, \$1,000,000; shares 50c par; 1,129,975 issued, non-assessable.

Property: 22 unpatented claims at Jerome, Ariz., said to show a copper bearing contact vein between quartz, porphyry, schist and diorite with limestone capping.

Development: by 235' shaft, to be sunk to 500', followed by lateral work. The present bottom is in sandstone, making 70 gal. water per min. Crosscutting underway on 230' level said to have exposed a gossan body 17' wide, on which a winze is sunk.

Equipment: 500 cu. ft. Sullivan compressor, 75 h. p. engine, 25 h. p. hoist, Cameron pump, etc.

A prospect whose shares are offered at 50c, 1917.

JEROME DEL MONTE COPPER CO.

ARIZONA

Office: Room 1018, 50 Congress St., Boston, Mass. **Mine office:** D. D. Homer, supt., Jerome, Ariz.

Officers: F. E. Young, pres.; A. B. Ewing, treas.; above with Thomas S. Woods, E. P. Thompson, Fred Sutter, E. S. Armstrong, Tasker L. Oddie, directors; E. S. Armstrong, managing director; D. D. Homer, supt.

Inc. in Arizona. **Cap.**, \$2,000,000; \$1 par; 800,000 in treasury.

Property: 41 claims and fractions, about 700 acres, in the Verde mining district, Yavapai Co., Ariz. Property being developed by 3-compartment shaft, down 500' in Sept., 1917, and sunk in limestone; much water encountered.

Equipment: electrically-driven hoist of 1,500' capacity, Ingersoll-Rand compressor, 400-gallon Cameron centrifugal pump.

A prospect.

JEROME GRANDE COPPER CO.

ARIZONA

Address: Jerome, Ariz.

Officers: S. J. Cain, pres.; J. W. Hubbard, v. p.; J. C. Scott, sec.-treas., with C. G. Lagstrom and W. Hales, directors.

Is a re-organization of the Verde Grande Copper Co., whose property in the Jerome district has been idle since 1909. See Vol. XII. for description of mine, which is considered to be favorably situated. Bondholders and old shareholders offered 200,000 shares at 25c each. If financed, the mine will be unwatered, plant erected and roads built.

Treasury stock offered under Corporation Commission permit at 25c, Sept., 1917.

JEROME NEW YORK COPPER CO.

ARIZONA

Address: Jerome, Ariz.

Inc. June, 1917, in Arizona. **Cap.**, \$2,000,000; shares \$1 par.

Property: 2 claims in the Verde district with reported good surface indications. Stock 25c asked, Oct. 20, 1917.

JEROME-PACIFIC EXTENSION MINING CO.

ARIZONA

Address: Jerome, Ariz.

Being organized in July, 1917, by N. Schutz, J. M. Layman, R. E. Moore and T. F. Shea of Jerome, with a capital of \$750,000, to develop an area S. of the Jerome-Pacific.

JEROME-PACIFIC MINING CO.

ARIZONA

Address: Jerome, Ariz.

Officers: Mrs. C. V. Hopkins, pres.; J. B. Harper, v. p.; foregoing with T. C. Mulcaire, I. M. Sutton, C. W. Small and H. F. Ashurst, directors.

Inc. Sept. 16, 1916, in Arizona. **Cap.**, \$750,000; shares 50c par; 750,000 issued; non-assessable.

Property: 36 unpatented claims in Verde district, 5 miles S. E. of Jerome, on the E. slopes of the Black Hills.

Geology: replacement bodies in schists, dipping 80° N. and pitching E.-W. Surface conditions are similar to those at the United Verde and United Verde Extension mines, that is, they carry large jasper outcrops, and show oxidized ore which assays up to 18% copper, 8 oz. silver, and \$6.80 gold per ton.

Development: by 2 vertical shafts, 35' and 65' deep; also 6 tunnels from 35 to 270' in length. These are to be sunk and extended. Expenses in 1916 totaled \$9,000, covering 2½ miles of road and assessment work.

The property has been favorably reported on by W. H. Weed and when enough money has been obtained, development will be resumed.

JEROME PORTLAND COPPER CO.

ARIZONA

Address: Jerome, Ariz. A. B. Frame, pres. and mgr.

Property: in Jerome district, Ariz., at site of old Equator smelter, near the Copper Chief mine.

Development: shaft down over 500' cutting diorite at 515'. Motor-driven pumps cope with fairly heavy flow of water. Drifting both ways at 500' level started in July, 1917.

In 1917 a suit was filed by J. M. Mahoney, Geo. Moore et al, against the president of the company, alleging fraud in acquiring some additional claims and selling them to the company for a large block of stock issued to himself and for selling other shares he was not entitled to. Also alleged, that shaft sinking has cost about \$222 per foot when similar work in district has been done for \$55 per foot.

JEROME-ST. LOUIS COPPER MINING CO.

ARIZONA

Address: W. P. Burke, pres., Jerome, Ariz.

Officers: A. Brockman, v. p.; J. M. Sullivan, sec.; G. Brookshire, treas., J. E. Burke, E. E. McFarland and J. H. Sontag, directors; J. Riley, supt.

Inc. Nov. 13, 1916, in Arizona. **Cap.**, \$750,000; shares 50c par.

Property: 8 unpatented claims, 3 miles S. of Jerome, on Copper Chief road, crossed by great Verde fault.

Development: shaft-sinking in limestone under way. Encountered water at 100' stopping all work until pumps are secured. Has 25 h. p. hoist.

About \$10,000 said to have been spent to mid-year, 1917.

JEROME SUPERIOR COPPER CO.

ARIZONA

Address: G. D. Case, mgr., Clarkdale, Ariz., or 644 Title Insurance Bldg., Los Angeles, Cal.

Officers: Melville T. Frasier, pres.; T. Ford, v. p.; G. D. Case, sec.-treas.; foregoing, with Geo. Mitchell and C. E. Selby, directors; Geo. Mitchell, managing director.

Inc. May, 1916, in Arizona. **Cap.**, \$750,000; shares 50c par.

Property: 106 unpatented claims in Verde district, 1 mile N. of Jerome and 1 mile N. W. of Clarkdale includes Sutcliffe and Stanridge groups.

Development: new 100' shaft, and roads, etc., that cost \$25,000 in 1916. Low-grade copper, silver-gold ore is said to have been opened by 3 shafts, deepest 265'. Ground is being tested by churn-drilling.

Equipment: includes gasoline hoist and 6-drill compressor.

The new Verde Tunnel and Smelter R. R. crosses the property for 2½ miles.

JEROME VERDE COPPER CO.**ARIZONA**

Office: 223 Security Bldg., Los Angeles, Cal. **Mine office:** Jerome, Yavapai Co., Ariz.

Officers: E. O. Holter, pres.; W. R. Barbour, v. p.; I. M. Sutton, sec.-treas., with T. E. Campbell, Heath Steele, H. F. Osborne and V. W. Henshaw, directors; J. B. Harper, supt.; H. P. Henderson, cons. engr.

Inc. Dec., 1906, in Arizona. **Cap.**, \$5,000,000; shares \$1 par; non-assessable; issued May 31, 1916, \$4,952,545. Registrar & Transfer Co., New York, transfer agent and registrar. Listed on New York Curb. Was organized as successor of Verde Queen Copper Co., giving old shareholders \$2,501,000 in stock, which is held by the old company in a single certificate, and is practically escrowed; 1,000,000 shares of this stock will be distributed on and after July 3, 1916.-

In May, 1917, capital was increased from \$5,000,000 to \$5,500,000, by issuing 500,000 shares, which were offered at \$1.50 each; 240,000 were sold; total shares in treasury, 280,783, Oct. 15, 1917. Company had \$175,308 cash and \$200,894 in Liberty bonds, and interest, Oct. 1st, 1917.

Expenses, for year ending Oct. 1st, 1917 were \$233,359 including \$178,264 for mine development.

Property: 28 claims, patented, 486 acres, lying E. of the United Verde and adjoining the Little Daisy mine of the United Verde Extension, shows an iron gossan with outcrops of copper ore on the Verde and Columbia claims.

Development: by 1,043' two-compartment Columbia shaft, with about 4,000' of workings, showing mainly copper carbonates, with small quantities of oxide and silicate ores, also some sulphide and a little native copper, all slightly auriferous and argentiferous. Average assays were reported, by former management, at 8.4% copper. Up to June, 1916, no pay ore had been developed. The mine is wet, and has electric pump, with capacity of 175 gals. per min., working against 500' head.

Equipment: includes a new hoist, good for 1,500' depth, and 1,500 cu. ft. air compressors. Commercial current is taken from the Arizona Power Co. There are a number of mine buildings, and a 35-ton smelter.

The promising disclosures on the Little Daisy mine of the United Verde Extension, adjoining this property, resulted in an option being given on the Jerome Verde property until June 15, 1915, to the United Verde Extension Co. This option provided for the payment of \$500 per month and that 100' of work per month should be performed. Under the option 935' of drifting and crosscutting was done on the 800', 775' on the 1,200', and a little work done on the 1,400' level. Results were unsatisfactory and option was relinquished after an expenditure of \$50,000. In April, 1916, an agreement was made with United Verde Extension under terms of which said company is to do 150' of development work per month, to be paid for by Jerome Verde on the basis of the company's working costs, plus 15% royalty; the work is being done on the 1,400' level of Jerome Verde. This is the only interest United Verde Ext. has in Jerome Verde. Company plans enlarging Columbia shaft to 3 compartments and sinking 330', equivalent to 1,400' level of United Verde Extension.

Diamond-drilling from the U. V. Extension 1,400' level passed through a shear zone with some native copper. A crosscut is being driven from the 1,400' level of the Edith shaft of the U. V. Extension, in Jerome Verde ground, to open this zone. Drilling proceeds E, from 1,400' in the U. V. Extension, and is in quartz-porphyry.

Shares rose to \$3 on report that diamond drill had cut 2' of 27% ore, which proved untrue. Mine shows geological conditions similar to those

of the United Verde Extension and the stock is therefore a good gamble, although the capitalization is considered excessive.

In October, 1917, company became a regular shipper, the ore coming from a small orebody on the 1,200' level (United Verde Extension side) of the Maintop claim. Ore is about 13½' wide, but total amount is not large. To Oct. 23, seven 40-ton cars had been shipped, running nearly 10% copper with about \$4 in gold and silver. Revenue from shipments is expected to pay all operating expenses.

Employs 30 men.

JEROME-VICTOR EXTENSION COPPER CO.

ARIZONA

Property sold in Oct., 1917, to the West United Verde Copper Co., which see.

JEROME YEAGER COPPER CO.

ARIZONA

Address: Jerome, Ariz.

Officers: J. W. Hudgeons, pres.; H. Wilson, v. p.; F. Hawkins, sec-treas.; also directors.

Cap., \$1,000,000; shares 50c par. Of the 2,000,000 shares, 800,000 are pooled, being given to the owners of the property, subject to complete financing.

Property: 360 acres in Yeager canyon being developed by shafts. Only a small crew employed at mine, which is a prospect. Stock 25c asked, Oct., 1917.

MAZATZAL MINING CO.

ARIZONA

Office: Globe, Ariz. **Mine office:** Payson, Ariz., in the Tonto Basin country, 120 miles N. of Globe.

Officers: W. C. Stanley, pres. and mgr.; A. J. Crossley, sec-treas., with G. B. Peart and W. Thomas, directors; J. F. Hatrick, supt

Inc. Jan. 25, 1917, in Arizona. **Cap.,** \$3,000,000; shares \$1 par; 1,029,000 issued; non-assessable.

Property: 65 unpatented claims, 1,300 acres in Mazatzal district, Gila Co., Ariz., said to show gold-silver-copper deposits in granite, schist and porphyry. Veins dip 70° N. E., and pitch N. W. Ore is both oxide and sulphide. Disseminated ore said to assay 5% copper and 80c gold per ton; vein, 10% copper and up to 130 oz. silver per ton.

Development: 5 tunnels from 80 to 600' long. Total workings 2,300', to depth of 300'. Reserves reported to be fairly large. A 2,400' tunnel is to be driven. Ore shipments expected to start, Sept., 1917.

MICHIGAN VERDE COPPER CO.

ARIZONA

Address: Jerome and care of Western Copper Syndicate, P. O. Box 325, Phoenix, Ariz.

Officers: L. B. Eaton, pres.; A. M. McLellan, v. p. and treas.; E. D. Bowles, sec.

Inc. 1916 in Arizona. **Cap.,** \$2,000,000; shares 50c par; 800,000 shares held indefinitely in pool by Arizona Corporation Commission to enforce its orders.

Property: 29 claims, 535 acres, which according to the company's literature and "ex-geologist" Bethune, contains "outcrops" in a connecting belt of schist and diorite. The property is neither better nor worse than that of the many other Jerome companies who are exploring their tracts.

No development is claimed, but the stock-sellers advertise that the property is owned outright and the money derived from stock sales (offered at 50c in June, 1917) will be used for development.

The Michigan Verde was one of the worst of the many very questionable promotions of the boom days of Jerome in 1916. The manner of its promotion and the character of its sponsors were open scandal in the

camp, and when the company lost its option and the Arizona Corporation Commission ordered the return of its promotion stock and forbade the sale of shares it was thought that the last had been heard of it. It is apparent that a new and different directorate has been successful in getting by the Commission prohibition, since the Western Copper Syndicate, which has a post-office box at Phoenix, Ariz., is advertising stock and sending out the same old hackneyed stories about the United Verde mine and among other misleading statements says, this property end-lines the United Verde Extension property, whose mine workings are $1\frac{1}{2}$ miles away, though an outlying undeveloped group of claims belonging to that company does lie between Michigan Verde and the U. V. mine.

From the known dip and extent of the orebodies of the United Verde and its great neighbor, United Verde Extension, it is certain that the Michigan Verde is entirely outside of any possible extension of those ore deposits. The geologic report published by the company is a rank example of supposedly technical writing.

MINGUS MOUNTAIN COPPER CO., LTD.

ARIZONA

Office: 516 Grant Bldg., Los Angeles, Cal. Mine near Jerome, Yavapai Co., Ariz.

Officers: W. W. Thomas, pres.; A. Gleason, v. p.; J. R. Thomas, sec.; above with A. M. McDermott, A. J. McDermott, R. A. Thomas and E. R. Jeffrey, directors.

Inc. June, 1900, in Arizona. **Cap.**, \$3,000,000; shares \$1 par; issued \$2,400,000.

Property: 5 claims, 100 acres, in the Black Hills district, 12 miles south of Jerome, the nearest railroad point, has good surface showings of carbonate ores. Assays from 2,800' vein traversing property, N. E.-S. W., are reported to show .02 oz. gold, \$1.45 silver and 6.39% copper. Orebody claimed to be 45' in width with dip of 60° E. but ore has only been found in bunches and streaks.

Development: by 4 shafts, deepest 430', with several tunnels, giving a total of 4,240' of workings.

Equipment: includes 50 h. p. steam plant, with 2 hoists, good for 1,000' each, and several mine buildings. Out of cash and idle some years.

MONSTER CHIEF MINING CO.

ARIZONA

Office: 27 William St., New York. Mine south of Jerome, Ariz.

Officers: Wm. Barret Ridgely, pres.; A. P. Thompson, cons. engr.; G. G. Rice, fiscal agent.

Cap., \$2,000,000; \$1,050,000 issued for property.

Property: 22 claims, 400 acres, adjoining the Green Monster on the southeast and the Jerome-St. Louis on the east. Mine is wholly undeveloped and without camp or equipment.

Is an undeveloped prospect. All available information on the company is from George Graham Rice's house organ. Stock 6c bid, 12c asked at Jerome, Oct. 20th, 1917.

A report by Arthur Perry Thompson, geologist, shows a big vein, called the Green Monster, crossing the Revenue claim of the Green Monster Co., into the Monster Chief group.

NEW Mescal MINING CO.

ARIZONA

Inactive. Jerome, Ariz. Is a reorganization 1914 of the Mescal Mining Co. L. C. Cherry, pres., State Bank Bldg., Little Rock, Ark.

Inc. 1914, in Ariz. **Cap.**, \$1,500,000; shares \$1 par.

Property: Owen & Allison group, 3 patented claims, a mile south of Jerome in Verde district, showing fissure veins in slate and diorite, one 3' average width, traceable 1,600' and workings show 1-2% copper with trace

of gold. Company originally owned 7 claims, but 4 were allowed to lapse and were jumped. The 3 remaining were sold to J. E. Russell of Prescott, who sold them to J. M. Layman, who in turn transferred them to the Verde Combination Copper Co., and they now comprise part of its Jerome holdings.

NEW YORK VERDE COPPER CO.

ARIZONA

Address: Jerome, Ariz. and care W. W. Lewis, Kingman, Ariz. Is a reorganization of the Victor Copper Co.

Property: at Jerome, consists of 1,100 acres in the Southern Verde district, including 700 acres directly south of and adjacent to the Jerome Pacific holdings.

The Kingman property consists of 580 acres in the Maynard district, covering the Copper King vein. Company is drifting at 400' depth to cut the vein which is said to show 3'-4' of copper ore in places.

PITTSBURGH-JEROME COPPER CO.

ARIZONA

Office: Commonwealth Bldg., Pittsburgh, Pa. **Mine office:** Chas. Arata, supt., Jerome, Yavapai Co., Ariz.

Officers: Wm. M. McJunkin, pres.; C. A. Cooper, v. p.; E. F. Thompson, sec.

Inc. 1904 in Arizona. **Cap.** increased, March 9, 1906, to \$3,000,000; shares \$1 par; issued, \$2,909,316.

Property: 21 claims, 387 acres, lying 2 to 3 miles south of Jerome, nearly N. W. of the Black Hills property, and about midway between the United Verde and Equator mines.

Development: by main, or 500', and the lower or 900' tunnels and the 900' Pittsburgh shaft, said to show argentiferous and auriferous sulphide ore of about 4% copper tenor at 358' depth.

The 500' or main tunnel 1,279' long connects with the shaft. An east drift on this level shows copper carbonate; the west drift is in diorite. Several veins were cut, said to show leached ore averaging 2%; selected sulphide ore carried from 6 to 30% copper, \$2.50 gold and 75c silver per ton, leading the management to hope for increased values below water level. Crosscutting at 900' depth, 1917.

Equipment: includes a 150 h. p. Fairbanks & Morse hoist, 650 cu. ft. compressor and electric power.

RICHARDS COPPER CO.

ARIZONA

Out of business. Formerly owned the Black Hills Copper Co. whose property was near the Equator mine, Jerome. Property sold, 1917.

SHEA COPPER CO.

ARIZONA

Officers: D. J. Shea, pres. and mgr., Jerome, Ariz.; J. P. Connelly, sec.-treas., with Nathan Schultz, directors; James Rice, supt.

Inc. 1916 in Ariz. **Cap.**, \$750,000; shares 50c par.

Property: 4 patented claims, south of Copper Chief group, carrying 8 or 9 outcrops with gold-silver-copper values.

Development: by shallow shafts, tunnels, etc., all in ledge matter. In Oct., 1917, the main incline was down 285'. The vein is 50' wide, with schist hanging and diorite foot walls. A selected sample of the rock ran \$4.60 gold, 14.40 oz. silver, 0.7% copper, 1% lead, and 2% zinc.

At 300' depth the ledge will be explored.

SQUAW PEAK COPPER MINING CO.

ARIZONA

Address: Edison Thacker, Jerome, Ariz.

Officers: J. J. Cain, pres.; H. E. Thacker, v. p.; Edison Thacker, sec.-treas., with R. Thacker and A. W. Whitaker, directors.

Inc. in Arizona. **Cap.**, \$2,000,000; shares \$1 par; 100,000 issued; non-assessable.

Property: 21 claims, 420 acres, in Squaw Peak district, 2 miles W. of Verde river and 28 miles S. E. of Jerome, Ariz. Examined in Nov., 1916, by W. E. Defty, whose conclusions were not favorable. Claims said to show copper ore with chalcopyrite and oxide minerals in quartz, occurring in fracture planes and veinlets in granite, capped to the W. by Cambrian rocks.

Development: 265' main tunnel and several shorter ones, also a 75' shaft.

Equipment: steam boiler and compressor; inadequate for proposed work.

UNITED JEROME COPPER CO.

ARIZONA

One of the companies that employed full page advertisements during the boom at Jerome, trying to sell shares. Cannot locate promoters and letters sent to company are returned by Post Office.

UNITED VERDE CONSOLIDATED CO.

ARIZONA

Address: Clarkdale, Ariz.

Officers: R. W. Wingfield, pres.; Paul McIntosh, v. p.; E. C. Farrell, sec.; D. L. Robinson, treas.; E. M. Barron, mgr.

Inc. Oct., 1916, in Arizona. Cap., \$7,500,000; shares \$5 par; 471,758 issued.

Statement of Aug. 25, 1917, showed receipts amounting to \$67,008 from sale of shares; and expenditures, \$59,781. The latter includes 1st payment on Ballard property, \$10,000; drawn by promoters (Balentine, Farrell and McIntosh), \$8,611; advertising, \$17,898; commissions, \$854; development of Mahurin property, \$3,259; road building, \$650; telegraph and phone, \$1,311; and sundries, \$9,863. There was a balance of \$7,226 unaccounted for. Due on the Ballard claims, \$60,000, and outstanding indebtedness is \$12,850. From these figures it is evident that only \$4,000 was spent on the property, or less than 7% of total expenses; while over \$37,000 went in advertising, commissions, etc., exclusive of promoter's commission.

Property: the Ballard and Mahurin claims, 2½ and 15 miles S. of Jerome, Ariz.

Development: drilling was to be done to 2,000' early in 1917. Three tunnels driven by previous owners, 15 years ago, are said to have exposed good copper ore.

UNITED VERDE COPPER CO.

ARIZONA

Office: 20 Exchange Place, New York. **Mine office:** Jerome, Yavapai Co., Ariz. **Smelter office:** Clarkdale, Ariz.

Officers: Wm. A. Clark, pres.; Jas. A. MacDonald, v. p.; J. H. Anderson, sec.; H. H. St. Clair, treas.; Chas. W. Clark, gen. mgr.; officers are the directors; Robt. E. Tally, asst. gen. mgr. and mine supt.; Thos. Taylor, smelter supt.; Clarence V. Hopkins, chief engr.; Dave Hopkins, purch. agt.; A. L. Reese, chief chem.-assayer.

Inc. 1883, in New York and reorganized Sept. 2, 1899, in West Virginia. Cap., \$3,000,000; shares \$10 par; fully issued and fully paid. Is practically a close corporation, having less than 20 shareholders, and is controlled, through stock ownership, by W. A. Clark. Five hundred shares were sold at auction, March, 1910, for \$70 per share.

Gross sales of copper, silver and gold were \$5,368,672 in 1909, \$5,605,488 in 1910, \$4,736,834 in 1911, \$5,899,457 in 1912, \$6,171,116 in 1913, \$5,186,909 in 1914, \$9,519,419 in 1915, and \$17,185,881 in 1916.

Company's investments at end of 1916 were valued at \$7,404,522, compared with \$2,587,724 in 1915. Cash on hand and in bank totaled \$1,771,961, Jan. 1, 1917, an increase of \$392,917.

Dividends: were begun, 1892, by old company on the basis of 25c per share monthly. Recent dividends have been: \$2,005,000 in 1905, \$2,700,000 in 1906, \$2,700,000 in 1907, \$2,025,000 in 1908, \$2,700,000 in 1909, \$2,700,000 in 1910, \$2,250,000 in 1911, \$1,800,000 in 1912, \$1,575,000 in 1913, \$1,125,000 in 1914, \$1,800,000 in 1915, \$4,050,000 in 1916, and \$4,500,000 in 1917 to October, a total of \$44,372,000.

Property: 13 claims, patented, 230 acres with sundry adjoining property, including the North Venture and South Venture claims, which have produced a little high-grade ore, in the Verde district of the Black Hills range, at an average elevation of 5,500' above sea level, and about 2,100' above the valley of the Verde river.

Company also owns the Copper Giant mine, Wm. Neagle, supt., near Hackberry—acquired in 1913. It is developed by 750' shaft, with various levels which show silicious ore carrying 2-7% copper with small gold-silver values. A concentrating plant will be erected if further development warrants it.

Geology: the property shows granular porphyritic igneous rocks, slate and schist, the ore deposit being connected with intrusions of acidic porphyry in dioritic rocks; the rocks are sheared and schistose, the overlying limestone having no genetic connection with the ore deposit.

The mine is opened on a single large deposit of sulphide ore, in a sheared diorite, about 600' in extreme width and 1,900' length, proven to depth of 1,500'. The orebody consists of more or less irregular masses, in a much broken and disturbed area, the ore-shoot having a dip of 72° and containing a 70' quartz vein that carries about 1% copper and from 0.25 to 0.75 oz. gold per ton, this quartz being used for converter linings. The gossan outcrop, carrying auriferous and argentiferous oxidized ores extends to a depth of about 160'. The zone of secondary enrichment carries very little chalcocite, with some covellite, and other secondary copper ores, all highly argentiferous. The primary zone carries mainly pyrite and chalcopyrite, with a little bornite. No ore assortment is attempted, and no concentration is made, everything from the mine going to the furnaces, the average of ore from all openings formerly being about 6.5% copper and 15 to 32% sulphur, with considerable gold and silver values in the oxidized zone.

Development: to a depth of 2,000', but production is mainly from the 6th and lower levels. The older portions of the mine are worked pillar-and-stall and timbered with square sets, filled with waste, worked-out stopes being filled with culls and barren rock blasted from the mountain side above the mine and run into abandoned stopes. The oxidized zone is being mined by open cut and the milling system. In the newer workings, and parts of the old mine where the ground will permit, bottom slicing and a modification of the shrinkage system is used.

The ore is very easily oxidizable, owing to its high sulphur tenor, and is therefore liable to spontaneous combustion, while, owing to the more or less shattered condition of the orebody, it is difficult to entirely prevent the access of air, very little of which will keep a sulphur fire burning incessantly. The fire on the 400' level has been burning since 1897, and the mine is on fire in various places, from No. 9 level to surface, fire in stopes not worked being walled off by cement bulkheads. Mining until early in 1917 has been in progress for several years in the fire zone under the Plenum system, introduced by J. J. Shaw. By this method, air under pressure is blown against the face of the stopes by electric fans. The large volume of cold air has a cooling effect on the burning ore, reducing temperatures, and extinguishing the fire in the immediate vicinity of the

working face, at the same time driving back the deadly fumes into the shattered rock mass and permitting extraction of the ore. The fire, while dangerous and annoying, does not destroy the copper, all of which will be recovered eventually, by mining or leaching.

Plans have been perfected for the steam shoveling of the upper levels of the mine, to and including the 300' level and preparatory work has begun. This will relieve the pressure of the underground fire gases.

The mine has one of the most perfect systems of mechanical ventilation known to copper mining. It was developed through the necessity of fire control, and cooling off of the heated parts of the mine, together with a plentiful supply of fresh air to the working faces.

Equipment: the compressed air plant on surface includes a 2-stage compressor, 28' and 52' and 26' and 44½x48" and 3 smaller units, including 2 machines driven by 600 h. p. and 300 h. p. motors, also a compressor driven by a 275 h. p. motor. No. 3 hoisting shaft has a first-motion hoist, good for 2,000'. No. 5 shaft will have an Allis-Chalmers mechanical double-drum hoist, with electrical equipment, speed of 1,900' per minute, and good for 3,000' depth; 7-ton skips operated in balance will be used. This installation is on the 1,000' level, which is the collar of No. 5 shaft. Haulage equipment underground includes nine 4-ton, four 6-ton and three 7-ton locomotives.

Smelter: the old smelter, built on the hanging-wall side of the mine and too close to the orebody, had considerable trouble from caving ground and was closed down and dismantled.

The new 3,000-ton smelter designed by Repath and McGregor has been operating since June, 1915. It is one of the most modern in the world, consists of a crushing and sampling plant, calcining plant, blast furnace, converter, and reverberatory departments, and a power house, together with coke and ore-storage yards and bins with a total capacity of 26,000 tons. Buildings are built of steel and concrete.

The crushing and sampling plant has an Allis-Chalmers 30x18" jaw-crusher, driven by a 50 h. p. motor; product passes up a long incline belt conveyor, capacity 2,400 tons daily, to top of sampling mill. This mill has three 20x10" Blake crushers, three sets of Allis-Chalmers crushing rolls, 54x24", 36x12" and 24x12"; two 4x14' Gates trommels and four Snyder samplers with final sample of 1 to 250. Crusher product goes over conveyor belts to storage bins for fines or to the calcining plant.

As described by T. C. Roberts in the Engineering and Mining Journal, July 21, 1917, the Hopewell crushing plant was built at the mouth of the 1,000' tunnel. It includes storage bins, No. 9 Gates crusher, shuttle conveyor, 42" steel bucket elevator, shaking grizzlies, and 36" belt conveyor, from which the ore goes to the blast furnace bins. Undersize goes to two compound revolving screens 60 and 80" diam., 18 and 15' long, with ¾" and ⅜" holes. First reject, 1½", is crushed by 2 sets of 54x24" Anaconda rolls set to ¾"; the second reject, minus ¾" is crushed by two 24x54" rolls set to ⅜"; the third reject, minus ⅜", is taken to storage bins. Product from all rolls in rescreened and recrushed as desired, the screens and rolls being in closed circuit.

The calcining plant has 12 21½' Wedge furnaces, each with a daily capacity of 96 tons. The 7 hearths, 6 roasting and 1 drying, are lined with concrete. The plant is built so that it can be enlarged when required. Cooling blast is furnished by 1 or 2 No. 6 Sirocco, 3-oz. blowers, each having a capacity of 25,000 cu. ft. of free air per minute, driven by a 30 h. p. motor. Fumes pass to the dust chamber building, sides of brick and steel, roof of 24-gauge copper equipped with baffle plates, and then to the 400'

stack. Calcines, as well as dust, are drawn into 15-ton cars, drawn by 10-ton electric locomotives.

The reverberatory plant has four 19x100' furnaces, placed at one end of the furnace building. Calcines, with oxidized ores, are fed to these furnaces. Slag is drawn off into Treadwell motor-tilted pots, drawn by an 18-ton electric locomotive, of which there are three.

The blast furnace plant has four 48x320" blast furnaces, designed by Repath and McGregor. Feed consists of mattes from the reverberatories, rich oxidized and sulphide ores, with some calcite. Gases go to a second dust chamber, similar to the other, but with steel plate sides, before going to the 400' 'stack. Ore and flux for the furnaces is brought by 4 to 6 ton side-discharge cars. Reverberatory matte is poured hot.

The converter plant has four stands with five 12' shells of the Great Falls type, supplied by Allis-Chalmers Mfg. Co. Converters are basic, lined with Harbison-Walker magnesite. Tilting is done by 50 h. p. direct-current motors. Copper is poured into two copper casting machines, each operated by a 20 h. p. direct-current motor. There is a 75-ton reheating furnace in connection with these. Slag is drawn into Treadwell pots and charged hot into the reverberatories together with rich blast furnace slag.

The power plant will generate only part of the electric current used, remainder being purchased from the Arizona Power Co. Current is received at 44,000 volts and stepped down to 2,200 volts. When the reverberatories are in operation waste heat from them will be utilized for 6 Stirling Type M boilers, 713 h. p. each, 2 to each furnace. Three Parker type water tube boilers, using fuel oil, are held in reserve. A pumping station, equipped with 2 pumps, on the Verde river supplies the water. The cooling system of the furnaces, compressors, and the condensing system of the steam units are taken care of by a central cooling plant and pumping station. There are 3 condensers, 2 Weiss and an Allis-Chalmers, and 5 Allis Chalmers centrifugal pumps, driven by motors.

There are 4 blowing engines, supplying the converters; a Southwork-Rateau-Smoot turbo-blower, capacity 24,000 cu. ft. free air per minute at 16 lbs. pressure, 2,500 r. p. m.; a Nordberg, Southwork and an Allis-Chalmers, with capacities of 21,000, 21,000 and 15,000 cu. ft. respectively. A Nordberg 2-stage compressor furnishes air up to 100 lbs. pressure, capacity 3,000 cu. ft. per minute. Air for the furnaces is supplied at 2½ lbs. pressure by 5 Roots blowers, two of 400 cu. ft., two of 300 cu. ft., and one of 224 cu. ft. Blowers are motor driven. A 16x32x36" Allis-Chalmers, tandem-compound engine operates one of the 400 cu. ft. blowers; a 3-cylinder Diesel engine operates one of the 300 cu. ft. blowers.

The electric generating units include 2 Parsons type steam turbines and generators; one is a 500-kva. Westinghouse unit, the other a 1,500-kva. unit made by Allis-Chalmers Mfg. Co., the former delivering current at 440 volts, the latter at 2,300 volts. Two Westinghouse synchronous 1,200 k. w. motor-generator sets take alternating current at 2,200 volts and deliver direct current at 250 volts for the electric locomotives, converter motors, cranes, etc. There are three 300 k. w., three 200 k. w. and three 50 k. w. transformers, also three 30 k. w. transformers.

The United Verde & Pacific railway, controlled by the company, has 28 miles of narrow-gauge line, traversing a very difficult country, connecting the mine and works with the Santa Fé, Phoenix & Prescott railroad at Jerome Junction. A standard-gauge railway, built 1912, by the Atchison, Topeka & Santa Fé R. R. Co., connects the new smelter at Clarkdale with its main line at Cedar Glade. For transportation between the mine and smelter another railroad, the Verde Tunnel & Smelter R. R. Co., has been built; it is operated as a separate organization.

Production:

Year	Lbs. Copper	Oz. Silver	Oz. Gold	Year	Lbs. Copper	Oz. Silver	Oz. Gold
1904.....	29,275,503	668,842	23,754	1911.....	33,167,987	461,145	15,239

* 10 months.

Up to June, 1917, the monthly yield was over 6,000,000 lbs., but labor troubles reduced the July-Aug. output to 4,250,000 each; yet the total for 1917 will be fully 8,000,000 lbs. above 1916.

In early years the United Verde made copper for 5c or less a pound, if one deducts gold and silver values from the cost. The reported cost per pound of finished copper, after deducting gold and silver values, was 9.17c per lb. in 1904; 9.27c per lb. in 1905; 8.69c in 1906, and 10.54c in 1907. Under average circumstances the cost may be figured as 9 to 10c per lb. The United Verde mine has been lied about more industriously than almost any other mine in the world, especially in the literature sent out by new copper mining companies with stock for sale. The United Verde has erroneously been pointed out, as an example of blind luck, but the mine was taken by Senator Clark, when generally considered worked out, and it was developed, by cash and brains, into a magnificent copper mine; the credit being due to the keen mining sense and business acumen of Senator Clark and not to chance. The mine is one of the best copper mines of the world, with many years of large and profitable production ahead.

To accomodate its employees the company constructed a model town called Clarkdale, at a cost of \$1,000,000. It includes upper and lower sections, with school house, restaurant, rooming house, business area, and residences, all supplied with electric light, water, sewers, and telephones.

UNITED VERDE EXTENSION MINING CO. ARIZONA

Office: 233 Broadway, New York. **Operating office:** Prescott, Yavapai Co., Ariz. **Mine office:** Jerome, Yavapai Co., Ariz.

Officers: James S. Douglas, pres. and gen. mgr.; George E. Tener, v. p.; Louis E. Whicher, v. p.; Chas P. Sands, sec.-treas.; preceding with Paul Armitage, H. K. Burch, George Kingdon, Archibald Douglas and Andrew J. Pickrell, directors; George Kingdon, gen. mgr.; H. De Witt Smith, supt.

Inc. 1902, in Maine, as a reconstruction of the United Verde Extension Gold, Silver & Copper Mng. Co. **Cap.**, \$3,000,000; shares \$10 par. Reorganized in Delaware, **cap.**, \$4,000,000; shares \$10 par; and again reorganized 1912, and cap. reduced to \$750,000, shares 50c par. In this reorganization, approximately 360,000 shares were set aside for exchange, on a share for share basis for old shares outstanding; about 40,000 shares were issued in liquidation of debts; 150,000 shares were issued to Jas. S. Douglas for service; 50,000 shares were sold to Mr. Douglas for \$25,000 cash; 400,000 shares were optioned to Mr. Douglas and his associates with the right to purchase all or a part of this block at par value at any time prior to June 15, 1915; and 500,000 shares were reserved for treasury purposes. Federal Trust Co., Boston, registrar; State Street Trust Co., Boston, transfer agt. Shares are listed on the Boston curb, traded on New York Curb. Annual meeting, 3rd Tuesday in Feb.

Gross revenue in 1916 was \$9,981,072; less \$2,334,746 for mine operations, freight, treatment, etc. \$207,809 for taxes, etc.; and \$500,417 for ore depletion and depreciation; leaving \$6,938,100 net. The balance to surplus was \$5,888,100. On July 1, 1917, the cash balance was \$4,793,072, excluding payment on 18,000,000 lbs. of copper.

Dividends: an initial quarterly dividend of 50c per share was paid Aug. 1, 1916. Two distributions in 1916 absorbed \$1,050,000. In 1917, to November, four 50c dividends and extras of 85c were paid. Total to date, \$4,042,500.

Property: 1,200 acres, known as the Little Daisy Group, a two-thirds interest in the adjoining Florencia claim, and an option on 19 claims, 300 acres adjacent to the company's property on the S. and S. E. \$130,000 was paid for this tract.

The Jerome Verde option was relinquished June 15, 1915, as the 2,127' of development work from the Daisy shaft failed to disclose ore of commercial importance.

History: original development was by an 800' vertical shaft, the Edith on the Little Daisy claim, about 1,700' from the main shaft of the United Verde mine, with collar 450' lower. This shaft, after passing through 50' of iron stains, encountered copper carbonates, continuing for depth of about 150', succeeded by conglomerate, and from a depth of 425' to 578' passed through schist carrying copper sulphides and manganese. These old workings total about 5,000' but develop only a little ore of about 2% copper, 1 oz. silver and \$3 gold, on the 800' level. A 130' winze below this level was bottomed in decomposed schist, showing considerable copper.

The early exploration work of the company was unsuccessful, and an option was taken in 1913 on the Jerome Verde group, and a new shaft, the Edith, started 1,500' farther east, sunk to a depth of 1,200'. Verde Extension's development of the Verde ground was disappointing but in the company's own ground a large body of very rich chalcocite ore was encountered on the 1,200' level, Dec., 1914. This orebody was developed and worked during 1915, and the shaft was sunk to the 1,400' level. Feb., 1916, a drift on this level cut the downward extension of the bonanza orebody found on the 1,200' level.

Development: during 1916 there was 12,193' of work done, with 1,541' in Jerome Verde ground. On the 1,400' level the orebody was fully opened, and has an area of 60,000 sq. ft. on that level. Between the 1,400' and 1,300' levels the shoot was proved by raises. Oxide ore was encountered 60' above the 1,300' level, so no considerable quantity of ore is expected above that point.

Conservative estimates give 1,000,000 tons of 16% ore between these levels. A winze was sunk 200' below the 1,400' level, passing through 114' of 15% ore and 46' of low grade ore. At 160' an intrusion was cut, and at 200 there was chalcopyrite again.

The ore thus far developed lies on the northerly downthrown side of a big fault, with a drop of 650' or thereabouts, as shown by the limestone strata on each side of it.

In May, 1917, work commenced on an 11,000' haulage adit, which will connect with the mine at the 1,300' level. A new 3-compartment shaft is being sunk to 1,700', and was concreted to 225' early in August. It should be complete by April, 1918.

Development to date makes the mine as great as its more famous namesake.

Equipment: is being added to as fast as possible, and includes a new smelter being erected $2\frac{1}{2}$ miles from Clarkdale.

Production: in 1916 was 80,159 tons of ore, containing 36,402,972 lbs. copper, 2,570 oz. gold, and 128,467 oz. silver; equal to 22.7% copper, 0.032 oz. gold, and 1.62 oz. silver per ton. In April, 1917, 11,419 tons yielded 6,203,992 lbs. copper. May and June outputs were lower on account of labor troubles. Up to August the production was only 3,000,000 lbs. behind the whole of 1916; and for 10 months, the total was 46,500,000 lbs., 10,000,000 lbs. ahead of the whole of 1916.

The recent history of United Verde Extension is remarkable, and large profits should continue when its own smelter is reducing lower grade ore. Limits of the orebody are not yet known, but the new work underway should prove them during 1918.

UNITED VERDE, JR., CO.

Property, the Ballard group, reverted to owners. See Ballard Group.

VENTURE HILL MINING CO., THE

ARIZONA

Address: W. R. Uber, sec-treas., Prescott, Ariz. **Mine address:** E. L. Bartholomew, supt., Jerome, Ariz.

Officers: Ed. Shumate, pres.; C. T. Jolly, v. p.; E. L. Bartholomew, supt. Inc. 1900, in Arizona. **Cap.,** 3,000,000 shares; \$1 par. In Sept., 1917, \$25,-000 was borrowed, for development, on 10% notes, secured by mortgage.

Property: 6 patented claims, 110 acres, 2 miles S. of Jerome, Yavapai Co., Ariz., near the Verde Combination and others. Examined by W. H. Weed in 1916. Mine was idle for years, but was reopened in July, 1916.

Geology: claims show a complex of altered Yavapai schist, quartz porphyry and diorite, cut by fractures and fissure veins. Two veins show some scattered ore in shaft and tunnel, samples assaying 6.96% copper, 6.5 oz. silver and \$4 gold per ton; ore in commercial amount had not yet been disclosed in October, 1917.

Development: by a joint shaft on the Verde Apex line, 265' deep, Oct., 1917, which connects with the 575' Socrates tunnel. The 2-compartment shaft has been in ore almost since the start, the schist showing pyrite and chalcopyrite. Over \$40,000 spent in 10 months, 1916.

Equipment: includes 60 h. p. Foos gas engine, 25 h. p. hoist, Sullivan compressor, bunk and boarding houses, etc.

Is regarded as a good prospect.

VERDE APEX COPPER MINING CO.

ARIZONA

Address: J. H. Robinson, sec., Clarkdale, and E. L. Bartholomew, supt., Jerome, Ariz.

Cap., \$3,000,000; shares \$1 par; 750,000 in treasury; 450,000 issued; 1,600,-000 in pool, largely under option to E. L. Bartholomew.

Property: 8 claims, 85 acres, in central part of the Verde district, one mile from Jerome, and some distance S. of the open cut of the United Verde mine. The claims are well located. As underground work is limited, the prospective value of the ground is largely a matter of geologic deduction and estimate, based on finding both oxide and sulphide ores in the tunnels, and with full knowledge of the 3 producers in the district.

Development: three veins are exposed in tunnels. The Black Horse is 6' wide, carrying good ore; the Socrates is narrow, but has promise, and No. 3 vein in the upper tunnel shows oxide ore of commercial value. With the Venture Hill Mining Co., which see, a joint shaft is being sunk on the boundary of the two properties. This was 260' deep, Oct., 1917.

Under permit of Ariz. Corp'n Commission, treasury stock is offered at 25c, with option of purchase of 2 shares ownership stock at 12½c., latter pooled one year.

Is a promising mining venture.

VERDE CENTRAL MINES, INC.**ARIZONA****Address:** C. T. Joslin, sec., Prescott, Ariz.**Officers:** W. F. Staunton, pres.; C. T. Joslin, sec.-treas., with J. A. Hope, C. C. Miller, Jr., and L. Spence, directors.**Inc.** Aug. 16, 1916, in Arizona. **Cap.**, \$2,500,000; shares \$1 par; non-assessable; 500,000 issued.**Property:** 20 patented claims, 308 acres, at Jerome, Ariz., in the center of the Verde district. Claims considered well located, and merit development of the known veins and prospecting along shear planes and beneath the limestone cap. Contains extension of the Venture vein, of claims owned by U. V. Extension.**Development:** by 3 old prospect tunnels, probably 1,000' long, on the Venture vein, and a 200' shaft sunk on the northern part of the property. Tunnels show ore. Is regarded favorably.**VERDE COMBINATION COPPER CO.****ARIZONA****Address:** David Morgan, supt., Box O, Jerome, Ariz.**Officers:** J. L. Dyer, pres.; F. P. Jones, v. p.; A. F. Kerr, sec.-treas.; with J. C. Callahan, J. M. Layman, J. S. Eberman and W. N. Richards, directors. O. G. Engelder, asst. supt.**Inc.** in Arizona. **Cap.**, \$1,000,000; shares 50c par; non-assessable; 1,600,000 issued. El Paso Bank & Trust Co., El Paso, Texas, transfer agent and registrar. Annual meeting in October.

Operating expenses from Nov. 1 to Dec. 31, 1916, were about \$15,000; and up to July 30, 1917, totaled \$82,000. On that date the cash balance was reported to be \$395,000.

Property: 33 claims, 550 acres, 15 patented, in Verde district, Ariz. Company's engineers consider it is on the main fissure of the district, and superficially to possess all the favorable attributes for ore deposition.**Development:** recent development is all at the north end of the property, by a new shaft over 700' deep (Oct., 1917), which connects with extensive workings in the Mescal tunnel. This tunnel shows the great Verde fault, the master, and post mineral fault that traverses the Jerome district for 20 miles; also discloses 2' of 5% copper ore, in a fissure vein, on which but little development save a raise has been done; also two promising contacts between diorite with stringers of copper; and a 75' tunnel opening a 3' quartz vein. shaft, where the contacts and mineralized zones are being explored. The old workings at the south end of the tract include 640' and 500' shafts, showing diorite with stringers of copper; and a 75' tunnel opening a 3' quartz vein.

Shaft has disclosed chalcopyrite ore in bunches and scattered particles for over 100', but no workable orebody has yet been reached (Oct., 1917).

VERDE GRANDE COPPER CO.**ARIZONA**

Reorganized in July, 1917, as the Jerome Grande Copper Co., which see. Described in Vol. XII.

VERDE HUB COPPER CO.**ARIZONA****Address:** Philip Carroll, pres., 715 Millikin Bldg., Decatur, Ill. W. S. Owens, supt.**Inc.** Nov., 1916. **Cap.**, \$1,000,000; shares 50c par. A reorganization of the Decatur Copper M. Co.**Property:** known as the Decatur, one mile S. of Jerome, Ariz.**Development:** by 284' shaft. Diamond drilling, in charge of Samuel Northland, was started in Sept., 1917.**VERDE MONSTER COPPER CO.****ARIZONA****Address:** J. J. Fearis, supt., Jerome, Ariz.**Officers:** T. F. Shea, pres.; C. M. Pedley, v. p.; and A. M. McLellan, sec.-treas.

Inc. in Arizona. **Cap.,** \$2,000,000; shares 25c par; non-assessable.

Property: 600 acres, 8 miles N. of Jerome, Ariz. About the end of 1916 ore containing 4% copper was found near the surface.

VERDE QUEEN COPPER CO.

ARIZONA

Reported in Smythe's *Obsolete American Securities*, Vol. XI, 1911, "New Jersey charter void 1906, for non-payment of taxes."

At a stockholders' meeting held in Jersey City, N. J., May 6, 1916, dissolution of the company was approved. It was decided to make a distribution of part of its assets, consisting of 1,000,000 shares of Jerome Verde Copper Co.'s stock; holders of Verde Queen stock to receive in partial liquidation 200 shares Jerome Verde stock for each share of Verde Queen stock.

Property of the company was taken over in 1906 by the Jerome Verde Copper Co.

VERDE SQUAW COPPER MINING CO.

ARIZONA

Address: T. H. Gray, sec., or Wm. Winkelman, supt., Box 682, Jerome, Ariz.

Officers: J. B. MacDonald, pres.; D. W. Barter, v. p.; T. H. Gray, sec.; C. F. Benjamin, treas., with C. C. and G. Reid, directors.

Inc. Jan. 8, 1917, in Arizona. **Cap.,** \$1,500,000; shares \$1 par; non-assessable; 809,910 issued. Annual meeting, second Monday in January.

Property: 15 claims, 275 acres, in Verde Valley, 4½ miles S. of Camp Verde, in Squaw Peak range, 25 miles E. of Jerome, Yavapai Co., Ariz. Examined in 1917 by William Winkelman.

Development: prospected for 17 years by D. W. Barter, and 3 to 40% ore has been exposed in numerous places. Present work consists in extending the Barter tunnel, now in over 400', to cut ore of winze.

Is a meritorious mining venture.

VICTOR COPPER CO.

ARIZONA

Reorganized as New York Verde Copper Co., which see.

Address: W. W. Lewis, Kingman, Ariz.

WEST UNITED VERDE COPPER CO.

ARIZONA

Mine office: Jerome, Ariz.

Officers: C. B. Stranahan, pres.; Brainard Avery, v. p.; Arthur Terry, sec.-treas.; preceding, with R. K. Wehner, Wm. T. James, J. B. Patton and Jas. T. Fisher, directors; John H. Banks, cons. engr., 61 Broadway, New York City.

Cap., \$5,000,000; shares \$1 par; 3,375,000 issued.

In Oct., 1917, company absorbed the Jerome-Victor Extension Copper Co. on the basis of 2,250,000 West United shares in exchange for 450,000 Jerome-Victor shares. If the 1,125,000 shares are sold at 25c. the new company will have \$281,250 cash with which to commence work.

The Jerome Victor Extension C. Co. was a reorganization of the Haynes C. Co., which in turn had succeeded the Jerome Mines Dev. Co.

Property: 8 patented claims, 160 acres, adjoining the United Verde on the N. W., shows lenticular orebodies in dioritic schist, reported to be 3'-19' wide and traceable for 2,000'.

Development: includes 1,200' shaft, with 2,000' drift and crosscut work on 700' level and 160' on the 1,200' level; also a 350' prospect shaft and 248' tunnel. Excessive flow of water encountered in drill holes, 2-300' deep, said to have forced former management to pull the pumps and close down the property in 1914.

The mine had been unwatered to 1,200' in June, 1917, when the miners' strike resulted in suspension of work, allowing the shaft to fill again. Little was being done in August, 1917; but on the present company assuming con-

trol, the mine should be unwatered by middle of November, and sinking continued to 2,000'.

Equipment: includes electric hoist, 10-drill Ingersoll-Rand compressor and 12 buildings. In 1917 a 150 k. w. generator was installed.

JOHNSON AND DRAGOON, COCHISE COUNTY

ARIZONA COPPER SHIPPING MINES CO.

ARIZONA

Mine office: Dragoon, Cochise Co., Ariz.

Officers: E. E. Wiseman, pres.; C. E. Cummings, v. p.; C. F. Elliott, sec.-treas.

Inc. 1910. **Cap.**, \$1,000,000; shares \$10 par; issued \$620,000.

Property: 8 patented claims, 160 acres, 2 miles N. E. of Dragoon. The property shows limestone crossed by numerous veins, averaging 2 to 12' width, said to carry 4 to 7% copper, 1 to 6 oz. silver and a trace of gold.

Development: by several pits and shallow shafts, deepest 130', with about 600' of workings. Is a prospect. Idle.

ARIZONA & MICHIGAN DEVELOPMENT CO.

ARIZONA

Office: Benson, Ariz. **Mine office:** Johnson, Cochise Co., Ariz.

Officers: S. French Hoge, pres.; E. C. McMahon, sec.-treas.; N. T. Trigar, supt.

Inc. 1904, in Arizona. **Cap.**, \$2,500,000; shares \$5 par.

Property: 7 claims, patented, 140 acres, showing porphyry and limestone. Claims said to carry 4 orebodies, 1 opened by vertical and incline shafts and tunnels, showing a 5' vein with poorly defined walls and impregnations in the limestone hanging and porphyry footwall. Has a 450' two-compartment main shaft with 24 openings showing cuprite, malachite and copper sulphides said to give average assays up to 12% copper, 18 oz. silver and \$1 gold per ton.

Equipment: 60 h. p. gasoline engine with double-drum hoist, 200 h. p. boiler and compressor. Company owns a short railroad connecting with the Southern Pacific Railway at Dragoon. Reported Dec., 1916, to be shipping 50 tons of 4% ore daily. About 60 men employed.

ARIZONA UNITED MINING CO.

ARIZONA

Office: 1420 Chestnut St., Philadelphia, Pa. **Mine office:** Johnson, Cochise Co., Ariz.

Officers: Alfred S. Miller, pres.; Alfred C. Harmer, Jr., v. p.-gen. mgr.; David H. Ross, treas.; Alfred H. Miller, sec.; preceding officers, Wm. M. Houston, J. Wesley Allison, Chas. B. Cox, Geo. E. Barnett, Wilson H. Brown, G. M. Jones, Earl P. Mendenhall and Fred J. Petry, directors. F. W. Smith, cons. engr.

Inc. Aug. 12, 1910, in Arizona, as successor to Arizona United Mining Co. of Delaware. **Cap.**, \$5,000,000; shares \$1 par; non-assessable; \$2,500,000 outstanding.

Dividends: 1% quarterly, begun October, 1916. Company is a close corporation.

Property: 45 claims, 30 patented, about 1,000 acres, 7 miles N. E. of Dragoon, in the Johnson mining camp. Land includes the Mammoth, Republic, Copper King and Southern group of claims. Principal development is on the Republic claim, opened by an 820' shaft, with about 6,000' of workings, in ore averaging about 5% copper.

The Mammoth mine has a 350' shaft, with about 3,000' of workings, in argentiferous and auriferous copper ore, giving average values of about 4% copper and 7% zinc.

Equipment: includes power plant, with hoists at the Republic and Mammoth mines, an electric plant, 4 Ingersoll-Temple electric drills and Ingersoll

air compressor. Transportation is by a standard-gauge railway from Johnson to Dragoon, connecting with the Southern Pacific Railway.

Mining operations are conducted by the Cobriza Mines Development Corporation for the account of the Arizona United Mining Co., lessor, and the Goodrich-Lockhart Co., lessee.

Production: was at the rate of 5,000 tons per month during 1916, totaling 65,647 tons, which netted \$699,525.

BLACK PRINCE COPPER CO.

ARIZONA

Office: 640 Gas & Electric Bldg., Denver, Colo. **Mine office:** Johnson, Cochise Co., Ariz.

Officers: Robt. N. Bell, pres. and gen. mgr., Denver, Colo.; F. T. Henry, v. p.; J. B. Wright, sec.-treas.; preceding officers, M. A. Hoag and W. A. Milne, directors.

Inc. May 10, 1901, in Arizona. **Cap.**, \$1,500,000; shares \$1 par, non-assessable; issued 1,320,100 shares. Annual meeting, last Wednesday in May. No indebtedness.

Property: adjoins Peabody mine and comprises 8 patented claims, 147 acres, showing replacement deposits in limestone. Mine has a 950' two-compartment shaft, sunk in limestone and showing copper oxides and carbonates, bornite and chalcopyrite on various levels. Recent exploration includes a 675' crosscut on 900' level.

Equipment: includes two 100 h. p. boilers, 175 h. p. steam hoist, Sullivan compressor, gas engine, 3 Cameron pumps and electric generator.

CENTURION ARIZONA MINING CO.

ARIZONA

Dragoon, Cochise Co., Ariz.

Officers: J. P. Richardson, pres. and gen. mgr.; Samuel Bennett, v. p.; H. A. Morgan, sec.-treas.; preceding officers, J. C. Page, J. W. Angle, W. H. Purdy, M. S. Richardson, E. F. Woodworth and H. E. Dunlap, directors. Willcox Bank & Trust Co., treas.

Inc. July 26, 1906, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; issued, \$575,931.

Property: 23 claims, 430 acres, in two groups, about 2 miles N. W. of Dragoon, in the Dragoon Mountains, shows a contact deposit between pre-Cambrian limestone and altered schist, averaging about 15' in width, and carrying azurite and malachite, associated with hematite. Ores carry an average of 2.7% copper.

Development: is by a 660' incline shaft, several shallower shafts ranging from 40 to 100' in depth, and a 3,000' tunnel, with about 4,500' of workings, estimated by management to show 165,000 tons ore in sight. Work on the 600' level said to be in 8.12% ore for 50'.

Equipment: includes a 15 h. p. gasoline hoist, good for 800', a small air compressor, pump, 70 h. p. boiler, machine shop, smithy and other necessary mine buildings. Water encountered on 660' level has somewhat retarded development, but shaft is to be deepened in 1917-18. Property considered promising.

EMPIRE COPPER & GOLD MINING CO.

ARIZONA

Office: 510 Bradbury Bldg., Los Angeles, Cal. **Mine address.** Dragoon, Cochise Co., Ariz.

Officers: Leon V. Shaw, pres. and treas.; P. E. Woods, v. p.; Chas. R. Van Tilburgh, sec.; preceding, with M. J. Gress, H. Hermanson, C. J. Nordquist, R. W. Pigeon, C. R. Lawrence, directors.

Inc. Jan. 31, 1905, in Arizona. **Cap.**, \$1,500,000; shares \$1 par, non-assessable; issued 953,814. Annual meeting, second Monday in October.

Property: 3 separate groups of claims, near Johnson and Dragoon, on the Southern Pacific Railway. The Empire group, 16 claims, 2 miles S. E. of Johnson, shows limestones and quartzite cut by porphyry and traversed by N.W. fissures carrying ore. Principal development is by the 380' Empire 2-compartment incline shaft, with about 500' of drifts, so wet that it was abandoned, temporarily; also the 125' Bridge, 158' Copper Whale and a 2,000' tunnel shaft started. Mine shows auriferous and argentiferous copper ore.

In May, 1913, machinery and supplies were moved from the Empire group 6 miles south to the Princess group, said to have attractive surface showings of iron gossan and copper carbonate and to be opened only by shallow shafts. Company also owns the Cowboy group of 8 claims, partly developed, showing veins in limestone near porphyry contacts.

Equipment: includes a 25 h. p. hoist and 1-drill Fairbanks & Morse air compressor. Buildings include an engine house, smithy, bunk house and boarding house.

No recent returns.

GREAT WESTERN GOLD & SILVER CO.

ARIZONA

Idle. Dragoon, Cochise Co., Ariz.

Inc. about June, 1908.

Property: in the Dragoon Mountains, show lead and copper ores with gold-silver values.

HAYES & GRACEY SYNDICATE

ARIZONA

M. P. Hayes and T. H. Gracey, Los Angeles, Cal., owners. Succeeds the Dragoon Copper Mining & Smelting Co., now dead.

Property: the Christmas and Eureka claims, carries replacement deposits with silver-lead-copper ores.

Development: by a 550' shaft.

Equipment: includes steam power and air compressor. Presumably idle. No returns secured.

JOHNSON COPPER DEVELOPMENT CO.

ARIZONA

Office: Frankfort, Ky. **Mine address:** J. T. Tong, mgr., Johnson, Cochise Co., Ariz.

Officers: Henry S. Krug, St. Louis, Mo., pres.; Ralph R. Wilson, v. p.; E. H. Elliott, sec.-treas.; preceding, with P. S. Head, Hon. A. A. Hazelrigg, Hon. Bailly D. Berry, Hon. A. C. Van Winkle and H. P. Hubbell, directors.

Inc. March 13, 1908, in Arizona. **Cap.,** \$2,000,000; shares \$1 par; non-assessable; issued, \$1,475,000. Annual meeting, second Monday in October.

Bonds: \$100,000 5-year 6% 1st mortgage gold bonds authorized, interest payable annually on Dec. 21. Principal due Dec. 21, 1921. \$35,000 worth of the bonds have been sold.

Property: 8 claims, 3 fractional, unpatented, 123 acres, known as the Climax group, in center of the Johnson camp, between the Peabody, Peacock, Republic and Black Prince mines. Claims show granite and limestone, with replacement deposits carrying malachite, chrysocolla, bornite and chalcocite, averaging 4% copper and 5 oz. silver per ton for the several thousand tons thus far developed. Orebody has a flat dip, averaging 32°, and is about 2' wide on the 250' level.

Development: by 800', 1½-compartment working shaft, said to be bottomed in bornite disseminated in limestone. The 100' level has about 500' of crosscuts and drifting, much of it in ore, but ground is leached and broken. The 250' level has N. and S. drifts, 500' of workings, on a 2' vein. A 500' winze was sunk from the S. drift. Development is said to show large bodies of low-grade carbonates near the surface and some sulphides at 400' depth. On the dump is a car of 8% ore.

Equipment: includes a 40 h. p. gasoline hoist, 4-drill compressor and 5 buildings.

KEYSTONE COPPER MINING CO.

ARIZONA

Idle.

Office: 603 W. Broadway, Newton, Kans. Mine at Johnson, Cochise Co., Ariz.

Officers: W. W. Miller, pres. and gen. mgr.; A. Bannow, v. p.; T. C. Miller, sec.; W. J. Trousdale, treas.; preceding are the directors. Doane Merrell, territorial agt.; U. R. Miller, supt.

Inc. 1908, in Ariz. **Cap.**, \$900,000; shares \$1 par; \$741,735 issued.

Property: the Bannon group, 16 unpatented claims, surrounding the St. George claim and 1½ miles from the Arizona United property, said to show a large deposit of iron ore and to have cut several veins in a 400' vertical shaft. Claims to have blocked out a considerable tonnage of milling ore between the 300' and 400' levels. Shipped 16 cars of ore during the spring of 1916, assaying 17.5% copper and 3.6 oz. silver. Plans further sinking and developing, with possible erection of a 200-ton concentrator.

MASCOT COPPER CO.

ARIZONA

Office: Harris Trust Bldg., Chicago. **Mine offices:** Dos Cabezos, Cochise Co., Ariz.

Officers: R. V. Dixon, A. J. Baldwin, J. A. Street, J. W. Phillips and H. H. Evans, directors. T. N. McCauley, mgr.; J. W. Prout, Jr., supt.

Inc. July, 1907, in Arizona. **Cap.**, \$15,000,000; shares \$10 par; non-assessable. Outstanding, 1,000,000 shares.

Property: 48 claims, 20 patented, 1,100 acres, about 300 acres being classed as mineral lands, in the Dos Cabezos district. Company also owns a town site near Dos Cabezos, and miscellaneous lands, including 3 placer claims, total holdings over 1,100 acres.

Property shows limestone near a granitic area, intruded by diorite dikes and quartz porphyry with a covering of rhyolite, on part of the ground. The limestone shows in the lower hills on the south. Granite constitutes the two pillars known as Dos Cabezos.

The ore occurs largely in lenses in contact deposits between altered lime and porphyry and generally within a mineralized zone of from 300' to 400' in width. Ores carry chalcopyrite in a gangue of contact minerals with 3 to 20% copper, the average being 5%, and small gold-silver values.

Development: by the 450' Oregon shaft, and 2 tunnels, longest the 1,800' Consolidated tunnel, connecting with the shaft at the 4th level. Total underground openings aggregate 25,000', and ore in sight is estimated at about 500,000 tons, containing 5% copper. About 20,000' of diamond drilling has been done in various parts of the property. Recent results reported as good, especially at depth of 700'.

Equipment: includes a 250 h. p. distillate engine, a 12-drill air compressor, machine shop, electric lighting plant, smithy, telephone system and boarding house, with about 80 buildings. About 125 men are employed. In June, 1915, the company finished building the Mascot & Western R. R., a 15-mile line connecting the town of Mascot with the S. Pac. R. R. at Wilcox, Arizona. A 10,000' aerial tram is used for carrying ore and supplies from mine to railway. A concentrator is contemplated.

The mine management is good and property is reliably reported as promising, though the company's advertising was lurid and its campaign of stock selling was regarded unfavorably in past years.

Mine was leased to the A. S. & R. Co. in 1917. Output in July was about 2,500 tons, which is sent to El Paso.

PEABODY CONSOLIDATED COPPER CO.**ARIZONA**

Office: 111 Broadway, New York. **Mine office:** Johnson, Cochise Co., Ariz.

Officers Leo Schlesinger, pres.; Alex T. Wells, v. p.; I. Niner, sec.; J. Born, treas., with Jos. B. Mayer, Morgan J. O'Brien, Jr., Herbert R. Limburg, G. M. Minzesheimer and Jas. Muir, directors. John H. Banks, cons. engr. W. T. Eberhardt, mgr.

Inc. in Ariz. **Cap.**, \$1,500,000; shares \$5 par; fully paid and non-assessable. Empire Trust Co.; New York, transfer agent. Listed on New York Curb.

Property: 12 claims, 5 patented, 230 acres, covering 2,000' along the ore belt at the Johnson camp, bought of the Bonanza Belt Copper Co., includes the Peabody mine, located 1879. Mine has a contact deposit between diabase and limestone and replacement veins, all within a 100' belt. Mine is credited with a production of about \$411,970. Ore is a mixture of zinc blende and chalcopryrite in a garnetized lime gangue and is oxidized to a depth of 200'. The ore shipped runs 4%-6% copper, with 5% iron, 15%-20% lime and 55% insoluble; silver averages $\frac{1}{2}$ oz. to each percent copper.

Development: by a 350' shaft, with crosscuts on the 200' and 300' levels, On the 3rd level a crosscut is being driven toward the contact. No ore reserves reported.

Equipment includes 90 h. p. power plant, compressor and hoist.

Shipments: 300 tons per month are made to the Cons. Kansas City S. & R. Co. (El Paso smelter), a subsidiary of the A. S. & R. Co., under a 3-year contract. Forty men employed.

Prospectus issued by company is regarded as rather unduly optimistic. Property is an old one, having been operated intermittently for 20 years.

STERLING COPPER CO.**ARIZONA**

Address: care Judson A. Elliott, Phoenix, Ariz. **Mine office:** Dos Cabezos, Ariz.

Officers: J. W. Thomas, pres.; L. C. Elliott, sec.; D. E. Nelson, treas.; with E. A. Congdon and J. A. Elliott, directors. C. H. Bean, supt.

Inc. 1906, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; issued, 482,600 shares.

Property: in the vicinity of Dos Cabezos, Cochise Co., Ariz., is developed by short tunnels and a shaft 125' deep, following a limestone porphyry contact, showing copper and lead ore which is said to average 5% copper. There has been about 1,000' of work done and \$3,000 spent in development. Property is a prospect. Letters returned in July, 1917.

TETER-STONE AZURITE MINING CO.**ARIZONA**

Dr. D. W. Teter, pres.

Property: 3 miles south of Dragoon, Cochise Co., Ariz., has a 4 to 10' contact deposit, between limestone and granite, showing outcrops of azurite and malachite, with some sulphide ore in a tunnel. Operations suspended, 1913, owing to a heavy inflow of water.

WILLIE ROSE COPPER MINING CO.**ARIZONA**

Address: J. W. Sterling, mgr., Bowie, Ariz.

Property: the Willie Rose mine, near Triangle Springs, 13 miles S. of San Simon, Cochise Co., Ariz., operated under 10-year lease from 1914. Developed by 188' shaft said to be bottomed in a 12' vein carrying slightly argenterous chalcocite, of about 2% copper tenor. Ore occurs in lime-porphyry contact, veins running E.-W., showing copper glance at slight depth. Has made several shipments of \$12 per ton ore to the El Paso smelter.

Equipment: includes hoist, oil engine, compressor and air-drills.

KINGMAN, YUCCA, MOHAVE COUNTY

See Chloride district for other mines.

ARIZONA-EASTERN MINING CO.**ARIZONA**

Address: 220 Fifth Ave., New York. **Mine office:** Kingman, Ariz.

Officers: Wm. Schuette, pres.; S. W. Odell, v. p.; A. V. Bradrick, v. p.; Lewis Lusk, sec.-treas.; preceding officers are the directors.

Inc. July 9, 1915, in Ariz. **Cap.**, \$1,500,000; shares \$1 par; issued \$700,000. Bonds authorized, \$100,000, none issued.

Property: 23 claims, 1 patented, 375 acres, 2 miles east of Hancock siding, on main line of Santa Fé R. R. and 10 miles south of Kingman, Ariz., includes the Red Hill and Fay mines, showing gold quartz fissure veins in granite porphyry. The mine was worked years ago by Mexicans. Mill tests said to show average value of \$11.78 gold per ton, with a 93% recovery in cyanide plant.

Development: 200' incline shaft and two 50' shafts, with 400' of underground workings.

Equipment: includes gasoline hoist and a 5-ton stamp mill for testing purposes. Company plans further development work.

ARIZONA-SOUTHWESTERN COPPER CO.**ARIZONA**

Office: 715 Higgins Bldg., Los Angeles, Cal. **Mine office:** Copperville, via Yucca, Mohave Co., Ariz.

Officers: R. H. Weber, pres.; Fred Hessel, v. p.; J. H. Hoffman, sec.; C. Hoffman, treas.; preceding officers, W. G. Laidley, T. A. McNeal, C. L. Davidson, E. B. Schermerhorn and John T. Slitzer, directors; John Lefler, mine supt.

Inc. 1907, in Arizona. **Cap.**, \$4,000,000; shares \$1 par, non-assessable; issued 3,300,000. Authorized bond issue, \$150,000; all outstanding. Annual meeting held in Kingman, Ariz., in April.

Property: 14 claims, 9 patented, 276 acres, including the Pittsburgh mine, in Crow canyon, Cedar Valley district, Hualapai Mountains, 25 miles from Yucca, the nearest rail point. Mine has 2 orebodies under development, estimated by company to average 30' in width and to be traceable 2 miles, opened by tunnels of 500' and 682', and shafts 400' and 300' connected on the 200' level, with about 5,000' of workings. Mine, which is quite wet, shows chalcopryite, galena and sphalerite, estimated by company to average 0.25% copper, 3% lead, 4% zinc, 10 oz. silver and \$1 gold per ton, which seems too high for a large orebody of this type. Company claims to have 100,000 tons of \$12 ore on the 200' level.

Equipment: includes an 85 h. p. electric hoist, steel headframe, a 12-drill Ingersoll-Rand air compressor, smithy and 300-ton concentrator, with 14 Overstrom tables. Plans to continue shaft sinking and do development work on the 400', 600' and 800' levels.

Property has ore, but it is complex, and mining, milling and freight charges high, so that the problem of dividends is one requiring great skill, courage and time, as well as ample funds.

ARIZONA TELLURIUM MINES CO.**ARIZONA**

Kingman, Ariz.

Officers: Thos. H. Condon, pres.; Geo. A. Shea, sec.-treas.; preceding officers, Carl Bertschinger, W. C. Pedlar, directors.

Property: claims in the Maynard district, 15 miles east of Kingman.

Development: 200' tunnel and a shaft which is being sunk to the 300' level. Presumably idle.

ARIZONA VENTURE CORPORATION**ARIZONA**

Office: 535 Chamber of Commerce Bldg., Pasadena, Calif. **Mine office:** Venture Camp, Kingman, Mohave Co., Ariz.

Officers: Geo. H. Hill, v. p.; Chas. H. Wagener, sec.-treas.; with Jas. Irving, Geo. W. Way, Willis Stanley and W. L. Talbott, directors.

Inc. in California. **Cap.,** \$500,000; increased to \$1,000,000 in 1915; shares \$1 par; 510,000 shares issued.

Property: 5 groups, 12 claims, about 240 acres, is near the Old Diamond Joe mine and is being developed by tunnel, 200' long, reported to have opened up \$15 ore. Company plans erecting a mill.

Equipment: includes hoist, air compressor, drills and electric power plant.

Company also owns the Waldron group at Deluge, Wash., and is sinking a new shaft to 500' level, with crosscut on 400' level, showing 4' 6" of \$23.60 ore. In 1915 management announced production of "lenzite" in commercial quantity, used for wireless telegraphy, in crystals valued at \$5 each. The Lenzite Crystal Corporation was incorporated for this purpose.

Present management disclaims responsibility for exaggerated claims of former president. The commercial value of property and patents remains to be proved.

COPPER GIANT MINE

Hackberry, Mohave Co., Ariz. Wm. Neagle, supt. Property optioned in 1913, by United Verde Copper Co., Jerome, Ariz., which see.

McCRACKEN SILVER-LEAD MINES CO.

ARIZONA

Address: E. C. Davies, 15 Exchange Place, Salt Lake City, Utah. **Mine office:** McCracken, Mohave Co., Ariz.

Officers: W. P. O'Meara, pres.; W. B. Van Horn, v. p.; W. A. Stephen, sec.-treas.

Cap., \$150,000; shares 10c par; 700,000 issued.

Property: an old producer in Mohave Co., Ariz.

Development: by tunnels to open veins at depth. Reports ore reserves of about 215,000 tons. Mill ore contains from 5 to 11.3% lead and 6.6 to 14 oz. silver per ton, for which a 100-ton mill was erected.

NEVADA-ARIZONA MINES CO.

ARIZONA

Office: 510 Odd Fellows Bldg., St. Louis, Mo. **Mine office:** Hackberry, Mohave Co., Ariz.

Officers: John Schmoll, pres.; Chas. E. Hamilton, v. p.; A. E. Louis, sec.; J. Wm. Seller, treas.; with J. Phillips, Aug. Richter, Jr., C. D. Morley, Edw. J. Ryan and Wm. Burmeister, directors. T. D. Walsh, supt.

Cap., \$1,500,000; shares \$1 par. Operating expenses for 1915 were \$51,717.

Property: 17 patented claims, about 340 acres, in the Music Mountains, said to show gold and silver values. Ore occurs in fissure veins, 4-10' wide, in granite formation. Average assays reported at from \$10-\$50 per ton.

Development: includes the 700' Lucknow shaft and 700' Roosevelt tunnel, latter in milling ore for 200'. At depth of 515' the Lucknow vein is 12' wide and carries a little galena.

Equipment: includes compressor and gas hoist. Company has erected a small concentrator, which started work in Oct., 1913. Operations in 1915 resulted in gross earnings of \$22,262 and a 95% recovery.

Mill operating one shift in June, 1917.

ORO-PLATA MINE

ARIZONA

Address: O. B. Stanton, supt., Kingman, Mohave Co., Ariz., and 101 Wall St., N. Y. Property is a gold mine, producing lead-zinc ore, with gold and silver values.

Development: by 280' shaft; equipped with gasoline hoist. Mine has mill with 2 Nissen stamps. Credited with production of \$500,000 in gold and silver.

SOUTHWESTERN COPPER CO.

ARIZONA

See Arizona-Southwestern Copper Co.

TELLURIDE CHIEF MINING CO.**ARIZONA****Office:** 502 Haas Bldg., Los Angeles, Cal. **Mine office:** Kingman, Ariz.**Officers:** W. E. Frost, pres.; S. F. Kelley, v. p.; C. C. Randall, sec.-treas.; R. L. Cornell, res. engr.; G. R. Hannan, gen. mgr.**Inc.** in California. **Cap.**, 1,000,000 shares; \$1 par.**Property:** 6 claims in Maynard district, Mohave Co., Ariz., 20 miles S. E. of Kingman, on E. slope of Wallapai Mountains. Examined by C. E. James, H. E. Bierce, V. Gelensnoff, A. H. Bradford, R. L. Cornell, W. L. Mackay, C. R. Harris and R. C. Jacobsen.**Development:** by over 1,000' of workings to depth of 200'. Shaft to be sunk to 500'. Several veins of molybdenite, gold and copper ore being opened and 2,500 tons are reported on dumps.**Equipment:** 100 h. p. semi-Diesel engine, 60 h. p. hoist, compressor, and 50 or 100-ton mill to be erected.

Company stated in June, 1917, that it expected to be a large producer of molybdenite in a few months.

WALLAPAI CHIEF MINING CO.**ARIZONA****Address:** S. C. Hall, 648 S. Olive St., Los Angeles, Cal., or Kingman, Ariz.**Officers:** C. F. Eyton, pres.; J. W. Squires, v. p.; S. C. White, supt.**Inc.** Jan. 20, 1911, in Arizona. **Cap.**, \$2,000,000; shares \$1 par; 525,000 issued. Annual meeting, third Monday in January.**Property:** 15 claims, 12 owned, 3 bonded, 320 acres, with 2 mill sites and 2 water rights. Lands show granite and porphyry with 6 veins; the main ledge

averaging 3' thick and proven for 3,000' along the outcrop. Ore carries chalcopryite and copper glance and is reported to average 11.85% copper.

Development: includes 700' shaft, with crosscut showing 4' of ore.

Equipment: includes small gasoline hoist, electric power and mill.

YUCCA TUNGSTEN MINING CO.

ARIZONA

Address: Harvey Klotsch, mgr., Yucca, Mohave Co., Ariz.

Property: 26 claims, 25 miles N. of Edmaier Mining Co. (tungsten mine), in Cedar Valley district, Mohave Co., shows a 5' vein of ore, carrying 5% tungstic acid and 1% to 3% copper.

Development: comprises a 250' shaft and 1,300' of drift tunnels, 200' apart vertically. Company operates a 50-ton mill.

MAMMOTH AND COPPER CREEK, PINAL COUNTY

COPPER STATE MINING CO.

ARIZONA

Described on page 386.

MAMMOTH DEVELOPMENT CO.

ARIZONA

Address: 1022 Investment Bldg., Los Angeles, Calif., and Tucson, Ariz.

Mine office: Schultz, Pinal Co., Ariz.

Officers: C. E. Calm, pres.-mgr.; Epes Randolph, v. p.; C. L. Bundy, sec.-treas., with R. C. Gillis and R. O. Boykin, directors.

Cap., \$300,000; shares \$1 par; 100,000 issued.

Property: has a bond on the Mammoth and Collins groups at Schultz, developed by 833' shaft, said to show gold, lead and wulfenite ore. An 1,800' drift on the 700' level connects both groups.

Equipment: includes 8 Wilfley tables. Flotation is to be installed. Extraction September, 1917, at rate of 150 tons wulfenite ore per day. Shipping 4 tons of concentrates reported to carry \$35 gold and 20% MoO₃.

SOUTHWEST INSPIRATION COPPER CO.

ARIZONA

Office: 8 W. Adams St., Phoenix, Ariz. **Mine office:** Copper Creek, Pinal Co., Ariz.

Officers: H. H. Temple, pres.; J. J. Sweeney, v. p.-treas.; J. W. Crenshaw, sec.; C. J. Price, gen. mgr.; also directors, with Louis Huber.

Inc. 1917, in Arizona. **Cap.,** \$5,000,000; shares \$1 par; non-assessable; 2,500,000 issued.

Property: 69 claims, 1,200 acres, adjoining Calumet & Arizona and Copper State companies' holdings on E., in Bunker Hill district, 12 miles E. of Mammoth, Pinal Co., Ariz. Examined by C. J. Price, N. R. Logue and Louis Huber.

Claims are said to show 5 chimney deposits in diorite, also disseminated porphyry. Ore carries copper, gold and silver values.

Development: commenced in May, 1917; tunnel 1,500' and shaft 400'. Proposed to drive 1,115' crosscut tunnel, sink 2 shafts and churn drill at three points.

SUNSET COPPER MINING CO.

ARIZONA

Address: Hayden, Ariz.

Inc. 1917, by F. W. McQuiston, J. E. Steele and G. H. Parsons. **Cap.,** \$500,000; \$1 par.

Property: 10 unpatented claims, 206 acres, in Bunker Hill district, 14 miles E. of Mammoth and 34 miles from Hayden, Ariz.

Geology: ore-bearing rock is a quartz diorite that cuts the sedimentaries and volcanic breccias. Ore shoots are found as chimneys, or pipes, from 25' to several hundred feet in diameter. Ore usually occurs as a filling between fragments of breccia.

Development: by tunnels, one said to show 5' of 4.4% copper, another,

475' lower, showing 5' of ore, assaying 5.8%. No sulphides have been developed, only bunches of good ore. A 100-ton dump assays 8%.

Mine examined by N. W. Logue in Feb., 1917.

TABLE MOUNTAIN COPPER CO.

ARIZONA

Near Mammoth, Ariz. Was controlled by Arimex Consolidated Copper Co., now defunct; á Thos. W. Lawson promotion. Fully described, Vol. XI, Copper Handbook.

MAYER, YAVAPAI COUNTY

ARIZONA BINGHAMTON COPPER CO.

ARIZONA

Address: Stoddard, Yavapai Co., Ariz. Company absorbed the Stoddard Mines Co. and Stoddard Milling Co., described, Vol. XII.

Officers: W. H. Reynolds; J. H. Whyte, sec.-treas.; above, with David Cole, Francis S. Vielé and E. W. Wells, directors. Geo. W. Johnson, gen. mgr.; S. E. Chaney, supt.

Inc. Feb., 1917, in Arizona. **Cap.**, \$1,700,000; shares \$5 par; all outstanding. Stock listed on N. Y. Curb.

Property: 10 claims, 6 patented, about 175 acres, in the Copper Mountain district, 5 miles from Humboldt. Mine was discovered in 1882 and reopened by present company, 1916. The Binghamton mine shows a broad sheared zone in chloritic-sericitic schist. The ore carries chalcopyrite, with but little pyrite, in silicified schist. Main ore-shoot has been opened from the 100' to 400' levels, and yields 5% ore, though the mill feed averages but 2.2% copper, and in 1916 not much over 1%.

Development: by 1,000' tunnel and 600' shaft, with about 4,000' of workings. New 3-compartment shaft to be sunk 1,500'.

Equipment: includes double-drum electric hoist, a 10-drill compressor, pumps and 250-ton flotation mill. A diamond-drill equipment was installed in 1917.

Production: mill reported to have treated 24,802 tons of ore from August, 1916, to April, 1917, producing 2,389 tons concentrates, that averaged 21.43% copper and netted the company \$243,570.

Treated 300,000 lb. copper in May, 1917, and with double milling capacity, June 1st, should now treat 500,000 lbs. per month.

ARIZONA COPPER QUEEN MINING CO.

ARIZONA

Address: 814 New York Life Bldg., Kansas City, Mo.

Officers: S. C. Douglass, pres.; E. S. Herider, sec.; E. J. White, treas., with W. D. Coldren, W. Burr Douglass and S. C. Douglass, Jr., directors; W. Burr Douglass, supt.

Inc. July 24, 1907, in Arizona. **Cap.**, \$5,000,000; shares \$1 par; 2,641,000 shares outstanding. Annual meeting, first Tuesday in October.

Property: 8 claims, 160 acres, in Yavapai county, about 26 miles S. E. of Mayer, shows a number of narrow quartz veins in granite. The ore is quartz carrying copper sulphides and their oxidation products with fair gold-silver values.

Equipment: includes 75 h. p. boiler, 2 hoists, one good for 1,500', 8-drill Leyner compressor and steam power. Sinking shaft to 400' level.

The company has been practically idle since organization but started active development during 1917, also equipping property with necessary machinery. Sinking shaft to 400' level.

ARIZONA MERGER GOLD & COPPER CO.

ARIZONA

Idle. Mine near Mayer, Yavapai Co., Ariz. H. C. Hillwell, S. L. Heron, Henry Reefson, Alonzo Hall, Robert M. Bazel and Geo. D. Birch, directors, at last accounts.

Inc. 1909, in Arizona, as a reorganization of the Lyon Copper Co. **Cap.**, \$5,000,000; shares \$1 par.

Property: 64 claims, near Mayer, Yavapai Co., Ariz., show fissure veins developed by a number of tunnels and crosscuts with 250' shaft.

BIG LEDGE COPPER CO.

ARIZONA

Office: 310 Sellwood Bldg., Duluth, Minn. Ehrich & Co., New York City, fiscal agents. Mines at Big Bug (Huron P. O.), near Mayer and Humboldt, Yavapai Co., Ariz.

Officers and directors: Ernest Le Duc, pres.; Charles Batre, v. p. and asst. sec.; D. D. Murray, sec.-treas.; John P. Trebilcock, supt.

Company is the successor of the Big Ledge Development Co.

Inc. in Arizona, Jan. 20, 1915. **Cap.**, 3,000,000 shares; par value \$5.00; fully paid and non-assessable; increased from \$1,500,000, Aug. 3, 1917; 1,900,000 shares issued. The Development company was converted into an operating company, Feb., 1916, the name being changed to Big Ledge Copper Co. and the par value of shares increased to \$5, the number of shares remaining the same and exchange made share for share. The company states that there are 751,000 shares of stock held in escrow, the balance in the hands of the public. Of 1,500,000 shares of new stock, 1,000,000 is to be used for the acquisition of the Great Western Smelters holdings, etc., and the balance is reported to have been underwritten at \$2.00.

Property: consists of 3 groups of claims aggregating approximately 1,900 acres. The Black Hills group consists of 43 unpatented claims about four miles east of Humboldt, Arizona. The Butternut group consists of 2 patented claims and 22 unpatented claims; the Henrietta group consists of 7 patented claims and 7 unpatented claims.

There is a spur of the railway line to the Henrietta orebins, and a 3,800' aerial tramway, costing \$12,000 was built in 1917, to convey Butternut ore to the railroad.

Henrietta Group and Mine: this property shows a fissure vein averaging 5' thick, cutting through hornblendic schists near a diorite intrusion. The vein carries several shoots whose ore contains copper-pyrite with pyrite and zinc sulphides in quartz. The claims cover 4,000' along the Henrietta vein and a considerable distance along a split or intersecting vein. The ore shoots so far developed an average width of 2' of ore reported to average \$20 in value.

Development: comprises a main haulage way, 2,300' long called the Henrietta, or lower tunnel. From this level the Le Duc shaft has been sunk 278' below the tunnel floor at a point 2,000' from the portal. Still farther west and over the hill are independent workings, made in former years, and recently reopened. These comprise shaft No. 1 with hoisting equipment to 300' depth and by No. 2 shaft to 450' level and below. An old upper tunnel 327' above the Henrietta is connected with it by a raise. At 150' below the main tunnel, the Henrietta vein is opened by over 550' of drifting. This will eventually be connected with the west workings noted above.

An intersecting vein, the Invincible, meeting the Henrietta where the Le Duc shaft is sunk, shows several inches of high grade ore, making a workable ore shoot at the intersection. This vein is reported to be opened by a 100' drift, south on the 150' level of the Le Duc shaft, with an upraise to the tunnel.

The Butternut Mine: this mine has a zone of silicified, pyritized schist over 20' wide, in which large lenticular masses of pyrite occur, showing low average values in copper and silver. A foot-wall band 2'-3' wide

carries high zinc content. The mine output will, it is believed by us, average less than 2% copper, being largely iron pyrite and quartz. This does not accord with the press reports of 48' of 4% ore on the 300' level, and of 10% ore on the 425' level.

Development: includes two old 1-compartment shafts, only 150' apart, one 300', the other 425' deep, and the new 3-compartment Batre shaft 98' deep in Sept., 1917. Principal development is on the 300' and 420' levels, drifts running along the vein showing 6' to 12' of pyrite ore. Mine has electric power, compressor, hoists, etc., and aerial tram 3,000' long will take ore to the railway.

Production: began March 12, 1917, shipping to the Mayer smelter (Great Western Smelters Corp.), under a 10-year contract calling for a charge of \$9 per ton. Company reported May 21, 1917, a daily average of 125 tons shipped from both mines, but both mine and smelter closed down shortly thereafter. The press reports of 7' of 14% ore in the face of the 420' level are not considered any more truthful than those crediting the mine with 15' to 20' of 8% ore, which when checked by sampling proved to be 9' of 1.8% "ore," high in silica.

The Black Hills or Big Ledge group of claims, 4 miles east of Humboldt, comprises an extensive acreage of land not considered worth paying taxes on.

Opinion: in view of the very remarkable statements as to earnings, ore reserves and smelter operations issued by the company officers, during the past two years, it is well to note that an exhaustive report on the property made by Walter Harvey Weed in the Fall of 1916, gave a total valuation of \$600,000 for the property, equivalent to about 40c a share for the stock. The so-called Big Ledge smelter did not then belong to the company, and any profit it might make would not help Big Ledge shareholders. The smelting rate of \$9 per ton, on a 10-year contract is considered exorbitant, compared with charges for similar ores furnished in large quantity for long periods, at other smelters.

According to press reports, apparently inspired, the Big Ledge smelter, financed by insiders, by a bond issue, has been unloaded on the company, the capitalization being doubled for the purpose. In our opinion this materially depreciates the value of the stock. Company is regarded as a rank example of frenzied finance whose glittering promises are all unfulfilled and which not even war time prices for copper and silver can redeem.

It is reported Sept., 1917, that E. Le Duc and other directors had lost suit against them for unlawfully appropriating 300,000 shares of stock.

BIG REEF COPPER CO.

ARIZONA

Office: Mayer, Ariz.

Officers: John Frank, pres.; A. C. Cole, v. p.; Dell Riggins, sec.-treas.

Inc. in Ariz. Cap., \$1,000,000; \$1 par; non-assessable; 519,997 shares in treasury.

Property: 19 claims, 380 acres, located $2\frac{1}{4}$ miles from Mayer, in Big Bug mining district, Yavapai Co., Ariz. The mines of the Cons. Ariz. Smelting Co. and Big Ledge Copper Co. are but a few miles distant. Claims cover an area of Yavapai schist traversed by a wide zone of silicification containing disseminated copper ore chiefly oxidized with segregations in quartz veinlets.

Development: about 300' of shallow work has been done to date and chalcopyrite ore reported shown in 60' shaft. Property favorably reported on, 1917, by J. H. Shockley, E. M., of New York.

Treasury issue of 50,000 shares offered the public, April, 1917, at 35c

a share, proceeds to be used in developing property to 200' depth and drifting 1,000' north to get under 100' ledge seen on surface. Is regarded as a promising prospect.

BLACK CANYON MINING CO.

ARIZONA

Address: Claude Baker, gen. mgr., Turkey, Yavapai Co., Ariz.

Officers: W. A. Moses, pres., Kansas City, Mo.; A. L. Harroun, v. p.; Edna Harroun, sec., Kansas City, Mo.

Property: the Black Canyon, or J. D. Thompson mine, 10 miles south of Mayer and 2 miles from Turkey. - Claims show a vein reported as 8-16' wide, opened by 800' drift, with 300' back. Ore carries silver, lead and zinc and is of milling grade.

A flotation mill is planned for 1918.

BLUE BELL MINE

ARIZONA

See Consolidated Arizona Smelting Co.

BROOKLYN ARIZONA MINING CO.

ARIZONA

Address: care of J. B. Hill, sec., Andover, Mass. Mine near Mayer, Yavapai Co., Ariz. Benj. B. Tuttle, v. p.; Jas. S. May, treas.

Inc. March, 1907, in Me. **Cap.**, \$2,500,000; shares \$10 par; non-assessable; fully issued. Bonds authorized \$500,000; about \$75,000 outstanding. Was promoted by the American Securities Co. Annual meeting, first Wednesday in April.

Property: 82 claims, about 1,600 acres, including the Brooklyn group of 14 claims, in the Squaw Creek district, about 20 miles S. E. of Mayer, carries auriferous and argentiferous copper sulphides.

Development: by 750' main shaft and 2,500' tunnel.

Equipment: includes compressor, double-drum hoist, 3,000' cable and Partridge smelter. Former mismanagement fully described in Vols. X and XI. Company reported in new hands, 1915, but no later returns received.

CONSOLIDATED ARIZONA SMELTING CO.

ARIZONA

See description under Humboldt, Yavapai Co., Ariz.

COPPER MOUNTAIN MINES CO.

ARIZONA

Address: Celora M. Stoddard, Phoenix, Ariz.

Is a reorganization of the old Stoddard Copper Co.

Officers: Celora M. Stoddard, pres.; Senator Reynolds of N. Y., v. p.; M. A. Pickett, sec.-treas., Phoenix, Arizona.

Inc. 1912, in Arizona. **Cap.**, \$5,000,000; shares \$5 par.

Property: the old Stoddard mine on Copper Mountain, a mile from the Arizona Binghampton, and near Mayer, Ariz.

Mine reopened, Nov., 1917. shaft retimbered and gasoline hoist installed.

COPPER QUEEN GOLD MINING CO.

ARIZONA

Address: Stoddard, Ariz.

Officers: Louis Goldman, pres. and mgr., Paris, Tex.; R. F. Scott, v. p.; W. F. Gill, sec.; A. Goldman, treas.; preceding with J. K. Bywaters, H. P. Mayer, C. R. Caldwell, J. H. Gooch and H. S. Bettes, directors; Claude Ferguson, supt., Stoddard, Ariz.

Cap., \$2,000,000; shares \$1 par; outstanding, 1,238,089.

Property: 25 claims, 23 patented, about 360 acres, and a mill site on the Agua Fria river, 6 miles east of Humboldt, adjoins the Arizona Binghampton. Claims show great beds of silicified schist, cut in places by rhyolite dikes.

Development: by 3 tunnels; No. 1, 593' long with about 2,500' of workings, including shaft and workings on 300' level; No. 2, 600' long, with 2,100' of workings on adit level, a 300' inclined shaft and 800' of workings on the 100' level; No. 3 with about 300' of workings. The vein, 7' to 12'

wide, contains ore carrying chalcopyrite, chalcocite and tetrahedrite, with some gold and silver.

Equipment: consists of two 400 cu. ft. electric driven air compressors and 30 h. p. electric hoist and complete shop outfit at No. 2 tunnel. At No. 1 tunnel there is a 15 h. p. electric hoist. Development work is being done on a substantial scale.

Production: 50 to 100 tons daily, 1916, with increased tonnage looked forward to during 1917. Operations were resumed on March 15, 1917. Ore reserves are said to be 20,000 tons of 3% copper ore.

FAIRVIEW GOLD & COPPER CO.

ARIZONA

Address: John Slak, mgr., Turkey, Ariz.

Office: care of H. M. Coffman, South Bend, Ind.

Officers: F. N. Bonine, pres.; Wm. Miller, v. p., 200 Sheidley Bldg., Kansas City, Mo.; H. M. Kaufman, sec.-treas., with M. T. Knapp, directors.

Inc. Sept., 1916, in Arizona. Cap., \$1,000,000; shares \$1 par; non-assessable; 500,001 outstanding.

Property: 9 claims, 180 acres, in the Peck mining district, Yavapai Co., 1 mile E. of Turkey Creek, and said to lie on Blue Bell contact. Claims reported to show an orebody, 200-300' wide, of oxidized ore, strongly leached, with values varying from \$1 to \$70 in gold, \$1 silver, 3% lead and 1½% copper.

Development: vertical shaft being sunk with drifts and crosscuts at 100' intervals. Management estimates ore reserves at 15,000,000 tons. The mine is equipped with a 35 h. p. gasoline hoist and small compressor.

FERGUSON GROUP (AZTEC GROUP OR LOGOS MINE) ARIZONA

F. E. Andrews, Prescott, Ariz., owner. Property formerly under bond and lease to the Logos Mng. Co. and previously to Aztec King Mng. Co.

Property: 9 contiguous claims, in the Agua Fria mining district, 2½ miles N. E. of Cordes, Yavapai Co., Ariz., and 10 miles from Mayer. Claims cover an area of Yavapai schists between diorite and granite. Copper ore occurs in small quantities at all openings with ore of commercial grade exposed on the main, or Aztec King, ledge.

Development: by many shallow shafts and a 160' tunnel.

Considered well worthy of development.

GREAT WESTERN SMELTERS CORPORATION

ARIZONA

Head office: 120 Broadway, New York. **Works office:** Mayer, Ariz.

Officers: Ernest Le Duc, pres.; Charles Batre, v. p.; W. C. Sherwood, sec.-treas.; foregoing, with John Borg, directors.

Inc. Sept., 1916, in Delaware. Cap., \$1,000,000; shares \$25 par; non-assessable. Bonds authorized, \$250,000. In Aug., 1917, Big Ledge Copper Co. (which see) voted to increase its capital to \$15,000,000 for the purpose of acquiring the smelter at Mayer.

Property: 60 acres at Mayer, Ariz., containing plant, as described hereunder; also lime and silica deposits.

Equipment: 2,000-ton ore-bin, 1,000-ton coke-bin, 250' railroad trestle, one 200-ton blast-furnace complete (blown-in March 12, 1917), Curtis turbo-generator, sample plant and laboratory, machine-shop, pumping plant, houses, etc. Product shipped to U. S. Metals Refining Co.

During July, 1917, a second furnace was blown-in. There has also been installed one 500 h. p. cross-compound Corliss engine, two No. 8 Connorsville blowers, two 150 k. w. generator sets, three 250 h. p. marine-type boilers, and a Weber concrete stack. A two-stand converter plant is to be ready soon.

It is stated that the smelter at Mayer, between March 12 and up to April 21, ran 33 days. In that time, it handled 2,700 tons of ore, or only

82 tons per day. It is designed to handle 200 tons, and circulated reports stated that 150 to 200 tons of Big Ledge ore were being handled every 24 hours and that a new 500-ton smelter addition was to be installed to handle increased production. Three shutdowns, for six days in all, were reported to be due to lack of ore supply even at 82 tons daily. Of the 2,700 tons smelted, 800 tons are said to have come from outside ore, and 1,900 tons from Big Ledge ore. Of Big Ledge ore, the Butternut mine contributed 1,300 tons, and the Henrietta mine 600 tons or less than 20 tons daily from the Henrietta, which was touted last February as ready to produce 200 tons daily as soon as the smelter should be ready. As to the smelter production reaching 15 tons of matte per day, the entire matte production from March 12 to April 21 was only about 80 tons, assaying 45% copper and about \$60 a ton in gold-silver, equivalent to 26 lbs. yield copper per ton ore and \$1.80 in gold-silver. These returns are so ridiculously low that the inference is that not all the matte has been drawn from the furnace, but if the returns really represent actual recoveries from average ore, then 26 lbs. copper at 25c a pound and \$1.80 in gold-silver, or \$8.30 per ton in all, would not even pay smelting cost of \$9 per ton on Big Ledge ore, let alone mining, freight, refining and selling.

See Big Ledge C. Co., owned by same interests.

HALF MOON COPPER CO.

ARIZONA

Address: care of O. B. Kemp, pres., Mayer, Ariz.

Officers: O. B. Kemp, pres.; O. A. Hesla, v. p.; J. E. Russell, sec.-treas., with Edw. S. Spring and Jas. A. Brennan, directors.

Inc. June 23, 1916, in Ariz. **Cap.**, \$1,500,000; \$1 par; 750,000 shares in treasury. Registrar & Transfer Co., N. Y., transfer agents.

Property: 14 claims, 280 acres in Agua Fria mining district, about 4 miles N. of Mayer, Ariz., shows copper glance in sericite schist over a zone 50' to 200' wide and traceable a half mile. Property equipped with gasoline hoist and air drills. Development work begun in Aug., 1917, to seriously open up mine.

Property reported by J. H. Shockley and Walter Harvey Weed to be well worthy of exploration.

INTERNATIONAL COPPER & MINING CO.

ARIZONA

Mine office: Mayer, Ariz.

Officers: John Slak, v. p., sec. and mgr.

Inc. Feb. 1, 1916, in Ariz. **Cap.**, \$1,500,000; shares \$1 par. Annual meeting Feb. 15th.

Property: 12 patented claims, 200 acres, in Black Canyon mining district, Yavapai Co., shows fissure veins in lime-porphyry-schist formation. The main orebody has N. S. strike and dips 10° from vertical. Average assays reported to run 6% copper, \$5 gold, \$3 silver per ton.

Development: by incline shaft and 3 short tunnels.

Equipment: includes 25 h. p. gasoline hoist and 10x10" Ingersoll compressor. Management plans sinking to 500' depth and crosscutting every 100'.

IRON QUEEN MINING & SMELTING CO.

ARIZONA

Address: Wm. T. Read, 15 William St., New York City. Mines near Mayer, Yavapai Co., Ariz.

Directors: F. W. Wood, Wm. T. Read, A. D. Barnhart, I. D. L. Williams and H. B. Bishop.

Cap., \$3,500,000; shares \$10 par. Company formed to take over, subject to a mortgage for \$130,000, the greater part of the former holdings of the George A. Treadwell Mining Co., sold at tax and foreclosure sales. The

Boggs and Hackberry properties are not included, being bought by the Commercial Mining Co., controlled by Phelps, Dodge & Co. The organizers of the Iron Queen offered stock at 75c a share to stockholders of the Treadwell Co.

Property: consists of Iron Queen group near Mayer, the narrow gauge railway, 31 claims and interests in 3 others in the Verde mining district. The Iron Queen group was favorably reported upon by M. A. Finney, former manager of the Consolidated Arizona Smelting Co. (Humboldt smelter), who states that property is leached down to 300' level, has zinc ore between that and 400' level and has 6' pyritic ore carrying 3% copper, 38% iron and 38% sulphur below that and on the 500' level.

Smelter was bought by the Big Ledge Copper Co. interests and an operating company formed, known as the Great Western Smelters Corp., which in turn was unloaded on the Big Ledge Co.

LOGOS MINES CO.

ARIZONA

Dead. Claims relocated and known as the Ferguson Group, which see.

LYON COPPER CO.

ARIZONA

Reorganized as Arizona Merger Gold & Copper Co., which see.

MONTE DE COBRE COPPER CO.

ARIZONA

W. A. Tucker, John Rose and James Smith, all of Bisbee, are the principal stockholders.

Property: on South Copper Mountain, near Mayer, Ariz., shows chalcopyrite and oxidized copper ore in a vein in schist.

Development: 60' shaft and adit tunnel.

ORIZABA MINING CO.

ARIZONA

Mine near Mayer, Yavapai Co., Ariz.

Officers: Geo. F. Wilson, pres., Globe; Parker Woodman, v. p., Bisbee; A. F. Muter, sec.-treas., Phoenix, Ariz.; F. M. Huddleston, Los Angeles, and T. J. Lawrence, Pittsburgh, directors.

Inc. Aug., 1917, in Ariz. **Cap.**, \$1,500,000; shares \$1 par.

Company will develop the Orizaba copper mine, 6 miles S. E. of the Kay mine, said to have 15,000 tons of 7% copper ore blocked out. Has several shafts and tunnels.

POCAHONTAS COPPER QUEEN MINING CO.

ARIZONA

Office: Pocahontas, Ark. **Mine office:** Mayer, Yavapai Co., Ariz.

Officers: W. H. Skinner, pres. and gen. mgr.; T. J. Burns, v. p.; D. A. Chapin, sec.; Benj. A. Brown, treas.

Inc. 1906, as successor of Big Bug Gold & Copper Mining Co. **Cap.**, \$1,000,000.

Property: 14 claims, 4 miles N. W. of Mayer, in 2 groups, about 1,000' apart. The smaller group of 4 patented claims carries gold-copper ore. The Spar group of 10 claims has a vein up to 14' in width, carrying mainly gold and silver-lead values, and the mine is said to have shipped 23 carloads of high-grade ore, under former ownership, that gave sufficient returns to pay the purchase price and the cost of development. The mine has a 200' two-compartment shaft and a 120' shaft. A level at this depth was being extended to develop 2½' of ore, said to assay \$49 in gold, silver, lead, cut in the bottom of the shaft, at last accounts.

PRINCE ALBERT MINING & MILLING CO.

ARIZONA

Address: Mark Bradley, mgr., Groom Creek P. O., Yavapai Co., Ariz.

Property: shows gold bearing veins in schist, developed by 200' shaft. Equipped with Fairbanks Morse hoist and Sullivan 240 cu. ft. compressor.

RIO TONTO COPPER MINING CO.**ARIZONA****Address:** 137 No. Central Ave., Phoenix, Ariz.**Inc.** Nov., 1917, in Arizona.**Property:** the Patton Copper mine, 4 miles east of Mayer, said to have high-grade ore exposed in several openings.**ROSALIE COPPER CO.****ARIZONA****Address:** Haddock & Shackelford, 424-Dwight Bldg., Kansas City, Mo. Concentrate contains 25% copper. Extraction is over 90%.

STODDARD MINES CO.**ARIZONA**

Succeeded by Arizona Binghampton Copper Co., which see.

UNITED ARIZONA COPPER MINING & SMELTING CO. ARIZONA**Office:** 136 N. Central Ave., Phoenix, Ariz.**Officers:** C. H. Dunlap, pres.; R. C. Baker, v. p. and treas.; C. W. Stott, sec.**Inc.** March, 1916, in Arizona. **Cap.**, \$2,000,000; shares \$1 par; non-assessable; 650,000 issued.**Property:** near Mayer, Yavapai Co., Ariz.**Development:** started June 1, 1916. Shaft is 640' deep and will be sunk to 1,000'. Eight feet of high grade copper ore said to have been opened. Shipments commenced in July, 1917.*MIAMI-GLOBE DISTRICTS, GILA COUNTY***ARIZONA BONANZA MINING & MILLING CO.****ARIZONA****Address:** Miami, Ariz.**Property:** 10 claims, 5 miles N. E. of the Inspiration Consolidated, only slightly developed and said to carry ore assaying from 5-30% copper and \$6 gold per ton. Company selling stock at 25c per share to provide development funds, March, 1917.**ARIZONA COMMERCIAL MINING CO.****ARIZONA****Offices:** 50 Congress St., Boston, Mass., and 188 Middle St., Portland, Me. Mine at Globe, Gila Co., Ariz.**Officers:** Chas. S. Smith, pres.; Harry M. Stonemetz, v. p.; C. H. Altmiller, treas.; preceding officers, E. S. Goulston, G. T. Rice, Chas. Sumner Cook, clerk, and Wm. E. Chandler, directors; Robert R. Boyd, supt.**Inc.** April 4, 1912, in Maine. **Cap.**, \$1,500,000; shares \$5 par, fully paid; non-assessable; issued 175,000. Annual meeting 2nd Wednesday in April.

Company is successor of the Arizona Commercial C. Co., bondholders of the old company receiving 70 shares of new stock for each \$500 bond held and the stockholders being privileged to subscribe, share for share, for fully-paid stock in the new company upon payment of \$3 per share. Accounts for year ending Dec. 31, 1916, showed cash and loans on hand, \$422,-

951; supplies, \$18,903; accounts receivable, \$144,343; and accounts payable, \$44,985. Net earnings were \$548,768 in 1916. Balance surplus, Dec., 1916, \$829,963. An initial dividend of 50c per share was paid Oct. 31, 1916; similar payments were made in April, July and Oct., 1917, with a 10c Red Cross dividend; total disbursements to date, \$2.10 per share.

Property: 11 claims, 3 fractional, in 2 groups, known as the Black Hawk and Copper Hill groups, separated by the Iron Cap mine of the Iron Cap Copper Co. Lands are at Copper Hill, 3 to 4 miles northeast of Globe, lying just north of the Old Dominion, and adjoining the United Globe and

Superior & Boston mines. The Copper Hill group, 56 acres, carries the Old Dominion and Copper Hill veins for about 1,500'.

Ore: a mixture of pyrite and chalcopyrite, contains 5% copper, 20% sulphur, 30% iron. Concentrating ore containing 4% copper is shipped to the Old Dominion. Smelting ore above 4% is shipped to the Copper Queen at Douglas, Ariz.

Development: in 1916 was confined to the Copper Hill and Eureka mines, with 2,734' of level work and 960' of raises in the first named from the 10th to the 14th level and 540' of work on the 8th level of the Eureka. The latter development proving valueless, work was stopped.

The working shaft at the Copper Hill mine, 1,600' deep, has extensive workings on the 10, 12 and 14th levels, along the Old Dominion vein and ore has been extracted eastward until cut off by the Badger fault, ore being exposed along the bottom of the 14th level for 400'. The most important development of 1916 was the opening up of the orebody for 100' horizontally and 150' vertically on the 10th level, east of the fault; indications point to its extension up to the 8th level and downward to the 16th. Above the 13th level, a new vein of high grade ore was opened in the hanging wall; it does not show on the 13th and continues some distance above the 12th level.

Future ore extraction will come from east of the fault, in the drifts to be driven on the 15th and 16th levels during 1917.

Equipment: at Copper Hill shaft includes a 72' steel headgear; a Wellman-Seaver-Morgan hoist, good for 1,500' driven by 175 h. p. Westinghouse motor; one 500-gal Aldrich electric pump; one 20,000 cu. ft. Sturtevant fan; and 300-ton ore bins.

The Black Hawk group, 97 acres, which carries the Black Hawk and Old Dominion ledges for about 3,000', has a surface capping of low-grade iron ore, above a 25 to 50' vein, leached to considerable depth, followed by silicious ore; estimated to average about 4% copper, with excess of iron. There also is a hematite vein of 3 to 4' width giving assays of 4.5% copper, with small silver values.

The power smelter plant was remodeled in 1916; new equipment includes two 600 k. w. turbo-generators. All power used is generated at this plant, which is connected with the Copper Hill mine by a 6" pipe line for compressed air and an electric transmission line. On the 14th level two 500-gal. p. m. pumps, electrically driven, were installed, pumping all water from the Copper Hill mine to surface.

Production: in 1915 was 44,353 tons of ore, containing 3,592,274 lbs. copper, 16,511 oz. silver and 282 oz. gold and in 1916 amounted to 48,889 tons of ore, containing 4,178,474 lbs. copper, 21,163 oz. silver and 305 oz. gold.

ARIZONA NATIONAL COPPER CO.

ARIZONA

Idle. 327 Pine St., Williamsport, Pa.

Officers: Thos. M. B. Hicks, pres. and treas.; C. S. Messerly, sec.; LeRoy Scholl, gen. supt.

Inc. Feb. 1, 1906, in Arizona. **Cap.,** \$3,000,000; shares \$10 par. Bonds \$300,000, at 5%.

Property: 14 claims, also a 15-acre mill site and 100 acres timber lands, formerly known as the McNelly-Crowley property, on Pinto creek, west of Miami, carrying contact veins between schist and granite, said to average 14' in width and traced 785', showing considerable high-grade oxidized ores, including chrysocolla and native copper, with some chalcopyrite and occasional bornite. The 80' ledge of decomposed schist is slightly impregnated with copper sulphides.

Development: by shafts and tunnels, with a total of 2,000' of workings. Has steam power. No recent returns secured.

BARNEY COPPER CO.

ARIZONA

Office and mine: Globe, Gila Co., Ariz.

Officers: Hon. J. D. Coplen, pres. and gen. mgr.; J. B. Coplen, v. p.; W. J. Miller, sec. and mgr.; foregoing, with J. N. Porter, directors; 1st Nat'l Bank, Globe, treas.

Inc. Oct. 27, 1910, in Arizona. **Cap.**, \$5,000,000; shares \$5 par; non-assessable; fully paid and fully issued, 999,995 shares being given for property. Annual meeting, first Tuesday in October.

Lands: 34 claims, partly fractional, patented, about 560 acres, adjoining the land of the Inspiration Cons. Copper Co. on the west, show Pinal schist and quartzite, partially covered by conglomerate. Property has a number of old pits and shafts, deepest 500', in Gila conglomerate.

Equipment: includes 15 h. p. gasoline hoist, and there are 7 camp buildings.

In April, 1911, Barney stock was offered for sale in Kansas City at 50c per share. In Jan., 1912, an option on property was given to the General Development Co. for \$600,000. This company put down 2 holes, one at the bottom of the 400' shaft passed out of schist and into dacite and at 1,030' into granite porphyry. This drill hole encountered an artesian flow at 960', which is a valuable asset of the company. The General Dev. Co. soon after relinquished its option. Drill hole No. 2 was discontinued at 600' without disclosing ore. The Barney Co. claims to have put down two holes, one of which passed through 20' of ore, about 1.2% copper, before being lost. Second hole was also lost. The surface conditions on property are unpromising, as the rocks are gray and unaltered.

In 1916 company sold 113½ acres to the Porphyry Copper Co., a new organization with same directorate as the Barney Copper Co., the latter holding control through ownership of 754,442 shares. The Porphyry company is reported to have sunk a 495' shaft, passing through 65' of carbonate ore and 21' of chalcocite. The strike interrupted operations in August, 1917.

BLACK WARRIOR MINE

ARIZONA

At Black Warrior, Gila Co., Ariz. See Warrior Development Co.

CASTLE DOME DEVELOPMENT CO.

ARIZONA

Address: 100 Broadway, New York City.

Officers: Mulford Martin, pres.; Garrett Mott, v. p.; E. C. Curnen, sec.-treas., with H. A. Tingley and John Kasser, directors.

Inc. in Maine. Owns 94% of outstanding capital of Inspiration Extension C. Co.

Company has bond and lease on the Inspiration Extension Copper Co. (which see) property at Miami, Ariz. Began work, April 15, 1916, on a tunnel, now 400' long, running N. E. into the property, in anticipation of opening a low-grade "porphyry" copper deposit.

COLE DEVELOPMENT CO.

ARIZONA

Office and mine: Globe, Gila Co., Ariz. P. J. Cole, pres.; M. L. Cole, Jr., sec.-treas.

Inc. Sept., 1909, in Arizona. **Cap.**, \$300,000; shares \$1 par; issued, 151,000 shares.

Property: 17 claims, known as the Cole & Goodwin group, 4 claims wide and 4 claims long, extending along Mineral creek, 3 miles south of the Gibson mine and about 10 miles S. W. of Miami, the nearest available rail point, and 10 miles N. E. of Ray, but is separated from Ray by some

extremely rugged country. Country rock is Pinal schist with diabase intrusions, carrying the Cole & Goodwin fault, traceable about 2 miles, that cuts the schist diagonally. This property carries fissure veins in schist, and also disseminated ores in schist.

Development: by the 450' Cole incline shaft, with 5 drifts, cutting several bodies of low-grade disseminated ore, and some high-grade from which regular shipments of 6% to 17% copper and \$2 to \$4 gold and silver are reported in 1917. There also are several short tunnels, showing schist carrying impregnations of disseminated chalcopyrite, there being a 135' crosscut tunnel about one-half mile from the shaft, and a 480' crosscut tunnel, 1,700' west of the shaft, with portal 500' vertically below the collar of the shaft.

Equipment: includes a 22 h. p. gasoline hoist. Idle since 1910, but development work resumed 1915 and small milling plant contemplated.

COPPER & SILVER ZONE MINES

ARIZONA

Claims sold to Globe Dominion Mining Co., which see.

COPPER SPRINGS MINING CO.

ARIZONA

Office: Globe, Ariz.

Officers: Capt. E. Storer Tice, pres.; R. L. Springer, v. p.; E. F. Hiatt, sec.-treas.; preceding with Dr. W. H. Meler, B. G. Stewart and W. H. Hiatt, directors. Exchange Trust Co., Boston, transfer agents. Fidelity Trust Co., Boston, registrar.

Inc. in Aug., 1916, in Arizona. **Cap.** amount not given. Stock is full paid and non-assessable.

Property: 25 unpatented claims, about 500 acres on Mt. Madera, in the Schultz ranch section of the Pinal mountains, about 6½ miles from Miami, Ariz., in a rough section of the country. Property is reached by wagon road.

Development: by 8 tunnels, aggregating about 1,400'. Work reported to show considerable leaching and some silicates of copper in the upper tunnels. Nos. 5 and 6 tunnels are reported to have cut carbonates and sulphides of copper running from 1½% to 4%. A new tunnel is being driven to obtain a depth of 400' with the expectation of getting sulphide ore.

Copper values are reported in nearly all of the tunnels but not in a very appreciable amount.

Property is a prospect being promoted by Temple H. Fay & Co., of Boston.

CORDOVA COPPER CO.

ARIZONA

Property taken over by the creditors and new company formed called Lecora Copper Co., which see.

DUQUESNE MINING CO.

ARIZONA

Address: care of T. A. Luckhart, sec., DuBois, Pa. Mine near Globe, Gila Co., Ariz. Geo. M. Luckhart, pres. and mgr.

Inc. 1909 in Arizona. **Cap.**, \$1,000,000; shares \$1 par.

Property: 10 claims, in Gold gulch, about 3 miles south of the Arizona National and 15 miles west of Globe, in the Pinal mountains. Mine has a 10' vein, carrying mainly silver-lead ore with copper expected at depth. Opened by 3 tunnels, 2 of 200' and 300', showing ore assaying well in gold. A 50' shaft on the East End claim shows ore giving assays of 5% copper, 3 oz. silver and \$4 gold per ton.

Equipment: includes a 25 h. p. gasoline hoist. Only assessment work done in 1914-15.

Probably closed down, 1917. No returns secured.

GERMAN COPPER CO.

Idle. Office: Chas. H. Trotter, sec., 10 No. New Jersey St., Indianapolis, Ind. Mine at Globe, Ariz.

Officers: John H. Murdoch, pres.; Chas. H. Zollner, v. p.; John A. Hook, treas.; preceding officers, Wm. Elwarner, Jos. Lauler, David Fair, Wm. Burnett, John I. Carson and J. B. McMurray, directors; John H. Faught, supt.; P. H. Pernot, cons. engr.

Inc. March 25, 1911, in Arizona. **Cap.**, \$3,000,000; shares \$5 par, fully paid; 142,373 issued; outstanding debt, \$75,000. Annual meeting, second Tuesday in October. Company is successor, 1911, of the Arizona-Colorado Belt & Gold Mining & Milling Co.

Property: 14 claims, 270 acres, held by location in the Globe district of Arizona. Ore occurs in a large fissure vein cutting through diabase, quartzite, and limestone, and as contact ores between diabase and sedimentary rocks. Vein strikes N. E.-S. W., dips 55°, is reported as 9' wide, proven to depth of 900', and said to carry 2% copper, 2 oz. silver and slight gold values per ton, principally as chalcopryrite, on 800' and 900' levels. Ore developed above 800' estimated at \$125,000.

Development: by 863' shaft, and a total of 3,000' of underground work. The 800' level is said to block out 2,000 tons of ore with 18,000 tons of 2½% ore reasonably certain.

Equipment: includes 100 h. p. steam hoist, Cameron pump and 7-drill air compressor. Arizona-Eastern railroad is 1 mile from property, which is well located and has merit. Assessment work only being done at last accounts.

GIBSON CONSOLIDATED COPPER CO.**ARIZONA**

Address: R. P. Greer, sec., Globe, Ariz.

Officers: Chas. E. Kaltenbach, pres.; Gen. Amasa P. Peake, v. p.; H. E. Bierce, managing director, with F. F. Towle, W. A. Lamson and E. J. Kaltenbach, directors.

Inc. May, 1917 in Delaware. **Cap.**, \$1,000,000; shares \$1 par; 750,000 issued. Columbia Trust Co., New York, registrar. Empire Trust Co., New York, transfer agents.

Property: 16 claims, 8 patented, 300 acres, about 8 miles W. of Globe, with a good wagon road connection, includes the Gibson mine which was opened by Messrs. Gibson and Henderson with capitalization of \$90 cash and a team of horses and not only paid its way but earned good profits.

Worked in a very small way, by different owners, 1900 to 1906, when taken over by the Gibson Copper Co., and thereafter worked continuously until June, 1910. Mine was under lease and option to the Summit Copper Co., for 17 months, at \$442,375, but reverted to owners, Jan., 1912, and was again operated under lease by Sultan & Wayne until August, 1913.

Geology: country rock is Pinal schist and granite carrying 3 approximately parallel fissure veins, having a N. E. strike. The Summit and Pasquale are the principal veins, the former vein, of 4 to 7' width, traceable for the entire length of the property, a distance of 1¼ miles. The Summit and Pasquale veins are about 250' apart, the Intermediate vein about 75' E. of the Pasquale. Ore occurs in the Summit and Pasquale veins in well-defined shoots, pitching 40 to 65° S. the lenticular form of these shoots being in some cases due to strike faulting and movements. Ore is mainly massive chalcopryrite, with a little bornite. Gangue is quartz with some calcite and small quantities of specular hematite and gypsum. Two veins show high-grade ore and some low-grade ore has been developed in 5 veins. The McKinley vein, undeveloped, shows a strong outcrop.

Development: to 500' depth by shafts and tunnels with 23,000' of work.

The Pasquale tunnel, driven on the Pasquale vein, is about 200' below the collar of the incline shaft. The Reynolds tunnel is to intersect the vertical shaft at 1,800' from the portal, at depth of 500'; the Toombs tunnel, 100' vertically above and the Upper Toombs tunnel, 210' above the Reynolds, are drifts on the Summit vein. Working shaft is an incline; 600' deep, sunk on the Summit vein, with 6 levels which show that the Summit vein runs N. 21° E., dips 56° N. W., and carries a seam of high-grade ore, the main pay streak carrying 8 to 15" of chalcopryite ore assaying 20 to 30% copper, throughout the various levels. The shaft has 5,915' of workings on the Summit vein, besides drifts on the Pasquale and Intermediate vein, reached by crosscuts on the 3rd and 4th levels.

Development by the Summit Copper Co. was by a vertical 3-compartment shaft, sunk to a depth of 244' by the Gibson Copper Co., and deepened by this company to 573', this depth corresponding with the 7th level of the old incline shaft. About 4,000' of new drifting and crosscutting, costing nearly \$142,000, was done. The vertical shaft cuts the Pasquale vein at 163', the Intermediate vein at 300' and the Summit vein at 500' depth.

The Pasquale vein differs from the Summit in that it cuts across the bedding of the schist, instead of following the bedding planes as does the Summit, having a strike of N. 20° E., with dip of 35 to 50°. Apparently the Pasquale vein is better defined, more continuous and stronger than the Summit, the fissure being of 5 to 10' width, carrying a pay streak, from a few inches to 3' in width, of ore assaying up to 33% copper. Ore occurs in the Pasquale vein in shoots pitching to the south, similar to the ore occurrence of the Summit.

The Intermediate vein, with drifts of 225' length on the 3rd and 4th levels, has a strike of 12° E., with dip of 52° N. W., and is only about 8" wide, with firm walls and, as developed, is not of great importance, but has possibilities. The ground is heavy and treacherous, requiring timbering for practically every foot of drifting and concrete posts were used.

Ore reserves: estimated by new owners at 500,000 tons, of a net value of \$3.50 per ton, if copper sells at 15c. This figure is in our opinion much too high as Messrs Pritchett & Hamilton estimated the developed ore reserves, at the end of 1910, excluding all high-grade ore, and omitting probable ore between the 3rd and 4th levels on the Pasquale vein, as 33,011 tons of ore, averaging 4.36% copper, on the Summit vein; 17,062 tons of 3% copper ore in the Summit filling; 39,860 tons of 2% ore on the Summit dump and 8,578 tons of 6.51% copper ore developed in the Pasquale vein. The development by the Summit Copper Co. proved disappointing; irregular occurrence and insufficient tonnage failing to offset the high-grade ore extracted. C. W. Pritchett, Denver, Colo., consulting engineer, advised the surrender of option after sampling and examining all workings.

Equipment: at the incline shaft includes two 250 h. p. boilers, a 14x16" hoist and a 6-drill Sullivan air compressor. The plant at the vertical shaft includes two 200 h. p. Stirling water-tube boilers, a 16x20" Hendrie & Bolt-hoff double-drum hoist, good for 1,000' depth and a 10-drill Sullivan cross-compound air compressor, with a 132' steel smokestack of 42" diameter. The vertical shaft has pumps with capacity of 500,000 gals. daily. A 300-ton mill is to be erected with funds derived from sale of treasury stock, 1917. The gross value of ore produced by the Gibson Copper Co., 1906-09, has been estimated at \$1,250,000. It was shipped to the Old Dominion smelter, a distance of about 18 miles, by 10-horse teams, and required careful selection, owing to the extremely high cost of transportation, returning better than 20% copper.

Production: 1,106,100 lbs. fine copper in 1906; 3,340,777 lbs. in 1907;

1,270,211 lbs. copper and 2,000 oz. silver in 1908; 667,405 lbs. copper in 1909, and 600,000 lbs. in 1912. Output in 1916, 3,460 tons ore yielding 1,043,144 lbs. copper. Smelter settlements, \$214,348. Costs, 26c per lb. Total shipments to July, 1917, reported as netting \$2,100,000.

GIBSON COPPER CO.

ARIZONA

Property sold May, 1917, to Gibson Consolidated Copper Co., which see. Fully described in Vol. XII of this book.

Office: Globe, Gila Co., Ariz. Mine at Bellevue, Gila Co., Ariz. P. P. Greer, pres.; F. F. Towle, sec-treas.; P. P. Greer, F. F. Towle, S. L. Gibson, J. N. Robinson and J. L. Alexander, directors.

Inc. 1906, in Arizona. **Cap.**, \$2,500,000; shares \$25 par; non-assessable; issued \$2,000,000. Has authorized a \$500,000 issue of 6% bonds; issued, \$6,000. Total dividends to date, \$80,000. Annual meeting, first Wednesday in March.

GLOBE BULLION MINING CO.

ARIZONA

Address: Globe, Ariz.

Inc. by P. J. Minck of New York, W. Buckland and G. B. Pert of Globe. H. Heidemann, supt.

Property: south of Miami shows gold-bearing ore. Press reports stated that the company's slogan was, "Pick your own samples and the company will pay for the assay." Caveat emptor.

GLOBE COMMERCIAL COPPER CO.

ARIZONA

Address: A. R. Jameson, Jr., Globe, Ariz., leaser.

Property: near Copper Hill, Gila Co., shows copper and manganese ore. A. H. Buckingham, leaser, is shipping manganese ore. A. R. Jameson shipping copper ore, 1917. Mill is proposed for 1918.

GLOBE DOMINION COPPER CO.

ARIZONA

Office: Globe, Ariz.

Officers: J. H. Barr, pres., Pittsburgh, Pa.; T. H. Jenks, v. p., Wickenburg, Ariz.; B. O. Thralls, sec.; T. A. Pascoe, treas.; preceding, with Dr. R. W. Craig and C. R. Clapp, directors.

Inc. in Arizona. **Cap.**, 1,500,000 shares; par \$1; 975,000 outstanding.

Property: 25 claims, about 500 acres, in diabase area, 1 mile east of Globe, adjoining the Old Dominion and Globe Consolidated mines and near the Superior & Boston, was originally worked for its silver ore, found near the surface. Development has proven the existence of copper at depth and owners expect to encounter the extension of the Gladiator vein of the Old Dominion mine. Property was formerly known as the Copper and Silver Zone Mines, owned by W. R. Martin, El Paso, Texas.

Development: by the 103' Clark and 108' Faugh shafts on the Old Ironsides claim, from which ore shipped has returned 1.25 to 3.5% copper, \$19 to \$236 silver, or an average of \$21.60 per ton. Present company has sunk the shaft to 375'. When the 600' level is reached drifts will be started following the veins that outcrop on the surface. Company employ 22 men. Property was reported on by Sydney H. Ball for Luke, Banks & Weeks, of 14 Wall St., who are reported to be financing it. Stock is traded in on the N. Y. curb.

GLOBE & LOST GULCH SILVER-COPPER MINES CO.

ARIZONA

Office: 1549 Logan St., Denver, Colo. Mine in Lost Gulch, Gila Co., Ariz. Mary E. Brooke, pres. and gen. mgr.; H. A. Wimbush, sec.

Inc. April 1, 1907, in Arizona. **Cap.**, \$1,000,000; shares \$1 par, non-assessable.

Property: 10 claims, patented, 180 acres, and other locations; also a mill site at the head of Lost Gulch, 1½ miles N. of Inspiration and

Miami, Ariz., showing quartzite, granite and limestone, cut by porphyritic dikes.

Development: shows silver-lead ore in diabase, with indications that copper ore will come in at depth; also shows silver-chloride ore in granite and limestone, and copper carbonate ore in dacite.

GLOBE-MIAMI COPPER CO.

ARIZONA

Address: Victor Gilsey, treas., 14 W. 40th St., New York.

Officers: D. F. Beggs, pres.; Albert Hicks, W. A. Jones, F. W. Barker, all of N. Y., directors.

Inc. 1917 in Delaware. **Cap.**, 200,000 shares; \$1 par.

Property: 21 claims in Globe-Miami district, Ariz., upon which \$200,000 is said to have been spent in development and purchase. There has been some gold ore extracted.

All the literature available on the property is from a brokerage house in New York; it is so profuse and tells so much about other properties and so few facts about this, that it is suspicious. The property may have a future, but it must be heavily burdened with too many metals, since the literature states there are copper, gold, silver, lead, tungsten and molybdenum deposits on the claims.

GLOBE MINING CO.

ARIZONA

Globe, Gila Co., Ariz.

Officers: Hon. J. F. Hechtman, pres. and gen. mgr.; M. A. Patterson, v. p.; Walter M. DeKalb, sec.; Geo. L. Beach, treas.; preceding officers, F. B. Walker, L. E. West and R. A. Jamison, directors.

Inc. Feb. 19, 1903, in Arizona. **Cap.**, \$2,500,000; shares \$1 par. Property leased to Mineral Farms Co., 1912. Both companies idle.

Property: 21 claims, patented, 335 acres, 2½ miles north of Globe, shows granite-porphry, syenite, quartzite and diorite, carrying fissure veins in diorite of 2 to 100' width, with gossans giving assays of 2 to 6% copper, 4 to 30 oz. silver and \$2 to \$28 gold per ton. The Mineral Farm group of 21 claims, 3 fractional, includes the Vacey-Constance mine, worked 1886 for silver, and said to have produced upwards of \$100,000 worth of ore under former ownership, this group having upwards of 20 old pits and shafts, of 10 to 165' depth. The Mineral Farm group shows altered sedimentary and igneous rocks, with iron dikes and a complex fissure system. The Mineral Farm vein, of about 4' width, gives assays of 4.8% copper and up to 132 oz. silver and \$7.44 gold per ton, and the group also shows a 20' vein, said to sample 22% copper, 9% zinc, 2 oz. silver and \$4.96 gold per ton, which seems excessive. The Eagle Pass group has a 215' two-compartment shaft, between 2 iron outcrops.

Equipment: includes a 60 h. p. boiler, 8x10" hoist and air compressor. There are 6 mine buildings.

INSPIRATION CONSOLIDATED COPPER CO.

ARIZONA

Office: 42 Broadway, New York. Mine at Miami, Ariz.

Officers: W. B. Thompson, pres.; W. D. Thornton and L. D. Ricketts, v. p.'s; Joseph W. Allen, sec.-treas.; Evan J. Dudley, asst. sec.; W. S. Harper, asst. treas.; Charles E. Mills, gen. mgr.; Wm. B. Thompson, Wm. D. Thornton, Jos. W. Allen, C. E. Mills, Edmund C. Converse, William E. Corey, Charles A. Corliss, L. D. Ricketts, William G. Rockefeller, John D. Ryan, Charles H. Sabin and Albert H. Wiggin, directors. D. A. Welch, purch. agt. Guaranty Trust Co., New York, and Old Colony Trust Co., Boston, transfer agents; Bankers' Trust Co., New York, and National Shawmut Bank, Boston, registrars.

Inc. Dec. 18, 1911, in Maine. **Cap.**, \$30,000,000; shares \$20 par; issued and outstanding Dec. 31, 1916, 1,181,967 shares. All bonds have been retired.

Comparative General Balance Sheet: year ending Dec. 31:**Assets—**

	Prop. & Equip.	Supplies	Copper on Hand	Other Current	Total

1914.....	22,166,764	439,880	2,641,219	25,247,863

Liabilities—

	Capital Stock	Bonds	Current	Surplus	Reserves	Total
1916...	\$23,639,340*	\$4,182,003	\$12,681,501	\$1,281,469	\$41,784,314
1915...	18,419,500	6,544,500	1,878,983	600,062	27,443,046
1914...	14,459,160	10,500,000	288,703	25,247,863

* All retired, 1917.

Profit and loss: for 1916 shows: sales of copper, \$33,496,343; total expenses, \$11,965,820; balance from 1915, \$600,062; total profit, \$21,229,552; surplus for 1917 after paying dividends, \$12,681,501.

Dividends: in 1916, four were paid, totaling \$8,548,051, equal to \$7.25 per share. In 1917, to Oct. 29, \$8 per share was paid.

Company took over properties owned by the Inspiration Copper Co. and the Live Oak Development Co., paying for same in stock. In May, 1912, the mill and camp site of the Black Warrior copper mine was purchased from the Warrior Copper Co. for \$175,000. Early in 1914 the property of the New Keystone Copper Co., lying between the Inspiration and Live Oak groups, 219 acres, was purchased for \$795,940, payable in 39,797 shares of stock at \$20 per share, 9 shares of New Keystone for 1 share Inspiration.

The consolidated property holdings of the company are as follows: mining lands, 1,870 acres; mill-site, tailing disposal, water supply, etc., total 4,216 acres, 8 to 10 miles W. of Globe, Ariz.

Company said to be developing properties in the Wickenburg district.

Geology: property carries about 1½ miles of the strike of a mineralized belt by Pinal schist, much crushed, altered and silicified by contact action, due to the intrusion of the great mass of granite forming the hills to the S. W., the shattering having allowed the free circulation of secondarily enriching solutions. The oxidized zone shows carbonates, occasionally of commercial tenor, as in the Clipper tunnel, but ore occurs mainly in secondary form as disseminated chalcocite, forming an enriched zone of commercial ore of 50 to 575' in thickness, estimated by the management to average 180', with an average of 90 to 100' of overburden, underlaid by a primary zone of cupriferous pyrite below commercial tenor. About 40% of the values occur in small fissures and veinlets and along the jointing planes and planes of schistosity, copper being mainly in the form of flakes and grains of chalcocite, the balance of about 60% of ore values being disseminated through the gangue of friable Pinal schist, with some quartz. The mineralization also extends into the granite-porphry contact, about 10 to 15% of the ore developed in the Colorado orebody being in granite. The cupriferous schist is faulted, just east of the Woodson orebody, by the Bulldog fault zone, of about 300' width.

Ore reserves: Jan. 1, 1916, consisted of 97,143,000 tons of 1.63% copper ore made up of the following: (a) sulphide ore, 46,252,000 tons, 2.01% copper; (b) low sulphide material, 28,698,000 tons, 1.26% copper; (c) oxidized material, 17,460,300 tons, 1.31% copper; (d) mixed carbonate and sulphide material, 4,732,700 tons, 1.31% copper.

No attempt was made during 1916 to develop additional ore, therefore as 5,353,880 tons was mined, reserves now stand at 91,789,120 tons.

About 20,000,000 tons of this is oxide ore, upon which experiments were made by leaching, giving good results.

The new mill, designed by H. K. Burch, consists of 20 sections, each one with rated capacity of 900 tons per day, making a total of 18,000 tons per day.

The scheme of treatment, stated in general terms, is as follows: at the mine—crushing ore to 4", maximum size in gyratory crushers, crushing this ore to 1½" maximum size by Symons disc crushers. At the mill—crushing product from the Symons disc crushers in Marcy ball mills to pass 48-mesh screen, treatment of this product in flotation machines with separation of flotation tailing into sand and slime. Sand is treated on concentration tables and the slime retreated in flotation machines. Concentrates are dewatered in the filter plant. Trials were made recently with Hardinge ball-mills.

While plans were for a 7,500-ton mill to cover 8 acres, adoption of the flotation process has permitted doubling originally planned capacity within space of 3 acres. As a result of this compactness, elimination of elaborate classification, and some stage crushing, the costs of the combined oil flotation and water concentration in 1916 were 50.385c per ton. Mill is equipped with Mineral Separation and Callow flotation machines, also one designed by Rudolf Gahl, in charge of the mill. Coal tar is the chief component in the frothing mixture. The first unit of the mill went into operation June 29, 1915, the 18th in Feb., 1916, and the 20th a year later. The first ore was caved underground and actual mining started July 25, 1915.

The Live Oak group of 14 claims, 200 acres, is about 1½ miles W of Miami, at the western end of the Miami ore belt and separated from the Inspiration group by the New Keystone group. The geological conditions are similar to those of the Miami belt generally, save that much of the surface is covered by leached white granite, showing brilliant, green-stained outcrops of far more attractive appearance than any other part of the belt. This granite is underlain by schists carrying the ore, but part of the orebody is in granite.

The mine was originally opened on a flat dipping vein, 5 to 12' thick, carrying high-grade chrysocolla ore, from which shipments running 17 and 18% were made for several years. Much of this material is quartzose and valuable as a gemstone. The vein ended at water level in a mass of low-grade chalcocite ore similar to that of the Miami mine. Orebody was developed by tunnel work and drilling by the Live Oak Development Co. by over 50 drill holes with 20,000' of drilling and 5,000' of underground work. This work blocked out a body of disseminated ore 1,400' long, 75 to 200' deep beneath a capping of oxidized material averaging 435' thick. The orebody as developed averaged 114' thick and contained 15,000,000 tons of 2.11% copper ore.

The New Keystone Group has about 60 acres underlain by Pinal schist, covered in part by a sheet of granite porphyry, 25' to 200' thick. A strong fissure vein crossing the property was mined by the old Keystone Copper Co., the vein being 12' thick with a paystreak averaging 15", from which shipments of 19 to 22% copper and 2 to 5 oz. silver per ton were made for some years. Mine yielded, according to report, about \$1,000,000. The New Keystone Copper Co. explored and opened up a deposit of disseminated glance ore similar to that of the Miami mine.

Development: by the new company consisted in blocking out this orebody by underground workings and churn drilling. The Keystone shaft is 330' deep and at the time the company was absorbed by the Inspiration Cons. Copper Co., had a total of 14,886' of workings. Churn drilling along

200' squares was discontinued June, 1912, after company had put down a number of holes with an aggregate of 21,947' of work. Development blocked out 2,516,000 tons of ore, which sampling showed to have an average of 2.25% copper.

Development under the present company has been of a dual nature, including both extensive underground openings, and churn-drill borings along the same general system as followed in the development of the Ray and Chino mines. Underground work in 1916 amounted to 147,840'; total workings, Dec. 31, 1916, approximately 92 miles, in addition to 29½ miles churn drilling. Stopping operations destroyed 31 miles of workings to the end of 1916, so the present openings are 61 miles.

The Inspiration orebody is being worked by 2 main trammig levels at 326' and 450' in depth respectively. The Live Oak orebody is accessible through the Live Oak shafts, but all ore is hauled through the main haulage-tunnel, 6,600' long, connecting with the bottom level of the Inspiration shafts.

Ore is mined by the so-called Ohio system, locally termed the "Finger Raise" system, undercutting and caving in blocks of about 70' vertical dimension; the broken and caved ore is drawn off through a system of inclined raises delivering to the haulage-ways below; these raises have a sufficient number of branches immediately below the caved area to reduce the interval between the heads of the raises that tap the caved ore to a minimum of about 8'. The ore is carried in trains of 5-ton cars by air locomotives to the working shafts, where it is delivered to one set of double concrete bins underground holding 3,700 tons and hoisted to surface through 2 shafts, delivering to a bin of 2,000 tons capacity located between the shafts. Skip loading and hoisting is automatically controlled. Ore extraction will be entirely confined to these 2 cement and steel-lined shafts, 585' deep and 107' apart, in Webster gulch, on the north side of the mountain, while men and supplies will be lowered and water pumped at the Incline, or Supply shaft on the opposite, or Miami side of the mountain. The 2 shafts will be operated from the same hoist house, but will be entirely independent units, capable of handling 1,000 tons per hour. The total lift is 630'. The ore will be hoisted in skips, passed through crushers and put in 25,000-ton storage bins. From these bins it is carried over the company's 1.6-mile railroad, with 3% grade, to the mill at the old Black Warrior townsite.

Ore extraction: 1916 was a complete operating year, mining confined almost entirely to the Inspiration ground. The output was 5,353,880 tons, averaging 1.548% copper. The greatest day's output was 21,289 tons. The average output of ore per shifts work was 17.46 tons. The area undercut was 18.4 acres. The cost of mining was 60.7c per ton.

From the time the ore is dumped from the chutes into the mine cars no manual labor is required, all operations being entirely mechanical.

The company owns its own railroad of 4½ miles standard-gauge track, connecting the mine with the mill and the mill with the smelter of the International Smelting Co.'s Miami plant, where concentrates are smelted.

The mine and mill are connected with both the U. S. Reclamation hydro-electric plant at Roosevelt and with the company's own steam plant, consisting of three 6,000 k. w. turbo generator units.

Production details in 1916:

Ore treated, tons.....	5,316,350
Average per day, tons (16,000 has since been exceeded).....	14,850
Average copper-content, per cent. (0.335% oxide).....	1.548
Average in tailing, per cent.....	0.397

Extraction, per cent.....	74.860
Copper in concentrate, per cent. (flotation 37.50%).....	30.688
Water used per ton of ore, gallons.....	1,108
Steel ball consumption per ton of ore, pounds.....	1.760
Flotation oil, used per ton of ore, pounds (coal tar 1.2 lb.).....	1.287
Cost per ton for milling, cents.....	50.385
Refined copper for year, pounds.....	120,772,637
Cost per pound of copper, cents.....	8.673
Cost per ton of ore.....	\$1.948

The low recovery, 74.86%, is due to the unavoidable inclusion of oxide ore. The percentage of copper in sulphide form was 1.213%, and in oxide combinations 0.335%. The extraction on the former was 90.95%, but on the latter 16.60%. Gravity or flotation concentration give low recoveries on the oxide ore.

The average yield of refined copper was 22.625 lb. per ton of ore. The mine is now capable of producing 20,000 tons of ore daily.

Production for 8 months to Nov., 1917 (mine was closed July and August on account of strikes), was 72,050,000 lbs. copper.

A profit of \$20,629,489 for the first complete year's work gives a good idea of future possibilities, although sales of copper realized over 25c per lb., against an average of about 15c over a period of normal years. Even at the latter figure, and costs at 9c per lb., large profits should be made on the normal output, which is at the rate of 11,000,000 lb. monthly. Dividends are kept at \$8 per share per annum, although profits are more than double this amount; but in these war times, it is best that some caution be observed by holding large cash reserves. The property is financially and technically managed by the best talent. The 1917 output will show a big decline on account of labor troubles in the Miami district at mid-year; there was no production in July and Aug. and the Sept. output was 2,250,000 lb., or about 20% of normal.

Earnings in 1916 were \$17.54 per share. In October, 1917, company had a surplus of about \$13,000,000, and earnings for the year will approximate \$15,000,000 or \$13 per share, a very large part of which will be absorbed by the war tax.

INSPIRATION EXTENSION COPPER CO.

ARIZONA

Address: F. O. Augustin, 433 Broome St., New York City. Wm. H. Correa, pres.; A. L. Rosengarten, v. p.

Inc. Feb. 11, 1913, in Delaware. **Cap.**, \$1,000,000, increased to \$1,500,000 in 1915; shares \$5 par; all issued. Annual meeting February 11th. Company's holdings are under bond and lease to the Castle Dome Development Co., 100 Broadway, New York, which acquired 94% of this company's stock, 1917.

Property: 95 acres, patented, in the Miami district, partially surrounded by claims of the Inspiration Consolidated Copper Co., and underlain by schist, locally altered, said to show a deposit of low-grade copper ore. Also 29 claims, unpatented, about 500 acres, on Porphyry Mountain, about 5 miles W. of the first group and adjoining the Continental mine of the Old Dominion Copper Co. This group shows disseminated ore in granite. Development to date consists of 3 tunnels total 2,200', all above water level.

Development: of the Miami tract includes a 500' shaft disclosing primary sulphides.

Equipment: includes a 35 h. p. gasoline hoist good for 500', with various buildings. Extensive drilling of ground planned for 1918.

INSPIRATION NEEDLES COPPER CO.**ARIZONA****Offices:** 116 Nassau St., New York, and Globe, Ariz.**Officers:** D. R. Williamson, pres.; Frank Beston, v. p.; F. W. Hamm, sec.; A. D. Williamson, treas., with Geo. J. Stoneman, directors.**Inc.** Jan. 4, 1912, in Ariz. **Cap.**, \$2,000,000; issued, \$1,300,000; shares \$1 par. Security Transfer & Registrar Co., New York, transfer agent and registrar. Listed on New York curb. Annual meeting first Monday in February.**Property:** 35 claims. 500 acres, 3 miles from Miami, Ariz., adjoins Southwestern Miami on the W., lies 1 to 2 miles S. W. of Inspiration Cons. property. Surface shows Gila conglomerate, Pinal schist and Schultze granite formation.**Development:** the result of assessment work, consists of a number of shafts, none over 100' in depth, and tunnels, none over 200' in length.

August, 1916, two churn-drills operating at holes No. 1, 395' deep, and No. 2, 300' deep, had cut oxidized ore carrying 1% to 2.6% copper, proving that the ground is on the ore zone of the district.

Churn drilling began June 18, 1916. Expect to have 7 drills in operation. Examined by J. H. Dockweiler (Crocker Bldg., San Francisco, Calif.) in June, 1916.

No recent news available.

IRON CAP COPPER CO.**ARIZONA****Office:** 50 Congress St., Boston, Mass. Mine at Copper Hill, Gila Co., Ariz.**Officers:** Frank P. Knight, pres.; J. Judson Dean, v. p.; R. H. Knight, sec.-treas.; F. A. Woodward, supt.; preceding and Alvin T. Baldwin, directors.**Inc.** Feb. 7, 1911, in Maine. **Cap.**, \$2,000,000; shares \$10 par, fully paid and non-assessable; 50,000 preferred, convertible into common, and 150,000 common; issued, 32,528 preferred, 112,513 common.**Dividends:** pfd. No. 4, July 2, 1917, 3½%; com. No. 1, Jan. 1, 1917, 2%; No. 2, July 2, 1917, 3½%, plus extra of 65c; on com. 50c extra, Dec. 1, 1917.**Bonds:** \$125,000, 7% 5-year, dated April 1, 1916. Federal Trust Co., registrar; Exchange Trust Co., transfer agent. Stock listed on Boston curb. Annual meeting, first Tuesday in January.

Company reports for year ended Dec. 31, 1916, a gross income of \$432,414, of which ore sales realized \$414,292. Expenses totaled \$385,332, including 5% depletion charge. No debts save outstanding bonds. Cash, accounts receivable, stocks and bonds total \$280,212.

Property: the Iron Cap and Bird groups at Globe, 20 patented claims, dividing two Arizona Commercial groups and adjoining the Old Dominion property.**Geology:** claims show shale and quartzite cut by diorite at depth and traversed by a fissure vein running N. E. and S. W., and dipping at 70°.**Development:** by 981' Williams shaft, with levels at 660, 765, 868 and 968'. Vein is opened for about 1,000' in length. The Iron Cap shaft is 920' deep, with levels at 450, 600, 800 and 920'. On the 800 and 900' levels the vein has been exposed for 400'.**Equipment:** 2 Wellman-Seaver-Morgan double-drum hoists of 1,500' capacity, 2,200 cu. ft. Sullivan air-compressor.

During 1916 the ore shipped to El Paso, Texas, averaged 8.6% copper and 6.54 oz. silver. Employs 140 men.

The future of this property appears to be good. The daily output in July, 1917, is 100 tons to the smelter and some 5% ore to the Old Dominion concentrator. Profit was \$118,706 in May, 1917.

LECORA COPPER CO.**ARIZONA**

Idle. **Office:** 500 Lonsdale Bldg., Duluth, Minn. **Mine office:** Globe, Gila Co., Ariz. David L. Fairchild, treas. The Cordova Copper Co., the old company, was taken over by its creditors and renamed.

Property: 21 claims, aggregating 270 acres, north of the Old Dominion mine and west of the Arizona Commercial.

Development: by the 1,225' three-compartment Gem shaft with extensive crosscuts on the 1,100' and 1,200' levels, cutting the Gem and Future veins, which have shown a little ore occasionally, but nothing of commercial size.

Shipments made from a vein 5 to 8' wide on the 1,200' level, averaged 3.35% copper, 33% iron, 35% sulphur, with \$1.30 in gold and silver.

Equipment: includes hoist and 12-drill air compressor. Management has struggled faithfully to make a mine, both east and west of Globe, but has rather poor prospects.

LOUIS d'OR GOLD MINING CO.**ARIZONA**

Reorganized 1916 as Louis d' Or Mng. & Mlg. Co., which see.

LOUIS d'OR MINING & MILLING CO.**ARIZONA**

Is a reorganization of the Louis d' Or Gold Mining Co., which company was practically a reconstruction of the Lost Gulch United Mines Co. Is controlled by Baldwin Syndicate.

Address: P. O. Box 995, Miami, Ariz. **Office:** 339 Monadnock Block, Chicago, Ill.

Officers: L. W. Whitmer, pres.; Geo. P. Baldwin, v. p.; J. A. Glenn, treas.; G. O. Swarts, sec., with J. B. Huling, Willis H. Smith and Theo. A. Steller, directors.

Inc. Nov. 29, 1916, in Ariz. **Cap.**, \$3,000,000; shares \$1 par; 1,400,000 issued. **Assets,** May, 1917, \$35,000.

Property: 17 claims, partly fractional, 292 acres, in 2 contiguous groups, about 2 miles north of the mouth of Lost Gulch, and 3 miles from a railway. Claims show monzonite-porphyry, diorite and granite, carrying 4 fissure veins, of which 3, of 4' estimated average width, are more or less developed, the mines as a whole having about 8,500' of workings.

The **Badger** mine has a vein of 3 to 6' width, developed by a 145' shaft, somewhat wet, carrying ore said to average about \$7 per ton in values, with occasional shoots of \$17 to \$30 per ton, and a 400' tunnel showing a vein of 3 to 6' width, averaging about \$7 per ton. Equipment includes a 15 h. p. gasoline hoist, good for 400' depth.

The **Bonanza** mine has a 1,050' tunnel. The **Cedar Tree** mine carries mainly argentiferous and auriferous galena, with a little copper and zinc. The **Tiger** or main vein is entirely auriferous, is developed by a 350' tunnel to 110', and is said to carry values of from \$3 to \$90 per ton. All ores are sulphide.

Shipments: of surface ore averaged 6 oz. silver and 1 oz. gold, with lead and silver. Development by winze sunk from the tunnel on the vein.

Equipment: the mill, of wood, completed Feb., 1910, has 10 stamps, a 6x10" Gates crusher, 2 Wilfley tables, 2 Frue vanners and a Pierce amalgamator; power equipment includes two 80 h. p. water-tube boilers and a 150 h. p. Corliss engine, 40 h. p. steam plant and compressor, installed 1915.

Company is churn drilling 300 acres of adjoining ground and has contracted to settle for each 20 acres as they are drilled and according to conditions underground; monthly payments, however, being made on property.

Examination of the Louis d' Or in 1916 by Chas. E. Hart, E. M., led to above purchase, his report stating that the west side of the property

was in "copper porphyry" with good surface indications of copper sulphides occurring at 500' to 600' in depth. Only churn drilling being done, 1917.

The property has been a failure as a gold mine but possibly has a chance of making good as a "porphyry copper."

MANITOU HILL COPPER CO.

ARIZONA

Idle and probably dead.

Office: care W. H. Brown, sec., 110 S. Third St., St. Joseph, Mo. **Mine office:** Globe, Gila Co., Ariz. A. T. Hammons, pres. and mgr.

Inc. 1911. **Cap.**, \$1,250,000; shares \$1 par. Company is a reorganization of the Pinto Creek Mining & Smelting Co., and by consolidation later acquired the property of the Five Points Copper Mining Co.

Property: 70 claims, at the head of Pinto Creek, about 10 miles S. W. of Miami, shows pre-Cambrian schists cut by granite and granite porphyry. Ore is low-grade.

The Pinto Creek group is developed by the 570' Yo Tambien shaft, showing a fair body of sulphide ore, the 70' Manitou shaft, and 8 tunnels, longest 2,200', with upwards of a mile of workings.

The Five Points group, some distance down the valley, is developed by the 150' Solace incline shaft, and the 350' Crackerjim shaft, sunk 1,500' apart. Property shows malachite near surface with some chalcocite at shallow depth.

Equipment: includes small steam plant and hoist at the Five Points mine, 6 h. p. gasoline hoist, 6-drill air-compressor, and 250-ton concentrator at the Pinto Creek mine. Assessment work done, 1914. Company endeavoring to raise \$25,000 for sinking shaft to prove ore in commercial quantities.

McMILLEN-STONEWALL MINING CO.

ARIZONA

Globe, Gila Co., Ariz. V. Y. Smith, pres. and gen. mgr.; C. N. Lightle, sec.-treas.

Inc. March 27, 1907, in Arizona. **Cap.**, \$1,000,000; shares \$1 par.

Lands: 34 claims, in the Richmond basin, 16 miles N. E. of Globe, carry 3 miles of the strike of the Stonewall Jackson vein, of 25 to 35' average width.

Property: includes the Stonewall Jackson mine, worked 1876-83, with an estimated production of about \$500,000 of silver ore, of high average grade.

Development: by the 300' three-compartment McMillen shaft and the old 600 Stonewall Jackson shaft, latter showing no stoping done below 230'. The mine is said to have considerable ore carrying 5 to 50 oz. silver per ton, with about 40,000 tons of discarded silver ore on the old dumps.

Equipment: includes an old stamp mill and a small cyanide plant. A full and favorable report on the property was made, May, 1912, by R. B. Wagner.

In 1914 property was bonded to G. H. Hayes and explored by diamond drilling, which proved unsatisfactory owing to the broken nature of the ground.

MIAMI CONSOLIDATED MINES CO.

ARIZONA

Office: Miami, Ariz., 110 Nassau St., New York, and 1050 Old South Bldg., Boston, Mass.

Officers: J. S. Cook, pres.; J. A. Pinyan, J. H. Thomson, Theo. Phillips, G. J. Davis, Irva Linley, J. B. Kendall, A. E. Gilmore and E. G. Schulze, directors; J. H. Dockweiler, cons. engr.

Inc. 1916 in Arizona. **Cap.**, \$2,500,000; shares \$1 par; 1,336,000 issued. Security Transfer & Registrar Co., New York, registrar.

Property: about 1,200 acres S. of and adjoining Inspiration Consolidated, Southwestern Miami, and Inspiration Needles properties at Miami,

Ariz. Originally held by 19 different owners. In 1915, prospectors shipped 272 tons of 2.6 to 5% copper ore, in 1916, 100 tons of rich ore, and previously 500 tons of .3 to 6% ore, all coming from two well-defined areas; north-central and southern. Prospectus was modest enough to inspire confidence.

Development: churn-drilling under way in 1917. No. 1 hole in May, 1917, was down about 1,000' and is said to have passed through sulphide ore at 420'; No. 2 found sulphides at 585', this ore understood to be an extension of the Live Oak orebody of the Inspiration Co.

Property warrants further drilling to determine extent of orebody.

MIAMI COPPER CO.

ARIZONA

Office: 61 Broadway, New York. **Mine office:** Miami, Gila Co., Ariz.

Officers: Adolph Lewisohn, pres.; J. Parke Channing, v. p.; Sam A. Lewisohn, treas.; preceding, with Hermann Sielcken, J. H. Susmann, Wm. H. Nichols, Walter T. Rosen, F. W. Estabrook, B. Hochschild and Theo. L. Herrmann, directors; Herman Cook, sec.; B. Britton Gottsberger, gen. mgr.; F. W. MacLennan, asst. mgr.; F. W. Solomon, mill supt.; R. B. Yerxa, asst. mill supt.; W. F. Williams, chief clerk; Arthur Stonham, auditor.

Inc. Nov. 30, 1907, in Delaware. **Cap.**, \$3,000,000; shares \$5 par; increased Nov., 1909, to \$3,500,000, and again increased Aug., 1910, to \$4,000,000; issued, \$3,735,570. Of this last increase in capitalization, 60,000 shares were offered to stockholders at \$18 per share. Of the issued stock, 300,000 shares were given, Nov., 1907, in payment for lands; 200,000 shares were issued April, 1908, at \$5 per share; 100,000 shares were issued Aug., 1908, at \$10 per share; 60,000 shares were issued Aug., 1910, at \$18 per share, and of the balance, 88,236 shares were set aside for conversion of bonds, and 52,886 shares remain unissued. Debentures, \$1,500,000 first-mortgage 10-year 6% gold bonds have been retired.

The company is controlled, through stock ownership, by the General Development Co. Mechanics & Metals National Bank, New York, and Old Colony Trust Co., Boston registrars; Bankers Trust Co., New York, and American Trust Co., Boston, transfer agts. Shares are listed on the New York and Boston Stock Exchanges. Annual meeting, third Wednesday in April.

Comparative General Balance Sheet:

Assets:	Property & Equip.	Devel.	Metal on Hand	Other Current	Stock Invest.	Total
1916....	\$4,582,483	\$1,207,071	\$5,419,056	\$1,893,412	\$100,000	\$13,202,022
1915....	4,593,765	1,416,994	3,017,566	299,163	100,000	9,427,488

(a) Premium on shares, less expense of issue.

Dividends: started in 1912, were paid regularly until Oct., 1914; resumed in May, 1915, at rate of 50c, and increased 25c each quarter since: \$1.50 per share in 1912; \$2.00 in 1913; \$1.50 in 1914; \$2.25 in 1915; \$5.75 in 1916; \$8.50 in 1917.

Property: 222 acres, mining claims, patented, 555 acres held for the mill and power plant and 345 acres for water rights, in the Miami district, 6 miles west of Globe. Claims show an area of silicified schist at and near a contact with a great intrusive body of granite, known as Schultze granite. The altered schist belt averages about 1,200' in width and has a generally

E.-W. direction. The granite merges into granite porphyry at its borders, and this and offshoots, or dikes of the granite in the schist, are mineralized along the ore belt. This is seen in a dike with E.-W. strike, of 40 to 60' width, mineralized in the same manner as the schist.

The schistose area is netted with contraction fractures and later fissuring due to metasomatic changes of volume, accompanying mineralization and alteration. The ore belt is marked by silicification and intense alteration of the schist, a change that fades out into natural gray schist a few hundred yards north of the Miami and Inspiration mines. The ore zone is oxidized and leached to an average depth of 210', this part containing small seams and veinlets of oxidized ore. Below this leached belt a few feet of mixed ore is succeeded by the zone of disseminated glance, a rather soft, much altered rock, specked with tiny glance grains and films.

Mining methods: the mine contains two separate orebodies known as the Main and Captain. In the former, topslicing produces 3,000 tons per day; in the latter, which consists of lower-grade ore, a system of shrinkage stoping with undercutting and caving of the pillars is used. The production by this method is also approximately 3,000 tons per day.

In the topslicing method, haulage levels are laid out 150' apart vertically, with drifts spaced 50' apart horizontally, and along these drifts, raises to the slicing levels are spaced 50' apart. One sub-level 50' above the haulage level is installed for the purpose of distributing air from the fans through the raises to the various slices. The slices are mined in blocks 250' square and 10' high. Each block is a unit in itself, being served by its own supply-raise and manway. The extreme horizontal dimensions of this orebody are 1,000'x750'.

The Captain orebody is about 350' thick with extreme horizontal dimensions of approximately 500' square. This is developed by a haulage level below the orebody, and hand tramming levels at suitable vertical intervals above the haulage level in the orebody. The hand tramming level consists of drifts 25' apart, with drawing off chutes spaced along them at intervals of $6\frac{1}{4}$ ' apart on the alternate sides of the drifts, thus tapping the orebody at intervals of $12\frac{1}{2}$ ' apart in all directions. The ore is soft, and caving is induced by putting up narrow shrinkage stopes at right angles to the drawing off drifts, and subsequently caving the pillars between them by undercutting. The ore is drawn off from the chutes uniformly and trammed in 20 cu. ft. cars and dumped through raises to the haulage level, where it is transported to the shaft in trains made up of 30 cars of 3.3 tons capacity, by 6-ton electric trolley locomotives.

Development: has been by extensive underground operations, supplemented by churn drilling. Up to the end of 1916 drill holes of 624' average depth had been drilled to the number of 92. Drill holes were put down at the corners of 200' squares. Drill borings in the vicinity of the mine have shown commercial ore to at least 115' additional depth below the 720' level of the mine.

The mine is worked by a very large main shaft with 3 others sunk during prospecting operations and development. The latter are known as No. 1, No. 2 and No. 3 shafts. No. 2, with 3 compartments, is 720' deep, and is sunk in about the center of the mineral deposit. All of the ground around this shaft has been mined practically to the 420' level and use of shaft has been discontinued. No. 3 shaft, 2,150' N. W. of No. 2., has 3 compartments and is 422' in depth, sunk through surface capping into ore. No. 1, the first shaft put down on the property, was stopped at 210' but in 1913 was deepened to 515', and a tramming level prepared for stoping and ore extraction.

The No. 4, or main working, 4-compartment shaft, equipped for ultimate production of 8,000 tons of ore daily, is sunk outside the proven mineral zone in order to be immune from caving and is bottomed in conglomerate at depth of 710'. It is 12x16' inside of timbers with 14x18' outside dimensions, and framed with Louisiana long-leaf yellow pine, preserved by the use of 12 lbs. of creosote per cubic foot.

Development: work in 1916 amounted to 42,118', as compared with 21,746' in 1915. Total amount of underground workings at close of 1916 amounted to 290,678'.

Ore reserves: Jan. 1, 1917: figured at 16,400,000 tons of 2.4% sulphide ore and 28,000,000 tons of 1.06% sulphide ore. In addition there are 6,000,000 tons partially developed mixed sulphide and oxide ore of an approximate grade of 2% copper. These figures are reliable, because of the unusually thorough manner in which the ore has been developed and blocked out and the well-known conservatism of the management. A very large part of this ore is actually blocked out underground, and the estimated average percentage is based upon thousands of careful assays, made of samples taken at 5' intervals, throughout the workings. It is probable that further development of the mine will develop more or less additional ore, possibly above what is considered the present payable limits.

Power Generation: In the power house are three 4-cylinder, triple expansion engines direct connected to three 1,000 k. w., 3-phase, 25-cycle generators; two 4-cylinder, triple expansion air compressors, with a capacity of 4,000 cu. ft. of air per minute at 90-lb. initial pressure. Steam is supplied from the boiler house by five 600 h. p. water-tube boilers producing steam at 190-lb. pressure and 100° superheat. At the present time additions are being made to the power plant, consisting of two turbo-generators of 4,000 k. w. capacity, and two 600 h. p. boilers will be added to the boiler plant.

The main shaft has 2 Nordberg hoists, the larger for raising ore having 2 drums of 10' diameter with 55" face, capable of handling 1,000' of 1½" rope. An auxiliary hoist has 16x16" cylinders with a drum of 8' diameter and 6' face for hoisting the man cage. The ore hoist raises two 7½-ton skips which are dumped directly into the pockets of the crusher building.

The crusher building, at No. 4 shaft, of 6,000 tons daily capacity, has Chalmers-Williams crushers, breaking ore to 1¼" size, the product being fed through two 4x10' trommels to four 62x18" rolls that crush oversize to half-inch cubes. Ore then goes by belt conveyor, Miami type, heavy duty Traylor, to the mill bins.

The concentrator, originally designed by H. Kenyon Burch, with initial capacity of 2,000 tons daily, since increased by remodeling to 6,000 tons daily, is on a hillside south of the ore deposit, permitting gravity handling, and with a large acreage nearby, available for tailings. The mill building is of steel and stands on concrete foundations and in interior construction steel and concrete are used almost exclusively.

Ore treatment: in the crusher building ore is reduced by gyratory crushers and rolls to pass a ¾" hole, and is then delivered by belt conveyors, equipped with automatic weighing device, to bins behind the mill, with a total capacity of about 10,000 tons.

The mill proper is divided into six sections described as follows: from the bins, ore is carried by belt conveyor to an 8'x36" Hardinge mill loaded with 4" balls. The product of this mill passes to a Dorr classifier, where the finished product made up to this point is separated. The oversize from this classifier is divided between two 8'x30" Hardinge mills loaded

with 2" balls, each operating in closed circuit with a Dorr classifier, and in these, the reduction of the entire feed to finished size (minus 48-mesh) is completed. The ore-pulp is then subjected to treatment by flotation in pneumatic flotation cells, which are a modification of the original Callow design. These cells are fitted with air bottoms covered with a porous medium through which is admitted air for aeration of the pulp. The total area of air bottoms in one section is 539 sq. ft. Air is supplied by a Root's blower with a capacity of 5,000 cu. ft. of air per minute at 6-lb. pressure, driven by a 150 h. p. motor. After flotation, the sand contained in the flotation tailing is subjected to treatment on Deister sand and slime tables. Concentrates pass through tunnels to the concentrate handling plant. The original plant consisted of round tanks with filter bottoms subjected to vacuum, but this is no longer used, and concentrates are now prepared for shipment by filtering. This plant consists of four Dorr thickeners 60' diam. by 12' depth, from which the thickened product passes to three 12' Oliver filters. From these the concentrates are delivered by belt conveyor direct to railroad cars.

The above description represents the latest flow-sheet adopted for the plant, and will be in full operation early in 1918.

For the past year, a 100-ton experimental plant has been in operation; in this the remodeled flow-sheet was worked out. Experiments on the treatment of mixed oxidized and sulphide ore are also being carried out in this plant, and the first steps for the handling of such ores will probably soon be decided upon. Concentrates produced in the mill average about 42% copper and are being shipped to the International smelter at Miami.

Water supply for the mill comes from the Old Dominion mine at Globe, and from two 16" wells equipped with centrifugal pumps, at the lower end of the Miami wash. Here is the main pumping plant, equipped with two Nordberg pumps of a capacity of 1,250 gal. per minute each. Water is delivered to the mill through a 14" pipe to two steel storage tanks with a capacity of 500,000 gal. each.

Buildings include machine shop, warehouses, steel change house, store, boarding house, bunkhouse and upwards of 150 frame dwellings for employes, all lighted by electricity. There is a substantial office building, erected at a cost of \$15,000, a club house and recreation hall, and a hospital owned jointly with the Inspiration Consolidated Copper Co.

Early in 1917 a Y. M. C. A. building was erected in the town of Miami at a cost of \$85,000. This is operated by the Industrial Branch of the Y. M. C. A., and membership is open to all residents of the district.

Mine is served by an extension of the Arizona Eastern railroad from Globe to Miami.

In the Miami district the basis of wages for all workers is by sliding scale based on the price of copper, the minimum for miners being \$3.50 when copper sells at 13c per lb., and 25c is added for each 2c increase in the price of the metal.

Production: begun March, 1911—

	Tons	Oper. Cost p. Ton			%	%	% Cu.	Lbs. Cu.			Cost	Sellin ^g

(a) Smelter returns.

Production: for 11 months to Dec., 1917, was 38,096,812 lbs. Output in 1917 will be about 12,000,000 lbs. short on account of labor troubles started early in July. Resumption on a small scale started early in Sept. I. W. W. and Union recognition were the basic troubles.

In 1914 the Mineral Separation Co. brought suit against the company for infringement of patent, and in the final decision given in 1917 by the U. S. Circuit Court on appeal, Miami was declared to have infringed the M. S. patents. In 6 months of 1917 Miami produced concentrates worth \$1,958,122 by flotation. The Miami is a property of demonstrated worth and the management is thoroughly experienced and capable. The stock is a first-class investment, with an assured long life for the mine. Company is particularly free in giving information concerning all operations.

MIAMI MOTHER LODE MINING CO.

ARIZONA

Address: Miami, Ariz.

Officers: W. Schafer, pres.; F. W. Solomon, v. p.; G. D. Barclay, sec.-treas., with A. Reid, E. Schafer, H. W. Faust and H. E. Gragge, directors.
Inc. in Arizona. Cap., \$5,000,000; shares 50c par.

Property: consolidated claims of Manitou and other companies, totaling 1,100 acres, in Miami district, Ariz.

Development: by 325' shaft said to have cut 18" vein on the 200' level and disclosed several lenses of ore in other workings.

MIAMI NEEDLES COPPER CO.

ARIZONA

Idle, and probably dead. **Last address:** Globe, Ariz.

Officers: D. R. Williamson, pres.; F. Beston, v. p.; F. W. Ham, sec.-treas.; the above and Geo. J. Stoneman, directors.

Inc. 1912. Cap., \$500,000; shares \$5 par.

Property: 11 claims on Needle mountain, about 5 miles west of Miami, slightly developed, shows altered schist and Schultze granite, the former with evidences of mineralization along narrow belts. Much of the group is covered by barren Gila conglomerate.

Is apparently succeeded by Inspiration Needles Copper Co., which see.

MOUNTAIN CONSOLIDATED MINING & MILLING CO.

ARIZONA

Address: Box 1899, Globe, Ariz., and G. B. Reed, Payson, Ariz.

Officers: G. B. Reed, pres.; J. W. Reed, v. p.; W. B. Haynie, sec.; A. T. Hammons, treas., with W. H. Shenk, A. C. McKillop and J. Nugent, directors.

Inc. March 22, 1917, in Arizona. Cap., \$3,000,000; shares \$1 par; 1,285,000 issued.

Property: 66 claims, 1,260 acres, in Payson and Brown's districts, Gila Co., Ariz. Claims said to show gold-silver-copper-lead-vanadium quartz veins in schist, slate and diorite. Ore occurs as streaks. Copper minerals are sulphides.

Development: by 214' shaft and 270' tunnel. Estimated reserves are 36,200 tons, but as only 98 feet of lateral work had been done to June, 1917, this amount must include probable ore based largely on outcrops. The Black Rattler claims in the Brown district are reported to have a silver-copper vein 10,500' long and from 40 to 100' wide, in a slate-schist contact, which outcrops from 50 to 75' above the surrounding country. Proposed to install a hoist and 10-ton mill.

NEW DOMINION COPPER CO.

ARIZONA

Office: 321-25 Owl Drug Bldg., San Diego, Cal. **Mine office:** Globe, Ariz.

Officers: R. E. Vandruff, pres.; B. F. Baker, v. p.; D. F. Mayfield, sec.,

with W. S. Vandruff and O. H. Reinholt, directors; R. W. Stephens, treas.; O. H. Reinholt, cons. engr.; Henry H. Holden, supt.

Inc. Sept. 29, 1916, in Ariz. **Cap.**, \$2,000,000; shares \$1 par; 1,030,000 shares issued.

Property: 27 claims, 500 acres the Mallory mine, Mills College group, and Baker group, immediately adjoining the Old Dominion and Iron Cap mines on the N. and W. of the latter, 2 miles from the center of Globe. All but 6 of the claims are patented.

Geology: similar to that of the Old Dominion, where the principal oxidized ore is cuprite. The ore occurs in lodes or veins, masses in limestone, and irregular mineralization of shattered rocks. Some sulphide ore has been found along a fault-vein on the 450' level. The limestone area, according to the surficial map of the U. S. Geol. Survey, is much greater than that of the Superior and Boston, but slightly less than that of the Old Dominion.

No large orebody has been blocked out yet, but surface ores show high silver values and copper up to 21%. The former operator shipped several carloads in 1916, averaging 8.31% copper.

Development: the original locator of the main group sank several shallow shafts and extracted considerable silver ore in the '70's and early '80's. The Globe Consolidated sank 800' 10 years ago on the site marked I. X. L. or Mallory shaft on the Geol. Survey maps. Altogether over 4,000' of development work had been done before present owners took charge. Since Sept., 1916, they have retimbered the 2-compartment shaft to 700' and cleaned out all the levels so that new crosscutting and drifting could be resumed. Plans call for a 3-compartment shaft $\frac{1}{2}$ mile N. W. of the old shaft, and a 1,400' tunnel through the ridge between these shafts to explore the limestone and facilitate communication after the railway-spur reaches the new shaft. Diamond-drilling will probably be carried on from the lower workings.

Pumping: no expense has been incurred in recent years for unwatering, due doubtlessly to the proximity of Old Dominion workings, which are now 1,000' deeper.

Equipment: includes a modern machine shop, a 400 h. p. steam plant, duplex Prescott pump, 6-drill compressor, etc. Altogether almost \$50,000 worth of improvements have been made during the 5 months, Sept., 1916, to Feb., 1917.

Production: much silver ore in early days. Complete statistics of copper production are not available. About 150 tons of good ore has been mined since Sept., 1916, only incidentally to the clearing out of the old workings, about 10,000 tons of ore expected to be mined and smelted at Old Dominion between Aug. and Dec., 1917. Distance to Old Dominion smelter about $1\frac{1}{2}$ miles by good wagon road.

NEW DOMINION MINES CO.

ARIZONA

Idle and no record of recent operations available.

Address: care Sydnor & Williams, Bellevue, via Miami, Gila Co., Ariz.

Inc. 1905. **Cap.**, \$1,000,000; shares \$1 par.

Property: about 400 yards west of the Gibson mine, is said to show a 4' vein in schist, opened by a 240' incline shaft. After 2 years of work this vein, carrying chalcopryite ore averaging 23% copper, was struck in a crosscut 200' from the tunnel face.

NORTH DOMINION C. MNG. & DEV. CO.

ARIZONA

Office: Hamil Bldg., Globe, Ariz. Mine at Radium Station, $3\frac{1}{2}$ miles from Globe, Gila Co., Ariz.

Officers: L. L. Lichtfield, pres.-act. treas.; A. Billard, v. p.-act. sec.; with Wm. Richards, W. H. Mercer and C. S. James, directors.

Inc. July 31, 1916, in Arizona. **Cap.**, \$5,000,000; fully paid and non-assessable; 2,750,000 issued.

Property: 42 claims, about 800 acres, mostly on the east side of Pinal Creek, 3 miles north of Globe. The area is outside of the Globe district proper and is several miles from the producing mines of the Globe and Miami districts. Company states that it has spent \$20,000 on development to Dec., 1917.

Geology: claims are said to show diabase and diorite cut by a mother lode and offshoots from it. This lode is reported to be 20 to 80' wide and to carry oxidized ores of copper with some vanadium, as well as silver and gold values.

Development: consists of 12 prospect shafts from 20 to 115' deep and 6 crosscut tunnels, the total results of 12 years' work, according to company's prospectus.

A 3-compartment shaft was down 115' in Nov., 1917.

A report by J. E. Hurd, E.M., states "there is not in the whole district a property capable of producing a greater quantity of ore rich in the metals, as the N. D. C. M. & S. Corp., which with careful management can be made to furnish work for several thousand people and to pay yearly very large dividends for a great number of years on the large and rich bodies of ore known to exist."

Such statements are not only humorous but in our opinion are gross exaggerations and not warranted by the limited development work done to date.

Two carloads of ore averaged 8½% copper in 1917.

NORTHWEST INSPIRATION COPPER CO.

ARIZONA

Address: A. H. Hammond, mgr., Miami, Ariz.

Officers: L. J. Overlock, pres.; C. E. Lucas, v. p.; A. H. Hammond, sec.-treas., with J. P. Glass, J. D. Houston and A. C. McKillop, directors.

Inc. Jan. 31, 1916, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; 750,000 in escrow until 300,000 are sold.

Property: 23 claims, 483 acres, at Miami, Ariz., adjoining Inspiration Consolidated Copper Co. for about 4,500' on the north, and less than half a claim from the Black Warrior mine on the west. Examined by Carl Trieckka and A. H. Hammond.

Claims reported to show a deposit of disseminated copper ore in schist. A shaft is being sunk 500', after which a N. drift will be run to cut the Black Warrior and Black Copper veins.

OLD DOMINION CO.

ARIZONA

Office: 50 Congress St., Boston, Mass.

Officers: Jas. Douglas, pres.; Chas. Sumner Smith, v. p., with Cleveland H. Dodge, Jas. McLean, Arthur C. James, Chas. S. Smith and J. Waldo Smith, directors; W. M. Bradley, clerk; C. H. Altmiller, asst. clerk and treas.

Inc. Jan. 15, 1904, in Maine. **Cap.**, \$8,750,000; shares \$25 par; \$7,333,825 issued and fully paid. Annual meeting last Wednesday in January. Stock listed on Boston and New York Stock Exchanges.

Dividends: 50c in 1905 and 1906; \$1 in 1907; 50c in 1908; \$1.50 in 1909, 1910 and 1911; \$4 in 1912; \$5 in 1913; \$4 in 1914; \$5 in 1915; \$12 in 1916; a total of \$10,840,714. To Oct., 1917, \$7 in dividends have been paid. Dividend rate reduced to \$1 quarterly, Sept., 1917.

The company is a securities-holding corporation only, organized to promote the operation of the Old Dominion Copper Mining & Smelting

Co. and United Globe Mines properties. These two companies are operated individually, but with a free exchange, upon an equitable basis, of ores for smelting and fluxing. On Jan. 1, 1917, the Old Dominion Co. owned 155,353 shares or \$3,883,825 out of \$5,000,000 stock issued by the Old Dominion Copper M. & S. Co. and the entire stock, \$2,300,000, of the United Globe Mines.

Income account for 1916 shows net income of \$3,532,126. Dividends paid in 1916, were \$3,520,236, compared with \$1,466,765 in 1915. The surplus was \$11,890, which, with \$355,696 surplus, Dec. 31, 1915, leaves \$367,586 surplus, Dec. 31, 1916.

The stock represents ownership in subsidiaries producing over 40,000,000 lbs. of copper annually, at a cost of about 11.7c a pound.

OLD DOMINION COPPER MINING & SMELTING CO. ARIZONA

(Controlled by stock ownership) **Office:** 50 Congress St., Boston, Mass. **Mine and works office:** Globe, Gila Co., Ariz.

Officers: Chas. Smith, pres.; Chas. G. Lund, v. p.; Chas. H. Altmiller, sec.-treas.; preceding with J. T. Herrick, E. P. Ricker, J. Waldo Smith and F. T. Bulmer, directors; W. C. McBride, gen. mgr.; I. H. Barkdall, mine supt.; H. H. Colley, smelter supt.

Inc. July, 1895, in New Jersey. **Cap.,** \$5,000,000; shares \$25 par; issued \$4,050,000. Stock listed on New York Exchange. Annual meeting, first Wednesday in April. Is controlled through ownership of 155,353 shares of the 162,000 shares of issued stock, by the Old Dominion Co.

Dividends: resumed July, 1907, after an intermission of 12 years, have been \$1.25 per share in 1907, \$1 in 1908, \$3 in 1909, \$3 in 1910, \$3 in 1911, \$4.50 in 1912, \$5 in 1913, \$2.75 regular and a special dividend of \$10 per share in 1914; \$5 and a special dividend of \$1.50 in 1915; \$12 in 1916; total to Dec. 31, 1916, (33 dividends), \$8,424,000. Gross earnings for 1916 were \$5,064,500; net earnings \$2,670,595. Surplus Dec. 31, 1916, was \$954,327.

Assets: Dec. 31, 1916, \$9,561,899, including mines, \$3,421,807; plant, and gen. construction, \$3,571,802; cash accts. receivable securities, and copper on hand, sold but not paid for, \$2,568,290.

Liabilities: capital stock, \$4,050,000; accts. payable and unpaid dividends, \$748,334; surplus acct., \$4,763,565.

The surplus account consists of: reserve against special fund voted for dividend, \$163,428; reserve for plant renewals (neither asset nor liability), \$2,207,593; mine renewals, \$1,438,216; profit and loss \$954,327; total surplus, \$4,763,565.

The company was engaged for years in litigation with A. S. Bigelow and the estate of Leonard Lewisohn suing for recovery of secret promotion profits. This has been settled for \$900,000 by the Leonard Lewisohn estate and by a judgment for \$2,223,722 against A. S. Bigelow rendered by the Supreme Court. The securities turned over by Bigelow have yielded 2 "special dividends," the first for \$10, the second for \$2. There will be another and final one of not more than \$1.

Property: 38 mining claims and fractions, 5 mill site claims and 4 placer mining claims, all patented; included in these is the Old Dominion mine at Globe; the Old Dominion and Keystone claims, 3½ miles north of Globe and the Continental mine at the head of Webster gulch, about 18 miles west of Globe; also the Chicago & New York group of 60 acres and the Geneva mine.

Geology: at the Old Dominion mine, the principal ore zone occurs along a big fault vein having a N.-E. strike with sharp easterly dip. The hanging wall is limestone and quartzite, with footwall of diabase of more recent age, faulting evidently occurring both before and after the intrusion

of the diabase. The ore favors the hanging wall, but also occurs in lenses along the bedding planes of the limestone and in shattered quartzite, the largest lens yet developed being 60x100x200' in size. The oxidized ores are mainly cuprite, associated with a little malachite and chrysocolla, in a gangue of iron oxides and quartz.

Sulphide ores first appear at a depth of about 350', as chalcocite, with gangue of pyrite and quartz, the lower workings also showing chalcopyrite. All ores are more or less argentiferous, and, as a rule are highly silicious, requiring heavy lime and iron fluxes in smelting. The mine shows large sulphide ore shoots on the 14th level and below, and has improved wonderfully in the deeper workings opened up in the past few years.

The orebody under Pinal creek shows oxidized ores up to 20% in copper tenor, on the 8th, 9th and 10th levels, with chalcocite of even better tenor on the 11th level.

Development: principal mining developments of the past few years have been at the western end of the mine, which furnishes $\frac{3}{4}$ of the smelting ore mined. On the 15th and 16th levels the vein is broken and buncy. On the 17th and 18th it is 35' to 40' wide, but of concentrating tenor.

The east side workings on the 14th, 15th and 16th levels develop the Gladiator orebody, and production, nil in 1913, was 30,000 tons in 1916. Development in 1916 totaled, 23,314'. In addition 1,305' of churn-drilling was done.

In blocks 8, 9, 11 and 12-W, 17th level, considerable work is to be done in exploring this favorable looking zone. On No. 18 level the foot-wall drift was extended W. into block 12-W, and a crosscut in 10-W cut 80' of 3% concentrating ore.

Mine is now developed down to the 1,800' level, where the workings show a wider orebody both east and west than was found on the 1,400', with no sign of diminishing values of size below the bottom workings of the mine.

No important changes have been made in mining methods and the heavy wet ground on the west side is still worked by square sets and filling, while the more solid ground on the east side of the mine is stoped by cut and fill without timber.

The "A" shaft, or main working shaft, on the eastern side of Pinal creek, in the west section of the mine, is connected with the principal workings by underground trolley lines, including a line to handle the ore of the Gladiator mine, which has yielded a notable quantity of smelting ore, and large quantities of concentrating ore. Ore extraction on the east side is mainly from the 1,200' 1,400' 1,500' and 1,600' levels; on west side from the 900' to 1,600' levels. Large ore pockets were cut in 1915 at these levels. "A" shaft has 5 compartments, 2 equipped for skip hoisting, 2 with cages for lowering men and supplies, and 1 for air and steamlines, water columns and electric cables. Ore and waste, hoisted to surface, is handled in skips.

Pump shaft was lined with concrete from 10th level to surface in 1916.

Equipment at "A" shaft includes a steel engine house, built 1910, having a 17"x31"x48" Nordberg compound hoist, good for 2,000' depth.

"B" shaft, on the eastern side of Pinal creek, bottomed on the 14th level, has 4 compartments. "C" shaft has a 100,000 cu. ft. fan for ventilation, and is bottomed on the 14th level. "D" shaft, 300' deep, is located on the western side of Pinal creek, about 2,000' west of the most westerly previous workings. The "K" shaft, 1,400' deep, also has a ventilating fan. The Transit shaft is about $\frac{1}{8}$ mile east of "A." The Kingdon (1,200') and Grey shafts, main working shafts of the United Globe Company, are con-

nected with the 1,200' level of the O. D. mine. The Grey shaft has a 75 h. p. Wellman-Seaver-Morgan electric hoist. Property has a number of smaller shafts and several tunnels, not in present use.

Pumping: the mine is very wet, the daily average amount of water pumped being nearly 7,000,000 gals. in 1916. During Feb., 1916, as high as 11,501,907 gals. were pumped in 24 hours. The company sells part of the water pumped to the Miami C. Co., but receipts from this source reimburse it only to a slight extent for the pumping expense.

During 1916, 2,523,870,000 gals. of water was pumped to surface. The Miami Copper Co. bought 720 million gals. for use in its concentrator.

The mine is equipped with pumps of about 20,000,000 gals. capacity daily, these including a 1,500-gal. Prescott pump on the 10th level, having a 12" water column, discharging 30' above the collar of the shaft, into a launder on a trestle leading to a storage tank, whence water is drawn for use of the mill and smelter. There are 4 Nordberg steam pumps on the 12th level, having a rated capacity of 8,000,000 gals. per day, with 4 Gould electric pumps, 2 on the 10th and 2 on the 14th levels. On the 18th level there are two 1,200 gals. per minute quintuplex Aldrich electric pumps. New centrifugal pumps were added, 1916, driven by power generated by a Diesel engine.

Early in 1916 drilling in Pinal creek proved the existence of a badly broken and porous area under the creek near the mine workings. Management has been grouting this ground with slime from the mill, thus reducing flood-water entering the mine from this point.

Mill and Smelter: the mine, mill and smelter are connected by a private railway, equipped with a Porter locomotive, and 50-ton ore cars.

A new crusher plant and sampling mill were erected in 1913. Capacity 150 tons per hour. In 1914, a 600-ton concentrator, using a 300-ton flotation plant to extract copper from the slime, was completed. The old 300-ton concentration mill, erected 1909, will be maintained as a reserve for test purposes.

The smelter does custom work, and was formerly an extensive purchaser of sulphide ores for fluxing the oxidized ores of the Old Dominion and United Globe mines, but these mines developed large quantities of sulphides in the lower workings. In 1916 a much larger tonnage of custom ore was treated than formerly.

The smelter has 8 double storage bins, holding 1,000 tons of coke, limestone and ore. Mixing, weighing and charging are done automatically, requiring a force of only 4 men. There are 5 blast furnaces, 3 being 44"x198" at the tuyeres, and the other 2 being 44"x231", set tandem, with settlers between, charged automatically from side-dumping cars. The furnaces have a nominal capacity of about 2,400 tons daily, but one furnace is held in reserve. Fuel is New Mexican coke, from the Dawson Coke Co. The smelter is served by an electric locomotive and three 3,000-lb. tilting cars for charging, with a steam locomotive and dump-cars for slags.

In the converter department acid converting was abandoned in Jan., 1913, and one stand of the basic converter type has handled all of the production since that time. The basic converter has been particularly successful at the Old Dominion plant. A shell removed in 1915 from the stand had been there for 30 months without patching and had during that time produced over 70,000,000 lbs. of copper. Shells are handled by a 40-ton electric traveling crane. The converters take 50% matte, and turn out blister copper of 99.5% copper with small silver values.

The power plant at the smelter includes a 2,300 k. w. generator and two 750 k. w. generators, direct-connected to General Electric horizontal

low-pressure steam turbines, utilizing exhaust steam. All machinery, except hoists and compressors, is actuated electrically. There is a 30-drill Nordberg compound air compressor, with intercooler and water-jacketed air cylinders, and a complete electric light plant. Within the last three years a 5,000 cu. ft. air compressor has been installed. Furnace blast is supplied by Connersville blowers of 45,000 cu. ft. per minute aggregate capacity and an 18,000 cu. ft. Nordberg air compressor furnishes converter blast. Fuel oil is used for the boilers. Power in 1916 cost \$74.14 per h. p. year, an increase of \$3.33.

Production: smelter production is larger than mine production because the smelter treats ores of the United Globe and a considerable amount of custom ore.

* First half of year.

Production in 1916, included 1,240 oz. gold and 60,688 oz. silver. Cost of converting per ton of fine copper produced in bullion, 1916, was \$7.59 compared with \$5.36 in 1915.

Monthly production compares as follows (in lbs.):

	1917	1916	1915	1914	1913
January.....	3,000,000	3,121,000	1,745,000	2,797,000	2,727,000

December.....		3,270,000	2,495,000	1,700,000	2,613,000

Mine was closed down from July to September, 1917, owing to labor strikes.

Ore reserves in the Old Dominion property are sufficient for at least 2 years production at the normal rate. It is not advisable to have reserves for a longer period than this as it is too expensive to keep the ground open. Ore has been found continuously and consecutively on all levels down to the 18th, 1,400' level, and company has found no difficulty in opening ore as required. Indications are that production will increase in the future rather than decrease. Management is exceptionally capable and efficient.

United Globe Mines

Office: 99 John St., New York. **Mine office:** Globe, Gila Co., Ariz.

Officers: Jas. Douglas, pres.; A. C. James, v. p.; Geo. Notman, sec.-

treas., with C. H. Dodge, Jas. McLean, Wm. Church Osborn and E. Haywood Ferry, directors.

Cap., \$2,300,000, shares \$100 par. Is controlled through ownership of entire stock issue, by the Old Dominion Co.

Income account for 1916 was \$3,291,862 from sales of ore and lime rock, with expenses of \$1,238,785, giving net income of \$2,053,077, and a total surplus of \$479,933, Dec. 31, 1916.

Dividends: \$6.50 in 1905; \$6 in 1906; \$4 in 1907; \$20 in 1912; \$30 in 1913; \$18.50 in 1914; \$27 in 1915; \$73 in 1916; a grand total to 1917 of \$4,255,000.

Property: 60 claims and 4 mill sites, lying W. of the Old Dominion group, including the Grey, Buckeye and Buffalo mines.

Development: is by several shafts and through the workings of the Old Dominion, of which this mine is practically a part, carrying the main vein of the Old Dominion in which the greater part of the development work is centered. The Kingdon and Grey are the operating shafts. In 1916 operations were confined to ore extraction, exploration and development work on the Old Dominion, Grey and Big Johnnie veins.

Good productive ground is opened on the 800', 1,000', 1,200', 1,400' and 1,600' levels in the Old Dominion vein. The orebodies are extensive, but erratic, and the ores are decidedly silicious, but are in good demand at the smelting works of the southwest for converter charging. Practically all of the ore is treated in the Old Dominion smelter. An enormous tonnage of concentrating ore, of 3 to 4% copper, has been developed, as well as large quantities of high-grade smelting ore up to 10% in copper tenor. An underground haulage line has been installed on the 14th level E. drift from "A" shaft of the Old Dominion mine.

The Kingdon shaft is being sunk from the 18th to 20th level. This will permit the shaft to be used for hoisting and ventilating purposes down to the present lowest operating level of the mine, and will greatly facilitate mining operations on the east side. It is planned during the coming year to add at the Kingdon shaft an adequate hoisting plant, together with necessary surface and underground equipment to allow of the entire Old Dominion and United Globe tonnage being hoisted at this point in case of a shutdown at the "A" shaft.

Total development work, 1916, 18,704'.

Production:

Year	Copper Lbs.	Silver Oz.	Gold Oz.	Year	Copper Lbs.	Silver Oz.	Gold Oz.
1906.....	4,607,537	5,277		1912.....	12,252,073	124,361	789
1907.....	3,399,084	12,382		1913.....	11,348,100	119,587	1,536

(See Old Dominion Co.)				1916.....	14,852,399	128,066	1,543

206,163 tons of ore produced was shipped to the Old Dominion Copper M. and S. Co. The costs at Globe for mining, pumping, development and other expenses at the mine were \$1,211,140, or about \$5.08 per ton of ore.

In 1916, 15,379 tons of oxide ore and 187,280 tons concentrating ore were smelted.

OLD DOMINION EXTENSION COPPER CO.

ARIZONA

Office: Globe, Ariz. Walter Harris, Maud Meeth and E. S. Davis, incorporators.

Inc. Apr., 1917, in Ariz. **Cap.,** \$10,000,000; shares \$5 par. Company formed to acquire mines, ore and do a general mining business.

OLD DOMINION EXTENSION MNG. DEV. CO.**ARIZONA****Office:** Globe, Ariz.**Officers:** J. F. Chisholm, pres.; R. G. Thomas, v. p.; L. M. Greenstein, sec.-treas.; all of Miami, Ariz.; above with W. P. Geary, F. Gill and A. R. Malone, directors.**Inc.** 1916 in Ariz. **Cap.**, \$5,000,000; shares \$5 par; 474,000 in treasury. 226,000 shares given for property are in escrow for an unstated length of time.**Property:** 600 acres, adjoining and dovetailed into Old Dominion C. Co. ground, at Globe, Gila Co., Ariz. Diamond drilling started, July, 1917, to cut the Sea-Bird vein at about 800' in depth.**Development:** by tunnels and several shafts, one 125' deep, sunk in quartzite and entering limestone. A 200' drift along the quartzite limestone displacement is reported to show several pockets of ore and an average sample of the black oxide of manganese found shows 13 oz. silver.

Is a prospect.

PORPHYRY COPPER CO.**ARIZONA**

Controlled by Barney Copper Co. through ownership of 754,422 shares out of 1,500,000.

Address: P. O. Box 1419, Globe, Ariz.**Officers:** J. D. Coplen, pres.; J. B. Coplen, v. p.; W. J. Miller, sec.-treas.; above with W. H. Woodson and W. A. Neiswanger, directors.**Inc.** 1916 in Ariz. **Cap.**, \$1,500,000; shares \$1 par; 1,078,624 issued. Security Transfer & Registrar Co., transfer office.**Property:** 5 claims and 5 fractions, patented, 114 acres, in the Miami district, bought from the Barney Copper Co. and paid for in stock.

Developed by 496' shaft said to pass through 60' of carbonate ore and into chalcocite ore. Work stopped, Sept., 1917, by miners' strike.

Equipment: includes 50 h. p. hoist, and compressor.**POWERS GULCH DEVELOPMENT CO.****ARIZONA**

John Matson, supt.

Property: 23 claims in Powers gulch near Globe, Gila Co., is said to show a vein carrying bornite and chalcopyrite ore associated with pyrite. Mine idle for a long time, was reopened in 1915 and a strike of tungsten ore reported in April, 1916.**Development:** by 2 shallow shafts and 2 short tunnels.**SOMBRERO DEVELOPMENT CO.****ARIZONA****Office:** Houghton National Bank Bldg., Houghton, Mich. **Mine office:** Globe, Gila Co., Ariz. Dr. Lucius L. Hubbard, gen. mgr. Company is a syndicate, not incorporated.**Property:** on Cherry creek, west of Sombrero Butte, and about 50 miles north of Globe, is slightly prospected by adits. The mine has a small water-driven plant. Inactive.**SOUTHWESTERN LEASING & DEVELOPMENT CO.****ARIZONA**

Has a lease on a part of the property of the Warrior Copper Co., which see.

SOUTHWESTERN MIAMI DEVELOPMENT CO.**ARIZONA****Office:** 85 Devonshire St., Boston, Mass. **Mine office:** Globe, Ariz.**Officers:** Geo. F. Ruez, pres.; L. A. Thulin, sec.; W. S. Rooney, treas., with R. H. Gross, T. S. Dee, D. T. Kennedy, J. H. Blodgett and A. H. Moir, directors; F. W. Hoar, gen. mgr.**Inc.** June 24, 1911, in Arizona. **Cap.**, \$500,000, increased Feb., 1912, from \$250,000; shares \$5 par; issued 15,000 fully paid shares and 85,000 assessable shares; \$2.25 paid in. Last assessment was 25c, payable Jan. 12, 1914. The first annual report as of date Dec. 31, 1912, gave receipts since organi-

zation as \$276,084 and disbursements as \$197,162 of which \$65,944 was payments on options, leaving a balance of \$78,922. Shares are listed on the Boston curb. Boston Safe Deposit & Trust Co., registrar.

Property: 17 claims, 4 patented, adjoining the Inspiration Consolidated holdings, in the Miami district, 8 miles west of Globe, shows silicified schist, mineralized at and near the contact with granite-porphry, the orebody being an extension of the porphyry deposit opened in the Inspiration and Miami properties. Ore occurs as chalcocite disseminated in schist.

Development: by churn drilling, along the same lines followed by its big neighbors, Miami and Inspiration. Eighteen holes have been drilled, averaging about 1,200' deep and the total footage amounting to about 20,000. Ore developed in this manner was estimated by Mr. Hoar, July, 1914, at about 981,000 tons of 1.5% copper, on which a recovery of about 65% is expected and probable total ore reserves of 4,294,000 tons of 1.2% ore. Development work to prove the extension of the orebody consisted of 7,940' in holes 10 and 18 in 1913. Mr. Hoar also estimates mining costs at \$1.15, milling costs at 65c per ton, and cost of smelting, etc., at about 3c per lb.

Idle. No recent information available.

SUPERIOR & BOSTON COPPER CO.

ARIZONA

Office: Houghton, Mich. **Mine office:** Globe, Gila Co., Ariz.

Officers: Wm. G. Rice, pres.; John H. Rice, v. p.; John R. Pimlott, sec.-treas.; preceding, with Jas. W. Harrington and Geo. Kingdon, directors; A. L. Graham, supt.

Inc. Nov. 23, 1906, in Arizona. **Cap.**, \$6,500,000; was originally \$1,500,000, increased Sept. 5, 1908, to \$2,000,000; April 22, 1909, to \$2,500,000; July 25, 1911, to \$3,000,000; Sept. 30, 1911, to present amount; shares \$10 par; \$7 paid in; issued, 283,827. Company has levied 7 assessments, last one of \$1 Feb. 7, 1916. Listed on Boston Stock Exchange. State Street Trust Co., Boston, registrar; Boston Safe Deposit & Trust Co., transfer agent. Annual meeting first Monday in December.

Comparative Financial Statement: fiscal year ending Sept. 30—

	Ore Sales	Calls & Sundries	Balance Oct. 1 Prev.	Total	Total Expend.	Balance Oct. 1
1917. . . .	\$340,198	\$42,344	\$176,107	\$559,649	\$418,071	\$141,577
1916. . . .	40,501(a)	243,030	29,529	313,060	136,953	176,107

1913. . . .	153,436	268,503	81,382	503,321	428,052	75,269

(a) Lessees produced \$167,121 additional. (b) Lessees produced \$42,164 additional.

Property: 51 claims, 785 acres, 28 claims, 388 acres, patented. The Globe & Arizona tract of 22 claims was bought for \$320,000, an adjoining group of 21 claims was bought for \$46,000, and the Collins-Doyle group of 5 claims was bought for \$150,416.35, giving a total cost of \$516,416.35 for lands. The Collins-Doyle group, added 1909, adjoins the former holdings on the north, carrying the extension of the Old Dominion fault, and being well located with respect to the Great Eastern vein. The property is a compact tract next east of the Arizona Commercial, and east of the Old Dominion. Lands are about 4,200' above sea level, and about 800' above Pinal creek, at Globe. The property carries both limestone and iron ore for fluxes. It is reached by the Arizona Commercial and Arizona Eastern rail-ways, both connecting with the main line at Globe.

In 1917 the Telfair group of 12 claims, 200 acres, adjoining the Superior & Boston, was acquired for \$7,000 cash and 14,000 shares. The ground is valuable, as it is considered to have the extension of the Old Dominion vein. W. X. Osborn, cons. engr., advised this purchase.

Geology: the property shows diabase cutting through about 600' of quartzite with interbedded shale and Globe limestone. Copper ore occurs in veins filling fault fissures. There are 2 dominant fault-belts, one series including from north to south, the Old Dominion, Great Eastern or Black Hawk, Limestone, Quo Vadis, Black Oxide and Iron King fault veins, intersected at nearly right angles, by other faults of later age, apparently but slightly mineralized. Three of the veins named show ore in commercial quantities. Later development may show the Quo Vadis to be the faulted continuation of the Great Eastern; there is a possibility that both are merely the eastern extension of the Old Dominion vein. The average strike of the faults is N. 70° E., with average dip of 60° N. The oxidized zone is deep, ore opened on the 8th level including cuprite, native copper, as well as chalcocite. Malachite is found in the workings above.

Development: by 4 shafts, the McGaw, Great Eastern, Limestone and Gardner, and 1 tunnel. Underground workings total about 33,000'. New work during year ending Sept. 30, 1917, amounted to 2,782'. The Great Eastern 444' vertical shaft being poorly located, was replaced by the McGaw shaft, to the north.

The McGaw shaft is 1,400' deep, with 3 compartments. The 10th level opened at 970' corresponds with the 10th level of the Arizona Commercial mine, next west. This shaft lies 900' north of the old shaft and is sunk between the Old Dominion fault on the north and the Great Eastern vein on the south, and is planned to intersect the Great Eastern vein at depth. This is the main working shaft of the mine and does the ore hoisting for the entire property.

One of the main hindrances to mining in the past has been water, also the largest item of expense.

The Great Eastern vein on the 6th level in the McGaw shaft, showed an ore shoot 25' to 30' wide, proven for a distance of over 800'. The 8th level exposed this vein for over 400' and also showed the zone of oxidation to continue to this depth. The 10th level discloses the first sulphide ore encountered in the McGaw workings of the mine, but the 12th level shows little or no copper in this vein, as far as developed. The vein matter is heavily stained with iron, highly silicious and, when commercial, carries about 7% copper.

The Old Dominion vein is tapped by crosscuts from the McGaw shaft, on the 4th, 6th and 10th levels, where it shows only oxidized material, quite thoroughly leached, carrying slight silver values, but with promise of copper ore at greater depth.

The 318' Limestone shaft showed a 4' footwall paystreak of commercial ore on the 300' level; has not been operated for several years.

The Gardner 3-compartment vertical shaft at the southern end of the property, on the Black Oxide vein, is 435' deep; mine is now idle. The Black Oxide vein apparently is a continuation of the Buckeye fault, on which the Old Dominion has opened mines on the Buckeye, Carrie and True Blue claims.

The 1,054' Black Oxide tunnel has its portal about 1,000' S. W. of the Limestone shaft, and cut the Black Oxide vein at 670', giving a 400' back. drifts on this level showing a vein carrying micaceous hematite, with small quantities of copper, and a little shoot of smelting ore. Indications are favorable to the existence of good bodies of high-grade sulphide ore at

greater depth. The Black Oxide is 280' east of the True Blue mine of the Old Dominion, from which lessees shipped small quantities of high-grade ore for several years.

The Iron King vein, parallel with the other 4 faults of the property, shows a good gossan, and has an old 70' shaft, in leached vein material similar to that in the other faults, at similar depth.

In 1916 nearly all the work was done on the 800' level, and most of the ore came from 70' above this level.

By April, 1917, the McGaw shaft was down 1,400', and crosscutting N. for the Great Eastern vein was started; the vein was cut and found to be wide and promising. Further work is in progress. The mine was in shape to produce 2,500 to 3,000 tons of 5% ore per month. There is considerable ground yet to be explored. Some copper glance was cut on the 1,000' level in June, 1917.

Equipment: includes hoists at each shaft, aggregating 1,260 h. p. The main plant, at the McGaw shaft, has four 250 h. p. Stirling water tube boilers, a 5-ton hoist good for 1,600', and a 1,200 cu. ft. Nordberg cross-compound air compressor, with an auxiliary compressor at another shaft. The mine has three 1,000-gal. Prescott pumps.

The company owns 38 buildings, including machine shop, smithy, carpenter shop, office and warehouse, with a number of dwellings for employees. The shops are well equipped and the smithy has a Wood drill sharpener. The changing house at the McGaw shaft has steam-heated lockers, shower baths and drying racks. Buildings are lighted by electricity. Fuel is mainly petroleum, with 5,000-gal. and 12,000-gal. storage tanks.

Production: was begun Feb., 1908, and to end of 1910 amounted to 27,126 tons ore, yielding 3,846,402 lbs. copper and 94,698 oz. silver, all from the Great Eastern vein above the 6th level with the exception of about 681 tons extracted by lessees from the Black Oxide workings. Known ore reserves being exhausted, production was suspended Aug., 1910, to March, 1913, when shipments were again resumed, curtailed in 1914 and resumed March 15, 1915.

Output in the year ended Sept. 30, 1917, was 17,146 tons of ore valued at \$340,198.

The management hopes to open up reserves of sulphide ore, which, if done, should make the company a steady and profitable producer.

SUPERIOR & GLOBE COPPER CO.

ARIZONA

Idle for several years. **Office:** 3 Calumet State Bank, Calumet, Mich.

Officers: John Daniell, pres.; Fred Smith, v. p.; Chas. Chynoweth, sec.; Joseph W. Selden, treas., and Hon. Norman W. Haire, directors.

Inc. Dec., 1908, in Arizona. **Cap.**, \$3,000,000; shares \$10 par; issued, \$2,450,000, in 15,000 shares of full paid stock and 230,000 shares of stock \$1 paid. Property is fully paid for; lands were bought for \$75,000 cash and 15,000 shares of full paid stock. First National Bank, Calumet, registrar. Annual meeting, third Monday in November.

Property: 13 claims, 250 acres, include the Magnet group of 12 claims, adjoining the Mineral Farm group of the Globe Mining Co., and 1 fractional claim, of several acres. The property, 2 miles N. E. of Globe, is in the eastern portion of the Globe district, lying N. of the Arizona & Michigan and N. E. of and adjoining the Globe Mining Co. and the Yuma mine of the Old Dominion, latter carrying the Yuma-Big Johnnie-O'Dougherty fault. The outcrop of the Yuma fault, on the Superior & Globe lands, shows an iron gossan carrying copper stains for about 3,000'.

Development: by several old shafts of 50 to 60' depth, said to have been sunk for gold ore. Present owner has sunk a 680' vertical shaft in the

hanging of the Yuma fault, on Copper Trust No. 2 claim, about $\frac{3}{4}$ mile from the Superior and Boston mine. The shaft cuts a 5' vein carrying iron with copper stains and has about 1,100' of workings on the 650' level, the N. crosscut 522' long showing 2 veins. The Yuma vein, cut at 235' from the shaft, has 320' of drifting, with an 85' winze and a 17' crosscut to the vein from the bottom of the winze. The vein shows merely iron and manganese, with copper stains and small silver contents. In the N. crosscut, 487' from the shaft, a second vein was cut showing a width of 20' and a 38' drift thereon showed material similar to that in the other vein, neither carrying commercial values. The S. crosscut on the 650' level was driven 233' in hard diabase, developing nothing of value.

Diamond drilling was begun in June, 1910, a 350' horizontal and a 957' vertical hole being bored from the bottom of the shaft. This work was continued until early 1912, but developed nothing of importance.

Equipment: includes a 100 h. p. gasoline plant having a 60 h. p. Fairbanks-Morse hoist good for 1,000' and a 3-drill gasoline air compressor. There are 5 buildings, including carpenter shop, engine house, office and dwelling.

UNITED GLOBE MINES

ARIZONA

Controlled by Old Dominion Co., and described thereunder.

VAN DYKE COPPER CO.

ARIZONA

Address: Hoval A. Smith, mgr., Miami, Ariz.

Officers: C. W. Van Dyke, pres., with H. A. Smith, W. E. Loomis, L. D. Van Dyke and C. B. Loomis, all of Miami, directors.

Inc. Aug., 1916, in Arizona. **Cap.**, \$5,000,000; shares 50c par.

Development: drilling was started early in 1917, and 11% ore was reported between 1,100' and 1,200' in April. In September, 47' of 7% ore was reported in No. 1 hole, No. 2 hole, $\frac{1}{2}$ mile from No. 1, was down 700' late in September.

WARRIOR COPPER CO.

ARIZONA

Office: Brown Bldg., Philadelphia, Pa. **Mine office:** Black Warrior, Gila Co., Ariz.

Officers: Spencer D. Wright, pres.; Geo. H. Buchanan, v. p.; D. H. Paris, sec.; H. S. Hopper, treas., with Ernest L. Tushin, Philip Godley, W. W. Doughten, T. A. Blythe, C. Gallagher, G. B. Walker and Thos. D. Martindale, directors.

Inc. March 10, 1905, in Delaware, as successor of Black Warrior Copper Co., Amalgamated, which came to grief. **Cap.**, \$1,600,000; shares \$10 par; in \$750,000 cumulative 7% preferred stock and \$850,000 common stock.

Bonds: \$100,000, issued \$41,000, at 6%, with interest paid.

Property: 50 claims, 46 patented, about 800 acres, including the Black Warrior group and the Lost Gulch group, near the Inspiration mine. The principal property is the Black Warrior mine, a producer since 1904, located about 7 miles N. W. of Globe.

Geology: the Black Warrior property shows slightly altered schist, dacite tuff, diabase, and conglomerate, the greater part of the area being covered by schist, which is the oldest formation. The diabase occurs as intrusive dikes, and the dacite is a surface flow over both schist and diabase. The Black Warrior vein is a fault zone 30 to 60' wide, filled with crushed mineralized dacite for about 300', with a breccia of schist and some diabase below. The vein has a generally E.-W. trend, and W. pitch. The ore averages about 50 to 60' in width, though a width of 100' is shown at a number of points. This property includes the Montgomery group, with the Montgomery and Dadeville claims, developed by tunnels of about 1,000' and 1,200' length, developing extensive bodies of copper silicates and hydrated copper oxides of excellent average value.

The Lost Gulch claims show a highly altered monzonite-porphyry covering the larger part of the area, with extensive outcrops of dacite and limestone and smaller ones of diabase, general geological conditions being much the same as at the Black Warrior.

Development: the Black Warrior mine is developed by the Winnie shaft, 500' from the western boundary, and tunnels of about 1,000' and 1,200' length, opening the mine to a depth of 300', with 5 levels spaced at 50' intervals. The mine has yielded a large tonnage of high-grade ore, giving assays of 6 to 25% copper, between the 200' and 300' levels. Considerable churn drilling was done, 1910-11, 1 hole in the vicinity of the Winnie shaft being sunk 506' in schist, showing mineralization, and a 580' drill hole proved the existence of chalcopyrite, disseminated in schist, though not of commercial value. The western portion of the property was tested without favorable results by churn drill, May, 1911.

Equipment: includes a steam plant, burning petroleum. Buildings include an assay office, engineering office, smithy, carpenter shop, several dwellings, and a 300-ton shipping bin.

A portion of the property has been leased to Messrs. Fisk and Snell, who are operating the plant under the name of the Southwestern Leasing & Development Co., and shipping about 100 tons of 6% ore daily. Production is mainly from the 200' and 300' levels.

The old mill and mill site at Warrior P. O., about 1½ miles E. of the mine, was sold, 1912, to the Inspiration Consolidated Copper Co.

MORENCI, CLIFTON, GREENLEE COUNTY

AMERICAN CELTIC COPPER CO.

ARIZONA

Inc. 1912. **Cap.**, \$3,000,000; shares \$5 par; issued \$2,000,000. Is a successor of the Arizona-Morenci Copper Co. and owns all its property.

Property: 98 claims, 2,000 acres, in 9 groups in Clifton-Morenci district, Greenlee Co., Ariz. Mines are adjacent to and surrounded by the Phelps-Dodge, Arizona Copper and Shannon properties. Mill and town sites are on the San Francisco river and the Morenci Southern railway crosses the ground.

ARIZONA-CELTIC COPPER CO.

ARIZONA

Office: 504 I. W. Hellman Bldg., Los Angeles, Cal. **Mine office:** Clifton, Greenlee Co., Ariz.

Officers: B. F. Taylor, pres.; D. M. Lynch, v. p.; A. G. Shaw, sec.-treas.; preceding officers, R. T. O'Donnell, Archibald Morrison and G. M. Chartier, directors.

• **Inc.** Feb. 20, 1912, in Ariz. **Cap.**, \$3,000,000; shares \$5 par; issued 400,000.

Property: 37 claims, 768 acres, and a 1,040-acre mill and smelter site, in the Greenlee Gold Mountain district, showing 3 orebodies, 1 vein of 80' width, said to average 3% copper. Property which was formerly owned by the Arizona Morenci Copper Co., is only slightly developed. Presumably idle.

ARIZONA CONSOLIDATED COPPER MINES, LTD.

ARIZONA

Letters unclaimed by H. S. Blake, Throgmorton House, Copthall Ave., London, E. C., Eng. **Mine office:** Clifton, Graham Co., Ariz. Hon. H. A. Stanhope and Jas. H. Hosking, directors.

Inc. June 17, 1899, in Great Britain. **Cap.**, £150,000; shares £1 par; issued £135,007 paid for property and £10,000 cash working capital. Last balance sheet Dec. 31, 1915; showed cash £121; loans at call, £5,930; expenditures, £4,919; liabilities, £963.

Property: in the Copper Mountain district, bought, 1909, from Con-

tinental Finance Syndicate, Ltd., for £135,000 in full-paid stock, is said by company to be the Scioto, Lowland and Chillicothe mines. The claims are said to show a vein that is 2½ to 8' and in places 30' wide, proven for 3,500'.

Development: by 3 adits; No. 1 in ore for 55'; No. 2, 110'; No. 3, 100'. Property includes a mill site, on the San Francisco river. Claims to own six copper mines, 120 acres adjacent to properties of the Arizona Copper Co. and of the Detroit Copper Co., near Morenci, Ariz. Operations reported to have been resumed, April, 1917.

ARIZONA COPPER CO., LTD. (THE)

ARIZONA

Head office: 29 St. Andrew Square, Edinburgh, Scotland. **Board of Directors:** Hon. Lord Salveson (chairman), G. Readman, W. H. Carter, Young J. Pentland, Alex. McNab, J. L. MacLeod and Sir David Paulin; Sec., William Exley Miller. Mine and works office: Clifton, Greenlee, Ariz. Norman Carmichael, gen. mgr.; P. B. Scotland, supt. of mines; J. G. Cooper, cashier and purch. agent.

Inc. August 5, 1884, in Great Britain. (For early financial details see Copper Handbook, Vol. XI, 1914, p. 72.)

Cap., authorized, £755,000; issued £703,984 10s as follows: 160,000 "A" preference shares of 5s each, all uncalled but £7,480 10s paid in advance of calls; £316,530 preference stock; £379,974 ordinary shares (1,519,896 shares of 5s each fully paid). Profits are divided thus: 10% cumulative dividends on "A" preference less 5% interest on amount uncalled and unpaid; 7% cumulative dividends on preference stock; balance to ordinary shares.

Funded Debt: 5% terminable debentures. Amount authorized and fully subscribed £500,000, repayable at 103 May 15, 1922, or at any time after May 15, 1915. On September 30, 1914, £400,000 of these debentures had been issued. Five per cent terminal debentures outstanding, Sept. 30, 1916, £287,825. Fiscal year ends on September 30. Dividends on ordinary shares for recent years have been as follows: 2s 6d in 1908, 1909, 1910 and 1911; 3s 3d in 1912; 2s 9d in 1913; 1s 9d in 1914; 2s 3d in 1915; 4s in 1916. Balance carried forward September 30, 1916, £443,490.

Property: company owns about 4,000 acres in the mineral belt of Clifton-Morenci district. Principal producing mines: Humboldt, Clay, Longfellow, Coronado, King, Metcalf and Boulder, others in reserve or process of development. Produces about 4,500 tons of concentrating ore and about 175 tons of direct smelting ore daily. Concentrating ore is chalcocite, disseminated in porphyry, carrying about 2.45% copper. Top-slicing is principal mining method used. Metcalf mining division supplies concentrator at Clifton. Morenci and Coronado divisions supply concentrator at Morenci. All mines connected by electric haulage to main hoisting shaft at concentrator, except Metcalf, which is connected by 36" gauge steam road (Coronado R.R.) to Clifton.

Electric haulage operated by 21 6-ton Jeffery locomotives, used singly, and two-unit and three-unit. Coronado-Morenci ore train consists of 36 10-ton cars hauled by three-unit locomotive over track of 20" gauge of 50 lb. rails.

Longfellow Mining Division: principal mines, Humboldt, Clay and Longfellow. Orebodies disseminated chalcocite in porphyry dikes and faulted or brecciated areas. Mining conducted principally through adits at present. There are 8 working levels and 2 shafts. Commercial ore proven to depth of 900' below surface. Concentrates transported by gravity incline 2,515' long to Coronado R.R., thence 6.1 miles to smelter, 2.2 miles below Clifton.

Metcalf Mining Division: principal mines, King and Metcalf. Other smaller producers. King mine produces disseminated chalcocite ore from faulted areas in porphyry and granite. Metcalf mine yields oxide ore from deposits in limestone and shale and small porphyry dikes. Ores transported by gravity inclines to bins on Coronado R.R. Outlying mines served by cable tramways. Ores mined by open-pit and shrinkage underground methods.

Coronado Mining Division: principal mines, Coronado and Horseshoe. Pyramid mine in development stage. Orebodies disseminated chalcocite and surface oxide ore in porphyry dike filling fault fissure in granite. Developed by 5 shafts (deepest 1,100') and nine levels, adit level 9,400' long, 1,100' below surface, and is part of electric haulage system to concentrator at Morenci. The Coronado shaft was gutted by fire, Aug., 1917, but has been retimbered.

The reduction works now consist of two concentrating plants, No. 4 mill at Clifton, with 500 tons daily capacity; and No. 6 mill at Morenci, with 4,000 tons daily capacity. A 400-ton experimental mill for the treatment of low-grade ores is also in course of erection at Morenci. Both concentrating plants have been equipped with the Callow system of pneumatic flotation, with the necessary thickener and Oliver filter equipment for handling the flotation concentrate. An addition of 8 Dorr pulp thickeners has been made to the water-reclaiming equipment at the No. 6 plant.

The mills are equipped with steel liners, and use steel balls as a grinding medium.

Improvements under way include the installation of Allen cones for de-watering and re-grinding mill feed, and an installation of 12 Dorr classifiers.

The new smelting plant, started up early in 1914, is situated 2 miles below Clifton, on the east bank of the San Francisco River. This plant is entirely of steel, brick and concrete, and consists of a receiving bin system with a capacity of 1,000 tons of ore and 1,500 tons of concentrates, a crushing, grinding and sampling plant, and a bedding plant with a storage capacity of 20,000 tons for mixing and storing the ores and concentrates, supplementary bunker bins being provided for the fettling ores, converter ores and fluxes.

The mixed charge is fed to the roasting plant, consisting of eight 7-hearth Herreshoff air-cooled roasters, equipped for firing with coal if needed. The roaster gases pass through a large dust chamber to a central stack, and the roaster charge and dust to the reverberatory plant, consisting of 3 oil-fired furnaces 22x100' (2 operating). The waste gases from this plant pass through a set of six 712 h. p. Sterling boilers, which, with 5 oil-fired boilers, supply the steam necessary to operate the power plant. The matte is tapped into ladles handled by 40-ton cranes for treatment in the converter plant, which consists of 4 stands with 5 shells of the Great Falls type converter, 12' in diameter. The bullion produced is cast in pigs for shipment on two straight-line casting machines. Both the reverberatories and the converters are provided with suitable dust chambers, the gases ultimately discharging into a common stack. The plant is served by both standard and narrow gauge railroad, in addition to electrified industrial tracks, and is equipped throughout with belt conveyors for the transportation of material.

The power plant is housed in a brick-steel concrete structure, and consists of 3 General Electric turbines of 2,000 k. w., three 10,000 cu. ft. Nordberg blowing engines for converter air, and an Ingersoll-Rand compressor for high-pressure air; the auxiliary pumps, motors, generators, transformers, condensers, cooling towers, spray ponds, etc., necessary for operations. The plant supplies all power needed at the smelter and also, through a 13,200-volt transmission line 10 miles long, the power needed for the town of Clifton, the concentrators and mines.

Well-equipped machine, blacksmith, boiler, tin, carpenter and electrical shops are maintained, as well as a large warehouse and brick shed.

Development work in 1916, amounting to 16,255', included proving marginal or disseminated ore, 20' wide, 200' below previous lowest workings.

At the Clay mine further development work opened up a large but very low-grade orebody, not yet being mined. The Pyramid mine has had 2,000' of new work on the 6th level, and the 1,100' or Coronado adit level. In the

Coronado vein, the oreshoot is bottomed between the 7th and 11th levels, but ore reserves have been maintained by additional ore developed east of the Matilda shaft.

The Horseshoe orebody is now an important producer, and will be connected with the main haulage, or 1,100' level, in 1917. In the King mine, a shoot of 8-10% ore, 10' thick and 200' long, was found in the pyritic vein on the 3rd level.

Miscellaneous enterprises operated by the company include foundry, machine shop, saw-mill, a 30-ton ice plant and town lighting plant. The company also has general merchandise stores at Clifton, Morenci and Metcalf.

Production: for fiscal years ending September 30: 1907, 27,404,349 lbs.; 1908, 33,930,291 lbs.; 1909, 32,017,487 lbs.; 1910, 32,161,205 lbs.; 1911, 34,569,019 lbs.; 1912, 38,150,000 lbs.; 1913, 34,230,000 lbs.; 1914, 38,942,455 lbs.; 1915, 37,416,010 lbs.; 1916, 34,100,000 lbs. (operations suspended by strike five months).

ARIZONA-MAYFLOWER COPPER CO.

ARIZONA

Office: Duncan, Ariz.

Officers: Jas. E. Hay, pres.; John W. Norgrave, sec.; W. B. Duval, treas.-mgr. Steve D. Corle, supt.

Inc. 1916, in Mass. **Cap.**, \$1,000,000; shares \$1 par.

Property: 17 claims, 340 acres; 13 claims are located in the Mayflower district, Greenlee County, Arizona, and 4 claims in Steeple Rock district, Grant County, New Mexico. Ore occurs as sulphides and oxides in fissure veins, with dacite foot and limestone hanging wall; reported to average 4 oz. silver, 4.3% copper and 7 oz. silver, 14% copper. Developed to depth of 100', and equipped with compressor, drills, gasoline engine and hoist.

ASH PEAK EXTENSION MINING CO.

ARIZONA

Address: Geo. Powell, mgr.

Inc. 1917, in Arizona.

Property: 14 claims, unpatented, in the Clifton district, said to show good gold-silver values at surface. Plans development and installation of necessary machinery, 1917-18.

CHASE CREEK COPPER CO.

ARIZONA

No returns secured, 1917.

Mine office: Clifton, Greenlee Co., Ariz.

Officers: Clarence K. McCornick, pres.; H. G. Smith, treas.; S. S. Campbell, mgr.; Isaac N. Stevens, supt.

Cap., \$5,000,000.

Property: 52 claims, 1,040 acres, 8 miles west of Clifton, having a 2,300' tunnel, 6x8', on lands adjoining the Longfellow mine, cutting the Longfellow orebody, of concentrating grade, at a distance of 493', having a back of about 900', showing low-grade sulphide copper ore. Tunnel practically reaches the Coronado Railroad, permitting advantageous shipments. Was making small shipments to the Shannon smelter in 1914.

CORONADO MINING CO.

ARIZONA

Idle. Clifton, Graham Co., Ariz.

Inc. July 12, 1902, in Maine. **Cap.**, \$1,000,000; shares \$1 par. Is controlled through ownership of a stock interest of about 53%, by the Shannon Copper Co., the remainder of the stock is held principally by Phelps Dodge Corp. Officers and management are the same as those of the Shannon Copper Co.

Property: 30 claims, 400 acres, patented, near Metcalf, adjoins the mines of the Detroit Copper Mining Co. and the Coronado mine of the Arizona Copper Co., Ltd. Mine has a 2-compartment shaft, on the Garnet claim, showing some ore on the 200' level; also several shallow shafts and short tunnels.

CUPRITE COPPER CO.**ARIZONA**

Inactive. Mine near Clifton, Graham Co., Ariz.

Officers: N. W. Lord, pres.; Isaac N. Stevens, v. p. and mgr.; L. B. Kauffman, sec.; Geo. B. Kauffman, treas.; Frank A. Ray, engr.; preceding officers, and Frank B. Laine, directors.

Inc. March, 1904, in Arizona. **Cap.**, \$1,000,000; shares \$1 par.

Lands: 26 claims, 490 acres, in the Copper Mountain district, opened by shafts of 30' and 320' and tunnels of 150' and 260'. The leached zone carries isolated pockets of rich ore. Company also owns about 2,000 linear feet of strong hematitic outcrops, ranging 5 to 100' in width. Property considered promising, but company inactive, awaiting developments on adjacent properties.

DETROIT COPPER MINING CO. OF ARIZONA**ARIZONA**

Fully described under title of Phelps-Dodge Corporation.

EAGLE GOLD & COPPER MINING CO.**ARIZONA**

Address: care W. J. Riley, First National Bank, Clifton, Ariz. Mine near Morenci, Greenlee Co., Ariz.

Officers: Wm. M. McCoy, pres.-mgr.; E. V. Horton, J. R. Hampton, J. R. McRea, M. H. Kane and E. C. Bunker, all of Clifton, directors. H. A. Collins, gen. mgr.

Property: formerly known as the Gold Belt, 20 claims, 4 miles N. W. of Morenci, carries veins with copper, lead and gold ores, developed by a 40' shaft on 1½' vein of rich silver lead ore.

Equipment: includes 5-stamp gold mill.

After 5 years of idleness, property is reported active, June, 1917, and shipping two carloads of ore weekly to the Shannon smelter at Clifton.

HOME COPPER CO.**ARIZONA**

Morenci, Graham Co., Ariz.

Officers: H. J. Degener, pres.; W. A. Leonard, v. p.; W. P. Gee, sec.-treas.

Inc. April, 1901.

Property: 35 claims, 700 acres, in 2 groups, also a mill site on Eagle River. Promoters were unable to inspire confidence and could not raise enough money to prospect the property sufficiently to prove if it has merit. Not a "wild cat" but a mistake. See Vol. XI, Copper Handbook.

LESZYNSKY COPPER MINE**ARIZONA**

J. Leszynsky, owner, 32 Broadway, New York City. Mine address: Clifton, Ariz.

Property: 38 claims, 24 patented, in Morenci-Metcalf district, Greenlee Co., Ariz., showing a deposit of low-grade disseminated copper ore, said to average 2½%, with between 2 and 3 million tons developed by shafts and mine workings.

Production: during year June, 1916, to June, 1917, was 30,000 tons of 3½% copper ore. Plans 500-ton concentrator for 1918.

MORENCI BRANCH OF THE PHELPS DODGE CORPORATION

M. H. McLean, gen. mgr., Morenci, Ariz.

(For description of corporation and the Morenci holdings, see P. D. Corp'n under United States.)

The original company, organized by Captain E. B. Ward, of Detroit, a wealthy steamboat owner, who was later joined by William Church, of Denver, Colo., was called the Detroit Copper Mining Company of Arizona. After they had developed important bodies of copper ore and demonstrated that the properties were highly productive, the properties were purchased by the Phelps-Dodge interests in 1897, and consolidated with other Phelps-Dodge interests, the name was changed on April 1, 1917, to Phelps Dodge Corporation, Morenci Branch.

The history of these properties is of great interest. Originally the district was prospected by a party of 46 gold hunters from Silver City, N. M., along in 1870. Isaac N. Stevens, of Clifton, is one of the survivors of the party. They were after gold, but saw the big copper outcrops. No copper claims, however, were located until 1872, when some of these prospectors located the Arizona Central, Yankee and Montezuma mines, now the property of the Phelps-Dodge Corporation, Morenci Branch. Other locations were made in 1873 by the original prospectors. During those times the country was infested by marauding bands, several miners being killed on Gold Creek, in 1882, and an attack made on the outskirts of Morenci. In 1875 Captain Ward purchased the four claims named. In 1882 he and Church started a small smelter on the San Francisco River, six miles from Morenci, the nearest available water supply. Two years afterward the plant was moved up to the mines, to which water was pumped. The smelter was enlarged, and by 1885 its output of copper gained to 3,345,000 pounds, growing from that time to over five million pounds in 1894. In 1893, however, discovery had been made of low-grade ore of Copper Mountains, and it was largely this that made the property appear most favorable as an investment to the Phelps-Dodge interests, who purchased it in 1897. Since then the property under their administration has been one of the important copper producers of the Southwest. A railroad was built from Guthrie to Morenci, and a concentrating plant erected, and large sums expended by the company in modern office buildings, general merchandise store, and large hotel. Taking into consideration its production for 1882, the property of the Morenci Branch had a production to last year of 360,000,000 pounds copper, to which should be added several million more pounds since.

The annual output of the Morenci Branch property is nineteen million pounds of copper. In its mines and reduction plants 1,500 men are employed.

The Company's Reduction Plant, Mill and Smelter

Run of mine ore is reduced by 3 Symons disc crushers to $\frac{1}{2}$ " size. The mill feed is reduced by rolls to pass a 4-mesh screen, and is then treated to a succession of wet concentrations as follows: The total mill feed passes through 4-mesh screen and is treated on Wilfley tables with Butchart national riffles, the tailings of which are deslimed with shovel wheels and Dorr drag classifiers. The fine product of this treatment is primary slime. The coarse product is reduced to one millimeter by means of Monadnock and Marathon mills. The product is then separated by Dorr classifiers into coarse sands, fine sands and slimes. The coarse sands are treated on Wilfley tables with the Butchart national riffle; the fine sands on Overstrom universal tables, and the slimes overflow, united with primary slimes mentioned above, is treated by flotation machine of the Rork type.

Flotation reject is cleaned up by a system of Frue sand vanners. The total mill concentrates are dried by vacuum tanks and shipped to the smelter. The tailings are dewatered in Dorr tanks and the clear water returned for further use.

The concentrates are delivered to the smelter, which consists of one 500-ton blast furnace. The matte is then delivered to three barrel-type converters. The product is sold as casting copper.

A marked feature of Phelps-Dodge policy is their constant search for new fields of mineral to be held in reserve. This is notable in the Morenci district. The company has spent large sums in such acquirements and the development of the same. At the same time, they employ the very latest methods of ore treatment and installing up-to-date machinery. By these methods the Morenci properties are now a very valuable part of the Phelps-Dodge mining family.

NEW ENGLAND & CLIFTON COPPER CO.**ARIZONA**

Sold to Phelps-Dodge interests. Described in Copper Handbook, Vol. XI.

NEW YORK-ARIZONA GOLD & COPPER CO.**ARIZONA**

Idle. Address: Morenci, Graham Co., Ariz.

Officers: A. L. York, pres.; J. F. Cleaveland, v. p.; C. E. Tyler, sec.-treas.; John C. Molder, gen. mgr.; J. R. Wester, supt., at last accounts.**Inc.** April 15, 1907, in Arizona. **Cap.**, \$900,000; shares \$1 par.**Property:** 30 claims, unpatented, 600 acres, and a 150-acre mill site, 4 miles west of Morenci, in the Copper Mountain district. Includes the Buzzard Shadow and adjacent groups. Claims show quartzite, shale and limestone cut by porphyry, with contact deposits, having orebodies, more or less developed, said to range from 10" to 4' in width.**Development:** by tunnels, 100', 450' and 600' long and the Lillian tunnel, 1,800', claimed to show a vein carrying several ore shoots. There are 5 shafts, including the 260' Argentine shaft, said to show copper sulphides; the 80' Louise shaft, reported to cut an 8" vein showing ore assaying up to 15% copper, 180 oz. silver and \$20 gold per ton, and the 72' Jensen shaft near the Louise. The Buzzard Shadow group, at the eastern end of the property, shows a 2 to 4' vein carrying auriferous and argentiferous copper ore.**Equipment:** includes a 15 h. p. Fairbanks-Morse gasoline hoist, 4 Nissen stamps and a tube mille.**P. D. EXTENSION COPPER CO.****ARIZONA****Address:** W. P. Weller, sec.-treas.-mgr., Morenci, Ariz.**Directors:** Wallace Keith, Isaac N. Stevens, Chas. T. Howland, J. C. Callaghan, Lester M. Dull and W. P. Weller.**Cap.**, \$2,000,000; shares \$1 par; 200,000 shares offered the public at 75c per share, Dec., 1916.**Property:** 35 claims, 710 acres, in the Clifton-Morenci district, developed by a 400' tunnel. A strike of 20% copper ore was reported in March, 1917.**SHANNON COPPER CO.****ARIZONA****Office:** 67 Milk St., Boston, Mass. **Mine office:** Metcalf, Greenlee Co., Ariz. **Works office:** Clifton, Ariz.**Officers:** Nathan L. Amster, pres.; H. N. Stonemetz, v. p.; Chas. R. Jeffers, sec.-treas.; preceding, with Kenneth McNeil, Wm. A. Paine, M. W. Cole, C. J. McGilvray, J. B. Beaty and David A. Ellis, directors. J. W. Bennie, gen. mgr.; H. H. Dyer, mine supt.; Wm. H. Bond, mill supt.**Inc.** Nov. 13, 1899, in Delaware. **Cap.**, \$3,000,000; shares \$10 par, increased July, 1909, to \$3,300,000; issued, \$3,000,000, with \$300,000 held in the treasury. **Bonds:** \$600,000 at 7% were retired 1911, but the company has guaranteed an issue of \$600,000 of 6% bonds, authorized May, 1909, by the Shannon-Arizona Railway Co., reduced by purchase to about \$103,000. The company has paid 8 dividends, aggregating \$1,200,000, to June 30, 1917. Shares are listed on the Boston Stock Exchange. National Shawmut Bank, Boston, registrar; Boston Safe Deposit & Trust Co., transfer agent. Annual meeting, third Wednesday in March.

Controls the Coronado Mining Co., through ownership of 53% of the stock issue, and operates, under lease, the property of the Leonard Copper Co., owning the Copper Belle mine at Gleeson, Cochise County, Ariz.

Comparative General Balance Sheet:**Assets:**

1911.....		2,014,219	1,895,365	118,854

(a) 16 months to Jan. 1, 1914. (b) operated first 9 months only. (c) add interest, \$16,228, and deduct expenses 5 months during which property was idle, \$43,044, leaves \$221,833 net profit for 1915. (d) Operating 11 months.

Dividends: 50c per share in 1905, \$1 in 1907, 50c in 1913, 50c in 1916, and \$1.75 in 1917 to Nov.

Property: 34 claims, 562 acres, at Metcalf, in the Greenlee district, also about 600 acres mill and smelter sites at Clifton, Ariz., and some limestone claims on the San Francisco River. The Shannon has a side-line agreement with the Arizona Copper Co., Ltd., by which extra-lateral rights are waived mutually, obviating all possibility of future litigation over apex rights.

Geology: ore occurs between limestone and porphyry, under hematite gossans, the oxidized ores favoring the limestone, while the ores in the porphyry side are mainly silicious sulphides. The ore occurs in irregular deposits, some of which are up to 300' in the greatest dimension. Many of the orebodies are large, and though low-grade and buncy, the quantity is very great. The upper levels in the mine show oxide and carbonate ores of 3 to 8% copper tenor; sulphide ores of 2 to 6% copper tenor are mined in the lower workings, the ores holding chalcopryrite with a little chalcocite. The mine as a whole is deficient in sulphide ores, and about one-third of the production is silicious ore, too low in grade to smelt, not readily amenable to concentration, but giving good results with the Bennie system of leaching when mixed with other ores. The concentrating ores average 2.5% and smelting ores about 4%.

Development: by shafts, tunnels and open pits, workings reaching a depth of 1,300' below the crest of the mountain, and totaling about 29 miles, 1917, with considerable ore reserves. The mine is timbered with 12x12" square sets. Extraction is by 3 double-track tunnels, connecting with a 1,400' double-track incline tram leading to the Shannon-Arizona Railway, with 6 ore bins at either end, the tramway, inclined at 36°, having 10-ton cars, operating in counterbalance, the steel cable passing around a 13' double drum, which runs a small air compressor serving as a brake.

Developments at company's outside properties in 1916 was reported as encouraging, and extension of better grades of ore is anticipated.

Shannon-Arizona Ry. Co. The Shannon C. Co. owns the entire stock of the Shannon-Arizona Railway Co. **Cap.**, \$600,000; shares \$100 par, and \$466,000 of the railway's \$575,000 6% 10-year bonds, guaranteed by the Shan-

non, and convertible into Shannon Copper Co. stock. The officers are: Nathan L. Amster, pres.; Chas. R. Jeffers, v. p. and sec.-treas.; John W. Bennie, W. A. Paine, B. F. Spriggs and C. G. Cole, directors.

This standard-gauge line, of about 10 miles length, was built and equipped at a cost of about \$700,000, the territory traversed being very rugged and including a 900' tunnel. The line was completed 1910, and not only is saving considerable money to the Shannon on ore haulage, but also gives immunity from serious interferences formerly caused by frequent floods.

Mill: the 500-ton concentrator at Clifton, on the San Francisco River, 8 miles from the mine, has ore bins 100' long, in 2 sections, for first and second-grade ores. The mill is of steel, in 2 connected sections, terraced, the upper section having two Blake crushers, four 6' Huntington mills, a 220' Robins belt conveyor, Hartz jigs and Wilfley tables. The lower section has 38 sand and slime tables. The steel power house at the concentrator has two 250 h. p. Stirling water-tube boilers and a 300 h. p. Nordberg tandem-compound engine. Water is pumped from the wells near the San Francisco River by a 600-gal. electric triplex pump.

Smelter: the smelter at Clifton, 7 miles from the mines, has 3 blast furnaces with a combined daily capacity of 1,800 tons of ore and treats concentrates and oxidized ores from the mines at Metcalf and pyritic ore from the Copper Belle mine of the Leonard Copper Co. The mixture is almost self-fluxing. Above the charging floor are 23 ore bins, with chutes. Fumes from the blast furnace pass through a 10' dust flue to a 20x20x100' dust chamber with hopper bottom, discharging periodically into cars on a railway track in a tunnel beneath, fumes passing from the dust chamber through a 170' flue to a 150' steel smokestack. Slags are hauled by an electric locomotive. The converter plant has 2 stands and is capable of turning out 120,000 lbs. of copper daily. The briquetting plant for fine ore, concentrates and flue dust, has a daily capacity of 60 tons, and there is a small sampling mill in connection. Slag haulage, converters, slag elevators, dust conveyor, briquetting plant and custom sampler are all operated electrically. The smelter power house has a 300 h. p. tandem-compound condensing engine, direct-connected to blowers, and converter blast is supplied by a 250 h. p. Nordberg air compressor. Fuel is petroleum.

In 1916 a 150-ton leaching plant was built, thorough experimental work having proven that mill tails and probably a very large tonnage of semi-oxidized ore can be treated at a profit. This plant was in full operation by May, 1917.

The company owns general stores, at Metcalf and Clifton. There are about 60 dwellings for employees. The Shannon owns and operates a water plant. Forces are about 1,200 men at the mines, mill and smelter.

Production:

	Copper Lbs.	Silver Oz.	Gold Oz.	Cost Copper Per Lb.	Sell. Price Per Lb.
1916.....(a)	9,364,968	62,935	1,328	18.46 cts.	27.24 cts.

1907.....	10,874,619	34,037	950	14.50 cts.	

(a) 11 months. (b) 9 months. (c) 16 months.

The property was closed down in Sept., 1914, on account of the low price of copper. Operations were resumed March 1, 1915, but in September the company was compelled to close down again, due to the miners' strike in the Clifton-Morenci district. This is most unfortunate for Shannon, for it is a high-cost producer (13.4 cts. per lb. in 1915 and 18.46 cts. in 1916), and it is only on high-priced copper that the company can earn money for dividends. Operations were started in Feb., 1916. In June, 1917, the yield was 956,000 lbs. Mine was again closed for several months in 1917, due to labor strike.

STEVENS COPPER MINING CO.**ARIZONA**

Office: No. 1 Broadway, New York. **Mine office:** Clifton, Greenlee Co., Ariz.

Officers: Fred Enos, pres.; W. Rowland Cox, v. p.; Geo. H. Kent, sec.-treas.; D. D. Irwin, resident mgr.

Property: 39 claims, patented, 780 acres, about 2 miles from Metcalf, Ariz., shows granite overlaid by Cambrian quartzite and Silurian limestone, with much faulting and intrusive porphyritic dikes, with orebodies near the fault lines. Some of the claims have produced copper ore, which was shipped to the Shannon smelter. Property being worked by lessees at present.

*NOGALES, SANTA CRUZ COUNTY***ARIZONA EUROPEAN MINING CO.****ARIZONA**

Office: Nogales, Ariz.

Officers: Manuel Escalada, pres.; Wm. Schuckman, sec., with Geo. Januel, directors. Jas. Ritchie, supt.

Property: the Buena Vista group, 2 miles from Patagonia, at an elevation of 5,500', said to show a 6' ledge of high-grade lead-silver ore.

Mine reported under development, August, 1917.

AUSTERLITZ GROUP OF MINES**ARIZONA**

Owned by A. H. Noon, Nogales, Ariz. Under lease to Camphius & Rives, Oro Blanco, Ariz.

Property: 5 claims, about 100 acres, in Oro Blanco mining district, Santa Cruz Co., Ariz., developed by 150' shaft and 2 tunnels, 600' and 300' long, said to show quartz fissure vein in porphyry assaying from \$4 to \$40 in copper, gold and silver. Developing in 1917. The property has been an intermittent small producer.

ORO MINE**ARIZONA**

G. B. Williams, owner, 316 Meigs St., Rochester, N. Y. A. J. Fraser, supt.

Property: the Oro mine, 10 claims, unpatented, at Old Glory, in the Oro Blanco district, 30 miles west of Nogales, Santa Cruz Co., Ariz. Mine shows 3 parallel fissure veins, from 6 to 30' wide. Vein on which most of the work has been done is 16' wide, with a 5' paystreak of silicious sulphide ore carrying copper, lead and gold.

Development: carried on since 1911, consists of a 350' shaft with 2 levels and ground opened for stoping. In 1916, a drift on vein at 350' said to have followed a paystreak assaying 3% copper, 5% lead and \$20 gold.

Equipment: includes pumps, tramway, mill and dam. Mine has produced about \$50,000 worth of ore to 1916.

Plans sinking winze and continuing drift on vein at 350' level.

*OATMAN, MOHAVE COUNTY***ADAMS MINING CO.****ARIZONA**

Address: 620 I. W. Hellman Bldg., Los Angeles, Calif. **Mine office:** Oatman, Ariz.

Officers: E. H. Newland, pres.; N. A. D'Arcy, sec.-treas.-gen. mgr., with C. H. Palmer, Jr., and M. Lines, directors. Thos. Kilker, supt.

Inc. Dec., 1915, in Arizona. Cap., \$100,000; shares 10c par. Annual meeting, first Monday in February.

Property: 9 claims in the Black Range section, adjoining the Nellie.

Development: by 400' shaft, crosscuts and drifts, said to show 3' of ore assaying \$20 per ton.

Equipment: includes 80 h. p. engine and pumps. Developing in 1917.

AOTMAN PIONEER MINES, INC.

ARIZONA

Oatman, Ariz. **Officers:** R. G. Tryon, pres.; Geo. F. Moser, sec.-mgr.

Inc. in 1915. Cap., \$1,500,000; shares \$1 par; all outstanding.

Property: 6 patented claims, including the Pioneer, formerly owned by the Pioneer Cons. Mines Co., 2 miles from Oatman. The Pioneer vein, one of the largest of the district, is covered for 4,000' by company's claims.

Development: by 420' main Pioneer shaft and several hundred feet of crosscuts and drifts on the 100', 200' and 400' levels, exposing above the 200' level 17,000 tons of \$9.20 ore north of the shaft and \$100,000 south, or a total of \$256,400 gross. No estimate is made of the lower-grade ore below the 400' level, and the high-grade shoot is bottomed.

In the Treadwell mine a 340' shaft with levels at 100', 200' and 300' exposes 12,800 tons of an average value of \$5.62, which is about the cost of handling such ore in the district.

The 35 Parallel mine has a 220' shaft connecting on the 150' level with a tunnel. The work is all in ore, exposing 8,500 tons of \$13.30 ore.

Equipment: includes 10-stamp mill, 80 h. p. engine, compressor and 2 hoists.

Property has merit, but the high cost of mining and milling the ores of the Oatman district must be overcome before the low-grade material in this and other mines can be successfully handled. The property is probably second only to the United Eastern in magnitude, and though of lower grade, is a property of much merit. A detailed report by Geo. F. Moser made March, 1917.

ARGO MINES CO.

ARIZONA

Address: Oatman, Mohave Co., Ariz.

Officers: S. S. Jones, pres. and gen. mgr.; J. M. Francis, v. p.; J. E. Shank, treas.; J. S. Withers, sec.

Inc. in Ariz. Cap., \$1,000,000; shares \$1 par; 600,000 shares held in treasury.

Property: 7 claims, 110 acres, in the Oatman district, show a vein 40' to 130' wide on surface, supposed to be a continuation of the Tom Reed vein.

Development: a two-compartment shaft is being sunk to the 500' level.

Equipment: 25 h. p. gasoline hoist, and a 360 cu. ft. air compressor.

Is one of many boom-day mines of this district.

ARIZONA CENTRAL MINES CO.

ARIZONA

Office: 15 Broad St., New York City. **Mine office:** Oatman, Ariz.

Officers: Chas. E. Knox, pres.; Sidney Green, v. p., with F. G. Corning, Donald C. Catlin and C. Van R. Cogswell, directors. W. W. Storer, sec.-treas.

Inc. December, 1915, in Arizona. Cap., \$1,000,000; shares \$1 par; \$600,000 shares outstanding. Stock listed on N. Y. Curb.

Property: 1 claim, 18 acres, at Oatman, bounded on the N. and E. by the United Eastern and on the S. by the Tom Reed. The mine is developed to depth of 360', and is said to show a quartz-calcite vein, 30' wide, carrying small gold values at surface and to depth of 300'.

Equipment: includes gasoline hoist and 4-drill compressor.

Is a prospect. Reported on by C. C. Burger.

ARIZONA EAGLE MINING CO.**ARIZONA****Address:** Oatman, Ariz.**Officers:** H. E. Ittner, pres.; E. C. Anderson, v. p.-supt.; C. A. Schoemaker, sec.-treas., with E. B. Garner and C. H. Schoemaker, directors.**Inc.** Dec., 1915, in Ariz. **Cap.**, \$1,000,000; shares \$1 par.**Property:** 6 claims, 120 acres, in San Francisco mining district, 2½ miles S. E. of Oatman.

Developing at last accounts. Stock campaign launched by Harry E. Thompson Co., New York.

ARIZONA GOLD STAR MINING CO.**ARIZONA****Office:** 347 Title Insurance Bldg., Los Angeles, Cal.**Officers:** R. Mansard, pres.; R. H. Sayers, v. p.; M. M. Miles, sec.-treas.**Cap.**, \$100,000; shares 10c par; issued \$50,000.**Property:** owns the Valkyrie and La Paz claims, 40 acres, 2 miles west of the Gold Road mine, in the Tom Reed-Gold Road mining district, Mohave Co., Ariz. Developed by 100' shaft, to be sunk to 400' depth. Equipped with hoist and compressor.**ARIZONA REX MINING CO.****ARIZONA****Office:** 1202 Hollingsworth Bldg., Los Angeles, Calif.**Officers:** Frank A. Keith, pres.; J. L. McIver, v. p.; R. I. Rogers, sec.-treas., with Geo. W. Long, W. K. Ridepour and S. W. Mudd, directors.**Inc.** Sept., 1915, in Ariz. **Cap.**, \$1,000,000; shares \$1 par; 636,200 shares outstanding. Annual meeting, first Monday in December.**Property:** 14 claims, at Oatman, Arizona, only slightly developed. Idle, 1917.**ARIZONA TOM REED GOLD MINES CO.****ARIZONA****Oatman, Mohave Co., Ariz. Officers:** Geo. F. Moser, pres.; Chas. S. Seeley, sec.; C. L. Moser, v. p.; Geo. F. Moser, gen. mgr.**Inc.** July, 1915.**Cap.**, \$1,000,000; shares \$1 par, non-assessable; issued 657,903. Stock listed in Los Angeles and San Francisco.**Property:** owns 7 claims, 97 acres, and has a lease and bond on the Snowball group, 90 acres, all adjoining the property of Aotman Pioneer Gold Mines, Inc., on the north. Main ledge of the Pioneer continues into company's claims.**Development:** by several shafts 10' to 100' in depth and on the 400' level by a crosscut from the Aotman Pioneer. Company sinking a main working shaft on the Trio claim.**BANNER GOLD MINING & MILLING CO.****ARIZONA****Address:** C. H. Vaughan, Kingman, Ariz. H. E. Benedict, sec. J. C. Brian, former owner.**Property:** in the Union Pass district, Mohave Co., Ariz., reported under bond to C. H. Vaughan, 1917.

Mine is said to carry the extension of the rich Sheep Trail vein, and a shaft has been sunk 250' on ore of milling grade. Developing, 1917.

BIG JIM CONSOLIDATED MINING CO.**ARIZONA****Office:** 561 I. W. Hellman Bldg., Los Angeles, Calif. **Mine office:** Oatman, Mohave Co., Ariz.**Officers:** C. C. Spicer, pres.; E. H. Newland, v. p.; S. M. Warmbath, sec.-treas., with E. H. Woods, directors. A. G. Keating, supt.**Inc.** 1917. **Cap.**, \$1,500,000; shares \$1 par, non-assessable. Stock listed in Los Angeles, San Francisco and on New York Curb. Is the successor of Big Jim Mng., which see.**Property:** 7 claims, unpatented, in the Tom Reed Gold Road mining district. The Bluebird group is 3,000' west of the Tom Reed. Ore is gold, occurring in andesite.

Development: 240' shaft on the Bluebird group, reported to cut the vein in a crosscut on the 200' level. Shaft will be deepened to 500' in hopes of finding the westerly extension of the United Eastern orebody.

Equipment: includes 25 h. p. gasoline hoist and Ingersoll-Rand compressor. There has been no production and property is still in the development stage.

BIG JIM GOLD MINING CO.

ARIZONA

Dissolved by vote of stockholders, April 24, 1917. The Big Jim and Monarch claims were sold to the United Eastern Mng. Co. in 1917, owners of Big Jim G. Mng. Co.'s stock receiving 1/6 share of United Eastern stock and one share of Big Jim Cons. Mng. Co. stock.

BLACK RANGE MINING CO.

ARIZONA

Address: Oatman, Mohave Co., Ariz.

Officers: D. P. Wright, pres. and treas.; Del Sherer, v. p.; Mitchell Carter, sec., directors.

Inc. Oct. 30, 1913, in Ariz. **Cap.**, \$1,000,000; shares \$1 par; outstanding, \$682,750. Listed on San Francisco Exchange. Annual meeting, 1st Tuesday in Nov.

Property: 8 claims, 2 patented, 150 acres, located 5 miles south of Oatman, shows fissure veins in andesite. Ore is said to run from \$2 to \$20 per ton. Developed by 300' shaft.

Equipment: includes a gasoline hoist, air-compressor and pumps. Property is still in the development stage.

BOUNDARY CONE GOLD MINES CO.

ARIZONA

Oatman, Ariz. **Officers:** F. H. Biles, pres.; J. D. L. Williams, Rex Arms Apt., Los Angeles, sec.; Calvin Hartwell, treas.; preceding, with W. F. Ball, S. M. Barnes, T. C. Job, directors. Frank Dryden, supt.

Inc. in Ariz. **Cap.**, \$1,500,000; shares \$1 par; reserved in treasury, 500,000 shares.

Property: 8 claims, 82½ acres, patented, 1 mile S. W. of Oatman. **Ore:** gold.

Development: shaft 750' deep, December, 1916, sinking to 800' level; 4,000' workings on upper levels. On the 450' level management reports an oreshoot 150' long, 15' in width, with average assays of \$14 per ton, and on the 550' level to have a shoot that was 150' long when work was stopped and shaft-sinking resumed. Shaft makes 15,000 gallons water daily, handled by bucket.

Equipment: hoist, 300 cu. ft. air compressor, blacksmith shop. Plans cross-cutting to vein on 750' level, development of orebody and erection of a mill.

CARTER GOLD MINING CO.

ARIZONA

Oatman, Ariz. E. A. Shaw, pres.; Henry Lovin, v. p.; W. K. Ridenour, sec.; H. H. Watkins, treas. Dan Bosque, in charge.

Inc. in Arizona. **Cap.**, \$1,000,000; shares \$1 par.

Property: New York, Giant and Gold Cross patented claims, 55 acres, in Tom Reed-Gold Road mining district, near Oatman, Mohave Co., Ariz. Developed by incline shaft, being sunk from the 250 to the 500' level with several hundred feet of workings on the 150 and 250' levels. The vein on the 150' level is said to be 12' wide, but contains small values. On the 250' level management reports that the vein is over 7' wide and averages \$8.60 gold per ton. On the 350' level 1,200' of drifting was done.

CASEY JONES MINING CO.

ARIZONA

Oatman, Ariz. **Officers:** H. M. Caswell, pres.; V. S. Rowley, v. p.; J. E. Shank, sec.-treas., with J. J. Casey and Geo. Z. Mellen, directors.

Inc. in Ariz. **Cap.**, \$100,000; shares 10c par; 600,000 shares in treasury. Listed in San Francisco.

Owens the Swallow group, 12 claims, 120 acres, adjoining the Oatman Gold

group on the east, said to show 3 veins from 6' to 25' wide and assaying on the surface from \$0.80 to \$2.86 gold per ton. Management plans sinking two 2-compartment shafts; east shaft will be 300', the west shaft 500' deep. In March, 1916, the east shaft was 60' deep. Property in the development stage.

CLARISSA MINING & MILLING CO.

ARIZONA

Gold Road, Mohave Co., Ariz. E. M. Rabb, pres.; A. W. Sydnor, v. p.-treas.; F. T. Bragonier, sec.

Inc. 1915, in Ariz. Cap., \$1,000,000; shares \$1 par, non-assessable; 550,000 shares in treasury. Owns 7 claims, 80 acres, adjoining the United Western on the north, at Oatman, Ariz. Company is sinking a shaft, 80' deep. Cut 4' of quartz vein matter at 65'.

CONE MINING & MILLING CO.

ARIZONA

Office: 132 Edgerly Bldg., Fresno, Calif.

Officers: J. P. Eaton, pres.; M. J. Walsh, v. p.; Hugh Sparkman, sec.-treas.

Inc. Aug., 1911, in Arizona. Cap., \$1,500,000; shares \$1 par; 778,875 shares issued.

Property: 12 claims, unpatented, 240 acres, 2½ miles S. W. of Oatman, in the Tom Reed-Gold Road district, Mohave Co., Ariz. Ore occurs in veins in rhyolite dike, traversing ground from E. to W.

Development: 235' shaft, with crosscutting to reach ledge on 200' level.

Equipment: includes a 15 h. p. Fairbanks-Morse hoist.

CRESCENT MINING CO.

ARIZONA

Geo. W. Pierce, mgr., Oatman, Ariz.

Has 1,000' tunnel, looking for oreshoot cut 300' above. Still operating, 1917.

CROWN CITY GOLD MINES CO.

ARIZONA

Idle. Last address: John C. Dalton, 6 Union Savings Bank Bldg., Pasadena, Cal. See Vol. XII.

DOME MINING CO.

ARIZONA

Office: 805 H. W. Hellman Bldg., Los Angeles, Calif. Mine is at Oatman, Ariz.

Directors: C. P. Campbell, pres.; C. C. Spicer, v. p.; A. M. Wheelock, sec.-treas.

Inc. Oct 9, 1915, in Arizona. Cap., \$100,000; shares 10c par, non-assessable; 500,000 shares in treasury. Annual meeting, last Saturday in Sept. Listed on Los Angeles Exchange. Company reports \$1,000 in treasury; April 17, 1916.

Property: 32 acres, unpatented, at Oatman, Mohave Co., Ariz. Developed by 40' shaft and a little trenching. Management states that a hoist will soon be added. Property is a prospect. Idle, and probably moribund.

EAST BLACK RANGE MINING CO.

ARIZONA

Address: W. S. Tarbell, 663 I. W. Hellman Bldg., Los Angeles, Calif.

Inc. 1916, to operate 6 claims adjoining the Black Range Mng. Co., at Oatman, Ariz. Fifty thousand shares of stock were offered to the public in April, 1916, at 15c a share.

Is a prospect of unproven merit.

ESPERANZA EXPLORATION CO.

ARIZONA

Address: Joseph Krauss, pres.-mgr., P. O. Box 149, Oatman, Ariz.

Officers: E. L. Terwilliger, v. p.; Jos. Kielen, sec.-treas.

Inc. Dec. 6, 1915, in Ariz. Cap., \$150,000; shares 10c par; 884,000 issued. Operating expenses, 1916, \$35,000.

Property: 10 claims, 170 acres, in San Francisco mining district, which show an E.-W. 15' fissure vein, with 15° dip N. Ore carries gold, average value being \$3 per ton.

Development: by 217' shaft. Equipment: 25 h. p. engine, 320 cu. ft. compressor, etc.

FESSENDEN GOLD MINING CO.**ARIZONA**

Oatman, Ariz. **Officers:** M. A. Fessenden, pres.; F. W. Crosley, v. p.; H. A. Culloden, sec.-treas., with J. O. A. Carper and C. M. Moses, directors.

Inc. in Arizona. **Cap.**, \$100,000; shares 10c par; treasury, 250,000 shares. Listed in Los Angeles.

Property: the Sunlight and Moonlight claims, 40 acres, adjoining the United Eastern on the north, at Oatman. Developed by 500' shaft and equipped with 3-drill compressor.

GILT EDGE MINES CO.**ARIZONA**

Idle. Oatman, Ariz.

Officers: E. A. Burns, pres.; E. A. Shaw, v. p.; S. W. Klass, sec.-treas., Kingman, Ariz.

Inc. in Ariz. **Cap.**, \$150,000; shares 10c par; 800,000 in treasury. Listed on San Francisco and Los Angeles Exchanges.

In Oct., 1916, company was trying to interest New York capital to the extent of \$30,000 for development.

Property: 95 acres, 2 miles S.W. of Oatman, adjoining the old Vivian mine, said to show 4 parallel veins varying from 4' to 60' in width.

Development: 4 tunnels, one claimed to have opened a vein for 50', with gold values from \$5 to \$12 per ton. Company sank a shaft, 250' deep, April 26, 1916, at which depth altered andesite was found, said to show quartz and spar and to contain fair values. Crosscutting done on the 100' and 200' levels.

Equipment: includes 25 h. p. Fairbanks-Morse hoist and a 52 h. p. air compressor. Plans sinking 600'.

GIRARD MINING CO.**ARIZONA**

Address: Oatman, Mohave Co., Ariz. H. B. Magill, pres. and gen. mgr.

Property: 6 claims, also leases on the Della claim of the Tango group and W. R. Hearst claim of Meals group, Silver Creek district, said to show gold ore. Tests to be made to find suitable treatment.

GOLD CLIFF EXPLORATION CO.**ARIZONA**

Address: P. O. Box 412, Oatman, Ariz.

Officers: Stephen E. Barren, pres. and mgr., Oatman; H. H. Alvey, sec.; Thos. Devine, treas.; Axel E. Johnson and Asa W. Le Barron, directors.

Inc. 1914, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; 136,212 shares sold; 363,788 shares in treasury.

Property: 19 claims, 285 acres, adjoining the Tom Reed Gold Mines Co. property, near Oatman. Developed by 53 shallow openings.

In 1916 company sold to the Copper Fame Mining Co. 10 claims in the Chloride district, Cerbat Mts., between the Tennessee and Golconda mines. The price was 700,000 shares of Copper Fame stock.

Is a prospect.

GOLD KEY MINING CO.**ARIZONA**

Office: 733 Central Bldg., Los Angeles, Calif. Mine near Old Trails, Mohave Co., Ariz.

Officers: W. H. Wise, pres.; H. M. Hall, v. p.; B. E. Shaw, sec.; with W. K. Ridenour and Raymond A. Carr, directors.

Inc. 1915, in Arizona. **Cap.**, \$1,250,000; shares \$1 par. Listed in San Francisco.

Property: the Treasure Key group, 4 claims, 50 acres, between the Boundary Cone and Orion groups, west of Old Trails and near Oatman, Ariz. Contains the Oatman type fissure veins in andesite, showing gold quartz ore. The one under development is 20' wide.

Development: by a 310' shaft with drifts on 300' level. The east drift exposes an ore-shoot 75' long and 4'-6' wide, showing 3' of \$30 ore. A second shoot 75' to the west is said to average \$12. Property is a "likely" prospect.

GOLD ORE MINING CO.**ARIZONA****Address:** A. G. Keating, Goldroad, Ariz.**Officers:** A. C. Werden, pres.; S. M. Warmbath, v. p.; I. W. Werden, sec.; A. F. Pollock, treas., with E. A. Shaw, directors. A. G. Keating, cons. eng.**Inc.** in Arizona. **Cap.**, \$1,000,000; shares \$1 par; 819,310 issued. Listed on San Francisco and Los Angeles Stock Exchanges. H. E. Teter & Co., Los Angeles, transfer agents; Security Trust and Savings Bank, Los Angeles, registrar.**Property:** 6 claims, 120 acres, $\frac{1}{2}$ mile N. of the Gold Road mine, Mohave County, which the Gold Ore is said to resemble and which has yielded \$5,-000,000.**Development:** by 560' main shaft and over 2,000' of drifts, etc. Levels have been driven at 350' and 530' E. and W. along the vein. On the bottom level is a shoot 5' wide, 200' long and 200' high. The Gold Road mill treated 2,300 tons from this, returning \$14.50 net per ton. A winze 125' below 530' shows a better vein than above. Reserves are placed at 30,000 tons of \$15 to \$20 ore.**Equipment:** a tramway has been constructed and the 300-ton Gold Road cyanide mill leased for ore treatment, about a third capacity to be used for a start.**GOLD RANGE MINING & MILLING CO.****ARIZONA****Oatman, Ariz.** Company reorganized March, 1916, with W. H. Reeves, pres., Pasadena, Cal.; J. E. Nelson, sec.**Cap.**, \$1,000,000; shares \$1 par. Treasury, 400,000 shares. Charter altered July, 1917; now levies assessments for development funds. Listed on Los Angeles Exchange.**Property:** Esmeralda group at Oatman, adjoining the Ivanhoe on the south. Shaft down 260', said to show \$4 to \$8 ore. Work resumed in July, 1917.**GOLD REED MINING & MILLING CO.****ARIZONA****Address:** J. C. Connors, Colorado Springs, Colo. **Mine office:** Oatman, Ariz., T. L. Welp, supt.**Property:** claims in Oatman district, Ariz., developed by 570' shaft and drifts.**GOLD ROAD ANNEX MINING CO.****ARIZONA****Office:** Goldroad, Mohave Co., Ariz. L. M. Hopkins, pres.**Property:** near Gold Road mine, Oatman district, Ariz. Machinery installed for sinking shaft to 500'. Prospects fair.**GOLD ROAD BONANZA MINING CO.****ARIZONA****Oatman, Ariz.** **Officers:** F. T. Torpey, pres. and treas.; W. B. Ross, v. p.; W. P. DeWolf, sec. E. M. Rogers, supt.**Inc.** in Ariz. **Cap.**, \$1,000,000; shares \$1 par. In treasury, 250,000 shares. Listed in San Francisco.**Property:** 90 acres, adjoins the Gold Road mine on the S. W. Shaft sunk 500', with considerable drifting at that level. Vein up to 4' wide said to average \$30 per ton.**GOLD ROAD MINES CO.****ARIZONA****D. R. Muir, mgr.,** Gold Road, Ariz.**Inc.** in Maine. **Cap.**, 400,000 shares; \$5 par; entirely owned by U. S. Smelting, Refining & Mining Co., which see for officers.**Property:** 15 patented claims, 216.52 acres, at Gold Road, Mohave Co., Ariz., 22 miles west of Kingman, on the Santa Fe R. R.**Ore:** gold-bearing quartz occurring in a fissure vein with E.-W. strike. Company owns about $1\frac{1}{4}$ miles on the strike of this vein. The mine had a good record of production prior to its purchase by this company in 1912.

Stopping operations had been carried down to the 500' level and were extended on the strike of the vein and also in depth to the 900' level. Company now extracting ore from the 800' level. Assay value of ore diminishes with depth as far as explored to date, and only a small percentage of ore found on the 800' level is of commercial grade, though the vein continues strong and permanent.

Development: to a depth of 1,100' by 5 miles of workings. There are 2 shafts, one reaching the 800 and the other the 900' level, equipped with cages and skips. Property is fully equipped with power house, air compressors, shops, warehouse and dwellings; has a 40-stamp 300-ton cyanide mill, located within a few hundred feet of the mine. Electric power is purchased from power plant at Kingman.

Production: for 1915 was 96,272 tons. Cost of mining averages \$3.15 per ton; milling about \$2.13 per ton. Recovery of gold per ton is \$6.77.

The mine has considerable unexplored territory within the depth to which it has been worked, and the prospects are that it will yield a small profit for some time to come from ore reserves now existing, or which may be found within this depth. Larger earnings may be expected in case exploration at depth discloses increased ore values.

Operations were suspended for a time, but resumed at end of 1916. Ore has been opened up, but not enough to warrant re-starting mill.

GOLD TRAILS MINING & MILLING CO.

ARIZONA

Address: Oatman, Mohave Co., Ariz.

Cap., \$100,000; shares 10c par.

Officers: W. Mellen, pres.; R. L. Stevens, v. p.; G. Z. Mellen, sec.-treas.; preceding, with W. P. Mellen and R. Mangrum, directors.

Property: at Oldtrails, Ariz. Nothing new reported since company was formed in 1916.

IVANHOE CONSOLIDATED MINES CO.

ARIZONA

Main office: 591 I. W. Hellman Bldg., Los Angeles, Calif. **Mine office:** Oatman, Ariz.

Officers: E. A. Carter, pres.; C. C. Spicer, v. p.; S. M. Warmbath, sec., with Fred Fox and F. P. McLain, directors. A. G. Keating, supt.

Inc. March 29, 1915, in Ariz. **Cap.,** \$1,000,000; shares \$1 par; 790,800 shares issued. Stock listed on New York Curb and Los Angeles Stock Exchange. Security Transfer & Registrar Co., New York, transfer agents and registrar.

Property: 5 claims and 2 fractions in the N. W. section of Oatman mining district, Mohave County. Claims cover about 3,000' along the strike of the main vein. Four veins have so far been disclosed. Developed by 500' shaft. A crosscut at 204' intersected a vein, 60' wide, showing average values of \$9 per ton. A crosscut is now being driven S. on the 500' level to encounter this vein. A drift will also be carried westward to intersect the Nancy Lee vein, from which a 20-ton shipment of \$150 gold-silver ore was made early in 1916. Company leased the Nancy Lee claim to L. V. Le Grand in 1916. Is a promising prospect.

In 1917 work was proceeding at the Nancy Lee No. 2, but nothing of importance was reported.

JEROME-OATMAN MINING CO.

ARIZONA

Office: Jerome, Ariz. **Mine office:** Oatman, Ariz.

Officers: Walter C. Miller, pres.; D. J. Shea, v. p.; S. F. Denison, sec.; H. W. Lewis, treas.; with H. E. Campbell and Henry Lovin, directors. Jas. P. Rice, supt.

Inc. July, 1915, in Arizona. **Cap.,** \$150,000; shares 10c par; 442,251 shares in treasury, Oct., 1915. Stock is listed on Los Angeles Exchange.

Property: 11 claims, unpatented, in San Francisco mining district, 3 miles

N. W. of Oatman, Mohave Co., shows gold-silver ore in quartz veins cutting andesite and rhyolite. The veins run N. W.-S. E. and dip N. 70°.

Shut down in 1917 on account of water on the 390' level, machinery being unable to cope with it. As practically no commercial ore was proved by 390' shaft and 600' of drifts, the resumption of work is indefinite. Claims being patented in 1917.

LAZY BOY GOLD MINES CO.

ARIZONA

Address: Oatman, Ariz.

Officers: Joseph Krauss, pres.; J. H. Move, v. p.; W. K. Ridenour, sec.-treas.

Inc. Sept. 9, 1915, in Ariz. **Cap.**, \$1,000,000; shares \$1 par; 604,500 issued. Listed on San Francisco Exchange.

Spent \$25,000 on development work, 1916. Had \$7,500 cash on hand, Aug., 1917.

Property: 9 claims, 150 acres, in San Francisco mining district, Mohave Co., Ariz., shows several veins in andesite carrying gold values.

Development: by 220' vertical shaft, with total workings of 750'.

Equipment: includes 300 cu. ft. compressor, 3 jackhammer drills, 40 h. p. gasoline hoist. Is considered one of the best prospects of the camp, having actual ore already exposed.

LEXINGTON-ARIZONA MINING CO.

ARIZONA

Office: 538 Merchants' Natl. Bank Bldg., Los Angeles, Calif. **Mine office:** Old Trails, Ariz.

Officers: Dr. C. H. Phinney, pres.; Dr. C. M. Heberton, v. p.; J. A. Small, sec.; H. R. Woods, treas., with R. M. Keeney, directors.

Inc. Feb. 12, 1912, in Ariz. **Cap.**, \$1,000,000; shares \$1 par; 836,832 shares issued. Stock listed on San Francisco and Los Angeles Stock Exchanges. Annual meeting, 4th Tuesday in Sept.

Property: 15 claims, 8 patented, 155 acres, at Old Trails, in the Tom Reed Gold Road district, shows fissure veins, from 6'-25' wide, running N. W.-S. E. and dipping 75° N.-N. E. Ore occurs as quartz-spar, in andesite, and is said to assay from \$2-\$14 gold per ton.

Development: by numerous shafts from 45' to 225' in depth. A 3-compartment vertical shaft is now being sunk to 600'.

Equipment: includes hoist, compressor and Cornish pump. Company also owns the townsite of Old Trails.

LOST TREASURE MINING CO.

ARIZONA

Idle. Oatman, Mohave Co., Ariz.

Officers: Geo. W. Long, pres.; J. F. McConnell, v. p.; J. L. McIver, sec.-treas.; J. E. Strumquist and L. J. Hammell, directors.

Inc. 1915, in Ariz. **Cap.**, \$150,000; shares 10c par.

Property: the Gold Ore Extension Nos. 1 and 6, 120 acres, at Gold Road, adjoining the Gold Ore on the N. and W., and claimed to carry the extension of the Gold Ore vein. A 700' vertical shaft is now being sunk. The mine is one of the many new prospects in the Tom Reed district yet to be proved.

LUCKY BOY MINING & MILLING CO.

ARIZONA

Office: 668 I. W. Hellman Bldg., Los Angeles, Calif. **Mine office:** Oatman, Ariz.

Officers: F. W. Remy, pres.; N. A. D'Arcy, v. p.; W. S. Tarbell, sec.-treas.-gen. mgr.

Inc. 1915 in Ariz. **Cap.**, 1,000,000 shares; 10c par. Stock listed on San Francisco and Los Angeles Exchanges.

Property: 200 acres in the Tom Reed district, adjoining the Telluride on the S. and the Tom Reed on the S. W., said to show gold ore occurring in stringers of quartz and calcite. A shaft on the Friday claim was down 425' in April, 1917. Crosscut being run to vein.

Equipment: includes 25 h. p. hoist, 200 cu. ft. air compressor, 35 h. p. engine, compressor and Jackhammer drills, installed 1915. Property considered promising.

LUCKY SAM MINING CO.

ARIZONA

Office: 678 I. W. Hellman Bldg., Los Angeles, Calif.

Officers: W. S. Tarbell, pres.; G. M. Gilbert, v. p.; Geo. E. Fairhead, sec.-treas.; L. C. Randall, supt.

Inc. 1915, in Ariz. **Cap.**, \$100,000; shares 10c par.

Property: 12 claims, 235 acres, in the Tom Reed district, Mohave Co., Ariz., carries 2 main parallel veins, 4-6' wide. Developed by 2 shafts, deepest 163'. A prospect.

LUCKY SEVEN GOLD MINING CO.

ARIZONA

A. L. Krous, pres., Oatman, Ariz.; **H. E. Bonnell, sec.**

Property: the Eva group at Oatman. Also has bond and lease on the Ibex mine, 4 miles from Klinefelder, near Needles, Calif., from which several carloads of ore shipped ran \$37 per ton. Developed by 227' shaft.

MURDOCK MINING & MILLING CO.

ARIZONA

Oatman, Mohave Co., Ariz. **Officers:** S. R. Porter, pres., treas. and supt.; D. Gibson, v. p.-sec.; F. L. Porter, asst. sec., with D. P. Wright and G. D. Page, directors.

Inc. Dec. 3, 1915, in Ariz. **Cap.**, \$1,000,000; shares \$1 par; 690,000 issued. Transfer office and registrar: Security Transfer & Registrar Co., New York. Listed on New York Curb as a prospect.

Property: near Oatman, shows a vein in andesite. Ore is gold-bearing and of the usual dense quartz type.

NAVY GROUP M. & M. CO.

ARIZONA

Office: 1029 Higgins Bldg., Los Angeles, Calif.

Officers: Dr. Geo. P. Waller, pres.; F. M. Townsend, sec.-treas.; R. E. Zuver, agent at Gold Road, Ariz.

Inc. 1915. **Cap.**, \$1,000,000; shares \$1 par.

Property: 3 claims, 48.26 acres, in Tom Reed-Gold Road district, Mohave Co., developed by 750' tunnel. A prospect.

NELLIE MINING CO.

ARIZONA

Mine office: Oldtrails, Mohave Co., Ariz.

Officers: F. M. Woods, pres.; R. C. Wilson, v. p.; E. T. Walmsley, sec.-treas., with H. E. Woods and C. S. Buck, directors; D. F. Meikeljohn, supt.

Inc. July 3, 1906, amended Aug. 4, 1915, in Ariz. **Cap.**, \$1,000,000; shares \$1 par; 790,000 outstanding. Stock is listed on the San Francisco and Salt Lake Exchanges. Registration Surety Co., 205 Russ Bldg., San Francisco, registrar. Annual meeting, first Wednesday in June.

Property: 11 claims, 190 acres, in Tom Reed-Gold Road mining district, 5 miles S. of Oldtrails, shows a fissure vein in andesite and andesite tuff, with gangue consisting principally of fine grain quartz and adularia and calcite. The values are exclusively gold, although traces of copper stain are found in the 2 altered dikes which strike out from the main lode, having a general strike N. 52° W., with dip about 55° N. E. Assays said to average \$5.90 gold per ton. Developed by 530' 2-compartment vertical shaft.

Reported that on the 350' level 200' of drifting opened ore worth up to \$35 per ton. At 435', in shaft No. 2, vein is reported to be 24' wide, and on 500' level 25' wide, 10' of it assaying \$5.31 per ton.

Equipment: includes 32 h. p. gas hoist, 55 h. p. compressor, 3,600' water pipe line, bunk and boarding houses. Property reported on by A. G. Keating.

OATMAN CRESCENT MINING CO.

ARIZONA

Office: 25 Broad St., New York. **Mine office:** Oatman, Ariz.

Officers: Geo. W. Peirce, pres.-gen. mgr.; W. T. Esser, v. p.; Gowen Peirce, sec.-treas.; with A. G. Reynolds, directors.

Inc. 1915. Cap., 1,000,000 shares; 10c par; 650,000 issued. Security Transfer & Registrar Co., New York, registrar and transfer agents.

Property: 9 claims, 170 acres, 4 miles S. E. of Oatman, said to show 3 strong veins outcropping at surface for 3,000' in length and giving average assays of \$6.13 per ton in gold. The veins strike N. W. and dip steeply S. The Highland Chief vein, from 10-40' wide, consists of altered and brecciated wall rock, with quartz and calcite, associated with black oxide of manganese.

Development: by 112' crosscut tunnel, several shallow pits and openings. In 1916, 1,200' of drifting and tunnel work was done. Drift said to be within 200' of ore zone, June, 1917.

Equipment: includes 50 h. p. engine, compressor, jackhammers, etc. Management plans driving the tunnel to 500'. Is regarded as a promising prospect.

OATMAN GOLD MINING & MILLING CO.

ARIZONA

Kingman, Ariz. Eli Hilty, pres.-mgr.; S. W. Klass, sec.

Inc. 1915, in Arizona. Cap., \$1,000,000; shares \$1 par.

Property: 10 claims, about 160 acres, in the Tom Reed Gold Road mining district, shows several well-defined veins with stringers of quartz and calcite carrying free gold.

The Kokomo vein is a fault fissure, 40' wide at surface, and said to show for 4,500' on company's ground, with strike N. 62° W. and dip 80° N. E., cutting the andesite, or occurring in a contact between rhyolite and andesite.

Development: a 500' shaft was sunk on the Kokomo vein in 1915, and crosscuts are being run N. and S.

Equipment: includes compressor and 25 h. p. hoist. Management hopes to cut the main orebody within 90' of the shaft on the 500' level. A prospect. Reported on by E. W. Brooks.

OATMAN GOLD TOP MINE

ARIZONA

J. P. Loftus and J. K. Turner, of Goldfield, Nev., operators. Mine is in the Secret Pass district, 10 miles from Oatman, Ariz. Said to have sufficient gold ore to keep mill running until October, 1917.

Has 30-ton ball and amalgamating mill.

OATMAN-JUMBO M. & M. CO.

ARIZONA

Oatman, Ariz.

Cap., \$150,000; shares 10c par. Paid \$65,000 in stock for property; \$50,000 worth of stock was offered the public, May, 1917, at 7½c per share.

Property: 80 acres, adjoining the United Northern and Gold Road Bonanza Mines near Oatman, Ariz., and said to carry extensions of veins in these properties. Some shallow development work reported to show assays up to \$19 gold per ton. Will be worked by tunnels.

OATMAN NORTH STAR MINES CO.

ARIZONA

Oatman, Ariz. A. O. Parsons, pres., with C. E. Gilman, R. R. Moore and Lloyd Tevis, directors.

Inc. 1915, in Ariz. Cap., \$150,000; shares 10c par. Stock is listed on San Francisco and Los Angeles Exchanges.

Property: 17 claims, 250 acres, at Oatman, claimed to carry extension of Tom Reed vein system. Sinking a 400' shaft in 1916.

OATMAN SOUTHERN MINING & MILLING CO.

ARIZONA

Oatman, Ariz.

Officers: S. R. Porter, pres. and treas.; B. W. McCloskey, v. p.; with R. C. Curry, directors; Mrs. J. C. Garinger, sec.

Inc. Oct. 9, 1915, in Ariz. Cap., \$100,000; shares 10c par; outstanding, 520,000. Security Transfer & Registrar Co., New York, transfer agt. and registrar. Listed on New York Curb as a prospect.

Property: 11 claims, 220 acres, in S. W. end of the Oatman camp, on the Black Range vein system.

Development: 2 inclined shafts, 64' and 108' deep, on the veins, said to show bodies of low-grade quartz ore. Shafts are 280' apart, but said to be unfavorably located for development purposes, so a new shaft was started.

No returns, 1917. Probably idle.

OATMAN SYNDICATE MINING CO.

ARIZONA

Oatman, Ariz. **Officers:** J. L. McIver, pres.-mgr.; Geo. W. Long, v. p.; C. W. Herndon, sec.-treas.

Inc. Oct. 29, 1915, in Ariz. **Cap.,** \$100,000; shares 10c; 500,000 shares issued. Valley Bank, Phoenix, Ariz., transfer agent. Operating expenses to March, 1916, were \$30,000.

Property: the Putney group, 11 claims, 4 patented, about 200 acres, 6 miles S. of Oatman, embraces about 3,500' on the main Black Range-Nellie lode system. Mine shows a quartz contact deposit surrounded by andesite, rhyolite and granite, with N. W. strike and dip of 45°.

Development: by 400' vertical shaft. Drifts are being run both ways on the vein from the 400' level.

Equipment: includes 40 h. p. hoist, 5-drill compressor and gasoline power. No 1917 returns.

OATMAN UNITED MINES CO.

ARIZONA

Oatman, Ariz. **Officers:** Chas. S. Sprague, pres.; C. C. Spicer, v. p.; L. Ashmun, sec.-treas.; J. K. Turner, cons. engr.

Inc. 1915, in Ariz. **Cap.,** \$2,000,000; shares \$1 par; 750,000 shares in treasury.

Property: 150 acres, surveyed for patent, 1½ miles N. E. of Oatman, adjoining the United Eastern on the N. and the Tom Reed on the S. W., shows 3 well-defined gold-bearing fissure veins in andesite and along andesite-rhyolite contact. The ore is oxidized and occurs irregularly.

Development: by 400' shaft, with E. and W. crosscuts under way, 1917.

Equipment: includes 5-drill Ingersoll-Rand compressor, 40 h. p. hoist and 50 h. p. engine. A prospect.

ORION MINING & MILLING CO.

ARIZONA

Office: 733 Central Bldg., Los Angeles, Calif. **Mine office:** Oatman, Mohave Co., Ariz.

Officers: J. L. Humble, pres.; C. J. Rhodes, v. p.-gen. mgr.; Wm. H. Wise, sec.-treas.; F. F. Brush, mgr., Oatman.

Inc. 1915, in Ariz. **Cap.,** \$1,250,000; increased March, 1916, to \$1,500,000; shares \$1 par.

Property: 170 acres, 70 patented, at Oatman, includes the Gold Dust group, one of the oldest gold producers in the district.

Development: by several shafts from 100' to 550' deep, a 100' tunnel, cross-cuts and drifts.

Equipment: includes 360 cu. ft. compressor, 75 h. p. electric hoist, 20-stamp mill and cyanide plant, mine buildings and dwellings. Developing at last accounts. No late returns.

PITTSBURG MINING & MILLING CO.

ARIZONA

Oatman, Ariz. **Officers:** L. P. Hansen, pres.-treas.; M. J. Walsh, v. p.; S. R. Porter, asst. sec.; above are directors; Jas. McLachlan, sec.

Inc. Jan. 31, 1912, in Arizona. **Cap.,** \$1,500,000; outstanding April 1, 1916, \$723,300; shares \$1 par, assessable. Security Transfer & Registrar Co., New York City, transfer agent and registrar. Listed on New York Curb as a prospect.

Balance sheet of April 4, 1916, shows assets of \$1,500,000, which includes: mining claims, \$504,000; unissued stock, \$776,700; discount on stock, \$169,487; development and construction account, \$46,142; general expense, \$3,671.

Property: 11 claims, 220 acres, 1 mile W. from Goldroads and 1½ miles

N. W. from Oatman, is said to show 3 distinct veins. The main vein strikes E.-W., dips N. 80°, and has a width of 6' to 40' along an outcrop said to be traceable for over 5,000', in which distance it shows two faults. Vein filling is chiefly quartz, with some calcite. Paralleling the main vein and 20' from it there is another vein 4' to 8' in width and nearly vertical, which is supposed to intersect the main vein. Near the center of the property these two veins merge and form one vein 40' wide. A third or footwall vein parallels the main vein and has a similar dip; at east end of property this vein is 200' back in the footwall; but is supposed to join main vein near center of property.

Development: 300' double compartment vertical shaft, sunk on E. end of Pittsburgh claim between main and hanging-wall veins; water prevented sinking deeper; at this level 125' of work has been done, but to date the ledge where opened has been low-grade. Total workings, about 1,000'.

Equipment: includes a 20 h. p. gasoline hoist.

RECORD LODE MINING CO.

ARIZONA

J. J. McCarthy, supt., Oatman, Ariz.

Officers: Chas. A. L. Gehrmann, pres.; Lee R. Myers, v. p.; L. L. Wallace, sec.-treas., with J. J. McCarthy, directors.

Inc., Jan., 1916, in Arizona. **Cap.,** \$250,000; shares 25c par.

Property: 10 claims, located on Hardy vein.

Equipment: hoist, compressor, etc.

Developing since January, 1917. An incline shaft is being sunk on the vein.

RED LION MINING CO.

ARIZONA

Address: Oatman, Ariz. Frank W. Strong, pres. Mine lies between the Ben Harrison and Gray Eagle claims, supposedly on the Tom Reed vein.

A 500' shaft is to be sunk and machinery installed, 1917.

SECRET PASS GOLD TOP MINING CO.

ARIZONA

Address: J. P. Loftus, 1615 Martel Ave., Hollywood, Cal.; and Kingman, Ariz.

Officers: J. P. Loftus, pres.; C. S. Sprague, v. p.; G. P. Loftus, sec.-treas.; with F. Kemp, J. K. Turner and S. L. Carpenter, directors.

Inc. May 30, 1916, in Arizona. **Cap.,** \$100,000; shares 10c par, non-assessable; 587,000 issued.

Property: 5 claims, 100 acres, in Oatman (San Francisco district), Mohave County, Ariz. Open cuts and other shallow workings show 5,000 tons of \$6 to \$15 gold ore developed.

Equipment: 30-ton plant, including 3' Hardinge ball mill.

SUN DIAL GOLD MINING CO.

ARIZONA

A. F. Carper, supt., Oatman, Ariz. Is one of the big crop of wildcats that have been born in Oatman since the strike in the United Eastern.

SUNNYSIDE MINING CO.

ARIZONA

Office: Oatman, Mohave Co., Ariz.

Officers: C. H. Palmer, Jr., pres.; F. A. Keith, v. p.; R. I. Rogers, sec.-treas., with S. W. Mudd, Philip Wiseman, P. L. Mullen and M. R. Sullivan directors. C. R. McCollan, supt.

Inc. in Ariz. **Cap.,** \$1,500,000; shares \$1 par.

Property: Sunnyside group of 3 claims, 2 miles S. E. of Oatman, said to have a vein with assay values of from \$2 to \$8 gold per ton. Development proceeding on vein at 400' level, considered promising. Property is in the development stage.

TELLURIDE M., M. & DEV. CO.

ARIZONA

Office: Oatman, Ariz.

Officers: G. W. Long, pres.; J. L. McIver, sec.-treas. and mgr.; H. Y. Basham, asst. sec.; with W. Matthie and P. C. McDonald, directors.

Inc. 1915, in Ariz. **Cap.,** \$220,000; shares 20c par; treasury shares, May 1, 1917, 382,266.

Property: 10 claims, 200 acres, at Oatman, Mohave Co., said to carry gold ore of milling grade.

Development: by 535' shaft with crosscutting and drifting on 475' and 535' levels.

Equipment: includes 40 h. p. White & Middleton engine, double-friction hoist, Fairbanks-Morse and Chicago Pneumatic compressors, mine buildings, etc.

Mine examined in Jan., 1917, by Etienne A. Ritter, who discusses the geology and development in 13 pages. He suggested diamond-drilling, and considers that the property is well situated, also that some important bodies of commercial ore should be uncovered. Some fair ore has recently been opened.

TIMES MINING CO.

ARIZONA

Oatman, Ariz. **Officers:** Z. J. Bergeron, pres.; W. E. Gray, v. p. and gen. mgr.; F. H. Lathrop, sec.; L. L. Wallace, treas.; preceding and L. R. Myers, directors.

Inc. 1915, in Ariz. **Cap.**, 1,500,000 shares; 25c par; non-assessable; outstanding, 763,000 shares. Listed on San Francisco Stock Exchange.

Property: 12 claims, about 240 acres, in the Oatman district, said to show an almost vertical fissure vein occurring in granite porphyry, andesite and rhyolite. Pay ore occurs in shoots and values are gold.

Development: includes shaft, which it is planned to sink to 550'. Cross-cutting reported to have developed ore of both shipping and milling grades.

Equipment: includes a 40 h. p. hoist, 500' compressor, 80 h. p. engine, power drill sharpener, etc., costing \$26,000.

Work was suspended July, 1916, on account of financial condition.

In April, 1917, the property was sold at sheriff's sale for \$9,000 to the Grapevine Springs Water Co. of Oatman. This is apparently the finish of one of the 200 companies born during the Oatman boom.

TOM REED APEX MINING CO.

ARIZONA

Address: Oatman, Ariz.

Is a prospect, on which company was developing a strong vein exposed on Ricebird claims. On Feb. 16, 1916, 50,000 shares were offered at 15c each.

Letters returned unanswered in July, 1917.

TOM REED GOLD MINING CO.

ARIZONA

Office: 604 Chamber of Commerce Bldg., Pasadena, Calif. **Mine office:** Oatman, Ariz.

Officers: Chas. Mushrush, v. p.; W. J. Lawrence, sec.; C. N. Post, treas.; with C. L. Wohld, directors. W. B. Phelps, mgr.; H. P. Flint, metallurgist.

Inc. Dec. 17, 1906, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; outstanding, 909,555. No bond issues, mortgages or indebtedness. Listed on Los Angeles Stock Exchange.

Earnings in 1916 were \$486,678, and operating expenses, \$432,000.

Dividends: aggregate \$2,600,000. The first dividend of 6% was paid in 1908. In 1910 the present 20-stamp was built and a second dividend of 3% was paid. Since then dividends have averaged 4½% per month for five years. In 1916, 10½c per share was paid.

History: the mine was discovered in 1900, 20 years after the discovery of the Gold Roads mine nearby. Early development proved unsuccessful and in 1904 the mine was sold for \$75,000, one-tenth cash. The purchasers failed to meet payments and the property passed to the Title Insurance & Trust Co. of Los Angeles, representing creditors, for \$45,000. The present company was formed and deeper developments undertaken. The Ben Harrison shaft was then 150' deep and the Tom Reed 90'. The first shoot of commercial ore was encountered on the 150' level.

Property: 27 claims, in three distinct groups, 374¼ acres. Also owns water

rights and mill sites in Cottonwood Canyon. Thus far most of production has been from the Tom Reed group, but development on the Black Eagle group promises early production.

At 400' depth in the Aztec claim there has been opened 1,000' of mill ore.

The claims cover the outcrop of the big Tom Reed lode, one of the typical quartz-adularia veins of the district, which has been reopened and crushed by strike faulting with enrichment of the primary ore. The oreshoots persist to the deepest level developed (1,400'), with no change in size or value.

Ore: is gold-bearing; average value about \$20 per ton.

Development: to a depth of 1,400', vertical, with total workings of 14,850'. Ore reserves are estimated at 180,000 tons, averaging \$10 per ton.

Equipment: working shaft has a 150 h. p. electric hoist. Power is supplied by the Desert Light & Power Co., Kingman. Also includes 5 other mine hoists and compressors with capacity of 2,000 cu. ft.

The mill rebuilt in 1917, of 300 tons capacity, has ball mills, classifiers and counter-current decantation system of cyanidation. Mine has machine shops, supply store, hospital, recreation hall, etc. Present equipment cost more than \$300,000.

Production: for year ending March 31, 1916, \$486,678, against \$614,333 in 1915 and \$1,002,284 in 1914. Recovery was 97% from 46,000 tons of \$11.03 ore, at cost of \$6.48 per ton.

Property is a good one, and equipment complete. During the past 2 years there have been many changes in the Tom Reed management, the last being in Sept., 1917. It is now reported that development will be modified. Rumors of consolidation with the United Eastern again are current. The new mill is working well and profitably treating lower-grade ore, but management is not so liberal about information as formerly.

TOM REED, JR., MINING CO.

ARIZONA

Office: Citizens' Bank Bldg., Los Angeles, Calif. **Mine office:** Oatman, Ariz.

Officers: E. S. Moody, pres.; J. L. Mason, v. p.; C. S. Baxter, sec.; with H. G. Peabody and W. S. Morse, directors.

Inc. 1909, in Ariz. **Cap.**, \$1,000,000; shares \$1 par, non-assessable; issued 786,226 shares. Annual meeting in Nov. Listed on Los Angeles Stock Exchange.

Property: 6 unpatented claims, about 120 acres, in the San Francisco district, Mohave Co., $\frac{1}{2}$ mile from Oatman. The fissure vein occurs in andesite-rhyolite and varies in width from 4' to 12'. Pay ore occurs in shoots, and is said to run from \$4 to \$15 per ton in gold.

Development: by inclined shaft, 300' deep. Lateral workings amount to 330'.

Equipment: includes 2 hoists, a 344' compressor, with gasoline power, shaft house, etc. A larger hoist has been provided to sink a new shaft to 500'. Is a prospect.

UNITED EASTERN MINING CO.

ARIZONA

Office: Oatman, Ariz.

Officers: Philip Wiseman, pres.; F. A. Keith and G. W. Long, v. p's.; R. I. Rogers, treas.; with S. W. Mudd, J. L. McIver, W. K. Ridenour, D. C. Jackling and R. C. Nowland, directors; W. K. Keith, sec.; J. A. Burgess, supt.

Inc. in 1914, in Ariz. **Cap.**, \$1,500,000; shares \$1 par; outstanding, 1,360,000; non-assessable. Equitable Trust Co., New York, transfer office. Listed on Los Angeles Stock Exchange and on New York and Boston Curbs.

Dividends started in July, 1917 at rate of 5c per share monthly, equal to \$68,150. To October, distributions totaled \$204,450.

Property: 27 claims, 300 acres, patented, at Oatman, Mohave County, ad-

joining the Tom Reed mine on the N., and covering the N. W. extension of Tom Reed vein.

In April, 1917, the Big Jim mine adjoining was purchased for 160,000 United Eastern shares, or over \$800,000. The Sunnyside mine, 3 miles away, is also owned by United Eastern.

Development: main shaft 790' deep, with crosscuts opening the vein on the 303', 465', 565' and 665' levels. On the 3 latter levels the orebody was 42' wide, 400' long and 200' high, equal to 320,000 tons in June, 1917; and in August on the 665' level the shoot was opened for 650'. In the Big Jim there is reported to be ore worth \$3,000,000; and in the Sunnyside there is 15' of ore on the 400' level. On the 565' level of the United Eastern a 4 to 7' intrusion reduced the ore value in June.

Geology: calcite vein, irregularly banded with quartz, in andesite. Geology of the district is complex and has been studied by many engineers. Veins outcrop either as prominent silicified ribs in the softer andesites, or as shallow depressions in quartz-porphyry, all showing more or less brecciated rock fragments cemented by calcite or quartz. Ore occurs as a series of lenses pinching vertically and horizontally within the vein-filling. Gold is seldom found near the surface in commercial quantities. None of the mines are wet.

Equipment: complete, with electrically driven hoists, compressors, and 200-ton mill, which is to be enlarged. It includes Marcy ball mills, tube mills, and the counter-current system of cyanidation.

The United Eastern mine and mill are described by Otto Wartenweiler in the November, 1917, Bull. of the A. I. M. E. The machinery includes an Allis-Chalmers double-drum 150 h. p. electric hoist, 150 h. p. 888 cu. ft. Ingersoll-Rand compressor, 100-ton coarse ore bin, No. 6 Tel-smith gyratory crusher driven by 50 h. p. motor, 400-ton mill ore bin, 2 No. 64½ Marcy mills driven by 100 h. p. motors, Callow belt screens, Dorr classifiers, three 5x6' Allis-Chalmers ball-mills driven by 75 h. p. motors, Callow tanks, 5 Dorr 40x12' thickeners, 4 Dorr 24x14' agitators, 5 diaphragm pumps, Krogh centrifugal pumps, Merrill classifying and zinc dust precipitating presses, refinery and the necessary cyaniding accessories. The whole surface equipment including water system, houses, roads, etc., cost \$248,468.

Production: for first half of 1917, 37,565 tons of \$21.12 ore were treated, yielding 96%. Profit for the period was \$491,130. Costs are about \$6.50 per ton.

This is the big gold mine whose splendid orebody caused the Oatman boom. Its discovery and development is the result of study of geological conditions and intelligent mine exploration. In March, 1915, ore was first found on the 400' level; in Jan., 1917, the mill was treating 200 tons daily; and in July dividends commenced, with every chance of being continued indefinitely.

UNITED NORTHERN MINES CO.

ARIZONA

Office: 434 I. W. Hellman Bldg., Los Angeles. **Mine office:** Oatman, Ariz.

Officers: C. T. Howland, pres.; W. H. Thomas, sec. and treas.

Inc. 1915, in Ariz. **Cap.**, 1,000,000 shares; par 10c; in treasury, 500,000. Listed on Los Angeles Stock Exchange.

Property: the Lion, Kennedy Fraction, and Poorman claims, 40 acres, between United Eastern and Gold Road mines, N. of west end of Fessenden claims.

Equipment: 25 h. p. gasoline hoist, compressors, etc. Sinking 2-compartment shaft to explore two veins. In Dec., 1916, \$2 to \$12 ore had been opened on 400' level, the vein being 50' wide.

UNITED WESTERN MINES CO.

ARIZONA

Address: Oatman, Ariz.

Officers: W. K. Ridenour, pres. and treas.; H. E. Woods, v. p., with S. E. Vermilyea, E. H. Newland and M. Lines, directors.

Inc. in Arizona. **Cap.**, \$1,000,000; shares \$1 par; in treasury, 600,000. Listed on San Francisco and Los Angeles Stock Exchanges.

Property: 4 claims, 65 acres, one mile S. W. of Oatman, Mohave Co., crossed by main road connecting Gold Road and Oatman, and adjoining property of the United Eastern Company along what appears to be a continuation of the main ore zone of that property. Also owns the Oofy Goofty group and water rights 4 miles N.W. of Oatman, total, 125 acres. Ore is free-milling gold, containing little silver. Pay ore occurs in shoots of undetermined extension. Development shows strong vein on the upper levels but below milling grade. On 505' level the vein is large, wet, and reported to show milling value.

Development: comprises a shaft 500' deep with crosscuts at 200' and 500'. At the latter depth a heavy flow of water from the vein temporarily stopped work, 1916.

Equipment: includes 50 h. p. hoist, compressor, buildings, etc.

Property a good prospect, but drifting alone can determine its value.

VIVIAN MINING CO.

ARIZONA

Office: Merchants' National Bank Bldg., Los Angeles, Calif. **Mine office:** Oatman, Ariz.

Officers: E. M. Ross, pres.; G. A. Hancock, v. p.-gen. mgr.; E. A. Olson, sec.; the foregoing and E. P. Thom, C. Leonhardt, R. Deving, directors. Farmers' & Merchants' National Bank, treas.

Inc. in Cal. **Cap.**, \$500,000; shares \$1 par; assessable; outstanding, 410,292. No bonded indebtedness. Annual meeting, first Saturday in July.

Property: 11 claims, 183 acres, 2½ miles W. of Oatman, Mohave Co.

Development: 450' shaft; workings, 5,400'.

Equipment: two Fairbanks-Morse 40 h. p. oil engines, steam compressor, 8 h. p. hoist, electric light plant, buildings, etc. Developing in 1917, being financed by assessments.

WEST GOLD ROAD MINING CO.

ARIZONA

Office: Crocker Bldg., San Francisco, Calif.

Officers: T. C. Petersen, pres.; R. L. Mann, v. p.; Gurdon Bradley, sec.

Inc. in Calif. **Cap.**, \$1,000,000; shares \$1 par.

Property: 5 claims, 63 acres, near Oatman, said to contain the W. extension of the Gold Road mine.

Development: consists of main shaft 455' deep, and several crosscuts and drifts. Stock unlisted.

WINCHESTER GOLD MINING CO.

ARIZONA

Address: L. E. Hesla, Prescott, Ariz.

Officers: L. E. Hesla, pres.-treas.; A. W. Bark, v. p.; C. F. Paul, sec., with C. J. Dalken and O. H. Hesla, directors.

Inc. July, 1915, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; 535,000 outstanding. Annual meeting, first Monday in July.

Property: 6 claims and 2 fractions, 140 acres, 2 miles W. of Oatman, Ariz. During 1916 owners spent \$3,500 on prospecting and report good surface results. A lode 17' wide assayed from a trace to \$2.30 gold per ton at depth of 50'. Another 30' shaft, 1,000' away, opened \$7 ore. Placer work years ago yielded considerable gold on part of the property.

PARKER, YUMA COUNTY

ARIZONA EMPIRE COPPER MINES CO.

ARIZONA

Mine office: Parker, Yuma Co., Ariz. W. A. Moses, pres.; Gen. E. Bouton, v. p.; L. H. Knowlton, sec.; Newton Evans, treas.; preceding officers and F. X. Pfaffinger, directors; Jas. H. Watson, gen. mgr.

Inc. Aug., 1909. **Cap.**, \$5,000,000; shares \$5 par.

Property: bought of Carnation Mining Co. 41 contiguous claims, 820 acres, about 10 miles north of Parker and 3 miles from Eagle Landing, on the Colorado River, include the Eagle, Carnation, Belcher and Cyclone groups. Company also has 160 acres of ranch lands on the Colorado River, including Eagle landing, held for a smelter site. Geological conditions are markedly similar to those at the Planet and Clara mines. The property, as a whole, has about 6,000' of workings, deepest 300', showing a large amount of copper carbonate, with sulphide zone not yet reached. On the 200' level of the Carnation shaft is an orebody said to assay 5% copper and \$5 gold per ton, carrying a 10' paystreak estimated to average 10% copper and \$6 gold per ton.

Surface showing is interesting, but development work is disappointing. Shallow excavations show irregular areas, often 50' wide, well stained with copper carbonate; much of it could be shipped. This green carbonate ore has been carefully piled and makes beautiful patches of color on the desert scenery. Development usually reveals a sheared zone, copper-stained, but only a few feet wide. Throughout this region there are occasionally encountered pockets of rich gold ore with the copper. These seem to be lenses interbedded in the schist, and while one or two important orebodies have been found in the region, no mines of importance have been developed. Mines reported taken over by a Los Angeles syndicate and shipments being made to Hayden smelter, Feb., 1917.

ARIZONA MCGINNIS COPPER CO.

ARIZONA

Address: Parker, Ariz.

Officers: B. L. Vaughn, pres.-gen. mgr., San Diego, Calif.; E. C. Fleet, sec. C. E. Boydston, supt.

Inc. 1916, in Calif. **Cap.**, \$1,000,000; shares \$1 par.

Property: 13 claims, adjoining the holdings of the Empire Copper Co., about 12 miles N. W. of Parker, Yuma County, developed by 200' shaft and a tunnel, 200' long, July, 1917. Ore occurs as a contact deposit in limestone and quartz schist, running N. 65° E., with 30-70° dip. The orebody is reported to be 50' wide and 200' long, opened to depth of 20' on surface, with 2' shoot of shipping ore containing cuprite, malachite and chrysocolla, and said to run 10% copper and \$8 gold.

Equipment: includes 35 h. p. oil engine, compressor and 1,100' aerial tram. Several carload shipments made in 1917. Management plans sinking shaft and driving tunnel to get below the surface ore.

ARIZONA REVENUE COPPER CO.

ARIZONA

Officers: David F. Johnson, pres., Phoenix, Ariz.; W. L. Williams, v. p.; Oscar M. Spence, sec.-treas., Parker, Ariz., with A. J. Beecher and Paul C. Thorne, directors. H. A. Morse, supt.

Inc. Dec., 1916, in Arizona. **Cap.**, \$2,500,000; shares 50c par, of which 2,200,000 shares were given the owners for the claims and 200,000 shares offered to the public, March, 1917, at 15c.

Property: 72 claims, about 1,400 acres, in Cieniega district, Yuma County, includes the Echo, Milton, Cecil, El Moline, Revenue and Elephant groups.

Development: amounts to about 3,000' of underground workings, at a cost of \$40,000. A 185' shaft on the Echo group is said to show ore running better than 8% copper. The Revenue group is developed by 2 incline shafts, 285' and 150' deep. Ore consists of hematite containing oxidized copper minerals, and occurs as a replacement of limestone lenses in schistose rocks. Surface showings are promising and warrant further development at depth. Geology of the district fully described in U. S. G. S. Bull. 451.

Ore reserves: about 400 tons of high-grade ore on the dumps. Shipments to begin in 1917. Reported, June, 1916, that A. S. & R. had option on the property. Property formerly owned by E. S. Osborne.

ARIZONA STANDARD COPPER CO.**ARIZONA****Address:** J. T. Carrigan, mgr., Parker, Arizona.**Officers:** T. Spellacy, pres.; O. M. Spence, sec.-treas.; with C. Leonardt and J. P. Sweeney, directors.**Inc. 1917. Cap., \$5,000,000.****Property:** 21 claims, 420 acres, 14 miles E. of Parker, and about 4 miles from Midway, on the Swansea Railroad. Claims reported to show surface indications of a disseminated copper deposit, which is interesting if true.**Development:** by 3,000' of underground workings. Plans prospecting at depth by means of churn drills.**BILLIE MACK MINING CO.****ARIZONA****Address:** W. Dowe, mgr., Parker, Yuma Co., Ariz. Operating property of Ruby Gold & Copper Co.**Property:** the Billy Mack mine, 8 miles from Parker, Ariz.**Geology:** an area of pre-Cambrian limestone and schist, whose beds dip steeply N. W. Ore occurs as a contact vein between schist and limestone, the deposit being an irregular replacement with no known connection between the small ore pockets. Ore consists chiefly of malachite, chrysocolla and specularite with porous quartz. In the main mine workings a bunch a few feet across consisted of a mass of needle malachite shot through with threads and stringers of gold. As a rule the ore, though often rich, occurs in short and very thin bunches, and so far as known does not afford a basis for profitable mining on a large scale.**Development:** by 200' shaft with levels at 100', 150' and 200' below surface, and by several lesser prospect tunnels and inclines.

In 1917 shipments of high-grade ore were made to the smelter. A 75-ton mill was erected early in the year.

CONTINENTAL COPPER & GOLD MINING CO.**ARIZONA****Office:** 319 Douglas Bldg., Los Angeles, Cal.**Officers:** Jas. R. Haddock, pres.; Coyle J. Tracy, v. p.; Herbert T. Muzzy, sec.; Fred Knoblock, treas.; preceding, with John Breiner, E. P. Clapp, J. F. Halsted, directors.**Inc. June, 1905, in Arizona. Cap., \$1,000,000; shares \$1 par, non-assessable; issued, \$900,000. Annual meeting, first Saturday in November.****Property:** 6 claims, patented, 120 acres, in the Bill William, Yuma Co., district, shows slates, schists and limestones, with igneous intrusives, said to carry 12 fissure veins and contact deposits of which one, of 8' estimated average width, traceable 1,500', has been developed by a 100' shaft, a 429' cross-cut tunnel and 20' and 161' drift tunnels, with 700' of workings, showing occasional oxidized ores, estimated to average 10.87% copper and \$4 gold per ton.

Property leased in Jan., 1916, to H. T. Muzzy, who made ore shipments to Selby smelter at San Francisco. Several lenses of 36% ore are said to be opened up.

EMPIRE ARIZONA CONSOLIDATED CO.**ARIZONA****Address:** Milton Sutherland, supt., Parker, Ariz.**Officers:** John E. Coffin, pres., 312 Merchants' Nat'l Bank, Los Angeles, Calif.; Truman Berry, v. p.; C. A. Musselwhite, sec.-treas.; E. W. Brooks, cons. engr. Company is the successor of Empire Arizona Copper Co.**Inc. Feb. 1, 1917, in Arizona. Cap., \$2,500,000; shares \$1 par; 1,270,000 issued. No bonds. Annual meeting in February.****Property:** 34 claims, patented, in the Cienega mining district, Yuma Co., Ariz., about 12 miles from Parker, is under lease and bond for 15 years at a royalty of 15% of the net returns. Company is reported to have an option to purchase property within three years at \$300,000.

Claims are said to show 3 large veins occurring in a porphyry limestone-

schist contact, with outcrops of iron oxide carrying copper values. The iron is hematite, carrying gold values, and the copper occurs as oxides and carbonates. Shipping ore was found at 100' in depth. Orebody said to be 4' to 25' wide, and to average 2.7% copper, 49% insoluble, 17% iron, 12-20% lime.

Development: by leasers during many years consists of shallow shafts, open cuts and tunnels. Company has sunk a 300' shaft on the Carnation claim and a 240' two-compartment shaft on the Eagle's Nest. Several adits have also been driven for over 350' on the veins and are said to show copper-gold values. Average assays are given as 5% copper and \$3 to \$8 gold.

Equipment: includes 25 h. p. hoist and 6-drill compressor. Management plans sinking Eagle Nest shaft to 1,000' level, 1918.

Production: shipping about 30-35 tons daily of 6.3% copper ore, May and June, 1917.

JUNIATA GOLD & COPPER CO.

ARIZONA

Office: 315 South Broadway, Los Angeles, Cal. **Mine address:** Parker, Yuma Co., Ariz.

Officers: P. W. Powers, pres.; E. S. Field, v. p.; Dalton S. Patterson, sec.-treas.; H. B. Ailman, supt.

Inc. Oct. 29, 1907, in Arizona. **Cap.**, \$1,000,000; shares \$1 par.

Property: 10 claims, 200 acres, lying between the Gray Eagle and Carnation mines, in the Seneca district about 9 miles N. E. of Parker, on the E. side of the Colorado River. Claims show gray micaceous schists with interbedded limestone. The schists dip about 45° and are cut by shear zones in which copper ores occur.

Development: by 200' shaft with 2 prospect shafts reported to expose 8' of ore carrying 4% copper and \$9 gold per ton. A second vein said to be 18' wide is reported to carry 2½% copper and \$6 gold. Property is a prospect. No recent returns secured.

MAMMON GOLD & COPPER CO.

ARIZONA

Address: W. M. Boyce, mgr., Parker, Yuma Co., Ariz.

Officers: E. S. Osborne, pres.; J. M. Patterson, v. p.; C. Bowman, sec.; H. H. Stone, treas.

Property: 32 claims in Senator district, 10 miles E. of Parker. In about 1904 several carloads of oxidized copper ore were mined. Property passed through several hands until present owners acquired it.

Geology: ground largely covered with basalt. Schists show in water-courses and on lower slopes. The copper and accompanying hematite occur in distinct but small fractures, also in a persistent bedded or blanket deposit, apparently conformable to the overlying gneiss. The bedded vein has been the source of the ore mined, and must be relied upon as the main source of ore. Where fissures cross the orebed, ore occurs in fair quantities.

Development: apart from shallow shafts, consists of 3 short tunnels, connected by stopes. No. 3 produced some ore; No. 2 is not promising; No. 1 workings, below No. 2, show the downward extension of the orebed. An incline shaft was down 175' in June, 1917, from which crosscuts have opened gold-copper ore. Churn-drilling is under way to cut the bedded deposit and the cross-fissure. Examined by W. H. Weed in 1917.

Production: about 500 tons, shipped at various times in past 5 years, ore averaging well in copper.

Is a property worthy of careful exploration by churn-drilling.

RED METAL COPPER CO.

ARIZONA

Address: Parker, Ariz.

Officers: Dr. A. H. Littlefield, pres.; Lee Pritt, v. p.; Fred M. Hall, sec.; O. M. Spence, treas., with John Pritt, directors.

Property: adjoins the Western Arizona Copper Co. holdings on the S.,

and is said to show a contact deposit of porphyry with an iron gossan carrying gold and copper values.

Development: by 225' shaft. Company offering stock at 25c per share, April, 1917, to procure funds for further development.

RUBY GOLD AND COPPER CO.

ARIZONA

Property near Parker, Ariz. Apparently acquired by the Billie Mack Mining Co., which see.

WARDWELL & OSBORNE COPPER MINES CO.

ARIZONA

Dead. Property lost by failure to do assessment work, and subsequently relocated and now held by Mammon Copper Co., which see. Described in Vol. XII.

WESTERN ARIZONA COPPER CO.

ARIZONA

Office: Miami, Ariz.

Officers: N. D. Brayton, pres.; J. P. Downey, v. p.; C. D. Duncan, sec.; F. E. Gassaway, treas.; G. R. Stewart, gen. mgr.; H. M. Foster, atty.

Property: 11 miles from Parker, on the Arizona side of the Colorado River. In April, 1917, two cars of ore averaged 12% copper and \$4 gold per ton.

YUMA CONSOLIDATED MINING CO.

ARIZONA

Address: F. W. Dunn, mgr., Quartzite, Ariz.

Property: placer ground in Quartzite district, Yuma Co., Ariz. Late in 1916 a dry treatment plant, including a Lidgerwood shovel, grizzly, Quenner crusher and Stebbing dry concentrators of 2,000 yards daily capacity was erected at a cost of \$65,000. Shortage of water is the reason for this type of plant. As much as 97% of the gold was said to be extracted. Gravel containing \$2, \$6.65 and \$12 per yard was reported as available. Nothing has been heard of the venture for nearly a year.

PATAGONIA, SANTA CRUZ COUNTY

AMERICAN BOY MINE

ARIZONA

Owned by Geo. Clarke, J. Petersen and J. B. David, Patagonia, Santa Cruz Co., Ariz.

Property: 6 claims near Patagonia, shows several veins from 6" to 18" wide. Ore contains gold, silver, copper and lead, and is said to average \$5 gold, 12 oz. silver and 10% copper.

Development: by an 80° incline shaft, 120' deep, and a 370' tunnel that cuts the bottom of shaft. On the 40' level 200' of drifting has been done, on the tunnel level 250'. The small shipments made have consisted of ore extracted by development work. Assessment work only being done.

BRADFORD MINE

ARIZONA

See Sonoita Copper Co.

CASANECA-DALY MINING & REDUCTION CO.

ARIZONA

Amadoville, Santa Cruz Co., Ariz. A. D. Daly, supt.

Property: 7 claims, 140 acres, in the Tyndall mining district, Santa Rita Mountains, Santa Cruz Co. Sulphide ore said to contain copper, gold, silver, lead and molybdenum, occurs in orebodies 3 to 8' wide in monzonite.

Development: by 600' tunnel, said to have blocked out 50,000 tons ore.

Equipment: includes a 50-ton concentrator, that started operating in Dec., 1915. Twenty men employed. Management plans driving a 1,000' development tunnel and increasing mill equipment.

CONSOLIDATED ARIZONA COPPER CO.

ARIZONA

Fred J. Miller, supt., Mowry, Ariz.

Property: 12 claims, in Patagonia district, with 60' shaft, said to show high-grade chalcopryite and chalcocite ore.

DUQUESNE MINING & REDUCTION CO.**ARIZONA**

Main office: 53 State St., Boston, Mass. **Mine office:** Duquesne, Santa Cruz County, Ariz.

Officers: Geo. Westinghouse, Jr., pres.; H. H. Westingham, v. p.; W. Grosvenor Calkins, sec.-treas.; Murray G. Day, gen. mgr.

Property: the Duquesne or Westinghouse mines, comprise half a dozen mines, 84 claims, patented, 1,000 acres, near the Pride of the West and 5 miles south of the Mowry, in the Washington camp, Patagonia mining district, Ariz. Shows a contact deposit between limestone and granite-porphry, carrying argentiferous and auriferous chalcopryrite, sphalerite, galena and pyrite, opened by a shaft 650' deep.

The Pride of the West and the Washington mines have large bodies of complex ore which have been the subject of numerous experiments in wet, electrolytic, magnetic, dry and other systems of concentration for many years past. At present the workings on the Bonanza mine are 650' deep and the Duquesne shaft 120' deep. The Bonanza shaft is equipped with a 50 h. p. electric hoist and an Ingersoll compressor. The Duquesne shaft has a 12 h. p. gasoline hoist.

Mill and oil-flotation installed 1917.

The mine is shipping to the Douglas-Arizona smelter, shipments running about 16% copper and 5 oz. silver per ton.

Operations, 1917, were very successful, the company's debts being paid off and a surplus acquired. The property and its history, geology, etc., is very fully described in U. S. Geological Survey, Bull. 582, pp. 321-334; 1915.

FLUX MINE**ARIZONA**

R. R. Richardson, owner, Patagonia, Ariz. Mine formerly owned by Hardshell-Flux Mng. & Dev. Co., dissolved in 1910. Worked by owner, 1917, and shipping 300 tons of lead-silver ore monthly.

HAPPY JACK MINING & REDUCTION CO.**ARIZONA**

Office: 530 Land Title Bldg., Philadelphia, Pa.

Mine office: Patagonia, Santa Cruz Co., Ariz.

Officers: Alfred W. Barnett, pres. and gen. mgr.; W. H. Barnett, v. p.; Henry W. Scattergood, sec.-treas.; preceding, with Martin Stotz and Theo. Myers, directors.

Inc. Oct., 1908, as successor of Happy Jack Mining Co., in Arizona. **Cap.,** \$1,000,000; shares \$1 par, fully paid and nonassessable; issued, 304,709 shares.

Property: 9 miles from Patagonia, shows several veins, carrying silver-lead ore with gold and copper values.

Development: by 3 tunnels, longest 950'. Total development work, 4,000.'

Has shipped considerable ore averaging 42% lead, 2½% copper, 20 oz. silver and \$2 gold. Several hundred tons of concentrating ore reported on dump.

Assessment work only done. Is considered promising.

HARDSHELL MINE**ARIZONA**

R. R. Richardson, owner, Patagonia, Ariz. Mine formerly worked by the Hardshell-Flux Mng. & Dev. Co., dissolved in 1910.

Ore is silver with some lead, copper and gold values. Mine bonded, 1917, and shaft will be sunk to 500'. Concentrator to be installed.

HAVALINA MINING CO.**ARIZONA**

Sold its Santa Nino property, Patagonia mountains, S. W. of Duquesne, Santa Cruz Co., Ariz., to J. Wells Smith, Feb., 1913. Property was being developed by 800' crosscut tunnel to reach a rich copper shoot said to have been found in the mine. Claims said to have a big showing of molybdenum ore. Litigation has stopped work.

HOSEY GROUP**ARIZONA**

Owned by W. B. Ramsdell and operated by Colin Timmons.

Property: 7 claims, including the Augusta mine, about 6 miles from Patagonia. The Augusta has 1,000' of development showing 3 veins, 3-15' wide, carrying copper, gold and silver. Assessment work in 1915 opened up several rich payshoots and the management is sinking a new shaft about 300' east of the old one.

IVANHOE MINE**ARIZONA**

Patagonia, Santa Cruz Co., Ariz. Formerly owned by Ivanhoe Mining Co., which has been dissolved. Property now owned by A. H. Ives, of Minneapolis, and J. E. Hurd, who, in 1915, did assessment work only.

Property: the Ivanhoe mine and various claims, 25 in all, unpatented, 500 acres, in the Wrightson district, 4 to 6 miles S. W. of Patagonia, the nearest rail point. The group shows rhyolite, andesite and diorite, with brecciation zones carrying orebodies, of which 5 are estimated by owners to average 27' in width, carrying chloride, silver ore, gray copper and chalcocite, estimated by management to average 16% copper, 6% lead and 225 oz. silver per ton.

Development: by the 200' Commercial shaft, with considerable cross-cutting, developing, it is said, large bodies of milling ore. There are also several tunnels, with 2,700' of workings, estimated to show 100,000 tons of ore.

Equipment: includes a 70 h. p. steam plant with a 50 h. p. hoist good for 1,000' depth. There are 5 buildings, and water is supplied by a 6 h. p. gasoline pump.

MANSFIELD MINING & SMELTING CO.**ARIZONA**

Office: 303 Railway Exchange Bldg., Kansas City, Mo. **Mine office:** Patagonia, Santa Cruz Co., Ariz.

Officers: Frank D. Reasor, pres.; H. A. Sutermeister, v. p.; C. E. Sweet, sec.; Chas. L. Cookson, treas.; preceding with Harry J. Richards, A. W. Safford, and A. E. White, directors.

Inc. May 26, 1906, in Arizona. **Cap.,** \$8,000,000; shares \$1 par, non-assessable; issued \$7,156,905. Bonds, \$100,000 authorized, at 6%, all outstanding. Annual meeting second Monday in January. Company owns no mining property, but in the reorganization proceedings, 1914, acquired stock interests in the Ruby Copper Co. and Southern Arizona Mining Co. See Vols. VIII and XI, Copper Handbook, for early history.

MORNING GLORY MINE**ARIZONA**

Chas. B. Wilson, owner and manager, Patagonia, Santa Cruz Co., Ariz.

Property: 12 claims, 240 acres, 12 miles from a railway, in the Harshaw district of the Patagonia mountains. Claim said to show 4 veins 6' wide in limestone and porphyry, carrying sulphide ore, estimated by owner to average 3% copper, 3 oz. silver, 60c gold, 35% iron and 35% sulphur per ton. A shoot of zinc-copper ore is reported to have been opened in 1916.

Development: 2 shafts of 80' and 200', with about 1,475' of workings, are estimated by owner to give 50,000 tons of 3½% copper ore blocked out for stoping. Ore is hand-sorted; crosscut tunnel is in over 500'.

Equipment: includes a small hoist.

Production: 10,000 tons to date. Developing only in 1916, but will start shipping when a favorable contract can be secured. Mine has been worked for over 30 years.

MUMME MINING CO.**ARIZONA**

Office: 1502 S. Flores St., San Antonio, Tex. **Mine office:** Patagonia, Santa Cruz Co., Ariz.

Officers: T. E. Mumme, pres. and gen. mgr.; E. J. Mockert, v. p.; H. P. Mockert, sec.; Geo. F. Wieland, supt.

Inc. Sept. 20, 1910, in Arizona. **Cap.**, \$100,000; shares \$1 par; issued 61,000 shares. Also has \$10,000 debentures authorized, but unissued.

Property: 7 claims, patented, in the Harshaw district, 6 miles from Patagonia, shows 2 veins of about 7' average width, carrying ore said to average 9% copper, 22 oz. silver and \$4 gold per ton.

Development: 50' shaft and 3 tunnels, longest 320'. Mine has no power equipment.

NEW STATE MINING & REDUCTION CO.**ARIZONA**

Office: 316 New England Bldg., Topeka, Kan.

Property: near Amadoville, Santa Cruz Co., Ariz., 26 claims, showing veins said to carry lead-zinc-copper ores, with gold and silver values.

Development: by 150' shaft with 950' tunnel.

Equipment: includes gasoline hoist and Ingersoll compressor. Was planning to erect a 100-ton dry concentrator to treat low-grade ores, at last accounts.

PATAGONIA MINES & DEVELOPMENT CO.**ARIZONA**

Office: Schmid-Shattuck Bldg., Patagonia, Santa Cruz Co., Ariz. Thos. Ewing, pres. and gen. mgr.; John A. Campbell, sec.-treas.; D. W. R. Davis and Charles Wighard, directors.

Cap., \$1,000,000; shares \$1 par; 850,000 shares in treasury.

Lands: 4 claims, including the Santa Rita in Josephine canyon, Patagonia, the Oklahoma group of 8 claims, and the San Antonio mine, in the Sierra Azul mountains, 30 miles S. W. of Cahanea, Mexico.

Shipments from Patagonia in 1914 to the Copper Queen smelter assayed 30 oz. silver, 13.72% copper, netting \$46.28 per ton. No returns reported since.

RED MOUNTAIN COPPER MINING CO.**ARIZONA**

Idle.

Property: 60 claims, 1,200 acres, includes the Four Metals mine at Mowry, Santa Cruz Co., Ariz. Was worked unsuccessfully by Oscar A. Turner, 1914-15.

Development: by several tunnels, longest 1,300', said to show pyrite and chalcopyrite ore, assaying from 1-3% copper for over 300'.

RUBY COPPER CO.**ARIZONA**

Office: 303 Railway Exchange Bldg., Kansas City, Mo. **Mine office:** Patagonia, Santa Cruz Co., Ariz.

Officers: H. A. Sutermeister, pres.; H. J. Richards, v. p.; C. E. Sweet, sec.; Chas. L. Cookson, treas.; preceding, with A. E. White, R. W. Pierce, Harry J. Richards, F. P. Greenwood, Dr. Emil Thielman, F. D. Reasor and W. W. Ross, directors; C. A. Pierce, gen. mgr. and supt.

Inc. 1912 in Arizona. **Cap.**, \$2,000,000; shares \$1 par; issued, 1,493,922 shares. Debentures, \$200,000 at 6%; issued, \$98,185.

Property: the Lee group of 9 claims, 6 patented, about 12 miles N. of Patagonia. Claims show remnants of Tertiary lavas capping a series of limestones and other sedimentary rocks, altered by metamorphism and underlain by a dense black crystalline rock that carries ore. This rock, though seemingly devoid of crush zones or fissures, contains disseminated particles of chalcopyrite with occasional bunches and patches

of high-grade ore assaying as high as 27% copper and 100 oz. silver per ton. This rock also holds kidneys, or globular masses of primary copper glance and bornite. Ores are estimated to average about 6% copper, 12 oz. silver and 11 cts. gold per ton.

Development: by 460' shaft and a drift tunnel, with about 5,000' of workings. The shaft is dry, unlike that of the Hosey mine to the N., and the Happy Jack to the S., both in higher ground.

Equipment: includes 30 h. p. gasoline hoist, Cameron pump and Leyner compressor.

In 1917 company was prospecting its disseminated deposits by churn drilling.

SOUTHERN ARIZONA MINING CO.

ARIZONA

Office: 303 Midland Bldg., Kansas City, Mo.

Officers: H. A. Sutermeister, pres.; F. D. Reasor, v. p.; C. E. Sweet, sec.; Chas. L. Cookson, treas., with A. E. White, Emil Thielmann, H. J. Richards, E. P. Greenwood and R. W. Pierce, directors. C. A. Pierce, supt., Patagonia, Santa Cruz Co., Ariz.

Inc. 1912 in Ariz. **Cap.,** \$4,000,000; shares \$1 par; non-assessable; 1,409,079 shares outstanding. Authorized bond issue, \$400,000; \$84,160 outstanding. Annual meeting third Tuesday in January.

Property: the Sweet group, 23 claims, 3 patented, in Wrightson mining district, 10 miles N. W. of Patagonia, shows gold-bearing copper ore, occurring as contact deposit between granite and monzonite. Mine has 365' shaft equipped with steam hoist and air compressor.

See Mansfield M. & S. Co.

STANDARD METALS CO.

ARIZONA

Address: Security Bond Co., 530 Title Insurance Bldg., Los Angeles, Cal.

Officers: O. B. Bachman, pres.; A. G. Kohnhorst, sec.; W. J. Mitchell, supt.

Inc. in Arizona. **Cap.,** \$1,000,000; shares \$1 par.

Property: over 1,000 acres, including the Denver, Standard, Tres de Mayo, Bob Lee, Mowry and North Mowry mines, in Santa Cruz Co., Ariz. Ore carries silver and lead.

Development: workings said to aggregate 12,000' to 15,000'. In the Denver, G. R. Hay estimates an output of \$400,000 for 10 years. The Mowry has a large past production, and is said to have 100,000 tons on dumps worth \$5 per ton net. E. W. Brooks considers the Bob Lee "one of the most promising undertakings of its kind."

It is to be hoped that those interested are not banking too much on past production of the mines.

THREE R MINE

ARIZONA

R. R. Richardson and A. E. Crepin, owners, Patagonia, Santa Cruz Co., Ariz. Mine was operated under option from April, 1912, to Oct., 1914, by N. L. Amster, 67 Milk St., Boston, Mass.

Property: 55 claims, about 1,000 acres, unpatented, on the westerly slope of the Patagonia mountains, 9 miles S. of Patagonia, at an elevation of 5,000'. Claims show alaskite with small, irregular areas of trachyte and rhyolite porphyries.

Ore: occurs mainly along several lodes in a N.-S. shear zone as chalcocite in high-grade shoots and also disseminated low-grade values. The first orebody opened had stopes 70 to 80' long and 40' wide, extending from the 50' to the 400' level; a second parallel ore-shoot, 100' from the first, was 23' wide and carried 8% ore.

Development: the Colossus tunnel, Evening Star tunnel and the

260' Colossus shaft, with total underground workings of 8,740'. Practically all the high-grade ore has been mined.

Equipment: includes a 50 h. p. Fairbanks-Morse oil-type hoist at the Colossus shaft, 40 h. p. and 60 h. p. oil-type engines operating individual belt-driven Sullivan air compressors.

Production: from April to Sept., 1913, 3,717,571 lbs. fine copper from 22,253 tons dry ore, averaging 9.1% copper. During 1914 about 100 tons of 12% copper ore was shipped daily.

Owing to litigation involving title between R. R. Richardson and Ben Heney, a former partner, the Amster lease was relinquished in 1914.

Reported in May, 1916, to have been sold to the Harrison Bros. of San Antonio, Texas, for \$500,000. In May, 1917, a 150-ton mill was reported as operating.

TRENCH CONSOLIDATED MINES CO.

ARIZONA

Address: care of Chas. W. Clark, Jerome, pres.; John Hoy, mgr.

Property: known as the Farrel mine, is near Patagonia and Harshaw, Santa Cruz Co., Ariz. The mines were acquired in 1913 by Senator W. A. Clark at a price said to be \$250,000. A 500' shaft being sunk 1917.

VICEROY MINING CO.

ARIZONA

Office: Janesville, Wis. Mine near Patagonia, Santa Cruz Co., Ariz.

Officers: Frank H. Baack, pres.; M. G. Jeffris, v. p.; M. O. Mouat, sec.-treas., Janesville, Wis.

Inc. Oct., 1912. Cap., \$1,000,000; shares \$1 par; non-assessable; issued, \$600,000.

Property: 8 claims, unpatented, 164 acres, in the Tyndall district, 20 miles N., N. W. of Patagonia, shows a number of fissure veins, traversing porphyry or following contacts between diorite and porphyry and dipping 45°. The vein is said to range from 6 to 75' in width. Ores are principally silver-bearing, but show occasional bornite and a little lead ore above the water level, reported to carry from 16 to 199 oz. silver per ton.

Development: by shafts of 40' and 100' with about 400' of tunnel workings in leached ore.

Idle for lack of funds, but company plans to resume operations soon.

WANDERING JEW MINE

ARIZONA

Comprises a group of four claims in the Tyndall district on the W. slope of Santa Rita mountains, near Alto, Santa Cruz Co., Ariz., owned by M. & L. Lulley and R. R. Richardson. Operated under bond and lease by E. B. & W. E. Holt and M. L. Kaiser of Nogales. First shipments made February, 1916.

Development: to 100' depth by 2 shafts, 300' apart, drifts and cross-cuts aggregating about 2,000' of workings. Country rock is gray diorite. Vein varies from 6" to 4' in width and contains argentiferous galena. About half the deposit is said to be shipping ore, the rest, concentrating grade. Ore is galena from the surface down, but in places contains a little copper carbonate and chalcopyrite.

In April, 1917, J. H. Verfurth and F. B. Kollburg were to erect a 75-ton mill. In a 10-ton test plant 60% lead concentrate was made, presumably by flotation.

WORLD'S FAIR MINE

ARIZONA

Patagonia, Santa Cruz Co., Ariz.

Property: 13 claims, near Harshaw, S. of Patagonia, in the eastern end of the Salero mountains, has a 600' main shaft, with about 2 miles of workings, developing an 8' orebody, carrying silver-lead ore.

The mine has been a shipper, since about 1893, of high-grade silver ore, and is credited with past production of about \$500,000 worth of ore.

PARADISE, (see Douglas)

PHOENIX, MARICOPA COUNTY

APACHE CHIEF MINING CO.**ARIZONA****Office:** 10 No. 2nd Ave., Phoenix, Ariz.**Officers:** Geo. H. Holgate, pres.; Dr. D. L. Conner, v. p.; Dr. Wm. G. Lentz, sec.; Dr. W. E. Severn, treas., with Sam Bradner, directors. Chas. M. Donohoe, supt.**Inc.** in Arizona. **Cap.**, \$1,000,000; shares 50 cts. par; non-assessable.**Property:** a group of claims at Apache Springs, about 23 miles N. of Glendale, said to show ore that averages 8% copper, \$1.20 gold and 90 cts. silver. Stock being sold, 1917, at 25 cts. per share to raise necessary funds for development work.**ARIZONA CACTILONE COPPER CO.****ARIZONA****Address:** P. O. Box 1007, Phoenix, Ariz.**Officers:** J. G. Hardin, pres.; S. C. Kingsbury, v. p.-gen. mgr.; I. J. Lipson, 2nd v. p.; C. D. Montgomery, sec.-treas.**Inc.** Feb. 8, 1917, in Arizona. **Cap.**, \$3,000,000; shares \$1 par; 400,000 sold at 25c each.**Property:** 21 claims of the Slocum Copper Co., in Maricopa Co., Ariz., 22 miles N. of Phoenix. Ground was examined by C. H. James in May, 1917, who recommended expenditure of \$30,000 to \$50,000 in exploration.**Geology:** main formations exposed are a more or less schistose pre-Cambrian granite and an altered diabase, the latter intruded by 2 prominent iron-stained quartz dikes showing a little copper carbonate and pyrite. Ore consists of copper and iron minerals in a diabasic porphyry.**Development:** by shafts 106' and 200' deep, midway between the quartz dikes. No important zone of secondary enrichment is expected.**ARIZONA DIXIE COPPER CO.****ARIZONA****Officers:** R. J. Shultz, pres.; J. W. Ambrose, v. p.; F. H. Larson, sec.-treas., all of Phoenix, Ariz.**Inc.** 1917 in Ariz. **Cap.**, \$1,500,000; shares 25c par.**Property:** 13 claims, 25 miles S. W. of Hassayampa, developed by 80' shaft and 40' drift, said to show a 5' vein carrying ore that assays 4% copper, with gold and silver values. Plan churn drilling in 1917.**BIG COPPER CHIEF CO.****ARIZONA****Address:** care Thomas Boyd, pres., Mound City, Ill.; S. E. Jordan, sec.-treas., Phoenix, Ariz.; R. E. Grace, v. p. **Mine address:** Canyon, via Bumblebee, Ariz.**Property:** the Jasper N. Nellis groups, 1½ m. S. W. of Bumblebee, shows schist mineralized by copper glance, etc., in a zone 300' wide.

Developed by shaft 50' deep and a 250' tunnel and many pits.

Is a prospect.

BUCKEYE COPPER & GOLD MINING CO.**ARIZONA****Main office:** New Philadelphia, Ohio. **Mine office:** Turkey, Yavapai Co., Ariz.**Officers:** Michael Siebold, pres.; Wm. Rommel, v. p.; Fred Graff, sec.; C. D. Grimes, treas.; with A. W. Reiser, L. Hardman, Geo. Edel, M. M. Davis; Alvin Graff, mine supt.**Inc.** July 24, 1912, in Arizona. **Cap.**, \$3,000,000; shares \$1 par; non-assessable; issued \$1,790,000. Annual meeting, first Tuesday in September.**Property:** 35 claims, 720 acres and a 20-acre smelter site, in 3 groups,

is 2 miles from Turkey, in Black Canyon district of Bradshaw mountains. Claims show chloritic schists and diorite, carrying fissure veins with occasional native copper and malachite, but mainly azurite, chalcopryrite and bornite, estimated to average 4% copper, 3.5 oz. silver and from a trace to \$6 gold per ton.

Development: 726' two-compartment shaft on the Columbia claim, a 520' two-compartment shaft on the Sullivan claim, with 2 other 200' shafts, various pits of 10 to 40' depth and tunnels of 87' and 314', with about 5,000' workings.

Equipment: includes 15 h. p. and 40 h. p. gasoline hoists, a small air compressor and several mine buildings.

CARMELITA MINING & MILLING CO.

ARIZONA

Office: 142 W. Washington St., Phoenix, Ariz.

Officers: P. P. Parker, pres.; M. S. Weyant, v. p.; J. A. Marr, sec. treas., with H. J. McCoy and J. H. Williams, directors.

Inc. in Arizona. Cap., \$350,000; shares \$1 par; 30,782 shares outstanding.

Property: 17 claims, 340 acres, in the Harqua Hala mountains, Maricopa Co., 14 miles from Wenden, said to carry a body of free milling ore, from 2 to 8' wide and assaying \$17 per ton. It is stated that there are 3,000 tons of \$15 milling ore on the dump. Treasury stock is to be sold to provide funds for a 50-ton mill.

CARNEY MINING CO.

ARIZONA

P. G. Carney, pres. and business mgr., Mesa, Maricopa Co., Ariz. **Homer Davidson,** supt.

Property: the Royal Gorge mine, shows a vein with gold-copper ore.

Development: by 800' tunnel and 100' shaft.

Equipment: includes gasoline engine and air compressor. Plans to erect cyanide mill.

GILA COUNTY CINNABAR MINING CO.

ARIZONA

Address: Phoenix, Ariz. Owns quicksilver claims in the Sunflower mining district, Mazatzal mountains, Maricopa Co., 30 miles from Phoenix. Ores occur in ancient schists, and consist of cinnabar and an opaline silica.

Erected a 30-ton furnace for recovery of metal. Geology described by Ransome, U. S. Geological Survey, Bull. No. 620, pp. 111-128, 1915.

GRAND TRAVERSE & ARIZONA MINING CO.

ARIZONA

Idle since 1910.

Office: 129 East Front St., Traverse City, Mich. Mine near Cave Creek, Maricopa Co., Ariz. Owns 3 patented claims. Fully described Vol. X, Copper Handbook.

HARRIS COPPER CO.

ARIZONA

Offices: Findlay, Ohio, and 319 Van Nuys Bldg., Los Angeles, Cal.

Officers: C. C. Harris, of Findlay, Ohio, pres., treas., gen. mgr. and purch. agt.; W. J. Martin, v. p.-mine supt.; Harry W. Moore, sec.; preceding officers, W. J. Sease, Los Angeles, and Fred F. Harris, San José, directors.

Inc. July 10, 1910, in Arizona. **Cap., \$1,000,000; shares \$1 par; non-assessable; issued, \$710,001.** Annual meeting, second Tuesday in January.

Property: 34 claims, 550 acres, in the Tip Top district, about 50 miles north of Phoenix and 30 miles east of Wickenburg, on the Agua Fria river, at the mouth of Black Canyon creek. Claims, partly purchased with stock and partly located by the company, show schists cut by dia-

base intrusions. The company's map shows 2 groups of claims, the Cascadilla, or western, being in part 3,000' wide and 1,200' long; the group covers 3 veins running north and south. Development is meagre; one shaft in diabase and 2 tunnels with an aggregate of 800' of work, costing \$9,000.

The Copper Reef, or east group, covers 2 veins, 1 alongside the Agua Fria river claimed to be an extension of the vein mined by the Kay Copper Co. Company claims 1,000 tons of \$15 ore blocked out, which is reasonable. One vein said to be 500' wide and another 90' in width, the observers evidently considering altered schist to be vein matter.

The president of the company writes the editor as follows: "We insist that the report speaks the truth quoted as we make the report to you, and if any embellishment is placed on the wording of our report, it must conform in meaning to give the information that can be construed from the wording that we give."

The property may have a great outcrop and it may contain copper in commercial quantities, but we defy any mining engineer to find out what the company does have on its property, from the report issued by the management and reprinted as a gem of humor in the Mining & Scientific Press, and in part reproduced herewith: "COPPER.—A red, ductile, tenaceous, malleable metal of great and varied use, originally called brass of cypress, copper sand, alacaunte, C group of minerals, mostly soft, included C, suprite, malaconite, malachite, chessylite, chrycopyrite, olivnite, etc. Black C ore, malaconite, gray C ore, Chalcocite, C Purite, yellow C ore, variety Chalcopyrite, the common ore.

"The formation of the Harris Copper Co. have blended with the iron, lime and porphyry with quartz. Many of the above minerals, but more especially the commoner forms with oxides condensed formation on the top with the iron and lime, with a great amount of carbon and sulphur in the schist formation, with an amalgamated condition of the various mineralizations where gold and silver predominates. The schist formation being soft, it stands to reason that when the sulphides appear in the lower rocks, I am led to believe from the geological lay of the uplift that is now held and owned by the Harris Copper Co., there is beneath the surface of this great iron-capped ledge a great body of copper ore." Enough said.

Despite the unfavorable impression created by the company's literature, it is understood that the property has genuine merit, has large orebodies, and with cheaper transportation will make a good mine. Part of property reported leased to Wilson Foster of Los Angeles in 1914 for ten years; lessee is required to spend \$20,000 and company to receive 15% of gross output.

HAUXHURST MINE

ARIZONA

Jas. Hauxhurst, owner and mgr., at last accounts.

Property: 900 acres, in the Big Horn mountains, about 65 miles W. of Phoenix and 27 miles S. W. of Wickenburg. Mine, formerly owned by the Hauxhurst Copper Co., was under bond for about 3 years to the United States Copper Mines, Inc., which forfeited same, 1909; leased to F. C. Alsdorf, 1913, but relinquished. See Vol. XI, Copper Handbook.

KAY COPPER CO.

ARIZONA

S. J. Tribolet, pres. and mgr., Phoenix, Ariz. Company owns the Starkweather mine and claims on the Agua Fria river, at the mouth of Black Canyon creek, 50 miles N. of Phoenix and some 9 miles from Cave creek. Past reports indicate that company developed a body of high-grade ore. The main shaft, 350' deep, is said to have shown 17' of 10%

ore on the 260' level and 8' of gray copper ore, averaging 17.7% copper, on the S. drift of the 300' level.

In May, 1917, reported that 9' of 10% ore had been cut on 350' level. Ore sent to Cons. Arizona smelter at Humboldt last year totaled 45 tons.

L. & N. GROUP (Quicksilver)

ARIZONA

Owned by Christopher Martin, et al.

Property: 7 claims, about 7,500' along the Gila county belt, in the Sunflower mining district, Maricopa Co., Ariz., shows stringers of quartz and cinnabar. Development work and prospecting in progress. A furnace with 1 retort was built in 1914 and 2 flasks of quicksilver were shipped March, 1915. Geology fully described U. S. G. S. Bull. 620-F. (1915).

NORTH PINAL MINING CO.

ARIZONA

C. W. Cisneey, pres., 228 E. Jefferson St., Phoenix, Ariz.

Property: formerly held by La Coronado Development Co., is in the Mineral Hill district, 10 miles from Price, Pinal Co., Ariz.

Development: by a 300' shaft, shows a lens of copper ore at depth of 260' in the shaft, said to carry up to 70% copper. Ore is mainly bornite.

Equipment: includes a 25 h. p. gasoline hoist and an air compressor.

PARADISE GOLD MINING CO.

ARIZONA

Address: P. O. Box 1095, Phoenix, Ariz. F. Obermuller, v. p.-mgr.; Jos. L. Obermuller, cons. engr.

Property: 6 mining claims and 3 mill sites in Paradise Valley mining district, Maricopa county, 23 miles from Phoenix, said to have 2 parallel veins about 300' apart, traceable at surface for 3,000', 45' wide at depth of 100' and averaging about \$5 in gold. Sinking shaft to 200' level in 1917. Stock offered to the public at 25c., Feb., 1917.

RED ROVER COPPER CO.

ARIZONA

Reorganized, 1917, as Red Rover Mining Co., which see.

RED ROVER MINING CO.

ARIZONA

Address: care of J. Apfield, Phoenix, Maricopa Co., Ariz. Is a reorganization of the Red Rover Copper Co.

Lands: 12 claims, known as the Red Rover Group, 12 miles north of Camp Creek and 50 miles N. E. of Phoenix, the nearest rail point.

Development: by 10,000' of underground workings, including a 200' tunnel and a 370' incline shaft, showing a 10 to 16' orebody between limestone and porphyry, carrying a 3' paystreak estimated to average 10% copper, 6 to 60 oz. silver.

The Red Rover mine, discovered 1882, has shipped from shallow workings about \$200,000 worth of high-grade ore, running about 15 to 25% copper, with values mainly in silver chlorides, 1 carload of 20 tons netting \$41,000, with no allowance made for copper contents.

Production: for 1913-14 was 440 tons of ore.

ROOSEVELT LAKE COPPER CO.

ARIZONA

Address: 17 E. Adams St., Phoenix, Ariz.

Officers: R. H. Williams, pres.; A. J. Matthews, v. p.; W. E. Laird, sec.; C. E. Ashley, treas.; with C. H. Prather and J. R. Murdock, directors.

Inc. in Arizona. Cap., \$1,000,000; shares \$1 par; 400,000 issued.

Property: the Humdinger and Orocobre claims in the Mazatzal mountains, 20 miles from the Roosevelt dam, and the Virginia claims, 9 miles from Phoenix, Ariz. One claim said to have ore worth \$1,000,000 on hand.

Development: by tunnels; churn-drilling contemplated.

Extravagant statements have been published about this company's possibilities, a full-page advertisement including this gem: "In this vast treasure-house—in vaults of porphyry and quartz, with walls of adamant—what wealth awaits the drill and blast, only the most active imagination can conceive." At last report company had sold its Roosevelt Lake property and will use the cash to develop the claims near Phoenix.

ROWLEY COPPER MINES CO.

ARIZONA

Office: Kansas City, Mo. **Mine office:** Gila Bend, Maricopa Co., Ariz.

Officers: E. D. Lysle, pres.; J. O. Goodwin, v. p.; J. T. McRuer, sec.; C. D. French, treas.

Inc. June, 1909, in Arizona. **Cap.**, \$10,000,000; shares \$1 par.

Property: 6 claims, patents pending, 124 acres, about 28 miles N. W. of Gila Bend, and 65 miles S. W. of Phoenix, Ariz.

Development: by inclined shaft to 292'; being 32' below water-level, with about 700' of crosscuts and drifts. Has uncovered 3 strong veins of copper-gold and silver-lead ore. Main, or vertical shaft, is 300' deep.

Equipment: includes 2 steam boilers, 1 Fairbanks-Morse, 150 h. p. oil engine, 2 compressors, one 300' and one 1,000' hoisting, ventilating apparatus, assay office and all necessary tools. Also five storage oil tanks, ore trailers, etc.

Ore is delivered to railway by caterpillar 75 h. p. tractor owned by the company, capacity 30 tons to the load.

Property was bought for \$20,000 cash and 1,000,000 shares in 1909, and is in active operation.

SAN CARLOS MINING CO.

ARIZONA

Address: D. Rowley, Gila Bend, Ariz.

Officers: Dora Rowley, pres.; J. C. Rowley, v. p.; Daisy Rowley, sec.-treas.; also directors.

Inc. Oct., 1914, in Arizona. **Cap.**, \$1,500,000; shares \$1 par, non-assessable; 500,000 issued. Expenditures in 1916, about \$2,500.

Property: 11 claims, 220 acres, 18 miles W. and 7 miles N. of Gila Bend, Ariz., said to show contact fissures in rhyolite. Orebody is 8 to 12' thick. Shoots are from 2 to 36" wide and ore carries copper, gold and silver. Ground is considered to contain extensions of the Rowley veins.

Development: incline shaft to 238' depth. An E. crosscut is to be driven to main contact.

Edwin Walters, J. F. Price and others have examined the property.

SILVER BUTTES MINING CO.

ARIZONA

Address: C. P. Crawford, 121 South Central Ave., Phoenix, Ariz.

Inc. in Arizona. **Cap.**, \$1,200,000; shares \$1 par; 503,839 issued.

Property: 12 claims in Mazatzal mountains, Gila Co., Ariz. Geological conditions are said to be similar to those of Jerome. According to a report by A. F. Muter, there are two vein systems in diorite, really fault fissures containing ore, especially at junctions of the two. All ore near the surface shows intense leaching. A winze is yielding good sulphide ore, and should be deepened. An incline shaft is recommended on the N.-S. vein, which can be traced on surface for 3,000'. The Butte vein, 2 to 7' wide, is said to contain from 25 to 300 oz. silver per ton, \$2 to \$15 gold, and 2 to 12% copper. Some rich ore has been shipped.

Prospectus contains a map showing position of property, with a straight line drawn through it from Jerome to Miami and Globe.

Such matter is misleading and reprehensible, as tending to convey a wholly untrue and erroneous impression.

In Sept., 1917, work was resumed.

SLOCUM COPPER CO.**ARIZONA**

Succeeded by the Arizona Cactilone Copper Co., which see.

STURDY GOLD MINING CO.**ARIZONA**

Montgomery, Maricopa Co., Ariz.

Officers: John Sturdy, pres.; F. H. Lerch, v. p.; N. Sturdy, sec.-treas. and mgr., Montgomery; with Wm. H. Sturdy and Albert Martin, directors.

Inc. June 16, 1915, in Arizona. **Cap.**, \$750,000; shares \$1 par; outstanding, \$500,000. Annual meeting, second Thursday in January.

Property: 4 claims, 65 acres, in the Winifred mining district, formerly owned by Fortuna Gold & Copper Co., described in Copper Handbook, Vol. XI. Was acquired by present management at sheriff's sale. Claims are said to show six parallel quartz veins in granite, averaging 4' in width and carrying gold and silver ore.

Development: 125' vertical shaft, with 1,000' of workings. Claims to have 6,000 tons ore blocked out, average grade \$10 per ton.

Equipment: includes a 6 h. p. Fairbanks-Morse gasoline hoist. New management raised \$7,900 to build a small mill and develop. At last accounts, shaft was being sunk to 600' level.

SUPERSTITION CONSOLIDATED MINING CO.**ARIZONA**

General Office: 44 Broad St., New York. **Mine office:** Phoenix, Ariz.

Officers: J. P. Bickell, pres.; Louis Ford, v. p.; A. W. Scott, sec., treas.-gen. mgr.

Inc. Jan. 7, 1915, in Arizona. **Cap.**, \$2,000,000; shares \$1 par; outstanding, \$500,000. Security Transfer & Registrar Co., New York, transfer office and registrar. Listed on New York Curb as a prospect. Liabilities in Feb., 1915, a 2-year 6% note of \$10,000, dated Jan. 20, 1915.

Property: 7 claims, Arizona King group and 2 adjoining claims in the Pioneer mining district, Pinal Co., 60 miles E. of Phoenix and 7 miles from a railroad. Said to show schist and intrusive porphyry with a vein outcropping for 3,000', from 5 to 40' in width; strike N. W., dip 65° E. The ore is gold claimed to assay from \$3 to \$48 per ton, with very little copper present.

Development: a 400' shaft with several hundred feet of workings. Ore reserves not given. A 50-ton flotation mill was built in 1915.

Is considered a meritorious prospect.

WOODBURY COPPER CO.**ARIZONA**

H. G. Murphy, Phoenix, Ariz., agt. Reported in July, 1916, that H. Cavanaugh and associates of Seattle, Wash., had purchased the property for \$200,000 and that work would be begun on the claims. No later returns.

YOUNG MINES CO., LTD.**ARIZONA**

Office: 413 Fleming Bldg., Phoenix, Ariz. **Mine office:** Goldfield, Ariz.

Officers: Geo. U. Young, pres.-gen. mgr.; E. C. Moore, v. p.; G. H. Cunningham, sec.-treas., with Frank H. Parker and W. S. Goldsworthy, directors.

Inc. 1910 in Arizona. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; outstanding, 20,000. Annual meeting in June.

Property: the Mammoth group, 12 claims, about 220 acres, 20 miles E. of Mesa, Maricopa Co., Ariz., contains a large disseminated low-grade orebody, said to carry sufficient free milling gold for mining on a large

scale by steam shovel or caving. Low-grade dump is said to average \$4.50 per ton.

Development: includes 3 shafts, 150', 320' and 445' deep and about 3,000' of laterals.

Equipment: includes 3 steam hoists, 3 pumps, small compressor, a 20-stamp, 60-ton mill, buildings, etc.

The president reports that: "Property may also be worked on a 350-ton basis on high-grade ore on a 6 to 8 year supply now developed, in addition to 20 years' operation on 1,000 tons per day basis according to engineers' estimates on hand."

PRESCOTT, YAVAPAI COUNTY

ANGLO SAXON SMELTING & REFINING CO.

ARIZONA

Officers: J. E. Russell, managing director, Bank of Ariz. Bldg., Prescott, Ariz. Hugh Rose Croup, pres.; Robt. L. Service, sec., with G. G. Lemons, directors.

Inc. 1916 in Arizona. **Cap.**, \$1,500,000. The company is to be financed in England.

The corporation has a lease on 200 acres of land from the City of Prescott for a smelter site and has also acquired several water rights. Owing to the war, no active work is being carried on, and the so-called "Lemon" smelter is, it is feared, not destined to materialize.

ARIZONA CALIFORNIA MNG. CO.

ARIZONA

Address: Prescott, Ariz.

Officers: W. S. Wilhelm, pres.; G. W. Lavender, v. p.; H. G. Wilhelm, sec.-treas.

Inc. April, 1915, in Arizona. **Cap.**, \$250,000; shares \$1 par; outstanding, \$100,000.

Property: 6 claims, 122 acres, patented, in the Hassayampa mining district, 6 miles south of Prescott, show a quartz vein containing gold, silver, zinc and lead ore.

Developed by the Shamrock and Ruth mines, latter having a 250' vertical shaft.

Equipment: includes a 10 h. p. hoist and a 40-ton mill, with Huntington mill and Wilfley tables. Mill concentrates said to assay 36% zinc, 55% lead and 30 oz. silver. Driving a 1,200' tunnel, in 500', March, 1917.

ARIZONA PORTLAND MINES, LTD.

ARIZONA

Address: Prescott, Ariz.

Officers: A. C. Nichols, pres.; A. S. Sittes, v. p.; Q. W. Blickenstaff, sec.-treas.-mgr., with S. Q. Tucker, directors.

Inc. 1914 in Arizona. **Cap.**, \$1,500,000; shares \$1 par; 600,000 outstanding. Annual meeting January first.

Property: 30 claims, 600 acres, in Copper Basin mining district, Yavapai county, about 12 miles S. W. of Prescott, adjoining the Loma Prieta on the S. and reported to carry the extension of Loma Prieta orebodies. Ore carrying copper, with slight silver and gold values, occurs as chalcopryrite, disseminated through a monzonite porphyry formation. The orebody is reported to be from 20 to 100' wide, with N.-S. course and easterly dip.

Development: by 500' of workings, including a 190' incline shaft and 3 tunnels.

Equipment: includes a 2-drill compressor, hoist and steam power. Operating expenses for 1916 were \$6,000. Plan sinking a new 3-compartment shaft in 1917.

AZTEC MINES CO.**ARIZONA**

Apparently dead. If so, R. I. P., as it is ill form to criticize the defunct. See Vol. X of the Copper Handbook.

BEEMER CONSOLIDATED GOLD & COPPER CO.**ARIZONA**

Owens the Stormcloud Mine at Mt. Union, 12 miles south of Prescott, Yavapai Co., Ariz. Idle.

BIG BUTTE COPPER CO.**ARIZONA**

Address: H. E. Shumate, sec., Prescott, Ariz.

Officers: Geo. L. Reed, pres.; Ed. Shumate, v. p.; Geo. C. Ruffner, treas. Inc. April, 1917, in Montana. Cap., \$1,500,000; shares \$1 par.

Property: 43 claims in Copper Basin district, near Prescott, developed by tunnel, shafts and open cuts.

BIG PINE CONSOLIDATED MINING CO.**ARIZONA**

Prescott, Ariz.

Officers: A. Bjorkman, pres.; Richard Lamson, sec.; A. Bergquist, treas.; with Felix Durocher and C. H. Dunning, directors. C. H. Dunning, supt.

Inc. April 30, 1915, in Arizona. Cap., \$500,000; shares \$1 par; outstanding, \$400,000. Annual meeting 1st Monday in April. Commercial Trust & Savings Bank, Prescott, registrar. Is a consolidation of the Big Pine Mng. Co. and the Lake Superior & Western Mng. Co.

Property: 14 claims in Senator district, 12 miles south of Prescott.

Ore: gold occurs in 3 parallel veins, which cross the claims.

Development: by 7 tunnels, principally on a vein claimed to show ore for 700' in one tunnel, 1,100' in a second, 1,600' in a third, and 400' in a fourth. Company claims ore reserves of 70,000 tons, average grade \$9 per ton.

Mill: the 100-ton cyanide plant of the Mascot mine, Lake Sup. & Western Co. was moved to the Big Pine property and erected near portal of tunnel No. 6. Electric power is obtained from the Arizona Power Co. H. C. Shotwell, who sampled the mine and assisted in the promotion of the company, reports that there is ample ore of milling grade to keep the mill supplied, but mill returns from two months' run were apparently unsatisfactory and mine was shut down for a while. Reported to have started again in Oct., 1917.

BLOCK MINES CO.**ARIZONA**

Address: Prescott, Ariz.

Officers: A. J. Head, pres.; E. Block, v. p., treas.-mgr., with H. Brinkmeyer and M. Goldwater, directors.

Inc. August, 1913, in Arizona. Cap., \$1,000,000; shares \$1 par; 500,000 shares in treasury.

Property: owns the Billy Boy and Christmas group of mines on the Hassayampa river, Yavapai county. Billy Boy mine developed by 225' tunnel showing 14" paystreak carrying gold, silver, lead and copper ore, said to assay \$70 per ton.

Is a prospect with some merit but needs financing and competent management to prove its possibilities.

BONNIE MINING CO.**ARIZONA**

Address: R. M. Garrett, Prescott, Ariz. Mine on upper Lynx creek, Yavapai Co., Ariz., is an old one reopened in 1916. The shaft, 123' deep, at last accounts, will be carried down to 250', when drifting, to cut the face of the main tunnel 500' distant, will begin. The ores, formerly gold-silver, are now high-grade copper, in a vein 26" wide at 123' in depth.

CASH MINE**ARIZONA**

Prescott, Ariz.

Property: leased to N. E. Getchell, Maxton, Yavapai Co., Ariz., shows

veins with gold-silver-copper-lead ore. Developed by a shaft with extensive workings.

Equipment: includes a 10-stamp mill. Six men employed. Shipments of concentrates made in 1915.

CASTLE COPPER CO.

ARIZONA

Property: 11 claims, known as the Dunkirk or Mt. Tritle group, 12 miles south of Prescott, on the southern slope of Mt. Tritle, near the head of Slate creek, in the Hassayampa district. Formerly owned by Dunkirk Gold & Silver Mining Co., later by Mt. Tritle Copper Co., and purchased in 1914 by D. M. Clark of Prescott, Ariz. Is an old mine, with tunnels of 150', 160', 170' and 300', driven at vertical intervals of 100', showing copper and lead sulphides, with values in copper, gold and silver, in about the order named.

Equipment: includes steam and gasoline power, air compressor and electric light plant. A 40-ton mill has 4 Nissen stamps, 3 Wilfley tables, 100-ton ore bin and a 10,000-gal. water tank. Oil flotation unit installed 1915, reported to be an unqualified success, saving as high as 98% on assay value of ore.

C. B. S. MINING CO.

ARIZONA

Near Prescott, Ariz., in the Copper Basin district, Yavapai Co. Claims show several veins with 62' shaft developing a 6' orebody, assaying 9% copper, \$10 silver and \$3 in gold. Vein dipped out of shaft and bottom of workings show a 10" ore streak of native silver. Contract is said to have been given to sink shaft 100'. Owned by same people as the Climax Mining Co., near Prescott, Ariz..

CLIMAX MINING CO.

ARIZONA

Prescott, Ariz. M. E. Spaulding, supt. Owns the Climax gold mine on the Hassayampa river, near Prescott.

Development: by 5 tunnels, longest 1,000', having a pay shoot 2" to 3' in width. Average grade of mill ore, oxidized, is said to be \$35. Sulphide ore in No. 5 tunnel is said to average \$21 per ton. It is claimed the mine has paid for itself since 1904. Company claims to have a large vein, 40' to 150' wide, and 7,000' long, with ore that mills \$454 per ton in gold. Property is equipped with 10-stamp mill, air compressor and good camp buildings.

COMMERCIAL MINING CO.

ARIZONA

Office: care Phelps, Dodge Corp., 99 John St., New York. **Mine offices:** Prescott and Skull Valley, Yavapai Co., Ariz. Maj. A. J. Pickerell, gen. mgr. Is controlled by Phelps, Dodge Corp'n.

Property: includes the Senator and Snoozer mines, producing high-grade sulphide ore from fissure veins and the Copper Basin mine with 18 claims, patented, in the Copper Basin, about 6 miles from the Santa Fé railroad.

Development: by a 300' two-compartment shaft, bottomed in good ore and 2 tunnels, that opened up large bodies of 3% oxidized ores. Employs an average of 25 men and ships from 80 to 100 tons per day of 7 to 10% oxidized ore.

Copper Basin mine yields oxidized ores found as segregations in altered monzonite, but despite a promising outcrop, no body of commercial ore has yet been found in depth as on the adjacent Loma Prieta mine. Much of the ore shipped is a cemented stream gravel.

CONSOLIDATED HOMESTEAD MINES, INC.

ARIZONA

Subsidiary of U. S. Continental Mines Co., which see.

Mine at Walker, Yavapai Co. **Cap.**, 600,000 shares, \$1 par.

Property: a mineral claim, patented, carries a vein yielding a complex

sulphide, ore containing copper, lead and zinc, with gold and silver values. Former production is said to be \$35,000. New machinery is reported as being installed in 1917. Development work on the 100' level is reported to have opened up 70' of ore. W. W. Lewis, Prescott, Ariz., is consulting engineer.

COPPER HILL GROUP

ARIZONA

Mine is at Skull Valley, Prescott, Ariz. Owned by E. S. Clark and J. J. Jackson. Reported under option to A. L. Garford of Ohio, with G. M. White in charge.

Property: 14 claims, unpatented, 245 acres, in Copper Basin mining district, Yavapai Co., Ariz. Main shaft reported as being sunk to 1,000' level.

Ore: copper bearing, with molybdenite, gold and silver in shoots and streaks in breccia, surrounded by granite, diorite and porphyry. Ore shoots vary from 5' to 15'. Average assays reported as copper, 3.75%; molybdenite, 4.25%; gold and silver, \$1.15. Property has shipped about 200 tons.

Development: in 1916, 1,500' of development work was reported and 75,000 tons were blocked out. Property has three shafts 45', 50' and 140' deep.

Equipment: steam hoist, and No. 5 Cameron pump.

COPPER VALLEY MNG. CO.

ARIZONA

Inc. April, 1917, by D. C. McIver and Rich. Lamson.

Property: 10 claims in Copper Basin, about 4 miles from Skull Valley, Yavapai Co., Ariz., said to show a mineralized schist belt over 100' wide and carrying some ore of commercial grade.

Development: by 3 shafts 30', 45', 60' deep.

DEVELOPMENT COMPANY OF AMERICA

ARIZONA

Reorganization committee: Room 514, 49 Wall St., New York. Company's affairs are in hands of a bond and stockholders' committee. (See Copper Handbook, Vol. X, for officers and organization.)

Inc. Nov. 23, 1901, in Delaware, as a holding company. Controlled through stock ownership, the Tombstone Consolidated Mines Co., Ltd., Imperial Copper Co., Congress Consolidated Mines Co., Ltd., and Poland Mining Co. Company also owned large stock interests in the Gila Copper Sulphide Co.; the Lookout Copper Co.; controlled the Southern Arizona Smelting Co. through Imperial Copper Co., and owned a large block of stock in the London-Arizona Copper Co., which company had a large interest in the London Range Copper Co. Company organized the Arizona, Mexico & Gulf of California Railroad Co., 1910, planning to build a railway from the Arizona Southern Railway, which is owned by the Imperial Copper Co., a subsidiary, to Port Lobos on the Gulf of California, a distance of approximately 200 miles. The authorized bonds and stocks of the Arizona, Mexico & Gulf of California Railroad Co. were never issued.

The Tombstone Co. owned, or controlled, practically all the mines of Tombstone, Ariz., that once wonderful camp, closed down in the 80's when a heavy influx of water drove the miners from the workings. The Tombstone Co. installed enormous pumps and succeeded in controlling the water, the Development Co. supplying nearly \$2,500,000 in addition to funds realized by the sale of its special contract bonds, before it came to the end of its resources, when, being unable to meet its bills, the company suspended operations.

Failure of the Development Co. to supply further funds to the Tombstone Co. and subsidiaries in 1910, with a loss of credit at various banks and indeed of its own stock and bondholders, is, it is said, directly due to

responsible financial interests in New York refusing to carry out their pledged word and agreement, a contract upon the strength of which the Development Co. implicitly relied and therefore made no effort to raise money elsewhere, until such refusal when it was too late to make other arrangements to meet its interest charges and other pressing obligations.

One of the most promising subsidiaries was the Imperial Co., whose property had to shut down because development work was not sufficiently advanced to supply the smelting plant with 700 to 800 tons per day of smelting ore, of high enough grade to yield a profit with 12½c copper. An important shaft lost by fire, would, in a few feet more depth, have entered a large body of sulphide ore, which would have supplied the necessary tonnage and flux for the smelter. The Imperial Copper Co., temporarily needing assistance, could not get it from the Development Co. for the reasons above stated, and as it could not do development work, repair the burned shaft, or sink a new shaft, it, too, had to shut down.

In 1913 the securities behind the bonds were sold at public auction, and purchased by Wallace Fairbank, Frank M. Murphy and Thomas W. Synnott, acting as a bondholders' and stockholders' committee. The securities included 250,000 shares of the Imperial Copper Co., and 400,000 shares of the Tombstone Consolidated Mines Co., Ltd., both without value. The stock of the Poland Co. and \$1,211,340.91 certificates of indebtedness, control that company, and the Congress Co. having no bonded debt, is controlled by its stock. The stock and certificates of indebtedness of the Poland Co. and the stock of the Congress Co. were also purchased by the committee.

All the securities purchased by the committee were placed in the treasury of the Congress Co., with the exception of such Congress stock as was set aside to be exchanged for the bonds of the Development Co., on the basis of 50% in stock for 100% in bonds. The committee hopes, even though it has not received much support, to get something worth while for the bondholders.

The Development Co. is reported to have brought suit against the Southern Pacific R. R. Co. for \$15,000,000, alleging that loss of its property is directly due to the refusal of the corporation to fulfill its pledged agreement to loan the \$500,000, thus bringing about insolvency to both the parent company and its various subsidiaries.

FORTUNE MINING CO.

ARIZONA

Address: 19 Lawler Blk., Prescott, Ariz.

Officers: A. W. Davis, pres.-gen. mgr.; H. J. Marshall, v. p.; J. P. Dillon, sec.-treas.; preceding, with J. E. Russell, A. E. Broas, J. L. Dennerlein, M. Collins, directors. W. W. Lewis, cons. engr.

Property: the Wizard mine and other claims in the Big Bug mining district, Yavapai county. Is a gold mine in which some high-grade copper ore occurs.

Development: 1,200' tunnel on the vein showing 4 to 6' of ore in a shoot 800' long; 225' shaft and crosscuts.

Equipment: includes 10-stamp mill and two 50 h. p. gas engines. 10,000 tons of milling ore reported on dumps.

GOLD WARRIOR MINING CO.

ARIZONA

Office: Prescott, Ariz.

Officers: O. S. Wakeling, pres.; A. M. McOmie, v. p.; D. C. MacIver, sec.-treas.; foregoing, with P. H. Osborne and J. R. Esposito, directors.

Inc. 1916 in Arizona. **Cap.**, 500,000 shares, \$1 par; outstanding, 210,000.

Property: 6 unpatented claims in the Hassayampa district, 11 miles from Prescott and about three-fifths mile from the Big Pine mine, at which mill Warrior ore is to be treated.

Geology: gold-silver contact deposit in blue diorite and quartz-diorite, dipping 45°, with N. E.-S. W. course. Pay-shoot is said to be 6' wide with metal contents evenly distributed. Ore reported to assay from \$14 to \$37 per ton.

Development: by 100' tunnel on the vein. C. H. Dunning, cons. engr., estimates if conditions hold, the first 1,000' of level should yield 25,000 tons of \$10 ore.

HANEY COPPER CO.

ARIZONA

Company owns properties at Ramsgate, 12 miles west of Prescott, with pyritic ore of very low gold-silver-copper values. Idle.

JEROME PRESCOTT COPPER CO.

ARIZONA

Address: W. A. Cline, Prescott, Ariz.

Officers: W. A. Cline, pres.; A. J. Matthews, v. p.; F. R. Dyas, sec.-treas.; above with F. O. Smith and W. E. Saunders, directors.

Inc. in Arizona. Cap., \$1,500,000; shares \$1 par; 500,000 issued. Registrar and Transfer Agent, New York, registrar and transfer agent. Kastel & Co., 20 Broad St., N. Y., fiscal agents.

Property: the Hub, or Sanders group of 33 claims, about 660 acres, several miles west of Copper Basin in Skull Valley, 4 miles from the railway and 12 miles from Prescott, Yavapai Co., Ariz. Claims cover a schist belt 30' wide, along a monzonite contact, which shows green copper stains; also several quartz veins carrying gold values and one containing hornblende with associated chalcopyrite.

An examination by W. H. Weed showed the property worthy of very modest development for gold, but lacking any of the earmarks of a successful copper mine. Promoters are sending out garbled copy of above report, in which all unfavorable comments and opinions have been eliminated.

LITTLE JOHNNIE MINE

ARIZONA

Owned by Harrington Blauvelt, Prescott, Ariz.

Property: in the Hassayampa district, Yavapai Co., shows a 3' fissure vein, carrying gold ore said to run 2 oz. gold, with 1% copper values appearing at depth. Average assays given as \$18 gold per ton.

LOMA PRIETA MINES CO.

ARIZONA

Address: Prescott, Ariz.

Officers: T. G. Norris, pres.; J. I. Gardner, v. p.; O. A. Hesla, sec.-treas., above with R. H. Burmister and E. J. Mitchell, directors. B. V. Woodward, asst. sec., 7 W. 37th St., N. Y.; J. E. Packer, 2nd v. p.; A. B. Peach, mgr.

Cap., \$1,500,000; shares \$1 par; 900,000 issued.

Property: 27 claims, 500 acres in the Copper Basin mining district, Yavapai Co., Ariz., 12 miles S. of Prescott, adjoining the Commercial mine of the Phelps, Dodge Corporation.

Ore: minerals are primary, chalcopyrite occurring with secondary quartz, and while high-grade bunches of sulphides appear, the deposit must be mined as a mass of low-grade concentrating ore of disseminated character. Samples show an average of about 2% copper, and 36 to 48c silver per ton.

Development: by 414' shaft with drifts and crosscuts at 400' level.

Equipment: includes steam hoist and compressor.

Production: one carload shipped in 1917 assayed 8.6% copper, \$1 gold and 1.5 oz. silver per ton.

Is a meritorious property, which is likely to develop a very large tonnage of concentrating ore.

LOOKOUT COPPER CO.**ARIZONA****Main office:** Prescott, Ariz. **New York office:** Room 514, 49 Wall St.**Officers:** T. G. Norris, pres.; A. W. Edwards, v. p.; Geo. D. Morris, sec.-treas.; L. B. Mulhearn, asst. sec.-treas., N. Y.**Property:** the Lookout group, 5 copper claims; Mark Twain group, 3 silver-lead claims; Davis group, 8 gold-silver-copper claims, in the Slate Creek mining district, Yavapai Co., Ariz.; Bodie group, 13 silver-lead claims, in the Hassayampa mining district, Yavapai Co., Ariz.**Development:** a 100' shaft was sunk on the Lookout property with short levels at 45, 60 and 100'; 800' north of the shaft are other workings, consisting of a crosscut to the vein and two drifts north and south with a 60' winze and raise to the surface from the north drift. At the mouth of the raise a gallows frame was erected and a hoisting plant installed. An excellent wagon road about $3\frac{1}{4}$ miles long connects the mines with the main road leading to the Davis mines.

On the Mark Twain group very little development work was done, although the mine had been worked in a small way at a profit, before acquired by the Lookout Co. The Mark Twain, Blue Dick and several other promising properties should be consolidated, insuring, under good management, a profitable mining enterprise.

The Davis group is one of the old mines of the district. From the surface and shallow workings much high-grade ore was shipped in the early days. The principal development work was by tunnels and winzes, all showing good ore; the high-grade ore carries considerable copper, though principal values are in gold and silver.

On the Bodie group of mines a good deal of development work was done on the patented claims. A shaft was sunk some 340', with levels at 55, 85, 170, 230 and 335', all said to show ore. The 3-compartment vertical shaft was started at a central point. Work was stopped on all the Lookout properties in 1910.

Surveys were completed for an ore road from the Walker end of the Poland tunnel, through the Senator district to Lookout camp. A branch was also surveyed from this line to the Bodie. The road measures 13.6 miles from the tunnel to Lookout and 8 miles to Bodie, with a maximum grade of 4%. It was intended to build a 30" gauge road with good roadbed and heavy rails, and operate it by steam. Two miles of railroad purchased from the Metals Milling Co. constituted the first 2 miles of the Lookout ore road. This contemplated road would furnish cheap transportation and tap a country that should produce large amounts of ore.

Part of the company's property is now being operated under lease.

MADIZELLE MINING CO.**ARIZONA****Address:** 413 Fleming Bldg., Phoenix, Ariz.**Officers:** G. U. Young, pres.; E. C. Moon, v. p.; G. N. Cunningham, sec.-treas.; above are directors.**Inc.** 1905 in Arizona. **Cap.**, \$500,000; shares, \$1 par; non-assessable; 3 issued; proposed in Aug., 1917, to sell 30,000 shares.**Property:** 25 patented claims, $2\frac{1}{2}$ miles N. of Copper Basin and 6 miles W. of Prescott, said to show a quartz vein with schist hanging and porphyry foot-wall. Ore carries copper as chalcopyrite and bornite, with gold and silver values, and assays from \$12 to \$40 per ton, 25,000 tons and 5,000 tons in reserve, respectively.**Development:** by tunnels from shafts, 500, 700, 800 and 130' long, with total of about 5,000' of workings.**Equipment:** includes steam hoist, compressor, pump, steam and gas power, and 5-stamp mill.

Idle since 1911, but development work is contemplated at an early date.

McKINLEY MINING & DEVELOPMENT CO.

ARIZONA

Prescott, Ariz. A. M. Gough, pres.; Chas. E. McKinley, gen. mgr.

Inc. 1906 in Arizona. Cap., \$1,000,000; shares \$1 par.

Property: 38 claims, 760 acres, in the Copper Basin district, 11 miles south of Prescott. The Dixie group of 6 claims has veins of 5 to 15' width, carrying copper ore. The Peacock group has a vein of 60' claimed width, carrying surface ores said to average 3.7% copper, developed by the Peacock shaft, sunk to a depth of 700'.

In 1917, a crosscut at 700' depth was driven 500', where a strong flow of water was met with. High-grade ore is said to have been exposed at that point, also on the 400' level.

Equipment: includes power plant with hoist good for 1,000' depth.

McMAHAN GROUP

ARIZONA

Zonia, via Kirkland, Yavapai Co., Ariz. Owned by C. H. McMahan and brothers.

Property: the Cuprite mine and a group of 8 claims, unpatented, south of Zonia. Ore zone reported as 700' long, containing 8 shoots, 50 to 75' long and 3 to 20' wide, assaying 2 to 9% copper in oxidized zone.

Development: consists of several shallow shafts. Assessment work done in 1916. Planning to sink a 450' vertical shaft. Considerable open-cut work done in 1916 and 1917 to locate ore zone.

MONROE COPPER MINE

ARIZONA

Address: John Curran, owner, Walker, Yavapai Co., Ariz. Mine, once owned by the Monroe Cons. Mines Co., long dead, is near the junction of Knapp gulch and Lynx creek, near Prescott. Formerly worked as a gold mine and said to have a 50' dike carrying copper ore on the 300' level. Development work consists of various tunnels.

OLD VESUVIUS MINE

ARIZONA

Address: C. H. McMahan and brothers, owners, Kirkland, Yavapai Co., Ariz.

Property: the City Group, known as the Old Vesuvius mine, 6 claims, unpatented, 9 miles S. E. of Kirkland. Shows 4 veins at contact of diorite and granite and diorite and quartz diorite. Developed by several shallow incline shafts. Small shipments made in 1916-1917 are reported to have carried from 4-7 oz. gold per ton. Sinking resumed in shaft on E. vein where high-grade ore is said to have been extracted.

PALO VERDE COPPER CO.

ARIZONA

Office: Akron, Ohio. C. H. Howland, Cuyahoga Falls, Ohio, mgr.

Officers: Will Christy, pres.; J. P. Loomis, v. p.; I. M. Shively, sec., with Chas. Currie, E. E. Quirk and C. H. Howland, directors.

Inc. in Arizona. Cap., \$2,000,000; shares \$1 par; issued \$1,000,000.

Property: 8 claims, is a copper prospect about 60 miles west of Phoenix, in the Saddleback mountains, between White Tanks and Eagle Tails districts, Yavapai Co., Ariz.

Mine is opened by shafts of 50, 112 and 210' depth and a 130' tunnel. Surface ores said to contain 2 to 15% copper. Plans to resume work.

PAN-AMERICAN MINING CO.

ARIZONA

Is a close corporation. C. P. Collins, pres., Tulsa, Okla.

Cap., \$600,000; shares \$1 par.

Property: 8 patented claims, near Prescott, Yavapai County, developed by several thousand feet of underground workings. Ore contains gold, silver, lead values, mostly of milling grade. Mine has been idle for several years.

POLAND MINING CO.**ARIZONA**

Office: Room 514, 49 Wall St., New York. **Mine office:** Prescott, Ariz. T. G. Norris, pres.; A. W. Edwards, v. p.; George D. Morris, sec.-treas.; L. B. Mulhearn, asst. sec.-treas.

Property: 37 claims, about 750 acres, extending through a highly mineralized mountain lying between the Big Bug and Lynx mining districts, Yavapai County, about 35 miles from Prescott by rail, or 15 miles by wagon road. The claims cover a granite mountain intersected by a number of well-defined, persistent fissure veins, disclosed in a tunnel which goes through the mountain a distance of some 8,000'. Two of these veins, the Poland and Accidental, have been extensively developed.

The property is equipped with air compressors, drills, cars and tools, and a thoroughly modern 20-stamp 100-ton mill.

The tunnel will be of considerable value as a transportation tunnel when a railroad is built from Lynx Creek end, connecting the mines in the Walker district with the Prescott and Eastern Railroad at the Poland end of the tunnel.

PRUDENTIAL COPPER MINING CO.**ARIZONA**

Idle. Office: 322 Federal St., Chicago, Ill. **Mine office:** 35 Bank of Arizona Bldg., Prescott, Ariz. H. H. Linney, agt.

Officers: Shea Smith, pres.; G. T. Clark, v. p.; F. B. Gibbs, sec.; G. H. Jenkins, treas., with W. H. Newhall and Mrs. E. A. Ewing, directors.

Cap. is 500,000 shares, and company is controlled, through the ownership of 422,778 shares, by the Estate of Maj. Shea Smith.

Property: 12 claims, patented.

QUAKER GOLD MINES CO.**ARIZONA**

Address: care Thos. J. Brodnax, Board of Trade Bldg., Kansas City, Mo.

Property: 10 claims, patented, the Gold Note and Richinbar mines, 12 miles from railway, in Harper district, Bradshaw Mts., Yavapai Co., Ariz., shows quartz vein carrying gold ores. reported to average \$8 per ton.

Development: 5,000' of work, in shafts, levels and tunnels.

Equipment: includes 20-stamp mill, hoist, etc., with electric power. Is a big low-grade proposition.

SHELDON MINING CO.**ARIZONA**

Address: care Stukey Bros., Walker, Ariz. John F. Pell, Pres., Newark, N. J.; A. R. Ackerman, treas., Walker, Ariz.

Inc. Aug., 1916, in Arizona, as a merger of the Sheldon group, the H. T. Andrews holdings and those of the Empire Mining Co., Metals Mining Co. and the Majors Mining & Milling Co. These holdings include nine very attractive copper-gold properties, several of them pioneer mines of the district. The tract is a few miles south of Prescott.

Idle and change of management being made in 1917.

SWASTIKA DEVELOPMENT CO.**ARIZONA**

F. W. Woods, mgr., 1832 E. 16th St., Los Angeles, Calif.

Property: in the Bradshaw mountains, Yavapai county, is leased to Frank W. Giroux, Prescott, Ariz. Mine, the Black Warrior, is again a producer of silver-lead-copper ore, one carload netting \$3,000 in 1916.

Development: by 410' shaft with 2' vein of galena exposed on 400' level.

TILLIE STARBUCK MINES CO.**ARIZONA**

Address: A. J. Pickrell, Prescott, Ariz.

Officers: A. J. Pickrell, pres. and treas.; Alan Gardner, v. p.; Richard Lamson, sec.: also directors.

Inc. July 17, 1916, in Arizona. **Cap.**, \$125,000; shares \$1 par; non-assessable; 100,000 issued.

Cash on hand, in June, 1917, \$45,242. Operating expenses in 1916 were \$4,758.

Property: 12 claims, 1 patented, 242 acres, on Slate creek, 15 miles S. of Prescott, Ariz., said to show a quartz fissure vein in porphyry and granite; 2 to 6' wide, dipping nearly vertical with N.-S. course. Three shoots, each 100' long, have been developed, with ore reported to assay \$12 per ton in gold and silver.

Development: by tunnels, 2,000, 800, 150 and 600' long. Workings total 4,000' to depth of 600'. Raises have been driven between tunnels to cut the vein.

A cyanide plant is proposed.

TIP TOP CONSOLIDATED MINING CO. ARIZONA

Prescott, Ariz.

Officers: C. W. Davis, pres.-treas.; A. F. Muter, v. p.; F. L. Haworth, sec., with W. W. Elliott and D. E. Nelson, directors.

Inc. 1916, in Arizona. **Cap.**, \$375,000. Company was organized to operate the old Tip Top silver mine about 25 miles south of Prescott, credited with a production of several million dollars, 1875-85, under Haggin, Head and Hearst.

The mine was originally opened to the 800' level; the present management has reopened it to the 200' level. The dumps, stope filling and low-grade ore left in the mine will be worked for silver and for the tungsten, which was formerly passed over. It is reported that there are 120,000 tons in the dumps that will assay 1½% tungstic acid, and over \$5.20 per ton silver, largely as chloride.

Mine examined by G. A. Thayer, who estimated ore worth \$792,000 to 300' depth and \$2,000,000 under water to 800'.

UNITED STATES CONTINENTAL MINES CO. ARIZONA

Office: I. K. Farrington & Co., 30 Broad St., New York.

Officers: J. H. Shockley, pres.; P. O. Abbe, v. p.; A. P. Monk, sec.-treas.

Cap., \$1,000,000; shares, \$1 par; outstanding, \$720,000; non-assessable. Registrar & Transfer Co., New York, transfer office and registrar. Controls 80% of capital stock of the Cons. Homestead Mines Corp., cap. \$600,000; shares \$1 par; payment for this stock being 50,000 shares U. S. Cont. M. Co.'s stock, placed in pool, and \$7,500 payable within one year.

Property: includes the Copper Bullion mine of the Continental and the Homestead mine, acquired in 1916; the latter consists of one patented claim in the Lynx-Creek mining district, near Walker, Yavapai Co., Ariz. This claim is said to carry the Homestead-Eureka vein, 4' to 7' wide in porphyry and diorite, showing gold ore, partly free milling, silver, lead, zinc and copper ore. The mine workings opened years ago were badly caved when present management acquired it.

Management reported in 1916 "two powerful veins opened for 1,500'"; that the deepest shaft is 120' and estimates \$210,000 yearly earnings on a basis of 100 tons ore daily, an output which will require much development work to realize.

New work on the Continental consists of one 60' and one 100' shaft, and total openings of 450'. A vein in quartz-diorite carries gold-copper ore with silver, lead and zinc values. The 100' shaft is being deepened.

Equipment: one report in 1916 stated there is a 5-stamp mill on the property, another that there is a 5-stamp mill building; also that "management therefore does not contemplate reconstructing its 5-stamp mill until a tonnage is developed that will warrant larger mill construction than 5 stamps."

Company's president is an able engineer and will make the mine a success.

Y. P. MINING CO.**ARIZONA**

Address: N. H. Getchell, mgr., Prescott, Ariz. Operates the Cash property, 14 miles S. of Prescott in the Senator district, Yavapai Co.

Dividends paid are said to amount to \$15,000.

Development: has continued for 3 years and is now at 750'. The 60-ton mill and concentrating plant has 5 Wilfley tables and a Monell slimer and was reported as producing \$8,000 gold bullion per month.

*RAY, PINAL COUNTY***ARIZONA HERCULES COPPER CO.****ARIZONA**

Stock control passed to Ray Hercules Mining Co., which see.

ARIZONA RAY COPPER CO.**ARIZONA**

Address: 115 N. First Ave., Phoenix, Ariz.

Officers: W. A. Stuart, pres.; F. M. Dorsey, v. p.; J. L. Milligan, sec., with Fred. E. Young, L. L. Wallace and W. Laurence Barnard, directors.

Inc. in Arizona. Cap., \$1,000,000; shares 10c par; 5,000,000 shares paid promoters for the claims.

Property: 12 claims, adjoining the Ray Consolidated, at Ray, Pinal county, considered to be outside the ore zone and valueless.

Company has been exposed and denounced by the California Corporation Commission, by the Mining & Scientific Press, and lately by the New York Tribune. The exposé drove the promoting firm out of California and to Phoenix, Ariz., where its business is said to have been bought out by the Arizona Securities & Trust Co., which company was still peddling stock, March, 1917, at 12c a share. In July stock was quoted at 2c.

Arizona Ray is considered a fraud of the worst type.

COPPER BUTTE MINES**ARIZONA**

Property under bond and lease to Ray Hercules Copper Co. of Ray, Ariz. Shipping 50 tons daily, 1917. Described in Vol. XII.

COW BOY MINE**ARIZONA**

C. W. McGraw, owner and mgr., Kelvin, Ariz.

Property: 5 claims, 85 acres in Dripping Springs district, Gila county, about 10 miles E. of Ray. Is a contact deposit in monzonite and lime, that carries gold, silver, lead values.

Development: by 150' shaft and 150' tunnel. Equipment consists of a 6-ton Gardner grinder and hand-jig.

Production: Gold, \$1,705 in 1915; \$2,940 in 1916; \$1,600 to Aug., 1917. Also 15 tons of 31% lead ore in 1917.

EAGLE MOUNTAIN COPPER CO.**ARIZONA**

Probably dead. Col. P. T. McGrath, gen. mgr., but his whereabouts unknown at Kelvin, Pinal Co., Ariz.

Property: 27 claims, known as the Copper Queen group, in the Riverside district, is slightly developed. Idle several years and lands of doubtful value.

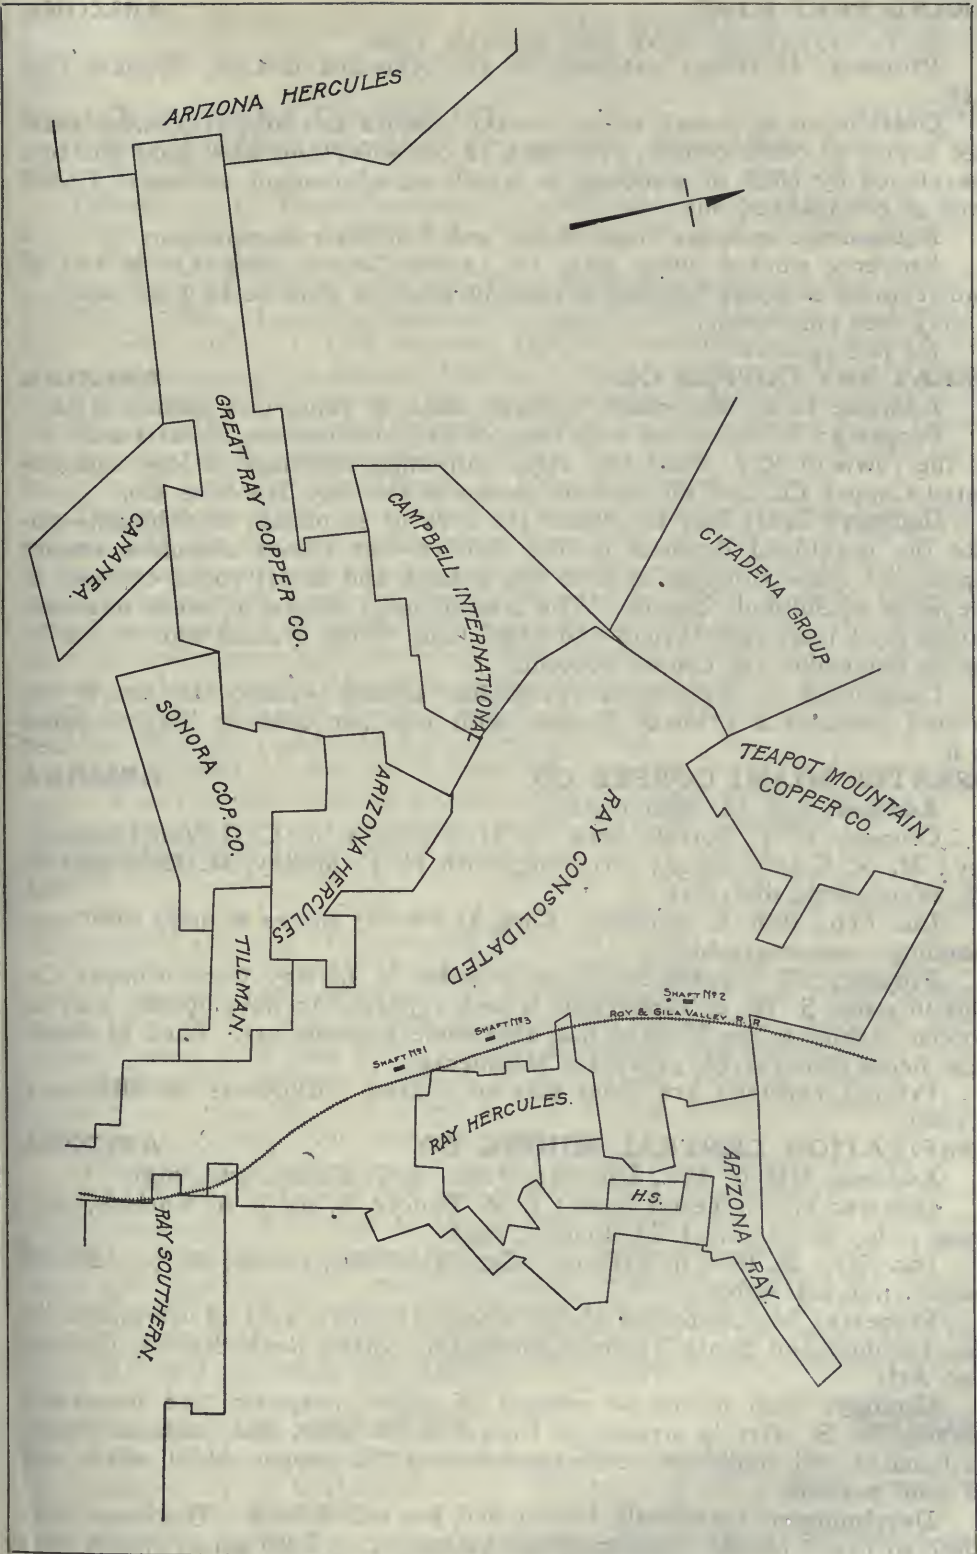

GOLDEN BELL MINING CO.**ARIZONA**

Idle. Kelvin, Pinal Co., Ariz. L. W. St. Charles, pres.; Geo. H. Sarrick, v. p. and gen. mgr.; G. L. Sarrick, sec.; L. C. St. Charles, treas.

Inc. 1910. Cap., \$1,000,000.

Property: 9 claims, near the Southern Pacific railway, 5 miles west of Kelvin, shows gold-copper ore in veins in altered diorite.

Developed: by 100' tunnel, shaft and crosscuts. Equipped with 25 h. p. hoist and air compressor. No 1917 returns secured.

PROPERTY MAP OF RAY DISTRICT, ARIZONA

GRAND REEF MINE**ARIZONA**

R. V. Dey, owner, 28 W. 88th St., New York.

Property: 14 claims patented, in the Aravaipa district, Graham Co., Ariz.

Ores: occur in fissure veins between granite and porphyry, with average values of $3\frac{1}{2}\%$ copper, 24% lead, 12 oz. silver and \$2.30 gold per ton. Developed by 7,500' of workings in which superintendent estimates 175,000 tons of ore blocked out.

Equipment: includes steam hoist and 7-drill air compressor.

Property worked under lease by Laurel Canyon Mng. Co. in 1915-16 and reported shipping 1-2 cars of concentrates per week to El Paso smelter. Thirty men employed.

No late returns.

GREAT RAY COPPER CO.**ARIZONA**

Address: C. A. McDonald, Citizens Bank & Trust Co., Bisbee, Ariz.

Property: 20 claims on both sides of Sulphide canyon, about 1 mile W. of the town of Ray, Pinal Co., Ariz., adjoining holdings of Ray Consolidated Copper Co. and the western group of the Ray Hercules Co.

Geology: Great Ray is outside the area of secondary enrichment—unlike the developed deposits of the district—but shows abundant copper stains and some sulphide in both the granite and schist rocks exposed in the walls of Sulphide canyon. The area of most intense primary mineralization is at least 1,500' broad and 3,000' long. This ground warrants drilling to determine the copper content.

Considered a legitimate, speculative mining venture to see if the ground contains a primary deposit with one per cent or better copper in it.

GREATER MIAMI COPPER CO.**ARIZONA**

Address: Box 14, Miami, Ariz.

Officers: W. E. Sorrels, pres.; R. H. Emery, v. p.; C. G. Van Lewenen, sec.; M. N. Kiamy, treas.; foregoing, with H. C. Malloy, M. Raiss and E. W. Wentworth, directors.

Inc. Feb., 1916, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; 8,000 outstanding; non-assessable.

Property: 32 unpatented claims, 9 miles N. of Ray Cons. Copper Co. and 16 miles S. W. of Globe and Miami, reported to have 100,000 tons of copper carbonate ore blocked out, also some sulphide ore. Lack of roads, now being constructed, prevented shipments.

Present earnings are from sale of shares. Expenses in 1916 were \$14,000.

INSPIRATION CENTRAL MINING CO.**ARIZONA**

Address: 1113 G Ave., Douglas, Ariz. A. J. Krison, gen. mgr.

Officers: W. E. Tester, pres.; J. M. Bedore, v. p.; J. A. Karlson, sec.-treas.; also directors. J. M. Bedore, supt.

Inc. Sept. 28, 1916, in Arizona. **Cap.**, \$1,000,000; shares, 50c par; 800,000 issued; non-assessable.

Property: 54 unpatented claims about 14 miles west of Geronimo, in the Turnbull and Santa Terressa mountains, Black Rock district, Graham Co., Ariz.

Geology: vein occurs at contact of schist, porphyry and limestone, dipping 85° S. Ore in streaks, is from 2 to 10' wide, and contains copper carbonates and sulphides. Average assay is 9% copper, \$11.50 silver and \$3 gold per ton.

Development: by tunnels, lowest 400', but still driving. Workings total 1,000' to depth of 580'. Reserves are estimated as 7,000 tons. Work contemplated, improvement on road, erection of ore bins and compressor.

Expenses in 1916 amounted to \$10,000. Haulage of ore will be to Geronimo on the Arizona Eastern line, thence to smelters at Globe or Miami.

KELVIN-SULTANA COPPER CO.

ARIZONA

Office: 339 Monadnock Bldg., Chicago, Ill. Mine office: Kelvin, Pinal Co., Ariz.

Officers: A. H. Westfall, pres.; J. A. Russell, v. p.; G. O. Swarts, asst. sec.-treas., with G. P. Baldwin, A. A. Knapp and J. A. Glenn, directors. A. L. Flagg, supt.

Inc. April 19, 1910, in Arizona. Cap., \$3,000,000, increased Dec., 1914, to \$5,000,000; shares \$1 par, non-assessable; issued 3,842,752 shares. Authorized bond issue to Nov. 1, 1919, \$200,000, \$198,700 outstanding. Company was a reconstruction of the Sultana-Arizona Copper Co., financed by the Baldwin Syndicate of Chicago and the entire floating indebtedness eliminated.

Property: 21 claims and 3 fraction, 530 acres; all patented but 2 claims and fraction, in Ray-Kelvin district, Pinal Co., Ariz. Company also owns 30 acres of gold and silver lands in Ures district of Mexico.

The Arizona mines were formerly known as the Riverside and Bryan groups, and are across the Gila river from and 1½ miles S. E. of Kelvin. Management reports 21 contact deposits, between granite and diorite, of which 5 veins have been developed; reported as 18" to 6' wide, and estimated to average 5' in width, with a generally N. W. trend. The property also was said, formerly, to show a 6' vein carrying chalcopryite in the lower workings, from which shipments to the Humboldt smelter returned 8.7 to 10.6% copper. Average tenor of ore in all veins is estimated by the company as 6% copper and 3 to 4 oz. silver per ton.

Development: by 6 shafts, deepest 590', and the Hunter and Agnes tunnels. About 10,000' of underground work has been done and is said to show widening of veins at depth. A 165' shaft on Diamond Joe claim is reported by Ralph Harris, mining engineer, to cut cuprite, chalcocite, chalcopryite and pyrite. Vein No. 2 is said to show 6' of 4% ore and in winze from the 300' level 3' of 6% ore. On the Bryan claim, a 175' incline shaft has exposed shipping ore, reported to be very rich.

A crosscut on the 540' level, being driven 2,000' and 1,267' long, Feb., 1916, is reported to have intersected 3 veins which are now under development; No. 510—a vein 4' wide, carrying 2% copper ore, and No. 510-b, about 1' wide, with from 3-17% copper, 4½% lead and 2½ oz. silver.

Equipment: includes a 575 h. p. oil-burning electric plant, a 1-mile aerial tram across the Gila river, to the railway station of Kelvin and a concentrator of 200 to 300 tons daily capacity.

Production: of old company, to end of 1909, was 522 tons of ore, yielding \$12,450. Production in 1907 was 45,838 lbs. fine copper and 653 oz. silver. Daily shipments of 20 tons to the Hayden smelter were made in summer of 1913. The mill has been closed down until sufficiently large reserves have been blocked out to insure profitable operation. Lessees are working on the surface and have made shipments said to average 8-14% copper.

Property held by receiver for sale in May, 1917. Re-organization contemplated and exploration by drilling. Ore shipments in 1916 were only 32 tons.

LITTLE BOBBIE MINING CO.

ARIZONA

Office: Room 3, 102 N. Central Ave., Phoenix, Ariz.

Officers: W. J. Graham, pres.; J. Pollard, v. p.; S. J. Ross, sec.-treas., above with Geo. Hershman and J. A. Ganz, directors.

Inc. 1917, in Arizona. Cap., \$450,000; shares \$1 par; 312,500 issued. Stock being offered the public at 20c a share.

Property: 9 unpatented claims, known as the Bisbee group, 175 acres, 1½ miles S. E. of Ray, Pinal Co., Ariz., adjoining the Ray-Broken Hill and Ray-Silver-Lead mines.

Ore: silver-lead in limestone, with some gold and copper values.

Development: by 300' tunnel.

Is a prospect.

RAY-ARIZONA COPPER CO.

ARIZONA

Address: 828 Chestnut St., Milwaukee, Wis.

Officers: Fritz Bock, pres.; M. A. McCabe, sec.; Fritz Bock, Jr., mgr., Kelvin, Ariz.

Property: 42 claims, on the south side of the Gila river, opposite Kelvin, shows monzonite porphyry in granite highly mineralized, with impregnations and veins carrying copper ore.

Development: by tunnel shaft and churn drilling. F. L. Underwood is reported to have financed the company under an option on 51% of the stock for \$250,000.

Equipped with Leschen tramway. Lessees shipped several cars of copper ore in 1916 to Hayden smelter.

RAY CENTRAL COPPER CO.

ARIZONA

Formerly the Finney Copper Co.

Address: Box 488, Phoenix, Ariz.

Officers: E. O. Petro, pres.; A. G. Dulmage, v. p.; H. T. Weldon, sec.-treas.-mgr., with W. O. Temple, directors.

Inc. May 20, 1916. **Cap.**, \$1,000,000; shares 50c par; 700,000 shares outstanding. Annual meeting 1st Tuesday in May.

Property: 13 claims, 260 acres in Banner mining district, Gila Co., said to show gold-silver-copper ore in a contact deposit in diabase and lime.

Development: by 165' shaft; drifting being done on the lowest, or 165' level, August, 1917. A prospect.

RAY CENTRAL COPPER MINING CO.

Present rate, \$4 per share per annum, payable quarterly, March 31, etc., at Guaranty Trust Co., New York.

A sinking fund of 10c per ton of dry ore treated was in effect from 1914 to 1916, increased to 12½c a ton after 1916. It seems improbable it will ever be needed.

Property: 126 patented claims, 2,143 acres of mining claims, at Ray, 130 acres at Ray Junction for railroad purposes, and a tract of 4,324 acres in Gila and Pinal counties, at Hayden and 21 miles from the mines, for milling and power plant and tailing disposal; 536.5 acres of this are leased to the A. S. & R. Co. for its smelter.

About 580 acres of the Ray property have been proven to be mineralized, and about 183 acres have been developed, with a certainty that more or less of the additional mineral ground will be found to carry workable values.

Geology: the property shows a flat orebody 150 to 400' thick, 1,000 to 3,000' wide and about 9,000' long, through the property. This zone con-

sists essentially of a highly metamorphosed iron-stained schist, whose borders and tongues are also mineralized and cut by diabase dikes. A fault east of the orebody brings the orebody against quartzite and limestone, while unaltered schist is found to the west. The silicified and whitened rock is leached to a considerable depth, the oxidized zone being succeeded by impregnations and seams of chalcocite and pyrite. The ore deposit is almost identical with that of Miami, and genetically similar to those at Bingham, Ely and Morenci. Oxidized copper ores are found near surface, though in much of the ground the top of the belt is leached to depths varying from 30 to 400' and averaging 225', this leached zone being succeeded by ore carrying copper sulphides, greatly enriched by the secondary redeposition of chalcocite, latter constituting the main ore value. At the bottom of the orebody the transition from the ore to rock mineralized with primary sulphides takes place in a few feet. This primary mineralization averages about one-half of 1% copper, whereas an average sample of ore on the 50' level gave 2.4% copper, 3.4% iron, 2.6% sulphur and 90.3% insoluble matter.

The many drill holes bored have shown an average capping of 240' depth, succeeded by an average of 118' thickness of ore, on the Ray proper, with 315' of capping and 171' thickness of ore on the Gila ground. The Ray mine has been developed by both underground workings and extensive churn-drill borings. Six churn drills have been employed, averaging about 50' each daily, boring 340 holes to an average depth of nearly 400' each, with a total of 140,000' of drilling, holes being bored checkerboard fashion, in 200' squares.

Development: by shafts Nos. 1 and 2 about 4,000' apart, and No. 3, the Ray Central shaft, near No. 1. There are many less important workings. The ore supply now comes almost equally from the No. 1 and the No. 2 mines. The No. 3 mine furnishes a smaller tonnage of high-grade ore. No. 1 shaft is 400' deep and has 4 levels at 171' and each succeeding 100' in depth. The shafts are connected by a drift, on the second level, which is run for more than 1 mile, practically through commercial ore. By the side of each shaft is an incline shaft, with a series of stairs used by the men and a haulage way used for the handling of material, the main shafts being used solely for ore extraction. The greatest depth from which ore is to be hoisted will be about 300' for years to come, and the greater part of the tonnage will be taken from the 170' level and above for some years. The mine is operated on the Cates shrinkage-stoping system, the stopes being carried up 15' wide with 10' pillars. When the stoping is completed and ready for drawing, the pillars crush and come down with the broken ore. This method gives a 92% recovery of the ore blocked out. The ore is trammed to 600-ton underground loading bins on each level of each shaft, and drawn therefrom into 12-ton skips through gates operated pneumatically. Ore is hauled underground in trains of 5-ton cars, drawn by compressed air locomotives of the H. K. Porter type, using air with an initial pressure of 1,000 lbs., through the 4,000' 8x14' double-track main haulage tunnel, with which all shafts and working levels are connected. Three cars are dumped at a time into each ore pocket, by a revolving tippie.

The Ray mine, of which the Ray Central or Globe-Isabella mine is now an integral part, has been developed for a maximum width of 3,500' and length of 8,000'. Total underground workings Jan. 1, 1917, amounted to 107 miles, of which mining operations have destroyed about 54 miles. In 1916 new work totaled 66,863', compared with 45,292' in 1915 and 75,261' in 1914. Openings to June 30, 1917, total 608,396'.

Ore Reserves: calculated to Dec. 31, 1914, amounted to 74,765,789 tons, averaging 2.214% copper and underlying an area of 205.2 acres. This is exclusive of 7,061,821 tons, averaging 1.74% copper mined from inception to the end of 1914. The higher grade orebody developed by No. 3 shaft, contained Jan. 1, 1914, approximately 540,000 tons of ore averaging slightly over .5% copper. Ore reserves Dec. 31, 1916, 93,373,226 tons averaging 2.03% copper. This tonnage ensures a life of about 27 years on basis of present production, averaging 10,000 tons per day.

The mine is operated electrically throughout, taking current over a transmission line from Hayden to Ray. There is a crushing plant at the mine, reducing ores to about 1" size before shipping to the mill.

The company owns and operates its own railway, known as the Ray & Gila Valley, from Ray to Kelvin, the trains continuing over the tracks of the Arizona railway (S. P. R. R.) to Hayden Junction and thence over a branch line, belonging to the Ray & Gila Valley to the Hayden concentrator. This line between Ray and Kelvin is standard gauge and is operated as a common carrier. It has 80-lb. rails, Mogul locomotives and 60-ton steel ore cars. The company has a very favorable freight contract with the Phoenix & Eastern for the transportation of ores partially over that line.

The old concentrator at Kelvin, 6 miles from the mine, inherited from the English owners, was enlarged, in 1907, to 300 tons daily capacity and extensive experiments were made until Aug., 1909, these resulting in the concentration of ores 17 into 1, with a 70% recovery of assay values.

Concentrator: occupies a 4,000-acre site at Hayden, about 16 miles from the mine. In its essential features it is a duplicate of the Garfield mill of the Utah Copper Co.

The mill, of 10,000 tons daily capacity, has eight units, and is so designed that it may be enlarged, on the unit plan. The crushing department has 16 sets of 42x16" rolls, and 24 six-foot Garfield Chilean mills. Sizing is done by 48 impact screens, and Janney classifiers, and concentration is effected by Garfield roughing tables, Harz single compartment jigs, Wilfley tables, and Isbell vanners. Water, derived from the Gila river and the adjacent hills, is sent to a 4,000,000-gal. reservoir at the mill site through a 30" pipe, by pumps having a capacity of 7,500 gals. per minute.

The mill started in March, 1911, treating an average of 850 tons of ore daily. The concentrates are well adapted to smelting, as regards sulphur and iron contents, only a small amount of limestone being required for fluxing. Concentrates are treated in the Hayden smelter, owned by the American Smelting & Refining Co.

The power plant at the mill site, of 10,000 h. p. capacity, supplies electric current for the operation of the entire property. The plant has water-tube boilers, burning oil and coal, and running four 2,500 h. p. Allis-Chalmers triple-expansion engines, direct-connected to four 1,750 k. w. electric generators.

*for 10 months

Mine cost includes coarse crushing and loading on cars at mine, from 3.1 to 3.7c per ton. Total cost calculated from income statement includes all operating charges. 1914-16 production of copper is from smelter returns from concentrates and high-grade ore shipments. Cost per pound does not include miscel. income, equal to about 0.1c per lb. Low recovery in 1915 due to construction work in mill improvements at a time when the price of copper made it more profitable to overload such sections as were not undergoing repairs. Ratio of concentration was 17.99 to 1 in 1914.

In 1916 production of silver was 8,125 oz., sold at 71.077c per oz., and 828 oz. gold at \$20 per oz.

The concentrator is now handling its full capacity of 10,000 tons a day. With the mine and works running at full capacity on the average grade of ore, production is now at the rate of over 80,000,000 lbs. of copper yearly. Present costs are 11c per lb. Original estimates by the company's engineers were that a net profit of at least \$1.75 per ton of ore could be secured. The tonnage already developed places the Ray Consolidated among the great copper mines of the world, with a certainty that the present enormous ore tonnage will be increased, and a possibility that it may be doubled. The management is practically the same as that of the Utah Copper Co., the pioneer among the so-called porphyry mines of the world, and is thoroughly experienced, strong and capable.

RAY HERCULES COPPER CO.

ARIZONA

Office: 25 Broad St., New York. Mine at Ray, Ariz.

Directors: Frank C. Armstrong, pres.; J. G. Hopkins, E. P. Earle, Geo. A. Huhn, W. F. Bartholomew, F. C. Armstrong, August Heckscher, Jos. B. McCall. C. E. Addams, gen. mgr.; A. A. Wren, drill supt. and sampler.

Inc. August, 1915, in Maine. **Cap.**, 1,500,000 shares, \$5 par; 1,263,000 outstanding. Company owns 90% of the issued Arizona Hercules Copper Co. stock. When entire stock of holding company is issued, company will have \$1,000,000 cash. No bonded debt, no preferred stock. As the 500,000 shares sold at \$3.75 yielded \$1,875,000, and \$1,000,000 was put in the treasury, the difference must represent part of the purchase price.

Property: 207 acres, in the heart of the Ray district, at Ray, Ariz., surrounded by the holdings of the Ray Consolidated Co. Tract shows Pinal schist, in part capped by dacite, conglomerate and wash and invaded by diabase. Ore developed is an extension and part of the Ray Consolidated orebody. It is crossed by a fault with 350' drop to the east, which fact long retarded development.

Development: in Sept., 1915, Henry Krumb made an examination after drilling 27 drill holes; 17 drill holes showed ore averaging 73.6' thick over 13½ acres with a 257' capping. The total ore developed by these holes was 3,428,774 tons assaying 2.36% copper. The area S. E. and E. has since developed more ore and 4 drills are now working, putting down holes at 200' intervals. A total of the first 30 holes aggregating 89,000' cost \$2.90 a ft., including general expense, 52c; labor and supplies, \$1.55; sampling and technical data, 57c; grading roads and moving drill, 27c. Drills are run in three 8-hour shifts with 1 drill runner at \$6 per day, helper at 40c per hour and sampler at 50c per hour. Drills average 30' per day and consume 1½ tons of coal and 1,500 gals. of water.

Company has sunk one 862' and one 522' shaft at N. W. corner of property and will mine orebody by methods formerly used by C. E. Addams at de Beers diamond mine in Africa. Company is erecting a 1,200-ton mill and figures a recovery of 33.44 lbs. copper per ton at 8½c total cost. If this is done company can earn \$540,000 at 13c copper.

Ore reserves: recent estimates place reserves at 10,000,000 tons of 2% ore, and a total of 25,000,000 tons is expected.

Company is backed by big financial houses, has expert technical advisors, and is very favorably regarded. The stock has been kept down in price by the greed of various brokerage houses, but is understood to now be held largely by strong investment interests.

By Sept., 1917, the mill buildings were nearly complete, the power plant finished, and a spur line is to be constructed costing \$200,000. Mill expected to be ready by end of 1917.

RAY SILVER LEAD MINING CO.

ARIZONA

Address: care Lawhon & Bradford, Phoenix, Ariz.

Officers: William McDermott, pres.; Jos. Cassou, v. p.; A. W. Lantz, sec.; J. H. Page, treas., with K. K. Koontz, directors.

Inc. Dec., 1916, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; 712,505 shares outstanding.

Property: 48 claims, 960 acres, 2 miles E. of Ray, Pinal county, on top of high limestone mountains. Shows replacement deposits of high-grade lead carbonate ore in fissures and along porphyry dikes intrusive in limestone, the ore occurring just above quartzite series.

There are three or four mines on the property, all showing shipping ore.

Reserves estimated by manager at 50,000 tons.

Production: began in June, 1917, 200 tons being shipped that month, 500 tons in July, and an average of 750 tons a month since, ore averaging 21% lead, with small silver-gold values.

Employs 35 men. Uses 231 burros for packing ore into Ray. Shipments made to Empire S. & R. Co., Deming, said to cover all operating expenses and 10% on issued stock.

Management expects to increase shipments to one car per day in September.

SULTANA-ARIZONA COPPER CO.

ARIZONA

See Kelvin-Sultana Copper Co.

UNITED STATES VANADIUM DEVELOPMENT CO.

ARIZONA

Address: E. P. Palmer, Phoenix, Ariz.

Property: 3 miles E. of Kelvin, Ariz. Development by tunnels is said to have opened considerable ore, and in Oct., 1917, a 50-ton mill was authorized. The Bryan dry sizing and concentrating process is to be used.

In May, H. S. Bryan of the Minerals Recovery Co. of Denver reported that a low-grade sample of ore showed 3.68% vanadium, an equal content of "molybdate," gold and silver worth \$76.27 per ton and about 48% "metallic" lead. A process had been evolved to treat this ore at Tucson.

SAFFORD, GRAHAM COUNTY

ATLAS COPPER CO.

ARIZONA

Officers: R. W. Craig, pres., Phoenix, Ariz.; John Barber, v. p.; A. J. McIlhinney, 2nd v. p., 34 Nassau St., New York City; E. W. Clayton, treas.; T. J. Sparkes, sec., with G. H. Hirschfeld, directors. R. J. Young, supt.; L. A. Dunham, cons. engr.

Inc. 1917 in Arizona. **Cap.**, \$1,000,000; shares \$1 par; non-assessable. Is a reorganization of the San Juan Copper Co.

Property: The San Juan mines, 13 claims, 260 acres, in the Lone Star district, Graham county, 8 miles N. of Safford. Ore occurs in granitic porphyry traversing diorite and is said to average 3.6% copper, with gold and silver values. Developed by 330' main shaft, 750' of drifting and 2,500' of diamond drilling, and equipped with hoist, compressor, churn drills and pump. Management is reported contemplating the erection of a 300-ton mill.

Shipments in 1916 to Douglas and El Paso smelters said to have netted the company \$50,000. Shipping 10 tons per day in 1917.

COPPER REEF CONSOLIDATED MINES

ARIZONA

Office: Wm. A. Griffith, sec., 1409 Park Bldg., Pittsburgh, Pa. **Inc.** Feb. 19, 1910, in Arizona. **Cap.**, \$5,000,000; shares \$5 par; issued 632,000 shares. Union Trust Co., Pittsburgh, transfer agent. Annual meeting, first Monday in February.

Property: 125 claims, 2,500 acres, including 600-acre mill site, in the Stanley Butte district, 15 miles S. W. of San Carlos, and west of Stanley P. O. Claims are on the western slope of a high mountain ridge whose eastern face shows granite overlaid by 600' of quartzite capped by limestone, while the western slope is plated with massively bedded gray limestone. On the claims these rocks are carboniferous and cut by numerous fractures carrying small replacement bodies of silicious copper ore. The rocks dip down the slope at 35°, and most of the orebodies are either in gash veins or occur along fractures, conformable to the bedding. In the many older pits and shallow shafts, the narrow gash veins were not over 2' wide and the ore pinched out at 20 to 30' in depth.

Development: said to aggregate 3,600', is mainly by tunnel, but includes the 575' North Star and 125' Jessie shafts. The manager estimated in 1914 80,000 tons developed by this work, which is a liberal estimate. Ores average about 5.4% copper and 68% silica, the copper being partly in the form of chalcopyrite and bornite, mixed with chrysocolla, malachite and azurite, etc. Management claimed average value of 8.65% copper with varying gold and silver values up to \$12 per ton.

Equipment: includes two 40 h. p. gasoline hoists, an Ingersoll-Rand 4-drill air compressor and all necessary mine buildings.

Operations suspended end of 1915. Secretary writes, March, 1916, that company is quite satisfied with its property and the existing conditions, and requests no publicity in the Handbook. Investors take notice.

GERONIMO MINING CO.

ARIZONA

Address: Miami, Ariz.

Inc. in Arizona, 1916. **Cap.**, \$3,000,000; shares \$1 par; non-assessable.

Incorporators: N. C. Bandy, D. J. Shea and A. M. Cobb, of Miami. J. W. Sterling, cons. engr.; R. F. Fitzgeralds, gen. mgr.

Property: at Geronimo, Graham Co., Ariz. Churn-drilling for copper ore commenced in Oct., 1916, one hole cutting 4½% ore at 85'.

This is one of the many companies launched during the boom in 1916, the advertising covering full pages of the local papers, which is not of itself suspicious.

GOLD BUTTES MINING & MILLING CO.

ARIZONA

Jos. and Daniel Fraser, incorporators, Duncan, Ariz.

Inc. Dec., 1915, in Arizona, to operate the New Strike gold property, near Twin Peaks. Ore contains gold and is developed for 800'.

LONE STAR CONSOLIDATED COPPER CO.

ARIZONA

Officers: Hon. Wm. H. Powers, pres., 209 Washington St., Boston, Mass.; Henry H. Folsom, sec.; A. G. Smith, treas. Chas. B. Spaulding, supt.

Inc. Aug. 6, 1906, in Maine. **Cap.**, \$5,000,000; shares \$10 par, practically as successor of Maravilla Copper Co.

Company controls the Mineral Mountain Copper Co., through ownership of a two-thirds share interest, and controls, through majority stock ownership, the Chase Creek Copper Co.

Property: 32 claims, includes the Little Clara mine, developed by tunnel and shaft, and the Lone Star mine, in the Gila mountains, 10 miles N. of Solomonville, having a 900' shaft, said to show a 5' vein of sulphide

ore carrying 8 to 10% copper, with fair silver values and a little gold. The shaft also shows stringers of ore giving assays of 5 to 20% copper. Air compressor and drills installed 1915.

SALOME, see Wenden

SILVER BELL, PIMA COUNTY

ARIZONA BELMONT MINING CO.

ARIZONA

Office: Bullitt Bldg., Philadelphia, Pa. **Mine:** Silver Bell, Pima Co., Ariz. Meyer Schamberg, pres.; John Rice, treas., with J. S. Harwood, N. S. Keith, W. P. O'Meara, G. D. Woodside and E. E. Young, directors. **Inc.** in 1911 in Arizona. **Cap.,** \$1,000,000; shares \$1 par; issued 870,000.

Property: lands, 16 claims, adjoin the Imperial Copper Co at Silver Bell, on the east and northeast and are developed by 392' shaft. Operations suspended in 1913.

EL TIRO COPPER CO.

ARIZONA

Drexel Bldg., Philadelphia, Pa. El Tiro, Pinal Co., Ariz.

Officers: C. D. Bouton, v. p.; J. D. Goff, sec.; C. J. Schlaechter, treas.; W. H. Buehman, acting gen. mgr.; preceding, with G. W. Barnes, William Greif, L. O. Bailey, H. D. Moore, directors.

Inc. May 22, 1907, in Arizona, as successor of the Cleveland-Arizona Mining Co. **Cap.,** \$4,500,000; shares \$10 par; fully issued. Funded debt outstanding July 1, 1916, \$1,291,000 (authorized \$1,500,000) first mortgage 6% 10-year \$500 and \$1,000 gold coupon bonds. Dividends 6% per year until all bonds are retired. Company controlled by American Finance & Securities Co., through ownership of majority of stock issue. Annual meeting third Thursday in April, at Tucson, Ariz.

Property: 14 claims, 255 acres, including a 5-acre mill site in the Silver Bell district, adjoining the Imperial mine, 70 miles west of Tucson. Claims show contact deposits between quartz porphyry and limestone, carrying cuprite, melaconite, chalcocite and chalcopyrite with a gangue of decomposed porphyry and limestone. Two orebodies under development are irregular in shape, of about 10 acres in combined area and proven to depth of 400'.

Development: by several shafts and tunnels, including the 283' three-compartment Kurtz shaft, and a 432' transportation, tunnel connecting the Kurtz shaft with the railroad. There is about 15,000' feet of development work disclosing large quantities of concentrating ore and several large bodies of high-grade ore. Mine is said to have considerable 3% ore on the dumps. Not operating March 1, 1916.

Equipment: includes a 600 h. p. steam plant, 150 k. w. electric plant and a 120 h. p. gasoline plant, with a 16x20" 250 h. p. double-drum hoist, good for 1,000'; 3 gasoline hoists, and Nordberg and Sullivan air compressors of 18 drills aggregate capacity. There are 18 buildings in all.

A 50-ton concentrator, built for experimental purposes, and increased later to 100 tons daily capacity, is equipped with a 7x10" Blake crusher, 30-ton Huntington mill, 2 rolls, a Vezin automatic sampler, 1 vanner, 5 Wilfley tables and 1 Richards pulsator and hydraulic sizer. Railroad crosses land.

IMPERIAL COPPER CO.

ARIZONA

G. W. Dietz, sec., Tucson, Ariz.

The Silver Bell mine is being operated by American Smelting & Refining Co.; Julius Kruttschnitt, Jr., mgr.; Edw. Thornton, supt.

In 1903 company bought the old Silver Bell mines and built the Arizona Southern Railway line from the Southern Pacific R. R. to the mine;

it erected a smelter at Sasco, through its subsidiary, the Southern Arizona Smelting Co., and built a concentrator and fine plant at the mine. Mining was stopped in 1913 by the loss of a 450' shaft by fire and the inability of the mine to furnish 700 or 800 tons of ore of high enough grade to pay with copper below 12½¢ a lb. Had the parent corporation, the Development Co. of America, been able to supply the funds, which it claims were promised by the Southern Pacific R. R., the Imperial could probably have tied over this period.

In 1911 trustee for bondholders of the company began foreclosure proceedings, resulting in the sale in 1915 of the property, including the stock control of the railroad and of the smelting company. Immediately thereafter the American S. & R. Co. secured a bond and churn-drilled the tract to check assay plans of former management, and in March, 1915, property was taken over and lease taken at \$2,000 per month on the Sasco smelter.

The Silver Bell mines cover 85 claims, 1,700 acres, in a small mountain range called the Silver Bell. The range has a monzonite porphyry core capped by Paleozoic limestone and quartzite, eroded and faulted, with ore-bodies in the baked and altered limestone as irregular lenses along shear planes in this contact zone. The porphyry is itself altered and impregnated with copper sulphides. Oxidation extends downward 100-150'. The underlying sulphide ore carries chalcopyrite and some bornite. This is the largest developed mine south of the Southern Pacific R. R., being but 35 miles south of Tucson.

For geology see Bull. 285, U. S. Geol. Survey, 1906, pp. 102-3. Also Min. Res. 1907, p. 175; 1908, pp. 204 and 305; 1909, pp. 167 and 251. Fully described in Vol. XI, Copper Handbook.

Shipments begun May, 1916, now average 10,000 tons per month.

OXIDE COPPER CO.

ARIZONA

Office: 85 Ames Bldg., Boston, Mass. Mine at Silver Bell, near Red Rock, Pinal Co., Ariz. Albert C. Burrage, pres.; Chas. D. Burrage, sec-treas.

Property: 31 claims, patented, known as the Copper Prince group, in the Silver Bell district, 7 miles south of the Imperial mine, shows contact metamorphic deposits carrying argentiferous copper sulphides in limestone gangue.

Development: by a 500' shaft and a 350' tunnel, with about one-half mile of workings.

Equipment: includes gasoline power and an air compressor. Churn drilling was done, 1910, to locate disseminated ores, but apparently results were not especially encouraging. Production was 49,676 lbs. copper and 103 oz. silver in 1908, and less than \$3,750 worth of ore in 1910; none reported since.

SASCO SMELTER

ARIZONA

Sasco, Ariz. Operated by A. S. & R. Co. under lease.

SOUTHERN ARIZONA SMELTING CO.

ARIZONA

Bankrupt. Property bought in by preferred creditors at public auction, March, 1915, and reported leased, 1916, to the American Sm. & Ref. Co. Sasco smelter fully described in Vol. XI, Copper Handbook.

WAYNE DEVELOPMENT CO.

ARIZONA

Idle.

Property: near Quijotoa, via Weldon, Pima Co., Ariz., includes 49 claims, partly patented, 980 acres and three mill sites, total 1,020 acres, in the Quijotoa district, 40 miles from the Red Rock-Silver Bell railroad. Claims show mineralized zones between granite and andesite carrying several orebodies, one of which is said to be 200' wide and characterized by

gold ores. The other orebodies show copper ores containing malachite near surface, succeeded by chalcopyrite, mixed with lead and zinc sulphides beneath the oxidized zone. The ore is reported to average 10 to 30% copper and 5 to 70% lead.

Development: by 1,800' crosscut tunnel, long abandoned, 7 shafts of 60 to 330' depth and about 10 tunnels, longest 430' with total workings of about 4,500'.

Equipment: includes steam and gasoline engines, aggregating 500 h. p. at the mine and mill, two 45 h. p. hoists, good for 700' depth, Fairbanks-Morse and Leyner air compressors, with 17 buildings. The 100-ton stamp mill and concentrator has 30 gravity stamps and a 250 h. p. engine, 4 Blake and Samson crushers, one 50-ton Elspass centrifugal crusher and 3 Standard tables. Long inactive and probably defunct.

SUPAI, COCONINO COUNTY

NORTHERN ARIZONA LEAD & ZINC MINING CO.

Address: Prescott, or Supai, Ariz.

Officers: W. I. Johnson, pres., with Geo. Brookshea, W. P. Burke, W. C. Miller and F. Blucher, directors.

Inc. 1916, in Arizona. **Cap.**, 1,000,000 shares of no par value; 520,000 issued.

Property: 5 claims, 100 acres, in Cataract Canyon district, Coconino Co., Ariz., said to show a chamber deposit in limestone. Ore contains both carbonate and sulphide of lead and zinc, with some silver.

Development: by tunnels, longest 285' with total workings of 600'.

Equipment: includes 20-ton mill, to be enlarged, giving concentrate assaying 65% lead and 25 oz. silver per ton.

Is a small mine, on which owners propose to erect a 300-ton mill.

SUPERIOR, PINAL COUNTY

ALTA MINING & SMELTING CO.

ARIZONA

Idle. Mail returned from former offices at Superior, and Florence, Pinal Co., Ariz.

Officers: L. H. Sherman, pres.; Col. G. W. Griffey, v. p. and agent; H. A. Austin, second v. p.; J. C. Ferrall, sec.-treas.; preceding officers and G. R. Charters, directors.

Inc. Sept. 8, 1905, in Arizona. **Cap.**, \$5,000,000; shares \$1 par. Annual meeting, first Tuesday in September.

Property: 25 claims, area 470 acres, and a 200-acre patented ranch, including a water right on the Gila river, in the Mineral Creek district, at Superior P. O., near the Lake Superior & Arizona mine. Lands have veins in schist and contact deposits between schist and porphyry, ranging 5 to 50' in width, opened by shafts of 96', 127' and 150', with upwards of 3,000' of workings, showing ore giving assays of 2 to 57% copper, with gold and silver values, also a lead vein giving assays of 2 to 57% lead, 4 to 15 oz. silver and 80c to \$14 gold per ton.

Equipment: at the Black Copper shaft includes boiler house and power house, with steam hoist good for 1,000', 4-drill Leyner air compressor and 14,000-gal. oil tanks. There are 9 mine buildings.

A suit against H. W. Augustine, H. F. Clough and I. A. Wood, promoters, for money claimed to be illegally appropriated for their own use, was decided in favor of the present management, compromised by the surrender of 1,190,000 shares of stock to the company.

Property reported sold, 1917.

BROWN WHITLOW GROUP**ARIZONA**

Mine Address: Superior, Pinal Co., Ariz. Owned by J. C. Brown and J. W. Whitlow.

Property: 5 claims, in Pioneer district, near Superior; adjoins the old Silver King mine, once the richest silver property of Arizona.

Development: by tunnel, which cuts a 7' contact vein of copper ore carrying low-grade and silver values.

CURRY MINING CO.**ARIZONA**

Wm. Curry, mgr., Superior, Ariz.; John T. Rurey, Phoenix, sec.; J. D. Cox, Hornell, N. Y. and Fred. H. Schulz, directors.

Inc. 1917 in Arizona. Cap., \$1,000,000; authorized to sell 200,000 shares.

Property: 7 claims, the Curry group, near Silver King, shows a ledge of silver lead ore.

Development: mostly by open cuts and pits, which show copper and lead ore. Plans sinking shaft 1917-18.

DOUGLAS COPPER CO.**ARIZONA**

Office and secretary: Fred L. Mason, P. O. Box 421, Globe, Ariz. T. C. Hendricks, pres.; H. M. Foster, v. p.; Chas. Davis, supt.

Inc. Aug., 1910, in Arizona. Cap., \$1,125,000.

Property: 35 claims, about 30 miles from Globe on the wagon road, and midway between the towns of Ray and Superior, Pinal Co., Ariz. Lands are traversed by several N. W.-S. E. fissure veins of limestone and quartzite, carrying gold, silver and copper in oxidized ores or as bornite and chalcopryite.

Development: by 2 tunnels, a shallow shaft and a number of open cuts, all on one large vein. Management expects to sink shaft to 500' in depth. Property lies west of the limestone uplift in which the Newman group is located. From personal inspection, the claims are regarded as of highly speculative value, but the great amount of activity in this belt, all part of the Superior district, makes the tract far more valuable than it was a few years ago.

FORTUNA MINING CO.**ARIZONA**

Company probably dead but mine working.

Address: Edw. McFarley, mgr., Superior, Pinal Co., Ariz.

Inc. Jan. 27, 1908, in Ariz. Cap., \$1,000,000; shares \$10 par.

Property: a group of claims, 5 miles N. of Superior, under lease and bond to McFarley and Miller in 1917, shows copper ore with high gold and silver values.

Development: by 430' shaft on N. S. vein and the 450' Richardson tunnel on E. W. vein, carrying a 2-6" pay streak of ore said to assay 10% copper, up to several thousand ounces silver and \$25 gold per ton, but cut off by a cross fault in face. Tunnel to be extended and the mine equipped with compressor and air-drills in 1917.

In driving the tunnel to intersect vein at 750', Sept., 1917, a 2' streak of gray copper ore was cut at 440' and a cave at 450'. Shipments are to begin shortly.

GRAND PACIFIC COPPER CO.**ARIZONA**

Address: Superior, Ariz. J. C. Denton, mgr.

Officers: F. G. Jewett, pres.; M. A. Moody and L. M. Hart, v. p.'s.; H. C. Hamlin, sec.-treas.; above are directors.

Inc. April, 1916, in Arizona. Cap., \$1,500,000; shares \$1 par; 950,000 outstanding. Income in 1916 was \$5,000 and expenditures, \$10,000. The company has no debts; has spent \$70,000 to date, and has cash and money due in 1917, totaling \$50,000.

Property: 35 unpatented claims, 2 miles S. of the Magma mine, Pioneer

district, Superior, Ariz., shows 3 fault fissures crossing the uptilted limestone and quartzite beds at right angles. The lode under exploration follows a porphyry dike, and is similar in geological occurrence to the nearby Magma mine. The orebody already opened is about 50' long, and in places 5' wide, the ore being a residual mass in leached iron gossan.

Ore occurs as shoots with 30° dip and E. W. course. Oxide ore shipped averaged 17% copper, with some precious metals. A bedding plane lode and a silver lode also occur on the claims.

Development: by 3 tunnels; the lowest one 700' long, Oct., 1917, should cut the ore shoot at 800', and at depth of 420'. Workings total 1,000'. No reserves blocked out. Drifting, sinking and raising contemplated.

Equipment: includes Fairbanks-Morse hoist and Sullivan compressor.

Production: 150 tons of 17% ore in 1917.

LAKE SUPERIOR & ARIZONA MINING & SMELTING CO.

ARIZONA

All assets transferred to the Superior Arizona Copper Co., in 1916, and stockholders received share for share in the latter company, which see.

MAGMA CHIEF COPPER CO.

ARIZONA

Address: Superior, Ariz.

Officers: C. L. Knight, pres.; K. Pomeroy, v. p.; F. T. Pomeroy, sec.-treas., with D. D. Moffat and W. T. MacDonald, directors; C. A. Kumke, supt.

Inc. Oct. 4, 1913, in Arizona. **Cap.**, \$2,000,000; shares \$1 par; non-assessable; 1,259,916 issued.

Property: 17 unpatented claims in Pioneer district, Pinal Co., Ariz. Examined by W. H. Hollis, F. M. Gordon, C. A. Kumke and W. H. Weed.

Geology: claims cover the Superior series of tilted limestone, quartzite and shale beds, resting on diabase and cut by cross faults and the persistent L. S. & A. bedding fault vein, both faults being in the Magma Chief. Ore deposition in the district occurs with porphyry dikes in and along these fault-fissures, all the known mineralized faults showing black manganese and ironstained outcrops of silicious material. Comparing the outcrop of the adjoining Magma and L. S. & A. veins with that of other fractures, especially those on the Magma Chief no difference can be noted. The L. S. & A. vein was first worked for gold, and later exposed oxidized copper ore. The Watson vein of the Magma Chief has surficial characteristics of well-mineralized veins, has a width of 33' of manganese outcrop on the Palace claim, has shown a porphyry dike and should yield copper at depth.

Development: a tunnel started early in 1917 was in over 1,490' in October. This work is suspended pending diamond-drill results at the L. S. & A. contact. The rock was porphyry for 525'. The old Baltimore tunnel is being extended to open a manganese deposit. It is intended to sink an 800' shaft on the Watson vein. Crosscuts at 950', 1,050' and 1,150' showed 15 to 25' of porphyry assaying up to \$3.50 gold and 1 oz. silver per ton.

By Dec. 1., No. 1 hole was down 72' in quartzite, and progress was expected to be 20' daily. The vein should be cut between 500 and 600' depth.

Is considered a promising well-managed mining venture.

MAGMA COPPER CO.

ARIZONA

Office: 14 Wall St., New York. **Mine office:** Superior, Pinal Co., Ariz.

Officers: W. H. Aldridge, pres.; C. F. Ayer and H. F. J. Knobloch, v. p.'s; H. E. Dodge, sec.-treas.; preceding, with John F. Alvord and C. A. Corliss, directors; W. C. Browning, gen. mgr.; E. H. Lundquist, mine supt.

Inc. June, 1910, in Maine. **Cap.**, \$1,500,000; shares \$5 par; issued \$1,200,000. Transfer agent, Guaranty Trust Co., New York. Registrar, Bankers Trust Co., New York.

Balance Sheet:

Assets—						
	Property & Plant	M. A. R. R. Stock	Cash & Copper	Other Current	Supplies	Total
1916.....	\$1,004,917	\$242,010	\$798,444	\$272,998	\$2,318,369
1915.....	928,186	200,000	443,068	46,855	\$35,166	1,653,275

Liabilities—

	Capital Stock	Current	Surplus	Total
1916.....	\$1,200,000	\$95,239	\$1,023,130	\$2,318,369
1915.....	1,200,000	47,478	405,797	1,653,275

Income Account:

	Metal Sales	Total Income	Total Expenses	Oper. Profit	Deprec.	For'd
1916.....	\$2,555,936	\$2,556,732	\$1,376,968	\$1,179,764	\$82,431	\$1,097,333.
1915.....	1,040,896	1,041,235	370,348	670,886	59,157	611,729

Earnings for first half 1917 were \$736,959.

Quarterly dividends of 50c per share began Sept. 30, 1915.

Property: in the Pioneer district, Pinal Co., Ariz., formerly known as the Silver Queen mine. Company owns a compact group of claims of about 531 acres, of which 153 acres are patented, also 108 acres of mill sites. Owns other interests and has options on adjoining property. Diamond-drilling revealed ore-shoots east of the main lode, which has been developed continuously from the 400' to 1,500' level.

Geology: The known orebodies of the mine occur in a strong fault fissure filled with porphyry and cutting diabase, quartzite and limestone. The ore is mainly chalcocite.

Development: mine has been partially prospected and developed to the 1,200' level by the old 800', shaft and a new 1,500' three-compartment shaft. Development work in 1916 totaled 8,653', of which 298' was shaft-sinking. Total underground workings Jan. 1, 1917, 26,236'. The vein has been developed on the 500', 650', 725', 800', 1,000', 1,200', 1,300', 1,400' and 1,500' levels. Openings on each of the three bottom levels have exposed the main ore shoot. At the bottom there is 34' of ore assaying 10.52% copper, 5.37 oz. silver, and \$1.26 gold per ton. Minerals are principally bornite and chalcopyrite. Total drifting at 1,500' was 235', all in ore containing 5% copper. West of the main body on the vein, or at 1,200' level was a shoot of ore 170' long and 5' wide, assaying 33 oz. silver, 0.4% copper, 80c gold, 2% lead, and 6.7% zinc. On the 1,000' level the main vein is 50' wide in places.

Ore reserves: estimated Jan. 1, 1917, as 125,000 tons copper sulphide ore assaying 6.25% copper, 6.5 oz. silver and .03 oz. gold per ton; 20,000 tons of lead-zinc ore, assaying 13.5% zinc, 2% lead and 12 oz. silver per ton; 7,500 tons of silver sulphide ore assaying 30 oz. silver, 0.4% copper, 2.2% lead, 6.1% zinc, 0.05 oz. gold.

Equipment: is electrical throughout, but includes a 160 h. p. steam hoist, now driven by compressed air, 2 air compressors, one of 1,500, the other of 900 cu. ft. capacity, driven by a 225 h. p. motor and 3 vertical Aldrich pumps, each driven by a 75 h. p. motor.

In Aug., 1914, the company completed a concentration and oil flotation mill, having a monthly capacity of 4,500 tons. Uses General Naval Stores oil. Mine and mill are connected by a 2,600' aerial tram. The Callow flota-

tion process is used in the mill and treats the tailing from the finishing tables. Recovery was 83.13%. Ore and concentrates are shipped to the plant of the A. S. & R. Co. at Hayden, Ariz. The 100-ton lead-zinc concentrator was enlarged 50%, but later the new section was changed to copper treatment.

The company owns substantially all the shares of the Magma Arizona Railroad Co., completed in 1915, a 30.4-mile narrow gauge road from Superior to Webster, a station on the Arizona Eastern R. R. This line was profitably operated in 1916.

A 15-mile electric power line with steel towers was built by the company from its property to the Inspiration mine, at Miami, where it connects with the power line from Roosevelt Dam. The company has a contract for several years with the U. S. Reclamation Service for electric power, at an approximate cost of \$49 per h. p. year.

Production: in 1916 was 8,473,580 lbs. of copper, \$375,885 gold and silver, \$24,492 lead and zinc; compared with 6,046,459 lbs., and \$208,658 gold and silver in 1915. The average selling price was 24.722c per lb., and cost 10.803c; leaving a profit of 13.919c per lb.

Crude ore shipped, 9,126 tons, assayed 16.756% copper, 18.802 oz. silver, and \$1.76 gold per ton. Mill ore, 74,617 tons, averaged 4.344% copper and 4.854 oz. silver. Tailing contained 0.7158% copper (of which 0.225% was oxide) and 0.84 oz. silver per ton. There was also shipped 3,450 tons of carbonate ore, assaying 7.936% copper, 5.611 oz. silver, and \$1.10 gold; 183 tons of lead and 429 tons of zinc concentrates.

Output for 1917 will be about 11,000,000 lbs. copper.

Although actual ore blocked out is not great in amount the future of the Magma appears bright, especially as the main orebody is strong at 1,500', and conditions for its continuation are favorable.

MAGMA EXTENSION COPPER MINING CO.

ARIZONA

Address: 110 N. 1st Ave., Phoenix, Ariz. **Mine office:** Superior, Ariz.

Officers: John Cowan, pres.-treas.; J. J. Neary, sec. and gen. mgr., with G. A. Mauk, J. W. Spray and F. H. Poole, directors.

Inc. 1917 in Arizona. **Cap.**, \$1,500,000; shares \$1 par; non-assessable.

Property: 135 acres in Pioneer district, Pinal Co.; said to be adjacent to Magma Copper, Magma Chief and Silver King mines. Geological conditions are reported to be similar to those at these properties, but this is doubted.

MAGMA QUEEN COPPER CO.

ARIZONA

J. C. Callaghan, C. R. Bone and G. A. MacDonald of Phoenix, incorporators.

Inc. Dec. 2, 1916, in Arizona. **Cap.**, \$1,500,000; shares \$1 par.

Property: 10 full and 2 fractional claims, 208 acres, known as the Black Diamond and Magma King groups, at the northern end of the Pioneer, or Superior mining district, Pinal Co., Arizona.

The Black Diamond ore deposit is a gently dipping bed of garnetized limestone, 12' to 20' thick, containing scattered grains and clusters of oxidized copper ore. This occurs at the contact between the limestone series of the region and the Silver King stock or body of monzonitic, i. e., granitic rock. The ore is flecked and spotted with stellate masses of micaceous hematite. Selected material for shipment shows 15% copper, 34.5% insoluble and 25% iron, but the average copper content of the deposit, so far as opened, is less than 2%. The Black Diamond orebody is 225' long.

Other claims show geological conditions which warrant prospecting work.

Development: work is limited to an incline, 48' long, and various open-

cuts. The 450' Black Diamond tunnel, 100' below the ore bed, had not reached ore at last accounts.

Regarded as worthy of limited prospecting, but not at points thus far attacked.

MAGMA RAY COPPER CO.

ARIZONA

Address: A. H. Woollacott, 261 I. W. Hellman Bldg., Los Angeles, Cal.

Property: 420 acres, known as the McSherry group, near Ray Junction, Pinal Co., Ariz.

MAGMA-SUPERIOR COPPER CO.

ARIZONA

Address: care of Samuel Newhouse, Salt Lake City, Utah.

Property: situated south and adjoining what was originally known as the Lake Superior & Arizona claims, now owned by Magma Copper at Superior, Pinal Co., Ariz. Geological conditions said to be favorable. Development proceeding at last accounts.

MAGMA SURPRISE MINING CO.

ARIZONA

Address: Superior, Ariz.

Officers: G. J. Stone, pres.; V. B. Andreas, v. p.; J. L. Boyce, sec.-treas., with R. Krakauer and P. Howle, directors.

Cap., \$1,000,000; shares \$1 par.

Property: 21 claims, 1½ miles S. W. of Superior, Pinal Co., Ariz. Developing at last accounts.

MAGMATIC COPPER CO.

ARIZONA

Address: Superior, Ariz.

Officers: J. C. Goodwin, pres.; T. J. Goodwin, v. p.; G. A. Goodman, sec.-treas.

Inc. 1917 in Arizona. Cap., \$100,000; shares 10c par; non-assessable. Listed on New York curb.

Property: 20 claims, 1½ miles S. of the Magma Copper Co. mine, Superior, Pinal Co., Ariz.

Geological conditions are similar to the other parts of the district. Shaft down over 100' in Aug., 1917, and said to show high-grade manganese ore. Copper indications reported improving.

MAMMOTH COLLINS MINE

ARIZONA

Care of Young Bros., Shultz, Arizona. See Great Western Copper Co.

MANIFEST COPPER & SILVER CO.

ARIZONA

Address: Box 494, Globe, Ariz.

Officers: W. Kitzmiller, pres.; W. R. Henry, v. p.; W. W. Crawford, sec.-treas., with J. W. Morrell and (Mrs.) C. Kitzmiller, directors.

Inc. in Arizona. Cap., \$3,000,000; shares \$1 par; non-assessable; 35,000 outstanding.

Property: 43 unpatented claims in Pioneer district, Pinal Co., Ariz., 20 miles from Globe and 12 miles from Hayden. Was a silver producer in the 80's. Under bond for 3 years to W. J. Porter and W. Kitzmiller.

Geology: sulphide ore occurs in a contact fissure in quartzite. It is reported to carry 10 to 30 oz. silver, \$1.50 gold, 10 to 35% lead, and 1½ to 6% copper.

Development: to 85' depth, totaling 2,000'. About \$7,000 spent during 1916.

POMEROY-PRUDENTIAL COPPER CO.

ARIZONA

Offices: Hornell, N. Y., and Superior, Ariz.

Officers: K. Pomeroy, pres.; J. T. Rurey, v. p.; E. Pomeroy, sec.; I. N. Brill, treas.

Inc. 1917 in Ariz. Cap., \$1,500,000; 750,000 in treasury; 50,000 shares sold at 25c each; 50,000 more offered the public at 50c a share, March, 1917.

Property: 9 claims, Pioneer district, 3 miles W. of Silver King, and known as the Silver Bell and Sulphide group, in the Pioneer district, $3\frac{1}{2}$ miles N. W. of the Magma mine.

Development: by 130' tunnel said to show some copper glance ore with silver values.

Is a prospect.

QUEEN COPPER MINING CO.

ARIZONA

Property sold to Magma Copper Co.

QUEEN CREEK COPPER CO.

ARIZONA

Address: Phoenix, Ariz.

Officers: A. Mackay, pres.; W. C. Foster, v. p.; Arthur J. Smith, sec-treas., with F. S. Stephen, F. J. Dourson, J. C. Devine, J. W. Crenshaw and C. M. Shannon, directors; W. A. Macdonald, supt., Superior Ariz.

Inc. May 3, 1916, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; 564,965 shares outstanding. Listed on New York curb, April, 1917. Equitable Trust Co., New York, transfer agents; U. S. Corporation, registrars. Annual meeting first Monday in May.

Property: 17 claims on Queen creek, 1 mile from Superior, Pinal Co., said to have a contact fissure, carrying gold-silver-copper values.

Development: by 260' shaft, being sunk to 500' depth. Diamond drill exploratory work in 1917 was reported to have passed through 40' of vein matter at 300' depth, assaying 8% copper.

SILVER KING OF ARIZONA MINING CO.

ARIZONA

Office: 1 Broadway, New York. **Mine office:** Alex. B. Downe, mgr., Superior, Ariz.

Officers: A. W. Hillebrand, pres.; Alex. B. Downe, v. p.; W. F. Ainsworth, sec-treas., with W. C. Foster, E. J. Stern, R. E. Lewers and T. B. Higgins, directors.

Inc. May, 1916, in Arizona. **Cap.**, \$2,000,000; shares \$1 par; 1,500,000 issued; non-assessable. Security Transfer & Registrar Co., New York, transfer office. Annual meeting first Wednesday in January.

Property: the Silver King mine, 10 lode claims, nearly 170 acres, 3 miles from Superior, on the Stoneman grade, is an old silver mine, popularly credited with a production of \$10,000,000, and known to have paid \$1,950,000 in dividends up to July, 1887. Opened to a depth of 1,000', the mine was originally worked for gold and silver, copper ore in the form of tetrahedrite coming in at a depth of about 310' and continuing to depth of 510', below which very high-grade silver ores were again encountered. There are about 6 miles of old workings.

Geology: the conditions are described in Bull. 540, U. S. Geol. Survey. Though currently spoken of as a vein, the orebody is a stockwerk, in which the extraordinarily rich ores, carrying various silver arsenical and antimonial sulphides of silver, with argentite and stromeyerite, apparently gave out at the bottom levels. Below this level, lower grade but payable concentrating ore, amenable to flotation may be expected and lateral development is also expected to develop more ore. Believe property worthy of reopening but that more capital will be needed than present plan provides for. Old records show that copper ore was mined on the 800' level.

Development: in August, 1917, the mine was reopened, and by October the 980' shaft was unwatered to 250', and exploration commenced.

Equipment: includes Fairbanks-Morse gasoline hoist, Ingersoll-Rand compressor, Cameron pump, 5-ton auto-truck and 100-ton mill equipped with flotation apparatus. The mill will not be worked until the mine is thoroughly opened.

SUPERIOR ARIZONA COPPER CO.**ARIZONA****Office:** 14 Wall St., New York City. **Mine address:** Superior, Ariz.**Officers:** H. F. J. Knobloch, pres.; D. E. Thomas, v. p.; F. V. Munster, sec.-treas.; above, with F. W. Holmes and A. E. Peterman, directors; W. C. Browning, mgr.**Inc.** Mar. 22, 1916, in Maine. **Cap.**, \$250,000; shares \$1 par; non-assessable; 180,010 issued. Annual meeting, fourth Monday in May.

Company took over property and all assets of the Lake Superior & Arizona Mining & Smelting Co., together with some claims formerly owned by the Magma Copper Co., at Superior, Pinal Co., Ariz., adjoining the latter company's mines.

Property: the Gold Eagle mine, with 11 claims, 110 acres, freehold at Superior, in the Pioneer district, 3 miles S. of the Silver King mine, 30 miles W. of Globe and 28 miles E. of Florence. Claims show thickly bedded, steeply upturned limestone, resting on quartzite, underlaid by diabase. Ore occurs following slips, or brecciation along bedding planes which in general lie within 20' of the base of the limestone. In places the ore is 4' thick, and sometimes leached iron gossan is 15' thick. This brecciation is due to fracturing or bedding faulting, and does not follow exactly the same bed.

As the vein matter is a leached iron gossan with only occasional patches and segregations of oxidized ore or residual nuclei of sulphide, hope is felt that massive sulphides will be found in depth. Though a heavy flow of water is encountered, the sulphide zone has not yet been reached.

Development: the principal working is the Charlton tunnel, which for 2,000' follows the mineralized fracturing along the bedding plane between Devonian limestone and quartzite. This tunnel is 130' vertically below the Holt tunnel, is connected with the latter by a 165' winze on the dip of the vein and is 3,000' long, showing ore assaying up to 30% copper. At the northern end of this long tunnel, there is an incline shaft sunk along the bedding plane at 26° inclination for 1,800' with short levels at various intervals.**Equipment:** includes steam plant with 175 h. p. water-tube boiler, and 16-drill Rand 2-stage air compressor. Fuel is petroleum, and there are 5 storage tanks at the mine and 2 at Florence, each holding 2 carloads of oil.**Production:** was 99,120 lbs. copper, 1,040 oz. silver and 188 oz. gold in 1907; none since. Work was suspended 1907, resumed 1910 by the Magma Copper Co., and again suspended 1911. Property is considered promising.

Some dump ore shipped by new company, 1916, and development work in progress, 1917.

SUPERIOR-BONANZA MINING CO.**ARIZONA****Address:** J. T. Muller, Superior, Ariz.**Officers:** J. T. Muller, pres.; Chas. Brittonham, v. p.; H. D. McPhail, sec.-treas., with G. J. Camsler and Geo. Dogan, directors.**Inc.** in Arizona. **Cap.**, \$500,000; shares 50c par; non-assessable; 485,000 issued.**Property:** 6 claims, 110 acres, ½ mile N. of the Magma Copper Co., Pioneer district, Pinal Co., Ariz., said to show a fissure vein in diabase, dipping 72° N., with E. W. course. Ore contains gold, silver and lead. Shoot said to be 300' long.**Development:** by shaft to 52'. Only assessment work done in 1916. Shaft sinking to 700' proposed.

A prospect of no particular merit.

SUPERIOR RAY COPPER CO.**ARIZONA****Address:** A. L. Emberson Co., 112 N. Central Ave., Phoenix, Ariz.

Inc. in Arizona. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; 700,000 issued.

Property: 11 claims in Pioneer district, 30 miles from Florence, and 1 mile from Superior, Ariz. Examined by John Armstrong, in Dec., 1916, who considers that the ground is well within the famous east and west faulting system upon which the great mines of this section have been opened.

Apparently no work of consequence has been done and claims are a pure gamble.

SUPERIOR SAFFORD COPPER CO.

ARIZONA

Address: Miami, Ariz. Mine near Superior, Ariz.

Inc. in Dec., 1916, by A. M. Bernstein, W. D. Wiley and B. W. Fauble, all of Miami. **Cap.**, \$2,000,000; shares \$1 par.

Property: in Pioneer district, Pinal Co., Ariz., near Magma Extension property. Shaft sinking said to have revealed 8 to 12% copper ore.

UNITED MAGMA MINES CO.

ARIZONA

Address: W. D. Steadman, Superior, Ariz.

Officers: J. H. Thompson, pres.; E. G. Schulze, v. p.; D. L. Hughes, sec.; Louis Lefkovits, treas., with W. D. Steadman, directors.

Inc. 1917, in Arizona. **Cap.**, \$2,500,000; shares \$1 par; non-assessable; 1,250,000 issued.

Property: 34 claims, 680 acres, in Superior district, Ariz.

Out of the mass of literature issued by Harry Lefkovits, 40 Exchange Place, New York, only the following can be extracted: "Property has been favorably reported upon by engineers of standing. It is believed to contain an extension of the Magma vein. In fact the property is said to bear about the same relation to the Magma Copper Co.'s property as the United Verde Extension bears to the United Verde, and that it has an excellent chance of repeating the development record of the United Verde Extension."

Nothing is available concerning development, etc. At last reports, Lefkovits had broken his pledge and bond to remain in New York until trial.

TOMBSTONE, COCHISE COUNTY

BUNKER HILL MINES CO.

ARIZONA

Owned by the Phelps Dodge Corporation, which see.

MIDDLEMARCH COPPER CO.

ARIZONA

Office: 319 Bullard Bldg., Los Angeles, Cal. **Mine office:** Middlemarch, Cochise Co., Ariz. Mine formerly owned by Gird Bros. and M. M. O'Gorman, of Los Angeles, Cal.

Inc. April 26, 1907, in California. **Cap.**, \$1,000,000, increased March 28, 1906, to \$3,000,000; shares \$100 par. Absorbed the Cobreloma Consolidated Copper Co., about 1907. Annual meeting, first Monday in April. Is under option for \$500,000 to B. M. Snyder, Los Angeles, Cal.

Property: 68 claims, 1,360 acres, in the Dragoon mountains, showing several contact deposits between limestone and granite-porphry, with a general N. W. strike, and dip of 42 to 54°. The 2 orebodies under development, said to be 30 to 80' wide, show oxidized ores succeeded by chalcopryrite, with some chalcocite.

Development: by 9 shafts, deepest 210', and 6 tunnels, total workings being about 2 miles, estimated by management to show 200,000 tons of ore, with 100,000 tons blocked out for stoping in the Missouri mine, with ore in other properties, though not extensively developed.

Equipment: includes a 300 h. p. steam plant, 50 h. p. hoist and 4-drill

Laidlaw air compressor. There are 12 buildings, including engine house, boiler house, machine shop and smithy.

Flotation plant being erected in July, 1917.

WAR HORSE COPPER MINING CO.

ARIZONA

Address: Bacher & Stelsel, 412 Mills Bldg., El Paso, Texas.

Cap., \$1,000,000; shares \$1 par.

Property: 15 claims in the Tombstone district, Ariz., 23 miles N. W. of Bisbee.

Development: 508' shaft and other openings. At 265' there was said to be $5\frac{1}{2}'$ of ore assaying 8% copper, 16 oz. silver, and \$1 gold per ton. At 400' the vein is 27' wide and is considered to run through 6 claims, a distance of 9,000' judging by the outcrop. This reported strike should make a profitable mine of the property if the ore is continuous for any considerable distance.

TUCSON, PIMA COUNTY

ACME MINING & REDUCTION CO.

ARIZONA

Idle. Mail returned from former address in Tucson, Ariz. See Vol. XI, Copper Handbook.

ALPHA COPPER MINING CO.

ARIZONA

Office: 34 S. Stone Ave., Tucson, Ariz.

Officers: E. A. Pike, pres.; R. J. Monahan, v. p. and mgr.; Geo. P. Myers, sec.; preceding, with F. S. Lockwood, J. L. Toohey, J. W. Bogan and John Nelson, directors.

Inc. Oct. 7, 1916, in Ariz. **Cap.,** \$1,000,000; shares \$1 par; increased from \$500,000 March 16, 1917. 590,000 shares in treasury. Last offering of 100,000 shares at 50c made in May, 1917. Company still owed \$30,000 on property, Sept., 1917.

Property: 22 claims, 7 owned outright, balance part paid, comprises about 450 acres, including the Pima and Fries groups, situated midway between Mineral Hill and Twin Buttes camps, San Xavier district, Pima Co., Ariz.

The tract is underlain by granite capped on the hills by quartzite and traversed by two different sets of veins, both metalliferous. The fracturing is complex and the veins associated with porphyry dikes, andesite dikes and wide breccia zones.

Ore: carries silver and copper as chalcopyrite and gray copper (tennantite) with silicious gangue. The Pima mine, opened to 150' in depth, 1876, produced \$85,000 in silver.

Development: 215' shaft on the Pima vein with levels at 150' and 200' cutting 2 veins, 4' to 5' wide, with stopes above 150' level yielding ore that is said to average \$16.35 per ton with copper at 25c and silver at 65c.

Equipment: adequate for existing needs only, includes 2 gasoline engine hoists, pumps, etc.

Reported on by W. Tovote, May, 1917. Property appears to have merit.

ARIZONA COPPER MINING CO.

ARIZONA

Office: Tucson, Ariz.

Officers: John N. Mettler, pres.; Jos. Brunner, v. p.; V. Brunner, sec.-treas., with Leo J. Wachs, directors.

Inc. Aug. 1, 1901, in Arizona. **Cap.,** \$1,000,000; shares \$1 par; 171,000 shares outstanding Jan., 1917.

Property: 25 claims, about 500 acres, 16 miles W. of Tucson, in Amole mining district, Pima Co., Ariz. Developed by 100' tunnel and 300' shaft,

said to show a vein carrying 2% copper. Ore occurs in porphyry and limestone and carries much iron.

Equipment: includes hoist, engine and several buildings. Company doing development work 1917 and plans installing air compressor with proceeds from stock sales.

ARIZONA MOLYBDENUM CO.

ARIZONA

F. J. Wharton, pres., Tucson, Ariz.

Inc. 1917, in Ariz. **Cap.**, \$300,000.

Property: 10 claims, about 200 acres, in the Baboquivari mountains, Pima Co., about 35 miles from Twin Buttes, slightly developed by several shallow shafts.

Ore: occurs as pegmatite carrying molybdenite, chalcopyrite and galena, in veins of quartz-feldspar, 4-10' wide, with S. E. strike, traversing coarse-grained granite. Samples reported to assay 2.2 oz. silver, 1.8 oz. gold and 3.9% copper. A 50-ton flotation plant constructed in 1917, is reported to be producing 1,500 lbs. of concentrate daily running 18% molybdenum.

ARIZONA-TONOPAH MINING & MILLING CO.

ARIZONA

Office: 303 Delta Bldg., Los Angeles, Cal. **Mine office:** 44 W. Congress St., Tucson, Ariz.

Officers: Jos. Dixon, pres.; R. D. Dunn, v. p.; Geo. Ankers, sec.-treas., with Countess Minafori, W. L. Shaffer and John L. Prime, directors.

Inc. Jan., 1916, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; 500,000 outstanding. Annual meeting, first Monday in November.

Property: 27 claims, 547 acres, in Amole mining district, Pima Co., 9 miles S. W. of Tucson, shows granite, andesite and rhyolite, cut by a sulphide deposit, proven for 100' and said to assay from 1-5½% in metal content. Values are gold, silver and copper.

Development: by 130' tunnel and 90' shaft. Idle, 1917, but management plans further development and installation of additional equipment in 1918. Management made optimistic statements concerning mine conditions and then suddenly shut down. Not favorably regarded.

BLANCHE ROSE MINING CO.

ARIZONA

Practically dead. At Twin Butte. Company relocated land of the bankrupt Chesterfield Copper Co., described in Vol. XI, Copper Handbook.

See Esperanza Mine.

BOSTON & ARIZONA MINES CO.

ARIZONA

General office: Tucson, Ariz.

Officers: Geo. P. Gregory, pres.; Henry C. Young, Jr., v. p. and gen. mgr.; Gerald S. Howland, treas.

Inc. 1915. **Cap.**, \$100,000; shares \$1 par. Stock listed on Boston curb. Federal Trust Co., Boston, transfer agents; Exchange Trust Co., registrars.

Property: 5 claims, in the Old Hat mining district, 25 miles north of Tucson, Pinal Co., Ariz., said to show an orebody 25' wide and 100' long, with copper-silver-gold values. Ore occurs between grano-diorite foot and quartz lime hanging-wall. Developed by 247' tunnel. A prospect.

Is not favorably regarded.

BUSH-BAXTER MINING CO.

ARIZONA

Address: care of E. N. Bush, Twin Buttes, Ariz. Company is a close corporation owned by four people.

Property: the Glance mine and 4 claims, formerly worked under lease by Bush & Baxter, at Twin Buttes, Pima Co., Ariz. Work started May, 1913, from a 10' assessment hole and lessees disclosed ore a few feet below surface, starting shipments almost immediately. Shaft has been sunk 582 feet.

Ore: said to average 5% copper, 2 oz. silver, 33% iron, 3% lime, 25% silica and 15% sulphur.

Production: in 1916 said to have averaged 120 tons of 4% copper ore per day.

Bonded late 1915 to the Amer. Sm. & Ref. Co. for \$450,000, but bond relinquished 1916 after payment of \$100,000 and \$54,000 royalty. Net smelter proceeds for 1916, \$132,000 from the one mine.

CABABI MINING CO.

ARIZONA

Secretary and address: Wm. H. Kershner, 1021 Hume-Mansur Bldg., Indianapolis, Ind. **Mine P. O.:** Camp Cababi, via Tucson, Pima Co., Ariz.

Officers: Chas. N. Wilson, pres.; Allen W. Conduitt, v. p.; preceding, with H. A. Walker, E. B. Peck, E. J. Scoonover, Albert Off, W. H. Kershner and R. A. Wilcox, directors; H. F. Scheerer, gen. mgr., P. O. Box 1116, Tucson, Ariz.; C. J. Price, mg. engr.; Harry Orndorff, purch. agt.

Inc. 1908, in Arizona. **Cap.,** \$1,500,000; shares \$1 par; non-assessable; issued \$1,250,000. Annual meeting, third Monday in June.

Property: 50 claims, about 1,000 acres, 35 claims patented, also 2 mill sites of 5 acres, situated in the Cababi mountains, 69 miles S. W. of Tucson.

Development: by numerous shallow shafts, and main shaft 450' sunk on the Picacho claim, includes an antigua, reopened about 1860, by Francisco Padrea, and which, years ago, was a small producer of silver-bearing copper and lead ores.

Equipment: includes a steam hoist good for 500', an adobe store building and several frame structures and tents utilized as dwellings.

A full report on the property made, Oct., 1912, by C. J. Price, mg. engr., shows 2,240 tons of ore, valued at \$28,485, on dumps. Manager reports 10,000 tons high-grade ore blocked out April 25, 1913. Mine now idle, but company claims it will be reopened when rail transportation is afforded.

CORNCOB MNG. & DEV. CO.

ARIZONA

See Corncob M. & Dev. Co.

DAILY-ARIZONA CONSOLIDATED COPPER CO.

ARIZONA

Address: G. S. Hancock & Co., fiscal agents, Tucson, Ariz.

Officers: W. H. Daily, pres.; J. W. Daily, mgr.

Cap., \$2,000,000; shares \$1 par; 1,000,000 shares issued in payment for property; 750,000 shares reserved for treasury.

Property: 22 claims, about 400 acres in the Old Hat mining district, near Oracle, Pima Co., developed by nearly vertical adit to depth of 500'. Ore as shipped will average 6% copper and \$2.00 in gold and silver.

Equipment: includes 100 h. p. boiler, compressor, several buildings and a ½-ton truck. About 15 men employed in 1917. Management claims to have expended \$30,000 on development work and equipment during 1916-17.

W. H. Weed in 1917, reported that the ore is a garnet rock carrying chalcopyrite; it is an inclined bed of limestone altered and mineralized by contact metamorphism. Though of low average grade, there are local masses of richer shipping ore. The deposit is quite similar to that of the adjacent mine owned by Phelps, Dodge Corp. The deposits are large, and if a sufficient tonnage is proven by development, can be mined and milled by flotation methods at a profit, provided cheap transportation is possible, since the mine is on a high mountain top and far from a railway.

DOS CABEZOS GOLD RIDGE MINING CO.

ARIZONA

Office: P. O. Box 987, Tucson, Ariz. **Mine address:** A. J. Welty, supt., Dos Cabezos, Ariz.

Officers: J. H. Huntsman, pres.; H. C. Kimball, v. p. and gen. mgr.; H. H. Hotchkiss, sec.-treas.

Inc. in Ariz. Cap., \$1,000,000; shares \$1 par; 200,000 issued. Annual meeting, Jan. 1st.

Property: 7 claims, patented, 140 acres, in the Dos Cabezas mining district, said to show a schistose fissure vein in granite and limestone carrying gold, silver and copper values as sulphides. Oreshoot reported as 4 to 34' in width with assays from \$12 to \$1,912.

Development: by new 450' tunnel, a 200' incline shaft and old 1,700' tunnel to be connected by winze with new tunnel 125' below. Equipped with 30 h. p. hoist. Said to have 75,000 tons of ore partially developed. Employs 20 men.

ELEPHANT HEAD MINING & MILLING CO. ARIZONA

Address: Ben Daniels, pres., Nogales, Ariz. Copper-lead property near Mt. Hopkins, Santa Cruz Co., Ariz.

Lands: about 40 miles from Tucson, and 6 miles from the Calabasas railroad, near Elephant Head Butte, in the Santa Rita mountains. A vein, said to have a 40' outcrop, carries a complex of argentiferous lead, copper and zinc sulphides, of low average grade, and there also is a 20' vein of quartzite, said to give surface assays of \$10 gold per ton.

No recent returns. Probably closed down.

EMERY-WHITCOMB TUNGSTEN CO. ARIZONA

Acquired by International Tungsten Corp., which see.

ESPERANZA MINE ARIZONA

Near Twin Buttes, Pima Co., Arizona. Under operation, 1917, by Messrs. E. A. Pike, J. C. Shell and Edw. Thornton.

Mine was owned in 1913 by the Chesterfield Copper Co. which went into bankruptcy. Company was reorganized in 1914 as the Blanche Rose Mining Co., but has not operated since 1914 and is practically dead. Present leasers have shipped several carloads of ore.

GLANCE MINING CO. ARIZONA

Address: Twin Buttes, Ariz.

Officers: E. G. Bush, pres., treas. and gen. mgr.; E. A. Pike, asst. mgr.; S. J. Gunn, supt.; G. H. Langworthy, sec. Is a close corporation.

Inc. in Ariz., in 1916.

Property: 3 claims, patented, held under option for old Twin Buttes Mining & Smelting Co., and a 2-year lease on the Twin Buttes railroad. The ore occurs in shoots at intersection of cross fractures with a main fissure in altered limestone near and roughly parallel to a granite contact. The ores contain copper glance, chalcopyrite and iron pyrite, with rather low gold-silver contents, and run 7% to 9% by smelter return. The last oreshoot developed is 15' wide and averages 12% copper. The Glance mine has a 450' shaft, being deepened to 650'.

Production: about 3,500,000 lbs. copper per year.

HELVETIA COPPER CO. ARIZONA

Idle. Office: 907 Metropolitan Life Bldg., Minneapolis, Minn. **Mine and works office:** Helvetia, Pima Co., Ariz.

Officers: C. C. Prindle, pres.; Chas. W. Sexton, v. p. and sec.; preceding, with William A. Paine, Jas. H. Seager, John S. Pillsbury, Russel M. Bennett and John R. Van Derlip, directors; Robt. H. Gross treas.

Inc. March 3, 1899, in New Jersey, and reorganized Oct. 4, 1905, in Arizona. Cap., \$5,000,000; shares \$25 par, in \$250,000 full-paid and \$4,750,000 assessable stock; fully issued. Levied 50c assessments, payable July 20, 1908; April, 1909; February, 1910, and Feb. 15, 1911, the latter assessment rendering the stock \$15 paid. State Street Trust Co., Boston, registrar;

Boston Safe Deposit & Trust Co., transfer agent. Annual meeting, first Monday after first Tuesday in October.

Financial statement of Dec. 31, 1916, is as follows: Capital stock, \$3,100,000; expenditures to date for mining property, \$2,181,786; for development, \$806,429; for equipment, \$40,250; treasurer's account, \$69,887; unpaid assessments, \$35,363; interest, \$12,141; ore account, \$46,461; general expense, \$34,428; taxes, \$1,327.

The company's holdings are at Helvetia, at the west foot of the Santa Rita mountains, 18 miles south of Vail, on the Southern Pacific, and El Paso & Southwestern railroad.

Property: 38 patented claims, also 8 patented mill sites and 960 acres of scrip land, giving total holdings of 1,673 acres, 30 miles S. E. of Tucson. The formations, resembling those of Bisbee, include Carboniferous and older limestones lying north of a great granite mass with porphyritic intrusions. The limestone has many iron outcrops underlain by orebodies occurring as replacements. These have an average strike of N. 35° W., with average dip of 45°, carrying ore of 2 to 4% copper.

For full description of properties and development, see Vol. XI, Copper Handbook.

INTERNATIONAL TUNGSTEN CORPORATION

ARIZONA

Office: 42 Broadway, New York.

Officers: Hiram Whitcomb, pres.; Richard Lounsbury, treas.; C. E. Greenough, sec.; A. A. Westerhouse, asst. sec.

Inc. June 16, 1916, in Virginia. **Cap.**, \$10,000,000; shares \$10 par. Company acquired entire capital stock of the Emery-Whitcomb Tungsten Co. and the National Tungsten Co., both incorporated in Arizona.

Property: 8 patented claims, 143 acres, and 18 unpatented claims, 350 acres, all contiguous, in the Arivaca mining district, Pima Co., 65 miles S. W. of Tucson and 23 miles from Amada on the So. Pac. R. R. Claims are said to cover an area of granite, rhyolite and diorite, the latter with quartz-filled fissures containing tungsten ore. Two of the veins are said to traverse the property for over 10,000' with widths ranging from 2½' to 12'; one ore-shoot claimed to be 12' wide, 175' long and containing 1% tungstic oxide, WO₃.

Development: mainly by tunnels, longest 500', with several shafts, deepest 156', which is said to be sunk on a 30' vein that traverses the property for a mile; 15' of this vein is said to contain rich tungsten ore; the balance, 2½% copper sulphide ore, "which taken together constitute a mammoth mine." Ore reserves are undoubtedly greatly over-estimated.

Equipment: includes a hoist, compressor and a 7½-ton auto truck for delivering ore to the mill. The 10-stamp mill has three 50 h. p. gas engines. Blake crusher, gyratory crusher, 8 Wilfley tables, Johnson vanner and 2 small air compressors. After a shut-down of several months, work was resumed, May 1, 1917. Mill is treating 100 tons daily, yielding 1 ton of 65% tungsten concentrate. At prices in Aug., 1917, this is worth about \$1,300.

KORNCOB MINING & DEVELOPMENT CO.

ARIZONA

Care E. W. Walker, v. p. of Arizona Consol. National Bank, Tucson, Ariz.

Is a dormant corporation, owning group of claims on eastern base of Catalina mountains, 75 miles by road from Tucson.

Claims show garnet containing copper pyrite, as a contact metamorphic product, along a granite limestone contact. Property was promoted by Col. Davis.

Geological report on property made by Prof. A. F. Tolman, Jr., of Leland Stanford, May 24, 1912.

MAGNATE COPPER CO.**ARIZONA****Address:** M. Brooks, sec.-treas., Liberty Bldg., Philadelphia, Pa.**Officers:** C. Z. Jones, pres.; Carl M. Kneass, v. p.; W. H. Weed, cons. engr.; A. C. Simpkins, gen. mgr.; Allan H. Burris, mgr.**Inc.** Nov. 19, 1916, in Del. **Cap.**, \$5,000,000; shares \$1 par; 2,710,000 in treasury.**Property:** 29 claims, in Twin Buttes district, Pima Co., Ariz., 32 miles from Tucson and 4½ miles from railway at Twin Buttes.**Geology:** surface shows characteristics of producing porphyry-copper areas. Basal rock is a grano-diorite of varying grain. Most of the area is covered by a dense fine grained rock very greatly altered, but probably monzonite. Mineralization proceeded along dominant N. E.-S. W. fractures, which were filled with quartz, pyrite and chalcopyrite. Erosion with oxidation of the pyrite, forming acid water, further changed the altered rock and formed a deposit of disseminated ore whose extent is not yet determined.**Development:** shaft sunk 150' opened at 50' and 150' on a vein 5-10' wide with bunches of 2 to 14% copper ore, and some lead ore, from which shipments have been made to the smelter.

Diamond drilling is in progress. No. 1 hole passed through 60' of 2% ore, more than confirming favorable predictions based on surface examination. No. 3 hole, 200' distant, is reported to show over 100' of 2¼% ore. A tunnel at the north margin of the group carries high grade ore.

Is an attractive prospect, with possibilities of development into a big "porphyry" copper.

MAJESTIC COPPER CO.**ARIZONA****Idle. Office:** First National Bank Bldg., Kansas City, Mo. **Mine office:** Oracle, Pinal Co., Ariz.**Officers:** E. A. Hosier, pres.; W. A. Neiswanger, v. p.; E. T. Wilder, sec.-treas.**Inc.** as Inspiration Mining Co., but sold its property, in the Globe district, to the Inspiration Copper Co., and changed its name, March, 1909, to present title, to avoid misunderstanding. **Cap.**, \$3,000,000; shares \$1 par; \$2,707,000 outstanding; bonds authorized, \$25,000; \$14,350 outstanding.**Former property:** 6 claims near Oracle, on which assessment work was done for several years, has been abandoned and company is now inactive. Company received from the sale of the Inspiration mine about \$1,500,000.**MICHIGAN & ARIZONA DEVELOPMENT CO.****ARIZONA****Office:** 905 Metropolitan Life Bldg., Minneapolis, Minn. **Mine** near Helvetia, Pima Co., Ariz.**Officers:** C. C. Prindle, pres.; R. M. Bennet, v. p.; Chas. W. Sexton, sec.-treas. This company reorganized the Helvetia Copper Co., under a plan explained Vol. V. Formerly owned a considerable share interest in the Helvetia.**MILE WIDE COPPER CO.****ARIZONA****Main office:** Tucson, Ariz.**Officers:** C. P. Reiniger, pres. and mgr.; L. E. Jettinghoff, sec.; Prescott Lyon, treas. The president with C. W. Freeman, E. C. Carter, W. H. Singer and F. C. Douds, directors. Annual meeting, July 7th.**Inc.** May, 1916, in Arizona. **Cap.**, \$1,000,000; shares \$5 par.**Property:** about 55 unpatented mining claims and 2 mill sites, about 1,400 acres; on the south side of Amole Peak, 18 miles from Tucson. Claims are divided into groups: the Copper King, Orient, Copper Mountain and Esperanza, with the Oro Fina placer claims and Copper King and Copper Crown mill sites.

Geology: a number of intrusions of quartz-porphyry, granite-porphyry and some andesite between beds of limestone, have caused considerable alteration and metamorphism. A striking feature of the topography is the dike-like amphibole and garnet outcrops. The general strike of the contact is N. E.-S. W. with 45° - 65° dip to the south-east. The change of dip is very noticeable, becoming flatter the greater the distance from Amole Peak. This system has been cut at right angles by system of vertical slips and faults. At some of the intersections of these two systems a circulation of mineral solutions depositing pyrite and chalcopyrite resulted in the replacement of the limestone. These replacements are the orebodies, having a width of 5' to 8' and a length of 15' to 20' and probably the same in height. In places there are bunches of high-grade chalcopyrite.

On the opposite side of the mountain and much nearer the railroad several of the claims held by the company show several apparently isolated contact metamorphic deposits consisting largely of garnet containing chalcopyrite, and averaging in the exposures seen, about $2\frac{1}{2}\%$ copper. The limited development does not disclose the limits of any of the orebodies, but their surface exposures are not great.

Development: main development on the Copper King group is by 300' incline shaft with stations at 100', 200' and 300'. Drifting is progressing on the 200' level, with about 700' to date and 150' of raising used for ventilation.

Production: for 1916 was about 100 tons of 8% ore, from 3 of the ore "pockets." This was shipped in Oct., 1917, according to report.

Equipment: 25 h. p. gas. hoist; 500 cu. ft. compressor, 100 h. p. F. M. gas. engine, store and camp buildings.

The properties of this company do not come up to the very rosily painted descriptions given out by the Pittsburgh brokers who hold an option for 51% of the stock, the balance being owned by the company's manager.

MINERAL HILL CONSOLIDATED COPPER CO. ARIZONA

Idle. Office: 331 Fourth Ave., Pittsburgh, Pa. **Mine office:** Tucson, Pima Co., Ariz.

Officers: M. S. Isherwood, pres.; Boon Ingells, v. p.; E. B. Reeser, sec.-treas. and gen. mgr.

Inc. March, 1904, in Arizona, as successor of Azurite Copper & Gold Mining Co. **Cap.**, \$3,000,000; shares \$1 par.

Property: the Azurite mine with 26 claims, 12 patented, 520 acres, in the San Xavier district, 18 miles S. W. of Tucson, said to have produced \$550,000 worth of ore under former ownership. Company's lands also include the American group of 8 claims and the Mineral Hill group of 5 claims. The mine is claimed to have a large body of sulphide ore averaging about 3.5% copper.

Development: by 74 pits and open cuts, 8 tunnels, longest 250' and 48 shafts, deepest 345', mine having a total of about 1 mile of workings. Company operated in 1912, but closed down in Sept., 1913, and apparently still idle, 1916.

MOLYBDENUM PRODUCTS CO. ARIZONA

Address: Arthur Geeson, Box R, Tucson, Ariz.

Officers: F. H. Hereford, pres.; Harold Steinfeld, v. p.; Alan Kissock, sec.-treas. and mgr., with Hiram Corbett, R. K. Shelton, K. G. Smith and Maxwell Miltors, directors.

Inc. June, 1916, in Arizona. **Cap.**, \$100,000; shares \$1 par; non-assessable; 30,000 issued.

Company owns no mines yet, but operates an electric smelter, buying

wulfenite ores, mainly from Arizona Rare Metals Co. Is one of the largest producers of molybdenum in the United States.

NARRAGANSETT COPPER CO.**ARIZONA**

Address: care W. R. Ramsdell, Tucson, Ariz.

Officers: W. R. Ramsdell, pres.; James S. Kelso, sec.-treas.

Inc. in Arizona. **Cap.**, \$3,000,000; shares \$1 par.

Property: 21 claims, at Rosemont, Helvetia district, Santa Rita mountains, Pima Co., Ariz. Mine is 20 miles from the S. P. R. R.

Gross earnings in 1916 were \$279,145.

Geology: the ore occurs in a replacement deposit between limestone and quartzite, which dips 30° E., and has a N.-E. pitch. Shoot has been opened for 1,000' along the strike. Both oxide and sulphide ores occur, and contain both copper and silver, the average for 1916 being 8.8% copper.

Development: by tunnel; workings total 2,000' to depth of 370', said to have exposed 300,000 tons containing from 2½ to 35% copper, including 19,000 tons of 4% ore in dumps.

Production: in 1916 was 1,274,876 lbs. copper and 10,347 oz. silver. Cost is given as 15½c per lb. Over 20 carloads monthly being shipped, 1917. Owner plans to erect a leaching plant for low-grade ores.

NATIONAL CONSOLIDATED MINING CO.**ARIZONA**

Presumably idle. Described in Vol. XI, Copper Handbook.

NATIONAL TUNGSTEN CO.**ARIZONA**

Acquired by International Tungsten Corp., which see.

OLD PUEBLO MINING & MILLING CO.**ARIZONA**

See Tucson Consolidated Copper Co.

OLD YUMA MINE**ARIZONA**

Col. Epes Randolph, owner, Tucson, Ariz. Mine closed, Aug., 1916.

Property: 40 unpatented claims, about 14 miles W. of Tucson, Pima Co., Ariz., shows a fissure vein, 40' wide in andesite, carrying gold, molybdenite and specularite. Ore occurs in 4 shoots, each about 300' long, and is said to average \$3 gold and 1¼% molybdenum. Developed by vertical shaft to depth of 320'.

Equipment: includes 15 h. p. hoist, pump, 400' tramway and 400-ton concentrating mill. Concentrates said to average 21% MoO₃.

OWL HEAD COPPER CO.**ARIZONA**

Office: Cameron Michel Co., 299 Madison Ave., New York. Mine near Red Rock, Pinal Co., Ariz.

Officers: Wm. P. Michel, pres.; Jas. P. Harvey, v. p.; E. I. Chapman, treas.; J. B. Wright, sec., with Ralph Cameron, directors.

Inc. 1910, in Arizona. **Cap.**, \$10,000,000; shares \$10 par; 3,160,000 issued. Registrar & Transfer Co., transfer agent.

Property: 24 claims, the Apache Princess group, in the Tortillita mountains, Owl Head mining district, 16 miles N. E. of Red Rock. Lands show a zone, 150' wide, of reddened schist with eruptive dikes, the conditions being said to resemble those of the "porphyry" or disseminated deposits at Miami and Ray. The workings show copper impregnations in the schist and to some extent in the adjoining granite, said to give assays of 0.5% to 3% copper and 1 to 3 oz. silver per ton.

Development: by shaft, 150' deep in May, 1916, to be sunk 200'. Cross-cutting and churn drilling is planned. A 2/3 interest in the Owl Head Co. is controlled by the Cameron Michel Co., which is financing the development work.

PIONEER MINING & SMELTING CO.**ARIZONA**

Offices: 1178 Broadway, N. Y., and Tucson, Ariz.

Officers: Garret B. Kip, pres., Tarrytown, N. Y.; W. C. Moore, sec.-treas., with G. H. Corwin and Edw. Benedict, directors.

Inc. Aug. 19, 1913, in Arizona, as a reorganization of the Pioneer Smelting Co., which went into bankruptcy in 1913. **Cap.**, \$1,000,000; shares \$1 par; \$690,647 issued; non-assessable.

Property: formerly held by the Pioneer Smelting Co., 14 unpatented claims, 260 acres, included the Plumed Knight mine, sold to Mr. Barnsdall of Pittsburgh, in 1917, and, the Gould mine, also sold, 1917. Mines fully described in Vol. XII.

Company owns a 150-ton custom smelter, 1½ miles west of Sahuarita, and 20 miles south of Tucson, on the Twin Buttes railroad. The plant has a 106x42" blast furnace, built by the Colorado Iron Works Co. The smelter was in blast for a short time in 1912, but has since been idle, as property could not pay expenses.

PLUMED KNIGHT MINE

ARIZONA

Sold, 1917, to Mr. Barnsdall of Pittsburgh, Pa.

Mine, formerly owned by Pioneer Mng. & Smelting Co., is 18 miles from Tucson, Pima Co., Ariz., in the San Xavier district.

Development: by shafts to about 350' depth shows ore rich in iron, lime and silica at and above 100' level, succeeded by bornite at depth. Ore said to average 4% copper with small gold-silver values.

ROSEMONT COPPER CO.

ARIZONA

Office: 11 Broadway, New York. Is controlled by Adolph Lewisohn and Lewisohn Bros.

Property: at Rosemont, Pima Co., Ariz.

In 1916 property was under lease to the Rosemont Development Co., which has a number of sub-lessees. Shipments to the El Paso and Sasco smelters.

Geology: numerous orebodies in limestone, occurring under geological conditions surficially similar to those at Bisbee. Company also owns claims at Helvetia, and others adjoining the Tiptop mine, near Helvetia, but the bulk of its holdings are on the east side of the Santa Rita mountains, west of the Rosemont post office. Company has a small smelter, long idle. Property regarded as promising.

SANTA RITA COPPER MINING & SMELTING CO.

ARIZONA

Office: care C. F. Elliott, P. O. Box 592, El Paso, Tex. **Mine office:** Arivaca, Pima Co., Ariz.

Inc. June, 1901, in Arizona. **Cap.**, \$3,000,000; shares \$1 par; issued, \$2,750,000.

Property: 12 claims, unpatented, 220 acres, in the Tyndall district of the Santa Rita mountains, 13 miles from Arivaca, shows granite, porphyry and diorite, carrying several veins of sulphide ore, usually at the contact of the diorite and granite. Veins range from 4 to 12' in width.

Development: 2 shafts and several tunnels, with a total of about 2,000' of workings, mostly in low-grade ore. A new tunnel, planned to give a back of 110', was 200' long, at last accounts. The mine is without power equipment. Company is a promotion of A. A. Post.

SESAME COPPER CO.

ARIZONA

Address: Box 907, Tucson, Ariz.

Officers: C. M. Taylor, pres.; J. E. White, v. p.; S. A. Elrod, sec.-treas.; Gerald Jones, counsel.

Inc. in Arizona. **Cap.**, \$1,000,000; shares \$1 par. On April 16, 1917, Arizona Corporation Commission allowed sale of 75,000 shares at 10c each.

Property: in Empire district, Pima Co., Ariz., 11 miles S. E. of Vail on the S. P., and El Paso and S. W. lines.

Development: several hundred feet by shafts, opening copper ore in 12 places. Prospectus said that "A number of theoretical and practical

mining men.....expressed the opinion that a large body of paying ore should be encountered at a probable depth of 200'," which is interesting, if true.

STRATTON COPPER CO.

ARIZONA

Address: P. O. Box 1116, Tucson, Ariz.

Officers: Chas. N. Wilson, pres. and mgr.; A. W. Conduit, v. p., with H. A. Walker, W. F. Milholland and C. P. Lesh, directors; W. H. Kershner, sec.-treas.; W. H. Scheerer, supt.

Inc. June, 1915, in Arizona. **Cap.**, \$2,500,000; shares \$1 par; outstanding, \$2,000,000. -Annual meeting in January.

Property: 13 claims and 3 mill sites, 175 acres, in the Catalina mountains, Pima Co., said to show a contact deposit of copper ore in limestone, assaying 7% copper and 10 oz. silver.

Development: 10 test shafts showing sulphide ore. Operating 2 incline shafts, one 200' deep, in ore assaying 4 to 20% copper. Forty men employed.

Equipment: three 500' hoists, two 75 h. p. boilers. Sullivan 550 cu. ft. compressor, lighting plant, buildings, 800' ore tram and $\frac{3}{4}$ mile cable tram for wood, etc.

Ore shipments started July, 1917.

SWASTIKA COPPER & SILVER MINING CO.

ARIZONA

Office: John Heidel, Heidel Hotel, Tucson, Pima Co., Ariz. **Mine address:** Twin Buttes, Pima Co., Ariz. W. K. Royce, pres. and gen. mgr. D. H. Cochran, v. p.; J. S. Hopley, sec.; J. M. Ormsby, treas., at last report.

Cap., \$1,500,000; shares \$1 par.

Lands: unpatented, include the Alice and the Pioneer mines, in the Swastika group of 14 claims and the Calendar group of 10 claims, about 3 miles S. of Olive or Twin Buttes Camp. The Swastika group carries silver-lead ores, and the Calendar group has silver-copper ores in contact metamorphic deposits between limestone and granite. The property has 360' of workings. Equipment includes a small steam plant.

The northern part of the company's holdings were bonded Nov., 1917, for \$125,000, negotiations pending for the remaining four claims.

TIP TOP COPPER CO.

ARIZONA

Idle. Office: Commonwealth Bldg., Philadelphia, Pa. **Mine office:** Helvetia, Pima Co., Ariz.

Officers: Geo. A. Aman, pres.; S. Charles Pratt, v. p. and gen. mgr., at last accounts.

Inc. 1902, in Arizona. **Cap.**, \$1,150,000; shares \$1 par.

Property: 24 claims, 400 acres, also known as the Little Helvetia mine, including the Tip Top and Copper Duke claims, also a 100-acre mill site, about 2 miles from Helvetia, shows 3 veins, averaging 14' width. These veins have extensive bodies of soft black sulphide ore in altered clayey limestone and porphyry, reported to give average assays of 5% copper and 1 oz. silver per ton, with a trace of gold.

Development: mainly by tunnel with about 4,000' of workings; also the usual prospect shafts and tunnels.

Equipment: includes gasoline power. Was bonded 1907, to Guggenheim interests, for \$250,000, with cash payment of \$75,000, but both parties to bargain were dissatisfied, and property reverted to owners.

TORTILLITA COPPER CO.

ARIZONA

Office: room 1003, 299 Madison Ave., New York. **Western office:** care Hon. J. B. Wright, 32 No. Stone Ave., Tucson, Ariz.

Officers: Wm. P. Michel, chairman; Robinson V. Thompson, pres.;

Thos. Rowland, v. p.; Leon N. Salmon, sec.; J. W. Edward Michel, treas., with Biana Le Manna, directors.

Inc. March, 1912, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; 600,000 issued. Stock is not listed. Annual meeting in January at the Tucson office.

Company claims to have sufficient funds on hand for continuation of systematic development work. Management is said to be in hands of the Eastern Stockholders Committee, a group of 10 stockholders, business men, who, according to their own statements, form "A Committee of Progress and Development—not Grievance." Is controlled by Camerón Michel Co. of New York.

Property: 34 claims, 700 acres, about 16 miles N. E. of Redrock, Pinal Co., Ariz., includes the Cloudburst and Yankee Girl mines, purchased under foreclosure in May, 1912. Property is an old-time silver producer.

Development: the "Yankee Girl" double-compartment vertical shaft, 12' wide and 500' deep, said to show some quartz carrying copper glance and native copper at the bottom; also a large flow of water. A large hoist and compressor have been installed. A N. crosscut was cut 600' from No. 5 station, with the main ore channel not far distant, where "large volumes of heavily enriched ore" should be encountered.

Equipment: includes an oil-driven air compressor, drills and a gasoline hoist.

Whether the property has a large ore deposit or not has not yet been proven, but reports by various engineers are favorable.

TUCSON ARIZONA COPPER CO.

ARIZONA

Office: 331 Ness Bldg., Salt Lake City, Utah. **Mine office:** J. A. Cowan, Supt., Tucson, Ariz.

Officers: John F. Cowan, pres.; E. A. Culbertson, v. p.; B. G. Hite, sec.-treas., with S. H. Douglas, W. H. King and L. A. Cummings, directors.

Inc. Nov. 28, 1916, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; 724,493 issued.

Property: 23 claims, 6 miles from Tucson, Ariz., show contacts and fissures in limestone and andesite. Orebody is said to be from 4 to 30' wide, dips 45 to 75°, and has an E.-W. course. Shoot is 400' long, 6 to 10' thick, and reported to contain 6% copper, 3 oz. silver and \$1 gold per ton.

Development: started in Dec., 1916, by 100' shaft and 500' of workings.

Equipment: 25 h. p. gasoline hoist and 250 cu. ft. compressor. Mine is a prospect and in good hands.

TUCSON CONSOLIDATED COPPER CO.

ARIZONA

Letters returned unanswered in May, 1917, from 511 Chamber of Commerce, Milwaukee, Wis. **Mine office:** Tucson, Pima Co., Ariz.

Officers: J. H. Wussow, pres.; Dr. M. A. Brandt, v. p.; F. J. Rodee, sec., Tucson; C. W. Schneider, treas.; Hon. Fred W. Fickett, gen. mgr.; preceding officers, J. G. Albright, C. F. Freeman, P. P. Donohue, A. Ballantine, R. L. Bennett and S. W. Purcell, directors.

Inc. April 15, 1907, in Arizona. **Cap.**, \$3,000,000; shares \$1 par; non-assessable; in one-half full paid and one-half common stock; issued, \$1,500,000. Annual meeting, third Monday in March.

Property: 81 claims, unpatented, in 4 groups, 1,620 acres, in the Papago district. The property of the Old Pueblo Mining & Milling Co., 9 claims, is held by this company under an option calling for 51% of stock on completion of \$50,000 worth of work. Presumably includes Purcell Grand Cons. Mng. Co. property.

The 4 groups are 8 miles W. of Twin Buttes and 35 miles W. of Tucson. Claims show granite-porphry and limestone, with fissure veins and

contact deposits, 5 being under development. The largest deposit is described as a chimney in limestone, about 55x150' in size. The groups as a whole have 3,800' of workings, mostly tunnels, longest 800', but including 10 shafts, deepest 525'. Ore is said to give assays of 6 to 30% copper, 12 to 80% lead, 3 to 125 oz. silver and 80c to \$30 gold per ton, from azurite, chalcocite, chalcopyrite and galena. The reserves were estimated at 500,000 tons ore blocked out for stoping, which estimate is regarded as excessive.

The **Purcell** group of 16 claims, 3 fractional, 275 acres, shows 3 approximately parallel mineral zones, developed by a 96' shaft and a 200' tunnel, estimated by the company to give assays of 15% copper, 20 oz. silver and \$1.50 gold per ton.

The **Bolello** group of 9 claims, 180 acres, 2 miles S. of the Purcell, has basic granite, with frequent quartz-porphyry intrusions, showing 3 copper veins, slightly developed, carrying ore that has given assays up to 24% copper, with gold and silver values.

The **Black Dyke** group of 48 claims, 960 acres, is W. of and about 3 miles N. from the Purcell group, constituting a parallelogram 3,600' wide and 12,000' long, showing strong iron outcrops, with favorable indications, having a number of shallow shafts, showing copper ore of 4 to 25% copper tenor, and silver-lead ore assaying up to 69% lead and 139 oz. silver per ton. This group has little development, but appears promising.

Equipment: includes a 250 h. p. steam plant, burning petroleum, with 2 hoists, and there are 6 buildings, including 2 general stores.

The **Old Pueblo Mining & Milling Co.**'s property consists of 9 claims, 5 miles W. of Tucson, developed by the 517' Quien Sabe shaft and a tunnel. A 70' shaft cut, at depth of 30', a 15-ton pocket of chalcocite, assaying 33% copper, 16 oz. silver and \$2.50 gold per ton.

The reports by Wishon, 1908, and Attix, 1903, issued by the company are so old, one wonders why this "sure thing" mine has been so long idle, and what work, if any, has been done in the past 8 years.

TWIN BUTTES MINING & SMELTING CO.

ARIZONA

Office: 77 Michigan St., Milwaukee, Wis. **Mine office:** Twin Buttes, Pima Co., Ariz.

Officers: W. A. Barber, pres.; Julius Frank or J. H. Tweedy, v. p.; P. C. Branner, sec.; Stephen Hoff, treas., with Ralph M. Friend, G. P. Mayer, Fred Williams and Henry Minnemacher, directors.

Inc. Sept. 8, 1903, in Arizona. **Cap.,** \$2,000,000; increased, 1905, from \$1,000,000 to \$1,250,000, and again increased, Jan., 1910, to \$3,000,000; shares \$1 par. Bonds outstanding were \$2,000,000 at last accounts. Controls the Twin Buttes Railroad Co. Wisconsin Trust Co., transfer agent and registrar. Annual meeting, third Tuesday in January.

Property: the King and Glance mines, being operated under lease and bond by the Glance Mining Co., on royalty basis. The Morgan mine is idle but under separate option. The Twin Butte Co. also owns many other claims, partly patented in the Twin Buttes district, in the foothills of the Sierrita mountains, 27 miles south of Tucson. Lands carry fissure veins in limestone and contact deposits having a limestone foot and granite-porphyry hanging wall.

The Twin Buttes Railway, 10 miles in length, running from Twin Buttes to the S. P. (Nogales line), has 1 locomotive and 3 flat cars. Is under 2-year lease to E. G. Bush, 1917.

Production: 258,672 lbs. copper and 3,446 oz. silver in 1910. Shipped about 100 tons daily in 1912, to the Pioneer smelter.

See Glance Mining Co.

VERDE QUEEN MINING CO.

ARIZONA

Address: Pantano, Pima Co., Ariz. P. M. Hilton, supt.

Property: in central part of Empire mining district, about 12 miles from Pantano, and 15 miles W. of Benson. Shows silver-lead and copper ores, developed by a 280' two-compartment shaft, from which a little lead ore was shipped to the El Paso smelter.

Equipment: includes gasoline hoist. Idle for several years.

VULCAN CONSOLIDATED MINING CO.

ARIZONA

Address: W. R. Ramsdell, 40 S. Stone Ave., Tucson, Ariz.

Officers: W. R. Ramsdell, pres.; C. E. Walker, v. p.; J. S. Kelso, sec-treas.

Inc. March 16, 1916, in Arizona. **Cap.**, \$100,000; shares \$1 par; non-assessable.

Gross earnings from ore sales in 1916 were \$128,753, and operating expenses \$78,078. Earnings were equal to 50c per share.

Property: 9 claims, 4 patented, 20 miles S. of Tucson, Pima Co., Ariz. Examined by F. R. Weeks.

Development: by 560' incline shaft in which sulphide ore carrying from 8½ to 12% copper has been opened.

Equipment: 15 and 25 h. p. Fairbanks-Morse hoists, and 50 h. p. Chicago Pneumatic compressor.

Production: 685,903 lbs. copper and 6,311 oz. silver in 1916.

WHITCOMB MINING & MILLING CO.

ARIZONA

Office: 154 W. Randolph St., Chicago, Ill. **Mine office:** Tucson, Ariz.

Officers: W. Sanson, pres.; J. C. Freeman, v. p.; T. A. Snow, treas.; A. McCallum, sec.; H. Whitcomb, gen. mgr.

Inc. March, 1914, in Arizona. **Cap.**, \$100,000; recently increased to \$200,000; shares \$1 par; non-assessable; all issued. No bonded indebtedness.

Property: 3 unpatented claims in the Pima district, 20 miles from Tucson. The increase of capitalization was for the purpose of acquiring 6 additional claims known as the Prosperity group.

Development: by inclined shaft about 500' deep and stopes on 3 levels. Ore is a silver-lead-bearing quartz of milling grade.

Equipment: includes a concentrating mill, shut down in 1915 for lack of water, but again operated in 1916. Company claims \$500,000 worth of ore developed on the two properties.

WHITE-VICTOR COPPER MINING CO.

ARIZONA

Address: J. H. White, mgr., Twin Buttes, Pima Co., Ariz.

Inc. Nov., 1916, in Arizona. **Cap.**, \$500,000; shares \$1 par.

Property: 6 claims, near the San Xavier mine, Mineral Hill district, Ariz. In March, 1917, 2-10% copper ore was said to have been opened near the surface and shaft sinking was started.

Prospectus says little about the property, but describes the wonderful returns of other mining companies.

YUMA MINE

ARIZONA

Property: 14 miles N. W. of Tucson, is controlled by Col. Epes Randolph, Tucson, Ariz., and associates. Reported, May, 1916, to be shipping to Tucson ore containing chiefly molybdenum, with about \$3 gold per ton. About \$100,000 is reported to have been spent in equipment and preliminary work. Employed 100 men at last accounts.

Mine is described in Bull. 111, U. S. Bureau of Mines, 1916. The molybdenum occurs as wulfenite in an acid eruptive rock so highly altered that it is difficult to classify. The wulfenite is associated with cerussite, or well-crystallized vanadinite, or both. The average mine ore would be about 2 or 3% wulfenite. Ore concentrates well.

VEKOL, PINAL COUNTY

SILVER REEF MINE**ARIZONA**

Owned by Frank M. Leonard and associates, 3543 Third St., San Diego, Calif. Former company, the Silver Reef Mining & Smelting Co., dead.

Property: 12 claims, surveyed for patent, including the Silver Reef mines, at Vekol, 12 miles S. of Casa Grande, in Pinal Co., Ariz., originally worked for silver ore. Vein 35' wide, between granite and rhyolite carries 12 to 20 oz. silver ore, also some lead and copper.

Development: by a 375' shaft and 425' tunnel.

Equipment: includes a gasoline hoist, air compressor and 20-stamp all-slime cyanide plant.

WENDEN, SALOME, ALAMO; YUMA COUNTY

ALVIN DEVELOPMENT CO.**ARIZONA**

Office: Houghton, Mich. Controlled by Tank Pass Consolidated Mining Co., Salome, Yuma Co., Ariz. Temporarily idle except for annual assessment work. Described Vol. X.

ARIZOTA MINING CO.**ARIZONA**

Had a large group of claims 11 miles north of Wenden, Ariz., in 1912.

BLACK REEF COPPER CO.**ARIZONA**

Mine address: Wenden, Ariz. **Office:** 17 W. Adams St., Phoenix, Ariz.

Officers: H. E. Willhalm, pres.-mgr.; F. H. Larsen, v. p.; T. M. Burroughs, sec.-treas.

Cap., \$250,000; 25c par; non-assessable; 650,000 shares in treasury.

Property: 8 claims, 160 acres, on the south side of Cunningham Pass, Harcuvar mountains, 8 miles north of Wenden. Claims adjoin property of the Desert M. & D. Co.

Development: the working shaft is 400' deep. The 170' level runs 45' west and 180' east on the vein, which, though leached, shows some shipping ore. The vein is practically vertical and the shaft sunk is bottomed in ore. Mine yields 1,000 gals. of water per day.

Ore: carries chalcopryite and bornite associated with limonite and siderite, and it is said to show \$3-\$40 gold, 3-35% copper and high iron values. Vein is 2'-3' wide with swell to 6' at 100' in depth.

Equipment: includes 25 h. p. steam hoist, 50 h. p. Fairbanks gasoline engine and compressor. Employs 15 men. In 1917 company offered the public 100,000 shares at 25c for a development fund. Reported fully financed Sept., 1917.

COBRITA VERDE COPPER CO.**ARIZONA**

Chas. Reedall, supt., Salome, Ariz.

Property adjoins that of Cobrita, but shaft collar is 100' lower, and good ore is reached in drift from shaft.

COBRIZA MINES DEVELOPMENT CORPORATION**ARIZONA**

Controlled by Goodrich-Lockhart Co. Halstead Lindsley, gen. mgr., room 1508, No. 60 Broadway, New York.

Officers: David M. Goodrich, pres.; H. M. Jasper, sec.-treas.; Robert Morrison, supt.

Property of 35 claims with equipment of 200 h. p. oil-fired boiler, 12-drill I.-R. compressor, hoist and electric plant. Has 800' inclined shaft and reported to ship 150 tons of 4% copper ore daily. Employs about 100 men. Operates under lease, property of the Arizona United Mining Co., which see.

CRITIC MINE**ARIZONA**

Geo. Easton and E. A. Stent, lessees, Wenden, Ariz. Geo. B. Layton, N. Y., owner.

Produced 100 to 150 tons a month of ore, carrying \$20 gold and 20% copper, from fissure vein in gneiss.

DESERT MINING & DEVELOPMENT CO.**ARIZONA**

Robt. W. Hollis, mgr.-cons. engr. Cap., 500,000 shares; \$1 par.

Property: 16 claims in Cunningham Pass, 9 miles N. of Wenden, and 27 claims at Wenden, total 540 acres.

Development: by 2 shafts, 200' and 325' deep on the Copper Hill claim, said to show a large body of disseminated ore.

GLORY HOLE BONANZA MINES CO.**ARIZONA**

Address: Salome, Yuma Co., Ariz.

Officers: Dick Wick Hall, pres. and mgr.; E. S. Jones, v. p.; E. G. Jesson, sec.; H. W. White, treas.; preceding, excepting E. G. Jesson, directors.

Inc. Feb. 5, 1916, in Arizona. Cap., \$150,000; shares 10c par; 1,250,000 outstanding.

Property: 12 claims, seven 8 miles N. W. and five 10 miles N. of Salome.

Geology: quartz vein, with 60° dip, N. W.-S. W. strike, in andesite and schist, shows small high-grade and large low-grade shoots of gold ore and some copper.

Development: by 4 tunnels aggregating 825' in length. Workings to 175' depth total 1,200'. Work commenced in 1916. No ore is being mined, only exploration being done since high-grade streaks were extracted. Promising developments reported in June, 1917.

Equipment: Fairbanks-Morse engine, 4-drill Ingersoll compressor, machine drills.

Is an aftermath of the spectacular discovery of specimen gold ore made a few years ago. Advertising is decidedly lurid in local Arizona papers.

HARQUA HALA RIDGE M. & M. CO.**ARIZONA**

Offices: 27 School St., Boston, Mass., and 74 Broadway, New York City. Mine office: Wenden, Ariz.

Officers: Angus McEachren, pres.; Chas. S. Hill, v. p.; M. A. Blood, sec.-treas., with Percy James and D. L. Aspinwall, directors. W. T. Gnash, mgr.

Inc. Feb. 28, 1917, in Arizona. Cap., \$3,000,000; shares \$1 par; non-assessable; 1,800,000 outstanding. Annual meeting 1st Wednesday in February.

Property: 37 claims, about 740 acres, in the Harqua Hala mountains, Ellsworth mining district, Yuma county, about 5 miles S. of Wenden, said to show a contact deposit between quartzite and porphyry, 100' wide and traceable for 1,200' in length, containing copper, gold, silver values.

Development: by tunnels and shafts, with a total of 1,200' of workings. A 1,500' crosscut tunnel is to be driven to cut the main orebody at 1,200' depth.

The company offers to prospective investors "to crush and pan gold ore, taken from the property, before your eyes," at their Boston office.

JEROME-WENDEN COPPER CO.**ARIZONA**

Address: A. J. Humbert, Wenden, Yuma Co., Ariz.

Is a reorganization of the Nuevo Mundo Mining Co., and although it has Jerome tacked on to its name, the company is doing its mining work far from there.

LA BELLE MINING CO.**ARIZONA**

Vicksburg, Yuma Co., Ariz.

Officers: A. W. Hompre, pres.; E. B. Moore, v. p.; L. S. Judd, sec. and gen. mgr.; James Bayne, treas.

Inc. Aug. 3, 1909, in Arizona. **Cap.**, \$100,000; shares \$10 par; issued, \$82,600. Company is a close corporation, entire stock issue being owned by officers. Annual meeting, June 30.

Property has been abandoned as development proved it of no value. All machinery and improvements sold, but corporation still alive, 1917.

MONTANA-ARIZONA COPPER CO. ARIZONA

Idle. W. D. Greenough, mgr. (Greenough Bros.), Spokane, Wash.

Property: 26 claims, 520 acres, 30 miles north of Wenden, Yuma Co., Ariz., is said to show 5 veins of 3 to 100' width, traceable 7,000', one vein carrying gold values.

Development: 300' two-compartment shaft and a considerable number of trenches.

Equipment: includes 60 h. p. gasoline hoist.

NAVAJO MINES CORPORATION OF ARIZONA ARIZONA

Office: Vicksburg, Yuma Co., Ariz.

Officers: E. P. Heald, pres.; William Vincent, 1st v. p.; O. B. Lefurgey, v. p.; C. Y. DeLay, sec.-treas. and gen. mgr., with H. M. Anthony, O. P. Posey and Eugene Schutz, directors.

Inc. in Arizona. **Cap.**, \$3,000,000; shares \$1 par; fully paid and non-assessable; 1,800,000 issued. National Security Co., New York, transfer agents.

Property: the Desert mines, comprising the Golden Mound, and Gold Eagle quartz claims, and Safe Deposit placer, all patented, 51½ acres, 2½ miles from Vicksburg on the railroad.

Geology: rocks are pre-Cambrian schists, with overlying quartzite, cut by diorite dikes. There are reported to be 3 quartz veins 1 to 10' wide, also a mound 400' across, 140' high at center. Ore contains gold, with small lead and copper contents and average assay is given as \$8 per ton. Quartz in small hill is said to carry 4.3% copper and \$17.15 gold and silver per ton.

Development: veins traced 800' by pits, tunnels, open cuts and a 275' tunnel with 2 crosscuts, 90' and 40' long. Ore reserves estimated by G. R. Boggs at 100,000 tons. W. Forstner estimates orebody 400' long by 140' high to contain 13,500 tons of \$20 ore and 1,500 tons of \$50 ore.

Equipment: includes concrete reservoir, buildings for 50 men, etc. Prospectus truly says: "This is not a sock for everyone." Development is, in our opinion too meagre to warrant the estimates given of either quantity or quality and mining and milling cost of \$2 per ton will be hard to attain on a small scale. In June, 1917, there were 5 carloads of ore ready for shipment.

NEBRASKA & ARIZONA COPPER CO. ARIZONA

Idle, and probably dead. **Address:** Paradise, Cochise Co., Ariz. W. K. Morrow, supt. at last report.

Inc. Jan., 1910, and merged June 25, 1910 with the California & Paradise Mng. Co., in the California & Paradise Cons. Mng. Co.

Property: 13 claims, known as the Morrow & Chamberlain group, developed by a shaft on the Malachite claim.

The old 200' Malachite shaft was deepened to 600' in 1913, and cross-cutting done on the bottom level without satisfactory result.

ORO COBRA MINING CO. ARIZONA

Address: Thos. Wilkinson, pres. and gen. mgr., 715 High St., Burlington, Iowa. Mine near Wenden, Yuma Co., Ariz.

Inc. Oct., 1901, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; fully issued. Annual meeting, second Tuesday in February.

Property: 14 claims, 280 acres, in the Tank Pass section of the Harcuvar mountains, Ellsworth district, 12 miles west of Wenden. The claims show diorite, schist, granite and porphyry, with several fissure veins, from a few inches to 20' in estimated average width, carrying oxidized ores near surface, said to assay 12 to 15% copper, and \$1.50 to \$80 per ton in combined silver and gold values, with chalcopyrite, at shallow depth. Mine is opened by shafts of 250', 150' and 40', and a tunnel of 110' with 700' of workings. Only assessment work done in 1915.

No later returns.

RANIER DEVELOPMENT CO.

ARIZONA

Office: 27 School St., Boston, Mass.

Officers and directors: S. J. Gnash, pres.; W. W. Gnash, v. p.; W. A. Dean, sec.-treas.; S. J. Gnash, mgr.; W. T. Gnash, supt., Wenden, Arizona.

Inc. July 1, 1914, in Arizona. **Cap.**, \$3,000,000; shares \$1 par; 1,878,496 shares outstanding, of which 1,777,238 shares are pooled. Metropolitan Trust Co., Boston, transfer agent. Annual meeting, February 15th.

Property: 44 claims, about 860 acres, in Ellsworth mining district, 12 miles N. of Wenden, Yuma Co. Ore occurs in fissure veins carrying gold-silver-copper-iron. The main vein is reported exposed at surface for 80-250' in width. Country rock is granite schist, shale, porphyry and limestone. Two small shipments averaged \$59 per ton.

Development: totals 800' of underground workings, including several shafts, deepest 226' vertical and a 130' tunnel.

Equipment: includes 20 h. p. gas. hoist, pump, tramway and several houses. Mine is connected by wagon road with Wenden.

Management plans drilling to greater depth in 1917. About \$5,000 was expended in development work during 1916.

TANK PASS CONSOLIDATED MINING CO.

ARIZONA

Address: A. Tennyson Pryor, pres. and gen. mgr., 933 Dime Bank Bldg., Detroit, Mich. Ward Smith, v. p.; Wm. D. Calverley, sec.-treas.

Inc. Nov., 1909. **Cap.**, \$3,000,000; shares \$10 par. Company controls the Alvin Development Co. through stock ownership, and took over the property of the Cobralla Copper Co., March, 1910.

Property: known as the Ultimatum or Cobralla group, adjoins the Alvin, near Tank Pass in the Harcuvar mountains, Ellsworth mining district, about 10 miles from Wenden. The mine carries about 4,500' of the strike of various fractures in a contact zone following granite intrusive in quartzite, amphibolite and limestone, the ores carrying bornite and chalcopyrite, and estimated to average 3 to 5% copper, 5 to 6 oz. silver and \$1 to \$8 gold per ton, with occasional paystreaks and masses of high-grade ore.

Development: by the 150' Carbonate Hill shaft and a 200' tunnel.

Equipment: includes gasoline hoist. Is a prospect of merit.

VICTOR & BELLE CROWN MINING CO.

ARIZONA

Wenden, Yuma Co., Arizona.

Officers: J. E. Matteson, pres. and gen. mgr.; F. C. Piper, v. p.; J. H. Matteson, sec.-treas.; B. J. Quinn, cons. engr., at last accounts.

Property: 10 claims, 180 acres, in the Harcuvar mountains, 8 miles N. of Salome, the nearest rail point. Claims are said to have a vein of 5 to 7' width, a 30 to 36" paystreak, giving assays of 15 to 20% copper and \$15 to \$20 gold per ton.

Development: includes shafts of 80', 35' and 450', and tunnels of 755', 165' and 230', aggregating about 1,200' of workings. In April, 1917, a tunnel was to be driven to open the mine at 900' depth.

WENDEN COPPER CO.**ARIZONA**

Address: I. H. Barkdoll, pres., Phoenix, Ariz.

Property: 3 miles N. of Cunningham Pass, Yuma Co., Ariz. Sinking and opening 30" of gold-copper ore, at last accounts.

WENDENDALE GOLD MINING CO.**ARIZONA**

Property near Wenden, Yuma Co., Ariz., in the Cunningham Pass district, is developed by a shaft, showing ore that gave returns to 13% copper and \$12 gold per ton, from a test smelter shipment. Shipping ore being mined by lessees in 1916.

YUMA WARRIOR MINING CO.**ARIZONA**

Office: 41 Bank of Arizona Bldg., Prescott, Ariz.

Officers: H. W. Stevens, pres.; E. J. F. Horne, v. p.; C. T. Joslin, sec.-treas., with W. A. Drake, R. W. Hunt, W. O. Johnson and H. K. Chapin, directors. H. W. Stevens, supt.

Inc. in Arizona. Cap., \$3,500,000; shares \$1 par; non-assessable. On Nov. 1, 1917, J. Frank Lilly & Co., 62 Broadway, New York, was offering 1,000,000 shares of treasury stock at 50c each. Shares are to be listed on New York Curb.

Property: 365 acres in the Ellsworth district, 6½ miles from Salome, Yuma county, Ariz., known as the Harqua Hala-Bonanza and Golden Eagle groups. Originally located in 1888, the mine is reported to have yielded gold worth \$4,000,000 above the 200' level. Mines operated by present owners for 3 years. Examined by L. W. Getchell.

Geology: ore shoots occur in shear zones in schists with intercalated limestone, extending down into the basal granite. Basic dikes are found and many veinlets of quartz and calcite occur. Geology is described in U. S. G. S. Bull. 451, 1911, p. 106.

Development: by incline shaft to 365' vertical depth. On 5 levels free milling ore is said to have been opened; on No. 7 south, sulphide ore assaying \$44 gold, 7.4 oz. silver, and 5.28% copper; and in a winze below No. 8, \$16.54 gold, 7.85 oz. silver, and 6.15% copper ore, all above water level. At 350' or 400' lower, estimated water level, a considerable body of copper sulphide is expected. A new 3-compartment shaft may be sunk.

Equipment: complete mining plant, ⅞ mile aerial tram from Golden Eagle mine to Bonanza, 40-stamp mill, shops and buildings. To treat the sulphide ore it is proposed to add tube mills, concentrators and flotation plant, with capacity of 200 tons daily.

Production: is irregular, and since Feb., 1917, the mill yielded gold worth \$25,000. Work is now concentrated on development.

Reported new orebodies may be valuable, but company should not bank on past production, which was gold from free milling ore.

WICKENBURG, MARICOPA COUNTY**ABE LINCOLN COPPER CO.****ARIZONA**

W. W. Wantland, pres. and mgr.; Col. Ed. W. Getten, sec.-treas., Omaha, Neb.

Property: in Hassayampa district, near Wickenburg said to show 7' of sulphide ore, averaging 17%.

A prospect—under development in 1917.

ARIZONA COPPER BELT MINING CO.**ARIZONA**

Office: 25 Broad St., New York, N. Y. Mine office: Constellation, Yavapai Co., Ariz.

Officers: Wm. J. Dilthey, pres.; H. F. E. Gamm, v. p.; J. C. Maugans, treas.; R. A. Camp, sec.; Samuel Bloom, directors; Charles F. Dilthey, supt. at the mines.

Inc. Feb., 1906, in Arizona. **Cap.**, \$1,000,000; shares \$1 par; non-assessable; issued, \$685,692. No bonds.

Property: 17 claims, exclusive of water right and millsite, in two groups, known as the Texas Group and the Wren Group. The Wren Group consists of 4 patented claims. The property is in Central Arizona, in the Black Rock district of Yavapai Co., about 15 miles N. E. of Wickenburg, the nearest railroad station on the Santa Fé Railroad.

The two groups are 2 miles apart and work is mainly on the Texas group, adjoining the Monte Cristo silver mines, some 2 miles nearer the railroad. The working shaft is about 320' deep, with cross-cutting and drifting at that depth. The ore carries copper, with gold and silver values, said to assay from \$28-\$40 per ton. The company has a well-established camp on grounds, 15 h. p. gasoline engine, machine shop and camp buildings.

ARIZONA LEAD & COPPER CO.

ARIZONA

Wickenburg, Ariz.

Officers: Edw. E. Northrup, pres. and mgr., El Paso, Texas; Fred. R. King, v. p., Whittier, Calif.; Jesse A. Spradling, sec., Redlands, Calif.; F. G. Hutchison, treas., Chloride, Ariz.

Property: 20 claims in the Big Horn mountains, reported to be partly developed with some ore blocked out for shipment, April, 1917.

ARIZONA SAMPLING & REDUCTION CO.

ARIZONA

Geo. M. White, mgr.; L. N. Butler, sec.-treas. Operates a reduction plant at Wickenburg, handling mainly custom ores, also developing the Copper Hill mine in Copper Basin and the James Jackson mine near Kingman.

BEE HIVE GOLD CO.

ARIZONA

Office: Hotel Zeiger, El Paso, Texas. Chas Zeiger, pres.

Cap., \$100,000; shares 25c par.

Property: 9 patented claims, adjoins the Octave mine, near Congress Junction, Weaver mining district, Yavapai Co., Ariz. **Ore:** quartz carrying gold values in quartz vein on contact between granite and schist.

Management claims to have spent \$60,000 in development work, driving tunnels, 1,000' and 2,000' long respectively, and to have 10,000 tons of \$8 ore on the dump besides 500,000 tons in sight and blocked out above tunnels and between two winzes sunk below the tunnel level.

Equipment: engine, compressor and drills.

BIG BLUE MINING CO.

ARIZONA

Address: Constellation, Ariz.

Inc. 1911, in Arizona. **Cap.**, \$1,000,000; shares \$1 par. Col. E. F. Brown, owner; J. A. Caskey, supt.

Property: the Big Blue and Copper Prince mines on the Hassayampa river, 14 miles from Wickenburg, Yavapai Co., Ariz., showing fissure veins in schist, that yield high-grade silver-gold-copper ore.

Development: by 2 shafts, connected on 200' level, drifts, crosscut and tunnels. An ore shoot developed on 100' and 200' level is now being stoped.

Equipment: includes crusher, pump, gasoline engine, hoisting plant and a concentration mill. Shipped regularly to Douglas in 1914. Ten men employed.

Reported under lease, 1917, to Thos. Nolan and A. W. Schoof.

DRAGON MINING & DEVELOPMENT CO.

ARIZONA

Address: Wickenburg, Ariz.

Officers: J. G. Scarborough, pres.; F. L. LaForce, v. p.; E. P. Truitt, sec.; H. Hertz, treas.

Property: in Wickenburg district, Ariz. In July, 1917, a shaft was being sunk to 200'. At 157' some gold-silver ore was opened.

EMPRESS COPPER MINING CO.**ARIZONA**

C. K. Hartley, supt., Wickenburg, Ariz. Company formed, 1917, to reopen and work the old Swallow mine, 12 miles east of Wickenburg. Shipment of 42 tons of copper-gold ore made in April, 1917.

GOLD BAR MINES CO.**ARIZONA**

Address: T. H. Jenks, Wickenburg, Ariz. J. A. Twitchell, pres., Phoenix, Ariz.

Property: of the Interior Mining & Trust Co., 15 miles N. E. of Wickenburg, developed by 330' shaft, said to show gold quartz at bottom. New shaft being sunk to 625', shows copper sulphides at 480 to 500'.

Equipment: includes 12 Nissen stamps of 100-ton daily capacity.

GRIJALVA NUEVA MINING CO.**ARIZONA**

Wickenburg, Yavapai Co., Ariz.

Officers and directors: J. H. Mulholland, pres. and gen. mgr.; J. J. Heard, v. p.; T. B. Inglis, sec.-treas. A. R. Schloesser, supt.

Inc. May 15, 1915, in Ariz. **Cap.**, \$500,000; shares \$1 par; all outstanding. Annual meeting, first Monday in April.

Property: 13 claims, 2 patented, 220 acres, 10 miles N. W. of Wickenburg, includes the old Grijalva mine.

Company started operations in Dec., 1915, and went out of business, 1917.

HALE MINING & MILLING CO.**ARIZONA**

Constellation, Yavapai Co., Ariz. Felix X. O'Brien, supt. Has gold and copper ores in veins. Equipped with gasoline power. Inactive save for yearly representation work.

JUANITA MINING & MILLING CO.**ARIZONA**

Company defunct.

Former officers: M. Dwight Jennings, pres.; W. S. Heflin, v. p.; D. A. Seaman, sec. and gen. mgr.; E. J. Bennitt, treas.; preceding, with B. F. Peters, Otto Kring and E. Payne Palmer, directors.

Inc. April, 1905, in Arizona. **Cap.**, \$1,500,000; shares \$1 par; non-assessable; issued \$1,200,000. Annual meeting, first Tuesday after second Monday of April.

Property: 16 claims, unpatented, 300 acres, and a 5-acre mill site about 4 miles from the Senator mine in the Hassayampa district, about 17 miles S. of Prescott. Property said to carry 11 fissure veins in porphyry and schist with 4 under development of 1 to 60' width, traceable 1,000 to 3,000' carrying copper sulphides assaying 2 to 10% copper, to 100 oz. silver and \$1 to \$1,700 gold per ton. Apparently the main vein is of 8' average width.

Development: by 210' shaft and several tunnels from 45 to 450' long, with 3,500' of workings estimated, 1913, to have blocked out 5,000 tons of ore with 25,000 tons in sight.

Equipment: includes 25 h. p. hoist, 2-stamp mill, 7 tons capacity.

Work resumed in June, 1917, by D. M. Jennings and others of St. Louis, who received a deed on the property from the Sheriff.

LA EXPOSICION MINING CO.**ARIZONA**

Letter returned from New York address, 1917.

Officers: Fred A. Swan, pres.; Forrester A. Linn, v. p.; Appollos Fuller, sec.-treas., with Chas. Putnam, directors.

Inc. May 20, 1910, in Ariz. **Cap.**, common, \$500,000; all issued; preferred, \$1,500,000; outstanding, \$750,000; all shares \$1 par. Security Transfer & Registrar Co., New York, transfer agent and registrar. Listed on New York Curb as a prospect.

Balance sheet on May, 1916, shows assets \$2,623,550, which includes "ore

in sight on Hurlbut lease" \$2,500,000, and "ore in sight on Zesiger lease" \$50,000. Neither tonnage, grade nor kind of ore are reported. The company had a lease and bond on property of the Leadville Mining Co. at Courtland, Ariz., but failed to make payments due and title reverted to the latter company.

Property: La Exposicion claim, 42 acres, at Cumpas, Sonora, and 2 claims, 74 acres, near Nacozari, Mex. In Arizona company has a bond on 7 claims near Wickenburg, adjoining the Monte Cristo on south, said to show copper sulphide ore.

Development: 2 incline shafts. A 100' incline shaft is said to show 20' of sulphide ore; the other shaft, ore 16' to 18' in width. Claim 30,000 tons of 8% copper ore in sight.

Company also has bond on a gold property, 5 claims, near Greaterville, Pima Co., Ariz., said to show a vein 200' wide and 1,000' long on surface, capable of being mined by steam shovel, and entire vein will mill better than \$8 per ton. **Development:** 2 tunnels, 250' and 300' long, and 90' incline shaft "all in ore." Management claims 500,000 tons free milling ore, capable of being handled for \$1.50 per ton, netting company \$8 per ton; all of which is preposterous; further comment is superfluous.

Equipment: includes a hoist and 2-drill air compressor.

A 3½' Huntington mill being erected, which is expected to treat 50 tons daily.

LINDEN GROUP

ARIZONA

Wm. Linden, Groom Creek, Yavapai Co., Ariz., owner and mgr.

Property: the Cottonwood and Vera groups, 7 claims, 140 acres at Groom Creek, in the Hassayampa district, shows gold-silver-copper-molybdenum ore in quartz contact vein traversing diorite-schist formation.

Development: by 50' vertical shaft and several tunnels, deepest 300'.

Shipments: in 1916, totaled 100 tons from the Cottonwood claim and averaged 17% copper with some silver and gold. Owner planned installing 50-ton Marathon mill and cyanide unit and driving a 400' tunnel in 1916.

Letter ret'd, 1917. Probably closed down.

MARICOPA MINES CO.

ARIZONA

Office: B. of L. E. Bldg., Cleveland, Ohio. Earl G. Hill, agt., Austin, Nev. **Mine offices:** Morristown, Maricopa Co., Ariz., and Austin, Lander Co., Nev. In process of reorganization, March, 1916.

Property: 33 claims, 611 acres, along the north contact of the Austin mineral belt. Principal property, 17 claims, at Austin, Nevada, shows four fissure veins in quartzite, ranging from 3' to 20' in width, traceable 1,400', and said to carry average values of about 4% copper, 50 oz. silver and \$2.80 gold per ton.

Development: by 4 shafts, deepest 800', and 5 tunnels, 2 longest being 2,000' and 830', with total underground openings of about 12,000'.

The Prosperity group, 16 claims, in the Wickenburg district, Arizona, shows granite and limestone, the ore occurring in fissure veins in porphyry. There are 6 known veins of 8 to 30' average width, developed by numerous shafts, with about 1,800' of workings. Ore is mainly chalcocite, claimed by the management to carry average values of 9% copper, 11 oz. silver and \$11 gold.

Equipment: includes 2 small steam hoists and an air compressor at the Arizona property and a 75 h. p. gasoline hoist, 2 air compressors, machine shop, and necessary mine buildings on the Nevada property.

The 100-ton concentrator, in New York canyon, near Austin, has a Blake crusher, 2 rolls, 9 Card tables, 6 slime tables and a small cyanide plant.

Extensive work planned for 1916, but no recent information is at hand.

MARS CONSOLIDATED CO.

ARIZONA

Probably dead. Address: care F. J. Webber, Colorado Springs, Colo. Company is the successor of the Heckley Gold & Copper Mining Co.

Property: 13 claims, in 3 groups, on Copper Hill, in the Black Rock district, 6 miles N. E. of Wickenburg, Maricopa Co., Arizona, shows 3 veins of 6', 10' and 25' claimed average width, developed by a 268' tunnel, said to carry ore assaying up to 28% copper. Letters unanswered.

MILDRED GOLD MINING CO.

ARIZONA

Address: D. B. Genung, supt., Stanton, Ariz.; H. M. Canover, pres. Company has no debts.

Property: 14 unpatented claims near Congress Junction, Yavapai Co., Ariz.

Development: 4,000' of shafts, drifts, etc. Tunnel 1,150' long has been driven from mill level to connect with main vein and incline shaft at depth of 520'.

Equipment: 2 hoists, 10-stamp mill and water supply $1\frac{1}{4}$ miles long.

MONARCH MINING & SMELTING CO.

ARIZONA

Wickenburg, Ariz.

Officers: W. O. Donovan, Vidalia, Ga., chairman; J. H. Mulholland, pres. and gen. mgr.; Jas. R. Vaughan, v. p.; J. B. Everidge, v. p.; J. H. Mulkey, sec.-treas.; officers are directors. A. D. Akin, cons. engr.

Inc. Aug., 1904, in Ariz. **Cap.**, \$1,000,000; increased to \$1,500,000 in 1913 and to \$3,000,000 in 1914.

Bonds: \$100,000 1st mtge., issued 1913; \$57,400 outstanding. Assets of company given as \$62,523 over liabilities, Jan., 1915.

Property: 6 claims, patented, 100 acres, known as the Ryland or Three, Black Buttes group, in the Black Rock or White Picacho district, 9 miles S. E. of Wickenburg, shows diorite and schist carrying oxidized ores changing at shallow depth to chalcopryite and occasional bornite, said to assay 2 to 20% copper and estimated by management to average 1 to 3 oz. silver and \$3 to \$15 gold per ton.

Development: several shallow shafts and tunnels of 600 and 360', with about 1,500' of underground workings and several thousand feet of surface trenching.

Equipment: includes a 50 h. p. distillate engine, 5x8" Rumsey triplex pump, and a 4-drill Sullivan compressor. There are about 26 buildings, all owned by the company. Water is taken from the Hassayampa river through 7 miles of 4" pipe.

Development has proved surface ores to be badly broken, not continuous and occurring in pockets. Former management counted on raising funds for deep development by milling surface ores, but with wet concentration process used in 100-ton mill, major part of oxides and carbonates was lost in the tailing. Mill was therefore closed down after trial run. Shaft sunk deeper in 1916, but work was suspended in winter and resumed May, 1917.

MONTE CRISTO MINING & MILLING CO.

ARIZONA

Chief owner, Ezra W. Thayer, pres., Phoenix, Ariz.; A. G. Pickett, sec.; Chas. B. Brann, supt., Wickenburg, Ariz.

Inc. Nov. 23, 1903. **Cap.**, \$2,000,000; shares \$1 par.

Property: Monte Cristo silver mine, adjoining the Arizona Copper Belt mine near Constellation, in Black Rock district, Yavapai Co., Ariz. The Monte Cristo mine shows very remarkable high-grade native silver ore which in the bottom of the mine is changing to copper ore.

Development: by 950' shaft with over 6,000' of workings. Company is developing on 1,000' level and has a large deposit opened up.

OCTAVE MINES CO.

ARIZONA

Office: 882 Drexel Bldg., Philadelphia, Pa.

Officers: H. C. Gibbs, pres.; H. S. Hopper, v. p.; D. S. Leas, sec.-treas.; J. Nelson Nevius, mgr., Octave, Ariz.

Property: the Octave gold mine, an old mine with a record of \$2,000,000 produced. Shows same geologic features as the Congress mine, 10 miles to east. The rocks are granitic, intruded by acidic and basic dikes, including some of post mineral age.

Development: to depth of 2,000' and for 1,400' along the vein; 500' of new work done in 1914-15, mainly E. of a fault that cut off the ore on the 8th level, has shown an orebody 270' long, 22' thick, averaging \$10 per ton, separated by 25' of lean vein from 90' of \$13.44 ore that is 4' wide. Property examined by J. Nelson Nevius, 1916.

Camp reopened after 7 years idleness and development work underway, Aug., 1917.

ORO GRANDE MINES CO.

ARIZONA

Office: Clinton, Ia. Mine near Wickenburg, Maricopa Co., Ariz.

Officers: at last accounts, G. E. Lamb, pres. and treas.; Geo. B. Upton, v. p. and gen. mgr.; F. W. Ellis, sec., and T. G. Norris, directors.

Inc. 1901 in Arizona. **Cap.**, \$3,000,000; shares \$10 par; non-assessable; issued \$2,500,000. Is a close corporation, controlled by 6 shareholders. Annual meeting, second Tuesday in January.

Property: 9 claims, patented, 161 acres, in the Black Rock district of Yavapai Co., shows contact deposits, between diorite and hornblende schist. The ore under development with strike of N. 27° E. and vertical dip, is estimated by management as 170' wide, traceable 4,400', and carries oxidized ores, bornite and chalcocite, with gold values.

Development: by shafts of 320', 100' and 100', with about 8,000' of workings, reported to have blocked out 980,000 tons of ore.

Equipment: includes a 55 h. p. gasoline plant at the mine, with a 15 h. p. hoist and 5-drill Sullivan air compressor.

The 50-ton mill has ten 1,050-lb. stamps with a 40 h. p. gasoline engine; water is pumped, for milling, from Box canyon on the Hassayampa river.

The manager reports a saving by straight amalgamation of 99% of assay values and having made 60-day mill-runs with a total cost of \$1.87 per ton, for mining, milling, pumping and all expenses, which is interesting, if true. Idle since 1907.

TOMBOY MINES

ARIZONA

Address: Bruce Hobbs, sec., 29 Otis St., Boston, Mass.

Property: 7 claims, 150 acres, in the Castle Creek district of the Bradshaw mountains, about 13 miles from Wickenburg, formerly owned by the Arizona Mines Co., shows an orebody up to 50' in width, traced by trenching for nearly 1 mile.

Development: includes several short tunnels, and a 250' shaft, showing a vein carrying about 3' of disseminated malachite, ore being exclusively oxidized to depth opened. Mine as a whole has about a quarter-mile of workings.

Equipment: includes an 18 h. p. hoist, good for 600' depth, and necessary mine buildings.

A full report on the property was made Oct., 1910, by Mark Bradley, mg. engr. Presumably idle.

VULTURE MINES CO.

ARIZONA

Address: Wickenburg, Ariz.

Officers: Robt. Mackay, pres.; F. W. Rockwell, v. p.; R. T. Sewall, sec., Boston; A. McLean, treas.; the foregoing and A. R. Mackay, F. M. Kimbark, E. I. Marvell, J. B. Sullivan, Jr., directors; Spencer Hutchinson, cons. engr.

Cap., 600,000 shares; par \$5; all issued. No bonded indebtedness. 35 Congress St., Boston, Mass., transfer office. R. T. Sewall, registrar. Annual meeting, June 1.

Property: 31 claims, 11 patented, 618.2 acres, 15 miles S. W. of Wickenburg.

Geology: quartz vein in schist contains gold, with some galena and pyrite, dips 37° and strikes N. 85° E. Pay ore occurs in shoots, the main orebody being 35' by 300'.

Development: mine is worked by back stoping and waste filling through two inclined shafts 765' and 595' deep. Greatest depth of workings, 1,239'; linear extent, 25,000'.

Equipment: includes Ottumwa hoist; gas and steam engine; Sullivan compressor; Cameron pump; 700' tramway; 125-ton stamp mill with concentrating machinery.

Ore: treated, 1912, 19,689 tons; 1913, 33,174; 1914, 36,348; 1915, 29,968 tons. No recent financial statement has been made. For ten months, 1913, ore averaged \$20.54 per ton; recovery, \$17.40 per ton; total value, \$429,416.
WICKENBURG COPPER M. & R. CO. ARIZONA

Address: Chas. Born, Prescott, Ariz.

Officers: B. B. Bloom, pres.; Chas. Born, sec.-treas., with R. N. Vyne, directors.

Inc. 1916 in Arizona. **Cap.,** \$5,000,000; shares \$1 par; non-assessable.

Property: 22 claims, in the Black Rock district, Yavapai Co., Ariz. Mine was idle for 15 years. Examined by A. E. Boyce.

Development: in August, 1917, company was driving a tunnel 300' on a silver vein.

WINKELMAN, See Hayden

YUCCA, See Kingman

YUMA, Yuma County

FORTUNA MINES CORPORATION

ARIZONA

Presumably idle: does not reply to letters.

Mines at Fortuna, Yuma Co., Ariz. **Office:** 31 State St., Boston, Mass., and care F. G. Hobbs, sec.-treas., Sharon Bldg., San Francisco, Calif.

Officers: F. E. Boland, pres.; Frank G. Hobbs, Thos. Pascoe, J. E. Manders, directors; T. C. Woodworth, cons. engr.; W. H. Enderton, supt; F. B. Keever, mgr.

Inc. 1913 in Calif. **Cap.,** \$500,000; shares \$1 par. Listed on Boston Curb. Federal Trust Co., Boston, depository.

Property: the Fortuna mine, 7 patented, 11 unpatented claims, 358.7 acres, 15 miles S. of Blaisdell station on the S. P. R. R. and 22 miles S. E. of Yuma, Ariz. Claims are at base of W. slope of the Gila range. The Fortuna mine is said to have been worked by Chas. D. Lane of San Francisco, 1896-1904, with a gross production of \$2,887,075 gold and to have paid \$1,180,000 in dividends. The oreshoot was lost in 1901, a fault from 800' to 1,200' level cutting off the ore, and \$500,000 was spent in vain to recover ore beyond the fault. Present company started work May, 1913, and is reported to have spent \$100,000 and to have recovered the vein on the 800' level.

The Fortuna is a quartz vein in schist, near gneiss and granite masses. It runs E. W., dips 50° S. and has an average thickness of 4", said to widen out to 30' in lenses. The outcrop shows iron and copper oxides, but the ore is free milling.

Development: by an old 1,500' working shaft whose levels have been utilized by present company. Crosscutting is reported to have found the oreshoot, 5' wide, on the 800' level. A new shaft, 400' E. of old workings, is said to show a 2" vein of \$40 ore. Company claims 1,000,000 tons of probable ore, which is regarded as too optimistic.

Mill has 20 1,400-lb. stamps and receives water from a 4-mile pipe line.

Mine has a good record and company has several eminent stockholders, but promotion record has been disappointing.

ARKANSAS

AMERICAN STAR ANTIMONY CORPORATION

ARKANSAS

Office and Mine: Gilham, Ark.

Officers: J. G. Battele, pres.; Gordon Battele, v. p.; C. M. Fenton, sec-treas., with Harry S. Miller and G. B. Fenton, directors.

Inc. Dec. 10, 1916, in Missouri. **Cap.**, \$24,000; shares \$100 par; all issued. Conqueror Trust Co., Joplin, Mo., registrar and transfer agents. Annual meeting 2nd Monday in December.

Property: 3 groups, 440 acres, near Gilham, Sevier Co., and a smelter in the town of Sevier. **Ore:** stibnite, occurs in fissure veins, 6" by 3' wide and said to give average assays of 30% antimony, 33% sulphur, 6% silica, 3% iron, 4% quartz and 24% alumina.

Development: by 3 shafts, deepest 175'.

Equipment: includes 3 compressors, hoist and steam power. Management reports ore reserves of 2,000 tons, June, 1917. Developing.

ARKANSAS ZINC & SMELTING CORPORATION

ARKANSAS

Address: F. W. Bocking, gen. mgr. Van Buren, Ark. N. Y. address: 42 Broadway.

Smelter: one mile east of Van Buren, between St. L., I. M., & S. R. R. and St. L. and San F. R. R. Plant includes ore storage bins of 4,000 tons capacity, weighing apparatus, 2 Ropp type kilns of 20 to 25 ton daily capacity, crusher and mixing house, sampler, 3 blocks of 800 retorts each with similar number proposed, pottery, electric power plant, and necessary buildings.

The ore and concentrate supply for this plant comes from northern Arkansas mines and probably some from Oklahoma.

CHARLEY BOY MINING CO.

ARKANSAS

Address: Chas. Gilstrop, Tulsa, Okla.

Officers: A. K. Richards, pres.; W. T. Hines, v. p.; Chas. Gilstrop, sec.-treas.

Has a lease on land in the Zinc district, Boone Co., Ark. Deep drilling is to be started.

DENVER MINING & MILLING CO. ...

ARKANSAS

Address: Yellville, Ark.

Property: a zinc-lead mine in northern Arkansas, said to contain up to \$300,000 worth of ore in sight. A new mill was started in August.

DIXIE GIRL MINE

ARKANSAS

Address: J. L. McCarty, Rush, Ark.

Property: in the N. Arkansas zinc region, developed by 100' and 225' tunnels and opencut. Rich carbonate ore is said to be exposed.

McCURRY MINING & MILLING CO.

ARKANSAS

Address: W. A. McCurry, Zinc, Ark.

Property: the Coker Hollow, Rhodes-Manchester and Haulk at Zinc and the Keys Gap and Canton near Ponca City. The former contains zinc

silicate, the latter blende and galena. At Zinc the company has a 100-ton custom mill.

ONWATTA MINE**ARKANSAS**

W. C. Settles, supt. Mine in Dodd City district, Marion Co., Ark., shows lead ore with calamite, smithsonite and cadmium ore, occurring in fissures or fault breccias, the zinc ore averaging better than 60% metallic contents. The formation is limestone. An intermittent producer.

YELLOW ROSE MINING CO.**ARKANSAS**

Address: Rush, Ark.

Cap., \$3,000,000.

Property: the Yellow Rose, White Eagle and Big Find zinc mines in the Rush district, Marion Co., Ark. Said to be one of the best properties in northern Arkansas.

Development: by shaft and tunnel. A 200-ton mill is operating.

CALIFORNIA

As the mining districts of the State are widely scattered along the Sierra front, the geographical arrangement is by counties instead of towns.

ALPINE COUNTY**CURTZ CONSOLIDATED MINES CO.****CALIFORNIA**

Probably dead; no response to letter. See Vol XII. Mine near Markleeville, Alpine Co., Cal.

MORNING STAR MINE**CALIFORNIA**

Owned by Curtz Consolidated Mines Co.

AMADOR COUNTY**ARGONAUT CONS. MINING CO.****CALIFORNIA**

Office: 43 Cedar St., New York City. Controls Argonaut Mining Co., and is itself controlled by the White Knob Copper & Development Co., owning a majority of its capital stock.

Officers: John T. Smith, pres.; H. H. Carlisle, v. p.; E. H. Kelly, treas.; Arthur Kennedy, sec., New York.

Inc. Jan. 5, 1907, in Maine. **Cap.,** \$2,000,000, par \$5; \$1,855,000 issued; \$1,200,000 owned by White Knob Copper & Development Co. Dividends: 30c in 1914; 40c in 1915; 40c in 1916; 10c to June, 1917. Annual meeting, 1st Tuesday after June 1. Security Registrar & Transfer Co., tran. agt. and registrar.

ARGONAUT MINING CO.**CALIFORNIA**

Address: 404 Humbolt Bank Bldg., San Francisco. Mine office; Jackson, Amador Co., Cal.

Officers: Jesse W. Lilienthal, S. F., pres.; N. S. Kelsey, mgr.; E. Phillips, mine foreman; Geo. W. Green, mill foreman.

Inc. in 1893. **Cap.,** \$1,000,000, shares \$5 par; all issued. Is the operating company of the Argonaut Cons. Mng. Co., control of which is held by the White Knob Copper & Dev. Co., Ltd.

Property: one mile north of Jackson, on the Mother Lode; adjoins that of the Kennedy Extension Mng. Co. on the south.

Ore: soft shattered white gold quartz in a very regular and continuous vein 8' to 12' wide, with strike N. 10° W. Vein outcrops in a metadiabase; above the 290' level it passes into the Mariposa slates, where, apparently, the fissure was originally opened by a thrust fault with a throw of 120'. One wall is a soft black slate, the other is slate or a greenstone schist. Two ore shoots have been developed; the north shoot 325' long, with average width of 10'; the south shoot 600' long, with average width of 10'. On the 1,240' level there is a split in the vein, a branch running off

into the schist hanging wall. Ore yields in the mill about \$5.50 in free gold and \$1.50 in concentrates.

Development: shaft 4,650' deep, sunk at an angle of 60°, with levels at 150' intervals. At 290' level shaft cuts the vein in diabase, from the 1,460' level to present depth it is in the slate hanging-wall. Present work is being done on the four lower levels. Ground is very heavy and the square-set mining method is used. Nearly half the force employed underground are timbermen. Ore is hoisted, in 4-ton skips, by a 500-h. p. double-drum electric hoist, automatically dumped into storage bins, then fed to a 10 by 16" Knight crusher and trammed in 2½-ton cars to the mill.

Mill: forty 1,000-lb. stamps, dropping 96 times per minute, with 7" drop, and crushing 5 tons per stamp through 20-mesh wire screen, with capacity of 300 tons daily. From the amalgamating plates pulp flows to 36 Frue vanners, tailing goes to hydraulic classifiers, overflow being concentrated on 20' Darrow rotary concentrators. A 90% extraction is made by amalgamation and concentration. Company employs 225 men.

BUNKER HILL CONS. MINING CO.

CALIFORNIA

Office: Humbolt Bldg., San Francisco. Mine office: Amador City, Amador Co., Cal. W. F. Detert, pres.; C. E. Bunker, supt.

Inc. 1907. Cap., \$200,000, shares \$1 par. The mine has paid dividends for several years; in first half of 1915 six monthly dividends were paid, totaling \$30,000. Owing to heavy construction and new equipment expense the dividend rate was reduced from 5 to 2½ cts. per share.

Property: 3 claims, the Bunker Hill, Mayflower and Nevada, 1½ miles north of Amador City, 2,587' on the lode.
